COBALT GOLD PEN CO., Dept. 319 Toronto, Ont.

1 Cent a Word.

This department is one of the most valuable in the MARITIME FARMER. At a cost of only one cent a word, you can advertise anything you wish to buy, sell or exchange. The address must be counted as part of the advertisement and each initial or a number counts as one word. Cash must accompany each order and advertisement must have address on, as we cannot forward replies sent to this office. Copy must be received not later than Friday before the date of issue, which will always be found on the editorial page of the proceeding issue. No black faced type or display of any kind will be allowed under this head, thus making a small ad. as noticeable as a large one. The rate for this column is one cent a word, each insertion. MARITIME FARMER, Sussex, N. B.

AGENTS WANTED, apply THE ELECTRIC BEAN CHEMICAL COMPANY, Ottawa, Ont.

The College Short Courses.

The Short Courses at the Nova Scotia Agricultural College, Truro, N. S., are now in full swing. The opening sessions on January 3rd saw an attendance of upwards of two hundred students, of which seventy were from the Island Province, twenty from New Brunswick, twenty from Cape Breton, and the remainder from various parts of the mainland portion of Nova Scotia. There are twenty-five ladies attending the Ladies' Shourt Course.

The faculty of the college is being assisted by representatives from the Federal Department of Agriculture, Ottawa, and from the New Brunswick and Prince Edward Island staffs.

Tickets will be sold at one way First-Class Fare for the ronnd trip. Tickets good going Sunday, January 15th, to Friday, January 20 inclusive, valid for return until Monday January 23rd. For further particulars apply to any Agent of the Grand Trunk Railway System.

Yours truly,
J. QUINLAN, D. P. A.

The Famous Rayo

Is the Lamp of Real Beauty

because it gives the best light of all lamps. The Rayo gives a white, soft, mellow, diffused light—easy on the eye because it cannot flicker. You can use your eyes as long as you wish under the Rayo light without strain.

The Rayo Lamp is low-priced, and even though you pay $5, $10 or $20 for other lamps, you may get more expensive decorations but you cannot get a better light than the low-priced Rayo gives. A strong, durable shade-holder holds the shade on firm and true. This season's new burner adds strength and appearance.

Once a Rayo User, Always One.

Dealers Everywhere. If not at yours, write for descriptive circular to the nearest agency of the

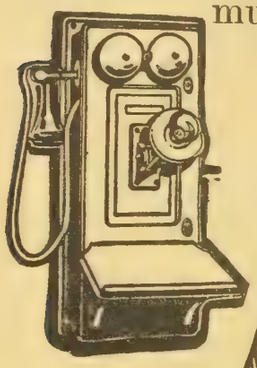
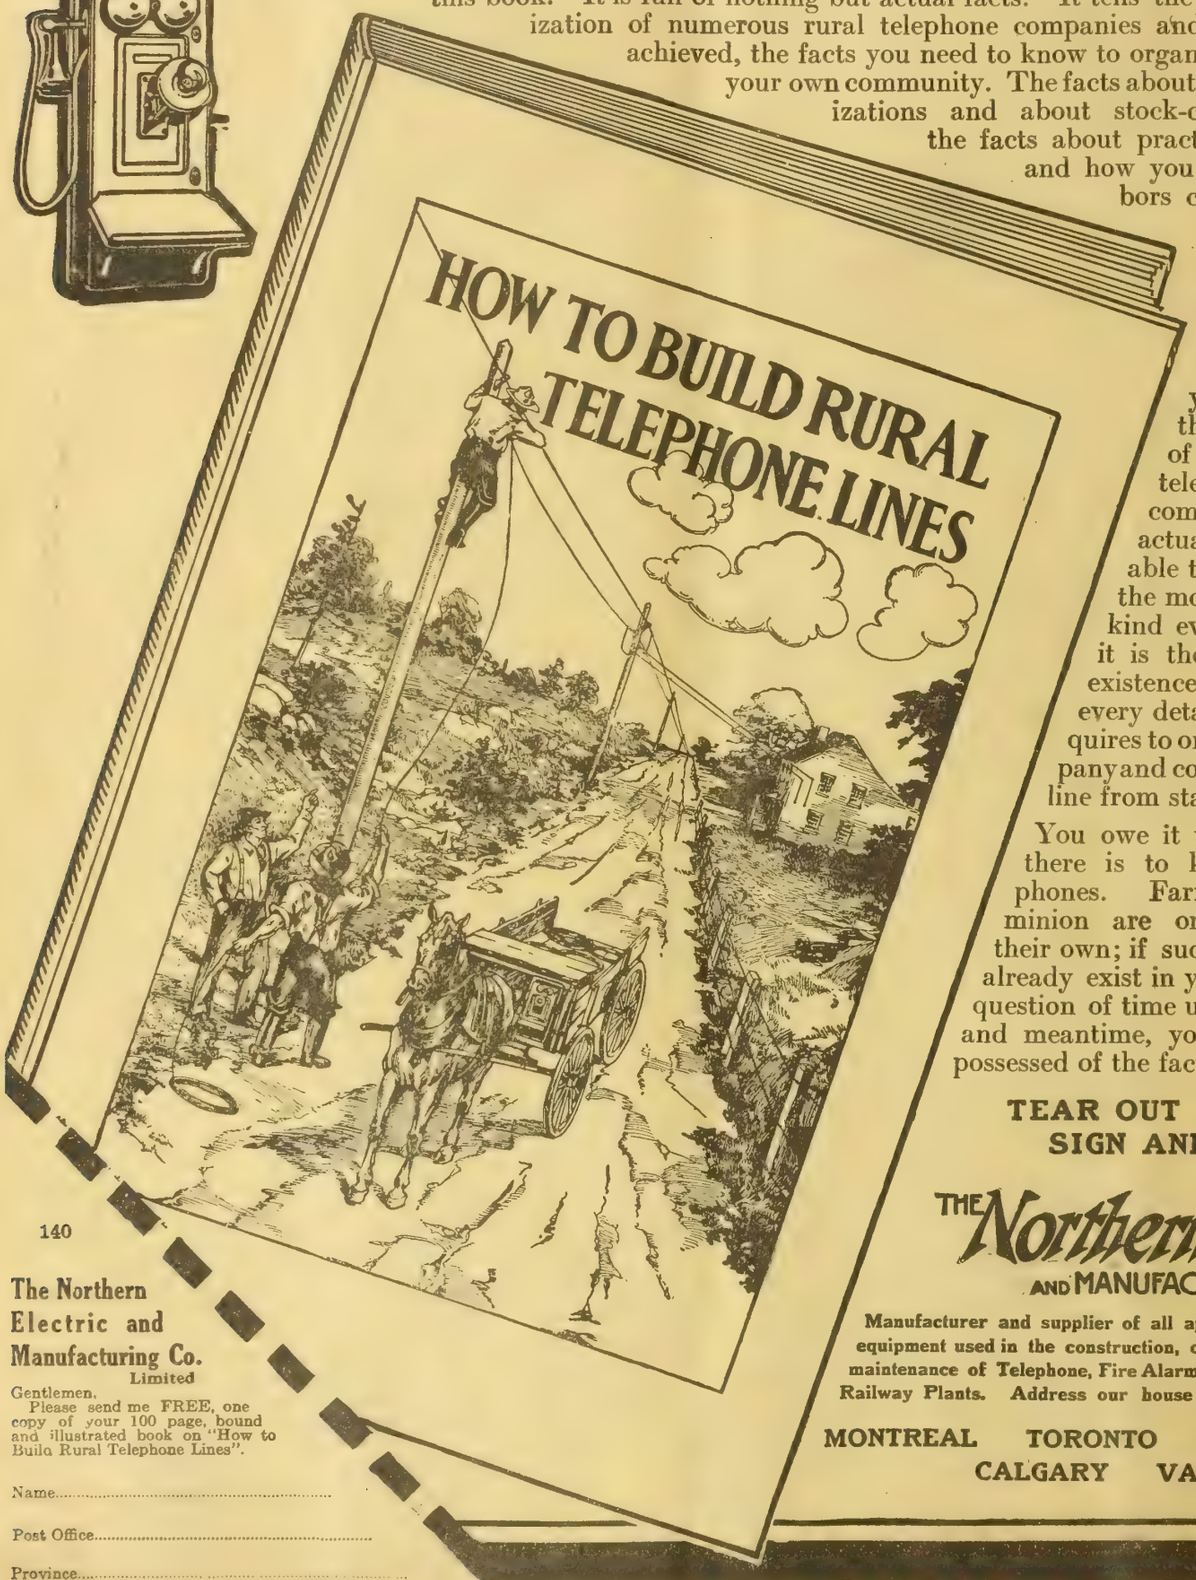
B. H. BULL & SON, Brampton, Ont.

WE SEND THIS 100-PAGE CLOTH-BOUND VOLUME SEND US THE COUPON TO-DAY FREE

YOU only need to tear out the coupon, fill it in and mail it to us to get this book. "How to Build Rural Telephone Lines" is a stiff-covered, cloth-bound book of 100 pages, crammed full of hard facts about the building of community-owned telephone lines. There is no theory—no clever writing in this book. It is full of nothing but actual facts. It tells the facts about the organization of numerous rural telephone companies and the success they have achieved, the facts you need to know to organize such a company in your own community. The facts about mutual-company organizations and about stock-company organizations, the facts about practical construction work and how you and your own neighbors can do this construction, the facts about the equipment necessary, the facts about government regulations on the matter—in short, it tells you every fact you need to know, from the moment you dream of the possibilities of a telephone system in your community, until the line is actually erected and you are able to talk over it. This is the most complete book of its kind ever published anywhere; it is the one single volume in existence that gives the farmer every detail of information he requires to organize a telephone company and construct a rural telephone line from start to finish.





You owe it to yourself to know all there is to know about rural telephones. Farmers all over the Dominion are organizing companies of their own; if such a company does not already exist in your locality, it is only a question of time until one will be formed and meantime, you should be becoming possessed of the facts.

TEAR OUT THE COUPON SIGN AND MAIL IT

POTASH

Is Absolutely Essential to the Successful Production of all **Farm, Garden** and **Orchard Crops.** It is quite futile to hope and pray for better crops than we had last year, while you do nothing to restore or maintain the fertility of your soil. You've got to do something to make conditions for plant growth as favorable as possible, before you can expect maximum returns from your farm. **POTASH** is an Indispensable Plant Food and has No Substitute. It is obtainable in the highly concentrated forms of

Muriate of Potash
and
Sulphate of Potash

of all leading Fertilizer Dealers and Seedsmen.
Write us for Free Copies of our Bulletins, which include:

Artifical Fertilizers: Their Nature and Use;
Records of Fertilizer Experiments in Canada.

Farmers of Quality

Stationary and Mounted, in 1 1-2 to 30 Horse Power

Want Quality!

Readers of THE MARITIME FARMER are of the quality stamp; we realize their discerning ability to pick an article of machinery that is correct in every mechanical detail. That is the reason why such care is taken to see that the **Ideal Gas and Gasoline Engines** are what we claim for them.

Every part of the **"Ideal"** is interchangeable—a mighty strong feature. The cylinder, instead of being cast with the base, is cast separate and bolts on the base. The valves, instead of seating directly on the cylinder head are enclosed in a valve cage, and the valve cage is inserted in the cylinder head, so that when the valves become worn, the valve cage and valve can be taken out and ground without removing the cylinder head.

The idea of casting the cylinder separate from the base is a good one, for when the walls of the cylinder become worn, you don't have to buy a complete new engine, you only require a new cylinder that can be bolted on the base. Another good feature is an extremely long piston with double rings instead of using three rings. We use three sets of two rings each on the Ideal.

Another thing, there is a speed regulator on this engine which enables you to run the engine at any speed, and, of course, when you reduce the speed of the engine, you also reduce the fuel consumption. For instance, if a man had a 6 H. P. engine and wanted to run a cream separator with it, he could reduce the speed and thereby cut down his fuel consumption to suit the work.

All these are points to consider when looking for a gasoline engine of quality—one that stands without a peer.

"Ideal" Gas and Gasoline Engines are built on honor and built to give their operators satisfaction, and they do it. We do not build a cheap or low grade engine, but do cater to that class of buyers who wish a first class article at a reasonable price.

YOU Can Furnish Your Home FREE!

ANY housewife buying goods at the stores mentioned below may have their cash purchases apply on Asepto Soap Premiums. Every cent you spend counts toward a premium. A sure and mighty convenient way to save without increasing living expenses. Over 300 premiums of honest value to select from. The list will be increased every few weeks. Furniture will be offered next. The old way was to allow premiums to apply on Soap Wrappers only. Now at any of these stores—no matter what you buy—everything has its equivalent in Soap Wrappers. That is every five cents spent counts the same as one wrapper, while purchases of our goods as here advertised entitles you to two coupons—the one the merchant allows and the ones found in or on our goods themselves.

Dr. White's Honey Balm.—A cough syrup that is safe and sure. We are positive that no other cough syrup equals it. Price 25c. Equal to 5 soap wrappers.

Pendleton's Panacea.—The best hot medicine, in use nearly 100 years. Every person knows it is good. Price 25. Equal to 5 soap wrappers.

Brown's Cutilive.—A witch-azel cream for chapped hands, sunburn, etc. Price 25c. Equals 5 soap wrappers.

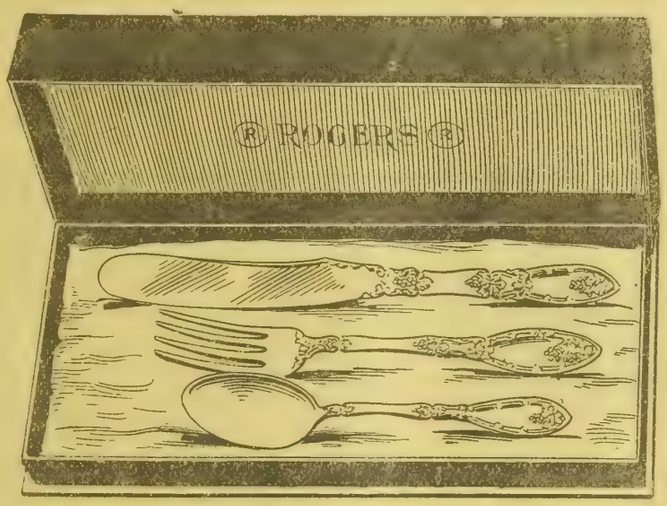
Scott's.—Salts, Senna, Sulphur, Saltpetre, Borax and Alum in 5c packages. Equal to 1 soap wrapper.

Brown's Spearmint Tooth Paste—Sweetens the breath, prevents decay, hardens the gums and whitens the teeth. Price 25c. Equals 5 soap wrappers.

Napatho Soap.—A pure laundry soap, containing naptha and incorporated by a process that prevents it from hurting the hands, as other Napatho Soaps do. The wrappers count for Premiums.

Sapid Tea.—A blend selling at 40c, in 1 lb. packages only. Blended by J. Harvey Brown, one of the most competent tea men in Canada. Each package carries a coupon equal to 8 soap wrappers.

Dr. Scott's White Liniment.—The largest bottle and best liniment. Price 25c. Equal to 5 soap wrappers.



Banner Flavoring Extracts.—All flavors and from 10c to $1.25 per bottle. Coupon on each bottle.

Herner's Dyspepsia Cure.—The only kind that tells you to eat what you like while taking it. Money back if not good. Price 35c. Equal to 7 soap wrappers. Price $1.00. Equal to 20 soap wrappers.

Brown's Stomach and Liver Pills.—A good family pill. Price 25c. Equals 5 soap wrappers.

Scott's Furniture Polish.—Renews the life of old furniture. Price 25c. Equals 5 soap wrappers.

Asepto Soap.—Is equal to the best and contains the same antiseptic features that Asepto Soap Powder does. The wrappers count for premiums.

Scott's.—Nitre, Glycerine, Iodine, Iron, Squills, Friar's Balsam, Carbolated Oil, Camphorated Oil, Castor Oil, Sweet Oil, Oil of Tar, Sewing Machine Oil, Spirits of Camphor. Price 10c per bottle. Equal to 2 soap wrappers.

Scott's Fruit Syrups and Lime Juice.—Pure and excellent flavor. 10c, 15c and 25c. Coupon on the bottle.

Ebony Polishes—None better, both paste and lustre. Coupon on each box. Try them.

Banner Spices.—In packages only. Absolutely pure. ¼ lb. packages carry coupon equal to 2 soap wrappers.

Venus Floating Soap.—Made from pure vegetable oils and unexcelled for the toilet and bath. Price 25c. Coupon counts for premiums.

Asepto Soap Powder.—Has been the greatest success of any soap or powder ever put on the market. This is the best evidence of its quality. It is antiseptic as well. It absolutely sterilizes every article washed. Think what this means to a family. Price 5c, and the trade mark counts for premiums.

The following stores are now in a position to explain to you what this offer means :—McLeod & Spence, Port Elgin, N. B.; F. L. Rayworth, Bayfield, N. B.; W. H. Outlook for Apple Growing in New Brunswick

PROSPECTS SECOND TO NONE.

By A. G. Turney, Provincial Horticulturist.

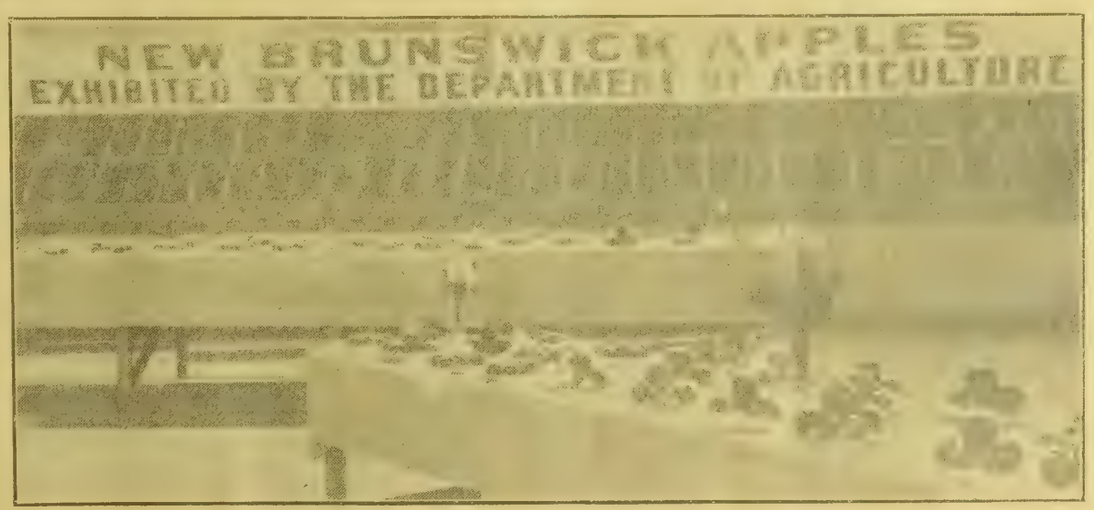
FIRST. Let us briefly enumerate some factors concerning the present status of the apple industry in America.

United States' authorities concede that country's production of apples to be inadequate to the demand and that this industry which has increased steadily the past few years is already a large one Moreover, they state that the demand is increasing at the rate of 1,000,000 barrels per year. Since the United States apple crop has declined from an average annual production for the five years—1900-1904 of 42,500,000 barrels to only 26,000,000 barrels for the five years ending 1909, it would appear that nothing short of a strong revival of apple growing in that country will make up the deficiency, let alone keep pace with the increasing demand would be were "fair" prices maintained. "Better Fruit" is my adequate to the demand. That may in apple growing in the United States will soon be followed by a period of revival until the supply is adebuate to the demand. That may be, but it is sufficient for our purpose that such a revival cannot be consummated in less that fifteen or twenty years, and that the United States' product will not figure very largely on the apple markets of Europe during that time.

An Encouraging Outlook.

A Section of the Big New Brunswick Fruit Exhibition that shows the outlook for Apple Growing in New Brunswick.

Turning to Canada, what do we find? The situation in Ontario, so ably dealt with in these columns by Professor Crow, and at various times during the past year by other authorities, shows: That her annual amount of apples available for export to Europe has steadily decreased and furthermore that the increasing home and Western Canada markets bid fair, in a few years, to leave no Ontario apples available for export to Europe unless there comes a great improvement and increase in apple growing in that province. It seems to me that Ontario, like the United States, will not be in a position to cater much to the European apple markets for some years to come. What then of Nova Scotia? The situation there is certainly different from that in Ontario and the United States. True it is that the New England States are producing much the same standard winter varieties but then they have a very large consuming population to cater to which Nova Scotia has not. In 1909 this Maritime Province produced upwards of 850,000 barrels of apples, the bulk of which were sold on the English markets. Nova Scotia produces the standard winter varieties, Northern Spy, Greening, Baldwin, King and Nonpareil to perfection; her logical market is across the water; she has thousands of acres yet to be planted to apples. Is it not evident that her apple lands by virtue of the situation on the American continent to-day, and by virtue of the natural advantages and proximity to the English market should capture that market for the standard winter varieties? I believe that so long as Nova Scotians can produce the winter varieties successfully, they will not easily be induced to consider the growing of the earlier varieties. Yet, we must admit that there is a considerable demand on the English market for a class of apples to cover the season from autumn until the winter varieties are fit to eat, say from October 1st, to January 30th. This then, is the link in the chain which New Brunswick by nature is the best adapted of all the Provinces to fill. Competent leadership and the necessary capital applied to the lands of New Brunswick and Nova Scotia during the next decade should result in our establishing a hold on the English market which apple regions to the west of us, by the time they had apples in quantity to export, would find it very hard to weaken.



A Convincing Evidence of Fruit Growing Possibilities.

The above display of box apples was an eye-opener to all those who did not have much faith in New Brunswick as an Apple Growing Country. The big Fruit Show recently held at St. John at which the above photo was taken awakened much latent interest in New Brunswick fruit growing

While Nova Scotia has a well established and very flourishing apple industry today, we in New Brunswick, have to confess to none. Nevertheless, apple growing here is past the experimental stage, in fact is a proved success, and there are a number of features here which would make the establishment of apple growing a much shorter and easier task than it has proved to be elsewhere. To begin with, the varieties we are adapted to grow and to which we must confine ourselves if we wish to gain a reputation as an apple province, are the Duchess, Dudley, Wealthy, Alexander or Wolfe

River, Fameuse or McIntosh Red. Most of these are early bearers and will be yielding returns five years before any of the later sorts. They are mostly shorter lived trees and should be planted much closer together, yielding greater returns to the acre. Again, the Duchess, Dudley, Alexander and Wealthy grow practically scab free, are self-fertilizers and regular annual bearers, great points in their favor. Many people are too prone to ignore the earlier season apples, pointing out that their perishability and poorer prices do not class them with the winter varieties as money makers.

We must consider, however, that a variety like the Duchess or the Wealthy can be produced for 60 or 70 p. c. of what some of the winter varieties may be produced, and surely this cost of production is as powerful a factor as the selling price in determining what varieties are most profitable. The experience of the past few years entitles the earlier varieties to more attention and I have no doubt that in New Brunswick their production for the European market will bring us acre for acre just as large if not larger profits than the winter varieties are producing elsewhere. Moreover, the selling price is not as low as some would have us believe. Since Red Astrachan and Duchess apples sold last autumn in Winnipeg for $2.25 to $2.50 per box, which is equivalent to $1.25 or $1.50 f. o. b. St. Catherines to the grower, and No. 2 Duchess sold at $5.00 per barrel, we may well consider that with all our water transportation to the British Isles and our pre-cooling facilities in St. John there will yet be thousands of dollars brought into New Brunswick by these hitherto despised varieties. The Fameuse and McIntosh Red, while not so cheaply and easily produced, are as high a selling apple as there is grown in Canada and quite large areas of our land show similar climatic and soil conditions to the Ottawa and St. Lawrence Valleys where these varieties originated and do so well. At the recent apple show in St. John the most noticeable feature about our apples was their exceedingly high color and natural beauty of appearance. R. W. Starr, the veteran pomologist of Nova Scotia, tells us that these same varieties grown in the Annapolis valley are some ten days slower in maturing than where grown in the St. John Valley. We have no desire to claim that we can grow all the standard Canadian varieties to as high a perfection as they are grown in Ontario, Nova Scotia and British Columbia, but what we do claim is that New Brunswick grown Duchess, Dudley, Alexander, Wealthy, Fameuse and McIntosh Red cannot be excelled by any of these provinces in point of size, color and flavor.

New Brunswick's premier apple lands are to be found in the Lower St. John Valley between St. John and Fredericton and are only from twenty to eighty miles by river transportation from St. John, the national winter port. The valley is one of great scenic beauty and fertility and is a great natural apple belt. To the man who desires to grow apples commercially, I do not know in all Canada of a country where the prospects and markets are better or the environment more ideal. To my mind, were it not a regretable fact, I should have believed it absolutely impossible that British Columbia of late years should have attracted so much capital and so many people from the old country fruit lands. Yet, in the face of the great geographical, social and natural advantages possessed by Nova Scotia, New Brunswick and Ontario, she has accomplished it. In the east we have a less rugged, a more beautiful country; we are within a week's journey from the best market in the world and the old home of our immigrants. We do not have to resort to artificial methods such as irrigation and frost fighting appliances, and our apples are better flavored. There is only one answer to this, British Columbia is awake and the east is asleep. The signs of the times are, however, not without hope—the east stirs uneasily in its sleep—presently it will rub its eyes—and then let us hope that it will open one and with just one eye open and its great natural advantages, British Columbia, wide awake as it is, will have to look on.

To my mind British Columbia with its lands already at fancy prices, with its higher cost of production and enormous transportation expense can never seriously compete with the Maritime Provinces on the European market, if we exert ourselves at all. Now is the time for the Province of New Brunswick and Nova Scotia, each keeping to the production of the varieties for which they are best adapted, between them to take a large and commanding place in the supplying of the European apple market from September to May of every year.

It is a matter of great satisfaction to be able to say that companies to develop our fruit lands are already being organized and will soon be in active operation, and I am confidently expectant that the development of fruit growing in the St. John Valley will be the most remarkable feature in the next ten years of Canadian horticulture.

How Can Alfalfa Growing Receive a Boost in the Maritime Provinces?

Alfalfa, The Feed DeLux.

Editor Maritime Farmer:

"Five crops a year and every pound a richer feed than corn or bran or any other of the favorites of the stockman!" When he heard this statement by a farmers' institute lecturer, Robert Walker, a Missouri stockman-farmer, went home with a resolution to try alfalfa. He sowed twenty acres that spring on a piece of his most fertile river-bottom land and kept the weeds down by occasionally clipping it with the mower. The next May he cut two tons of hay per acre, worth five dollars a ton at his farm. In August he cut the seed crop, which yielded six bushels an acre, worth eight dollars a bushel. In October another crop of hay was ready, but he turned in his cattle to graze it lightly until cold weather. Fifty-eight dollars an acre the first season!—and that crop of hay was rich enough to take the place of several tons of bran for his fattening cattle.

In 1871 Henry Miller, of southern California, began to grow alfalfa. Now he has about twenty thousand acres on irrigated and upland soils. He cuts four tons of hay per acre each season and feeds it to cattle and hogs, or bales and sells it for eight to ten dollars a ton. These are but casual instances of the virtues of this crop, which is the peer of any feeding stuff. The almost unlimited yielding capacity —under irrigation reaching ten to twelve tons per acre—together with its richness as a feed by virtue of a higher percentage of that flesh and bone building material protein, than any other common farm crop, makes alfalfa the marvel of the crop world.

"Alfalfa, "the best forage," as its Arabic name reads when translated, claims place as the oldest crop known to man. When the insane King Nebuchadnezzer was driven to the fields to eat grass, as related in the Book of Daniel, he found this nutritious and palatable plant a ready food. The Persians grew alfalfa by irrigation and gave it to the Greeks and Romans. That careful old Roman countryman, Columella, in his twelve books on farming, written about 56 A. D., told how to grow this crop. Six crops a year were often cut; and his method on seeding and care might be used as a text in school of agriculture today without serious danger of error. Though so well known to the ancients, alfalfa is still unknown to tens of thousands of American farmers, to whom it would be worth unmeasured millions if once well established on their farms. Hoard, the former dairyman governor of Wisconsin, has pronounced the alfalfa movement "the most important agricultural event of the century."

"America got alfalfa through seed importations from Europe into the Eastern States, where it has been grown successfully in New York since 1793. It was there known as Lucerne, which name it got from the Lucerne Valley, in Italy. George Washington grew it at Mount Vernon or on other of his estates, and Thomas Jefferson was so pleased its appearance that he wrote of the beauty of his alfalfa fields.

The Champion Shorthorn Heifer Merry Maid V.

During the season of 1908, Merry Maid V, then in her calf form won first prize in the junior calf section and championship of the breed at all the fall shows. In 1909 she won first as junior yearling and championship at all Maritime shows, later at Fredericton she was placed second to her stable mate in the championship class by Mr. Andrew Elliott, the judge. She has maintained her enviable reputation during the past season, 1910, by winning first as two-year-old and championship at the Dominion Exhibition, St. John, and also at the Halifax exhibition under the judgeship of Prof. Geo E. Day. She mainained the same rating at the Maritime Winter Fair, recently held in Amherst, N S, winning the grand chamsionship award. Merry Maid V's dam, Merry Maid had a similar career only she started her career by winning a grand championship for the first time when she was about six months old. She kept up her wonderful show record until this year. In her ten year old form she stood second in the aged cow class. Owned by C. A. Archibald, Bellevue Stock Farm, Truro, N. S.

NO LAZY MAN'S CROP.

The Eastern farmer, however, never adopted the crop generally, nor carried it westward. The goldseekers who came around the Horn to California stopped at Chile and found it flourishing where it had been left by the Spaniards. Alfalfa is known to have been grown in southern California in 1859, from there spreading eastward through the fertile valleys of the Southwest to Utah, Colorado, and on.

"Alfalfa demands good farming. It declines to grow on poor, wet, weedy sour and untilled lands. Many fail with it on first trial. Some have become discouraged and called it hard to grow, yet it is almost a weed in its rank spread in specially favorable localities. This fastidious nature has hindered its progress in the favor of careless farmers, who ignore its cardinal requirements. Its three simple demands are a dry, sweet, fertile soil; but these involve about all there is to good soil management—namely, drainage, liming for acidity when needed and adding the needed fertilizers, with proper tillage. Alfalfa refuses to be made a side issue; it demands the best field and care of the farmer to establish it. It develops his patience as it must be cut but sparingly the first year and must not be rudely trampled.

"Farming was not so hard before we knew alfalfa," complained a Kansas farmer. "There used to be occasional periods of rest, but now this plagued crop drives us the year round. In the spring, just as we are busy planting the corn, we must hustle away to cut that first crop of alfalfa. It won't wait; it must be attended to first. Then in June, when we're hoping for a few days' let-up, there is a second crop ready and another hay harvest is on us. Late in July, when it is hot and sultry and haymow is a steaming furnace, there is more alfalfa to harvest. In September we used to get a few days to visit our folks in the next county, but now that cussed alfalfa must be cut. Can't leave it or it spoils; and in October, when the corn harvest is about over, there is another hay harvest. It's just cut, cut, all the year—and that is not all. Our barns are full of the stuff, stacks fill every available feed lot and we are obliged to buy steers and lambs and pigs to eat it out of the way of the next season's crops. Alfalfa is no crop for a lazy farmer."

THE ANIMALS' FAVORITE.

Back in 1889 a rawboned young cowboy left a sheep ranch on Green River, in Utah, and came home to northern Ohio to help his gray and stooped old father make a bare liv-

How Can Alfalfa Growing Receive a Boost in the Maritime Provinces?

Alfalfa can be Successfully grown in the Maritime Provinces. In every issue for the last two months we have asked for suggestions from our readers in regard to best means for "Boosting Alfalfa Growing in Maritime Canada." Not more than eight or tenreaders have offered suggestions or asked questions. Surely this subject deserves more attention and assistance than our farmers are devoting to it. We know that a large number of our 10,000 subscribers have experimented with this useful legume. We want to hear from the unsuccessful experimenters as well as the ful ones. By relating your experiences you may lead the way for some other farmer to follow in your successful path or to avoid paths in which you have not been successful. If you have been successful, we know you have discovered enough merit in this wonderful plant to make you anxious to tell your fellow farmers about it. If you have been unsuccessful, the fault may lie at your own door; perhaps you left some essential condition unfulfilled.

State the methods you followed in preparing soil and seed, and by thus helping others you will be helping yourself. If you do not wish your name to appear we can with-hold it. Ask qubstions, read what other farmers say about Alfalfa Growing and intelligently apply any feasable ideas you may thus glean. Address communications to

THE MARITIME FARMER, Editorial Department, Sussex, N. B.

ing from a wet and weedy old farm. The boy brought back a bag of the seed of the wonderful alfalfa which had so delighted the hungry lambs when they returned from the frosty ranges for the corral-feeding at the end of the range season; but the old wet Ohio clay was too poor to grow alfalfa. First attempts to seed it failed, but the boy had a vision of fields like the irrigated valleys of Utah and persisted in sowing more alfalfa each year; and little by little it covered the farm as one after another of the fields were tilled and limed and manured. The best the father could do on the farm before alfalfa came was to sell eight hundred dollars' worth of wheat, hay, pigs and potato. In 1909 some fields yielded six tons of hay an acre, the corn from ninety acres grown on alfalfa sod measured almost nine thousand bushels, shelled. About fifteen hundred lambs were fed to winter fatness, and three brothers find this farm, now expanded to over three hundred acres, demanding their whole attention. This is not an isolated story of reclamation; it is being duplicated on a thousand farms from Maine to Oregon.

"Alfalfa is a dual-purpose plant, serving the grower in two ways. It has the highest feeding value of any of the common farm crops, because it is rich in digestible protein. Protein is the part of food plants that makes red blood, flesh and bone. Protein is the costly part of the food of animals and alfalfa furnishes a lot of it at the lowest cost and in a very palatable form. The agricultural chemist has shown that a good average crop of alfalfa from one acre in the Eastern States contains over five thousand pounds of digestible matter, of which nearly nine hundred pounds is protein; while its nearest competitor—red clover— returns only three thousand pounds of digestible matter containing only five hundred pounds of protein. In feeding value its relation to other common crops is best shown by comparison with the common crops on the basis of percentage of protein. Alfalfa hay contains 11 per cent digestible protein; red clover, 6.8; timothy, 2.8. Wheat bran, so generally used as a source of protein, contains only 12.2 per cent of protein.

In its palatability lies much of its virtue. All animals love it. Hens will pluck it; the family dog will nip the tender shoots as he passes through the field. Gorging and bloating may result when hungry animals are turned into a field and allowed to eat their fill. The cured hay has been ground into meal for stock food, and tests of alfalfa flour made into bread have shown it to be a palatable food for man.

"Alfalfa helps poor soils. It first demands that the farmers carefully drain, lime and manure such land before it will grow vigorously. Then it revolutionizes the whole stretch of the land by sending its penetrating roots deep and wide in search of plant food and moisture. Down into the hard subsoil these needle-tipped fibers grow—three, six, ten and even twenty feet. The constant growth and decay of these fine rootlets open millions of tiny tunnels through the hardest soil, where air and moisture follow; and what was once a soggy mass becomes a loose, friable soil in a receptive state for added fertility. It harbors its own nitrogen-gathering germ, which draws a supply from the air when an abundant supply is not to be had in the soil.

Alfalfa growing is not altogether easy. Though in some sections it grows almost wild, securing a stand is the difficult phase of its culture over most of the country. The best farmers have to study and experiment with it. A trial plot is advised by the experts before large areas are seeded. It is largely a soil problem. No amount of care will bring success if the soil is wet or sour, or devoid of available plant food to support the hungry young alfalfa plants the first year. Spring or summer seeding is quire generally practiced, though fall seeding is followed successfully in some sections. Plow early and pack the surface to hold the moisture. Spare no pains on the seed bed. Make it fine and free from weeds. Corn land is best for alfalfa, since weeds trouble less. Fifteen pounds of seed to the acre is used either broadcast or in the seed attachment of a grain drill. If the land is very dry follow the drill with the roller.

NURSING THE FIRST CROP.

"A nurse crop of barley has been used quite generally as a protection the first summer. The nurse crop aids in keeping down weeds, which may press the tender alfalfa. On the cleanest land the nurse crop is not needed. If the land has never grown clover inoculate with the alfalfa bacteria. Manured land seldom lacks the germs, but a few hundred pounds of soil from an old alfalfa field will do the trick.

"The first season's cutting must be light. After the nurse crop of barley is mowed off, clipping should be delayed until the small buds or shoots appear near the ground, which are the sure sign that the plant can bear to have its main stems severed. To cut alfalfa at any time before these shoots appear is to take great chances of killing it. To wait too long allows these shoots to grow up to be cut off and the plant is again stunted. The spring-sown field may be clipped twice the first season, but never violate this signal of Nature that the plant is ready to replace its top. Let the plants go into the winter with a good strong top growth. Bare alfalfa stubble fares ill in icy periods.

"Like most other plants, alfalfa becomes acclimated to a region and local variations have been developed. The strain grown on rich irrigated lands will not do so well under dry-farming conditions and the plant as developed in the hot Southwest, will not thrive in the Northwest.

"Alfalfa is coming again to its own. Corn, cotton and wheat have in turn occupied the spotlight of the countryman's approval as being the greatest of American crops, but none of these can furnish so distinguished pedigree or such a variety of uses and benefits in the realm of useful plants, as alfalfa. The average countryman has been afraid of alfalfa; afraid to attempt to grow it. So much has been said about its demands for fertile soils, drainage, good preparation for seeding, danger from weeds, inoculation, that he has gotten the impression that it requires a lot of scientific knowledge anh much trouble to get a stand. Far more has been said about the troubles with it than the benefits of its successful culture. Its superior virtues gs a food plant, as an aid in the improvement of soils and as an essential in the rotation on the stockfarm are too important to be neglected long by the American countryman."

The foregoing article on the merits of Alfalfa appeared in a recent issue of the Saturday Evening Post. I am deeply interested in your Alfalfa Boosting Campaign and trust that you will find space to publish this article. I have been successful in establishing a small plot of Alfalfa by strictly following the methods advocated in the Maritime Farmer on several occasions.

ALFALFA.

Cumberland Co., N. S.

A Typical Hereford Steer.

The subject of the above sketch is a typical Hereford Steer, two years and 11 months old weighing 1735 pounds. At one year and 11 months of age he weighed 1400 pounds. He was reserve grand champion at the 1910 Winter Fair and winner of the Sir Frederick Borden Silver Cup for the best animal, any age in the Shorthorn or Hereford classes. Owned by W. W. Black, Amherst, N. S.

Alfalfa For Prince Edward Island.

Editor Maitor Maritime Farmer:—

I have been a subscriber to your paper for several years and I must say that I find many valuable and helpful articles on farming in its columns.

I am much interested in the discussion you have started Re Alfalfa Growing and would like to know what you think of trying to grow it here. Our soil is light, well drained and rich, as we use large quantities of stable and sea manure. Red Clover and Alsike do well here. Would nitro-culture or soil infection be necessary? Could we sow with timothy seed as we do the other clover with wheat or barley as nurse crop? Do you know where Alfalfa seed can be procured? I will let you know next season whether or not I succeed in getting a crop.

DAN G. McCORMACK.

Launching, P. E. I.

From the measure of success that has been secured by a number of Prince Edward Island farmers, in growing Alfalfa, in an experimental way, we would certainly advise that you try to grow it. Knowing the place that alfalfa will fill in the economic agriculture of the Maritime Provinces, we advise that every farmer—not making a single exception—in these provinces try a piece of alfalfa. Confine your energies to a small area at first so that its cultural requirements may be understood.

The soil you mention should be all right if clean and not far from water. Alfalfa does best on well drained land, yet it is a terrific water consumer. The sea manure should supply the abundance of lime needed. Even on rich soil the plant will ultimately die if the proper bacteria are not in the soil. These can be introduced by treating the seed with nitro-culture at the time of sowing or harrowing in some soil from an old alfalfa field or plot at the

WOMEN'S INSTITUTES.

Several articles on the advisability of forming Women's Institutes in the Maritime Provinces have recently been contributed to these columns by "Farmer's Wife," Andover, N.B. We have her assurance that she is going to continue the agitation. She is agitating a live question - one that is receiving the careful consideration and support of the best thinking class of farmers and farmers' wives and daughters in the most progressive agricultural districts of Canada. To many the Women's Institute is a mere term, to others only a vague idea of a women's club, while to those who know its work, and have enjoyed the benefit of its membership, it is a means of uplift and a great educational force. In no place has the institute made greater progress in the rural districts than in Ontario, and to see the organization at its best is to learn of its development in the older places of Ontario.

For many years there had been farmers' clubs, known as the farmers' institutes, the aim of which was to improve farming conditions by discussions on methods in agriculture, and by holding meetings of farmers, addressed by men who were graduates from some college of agriculture. Once a year a general meeting was held at some central place, to which the general public was invited, and to this meeting the wives and daughters of the farmers, who were members of the institute, generally attended. At these meetings there was often a demonstration in buttermaking or some other work that was of interest to women, and the idea was conceived by some of forming women's institutes, the object of which would be the improvement of the homes. It was hoped that such organization of the women of the districts would improve the social life of the community and thus be of social service.

At first the progress was slow, as people in the country are apt to look askance at all women's clubs, but the interest grew steadily, and the work spread more rapidly than its promoters could have dreamed, with most beneficial results. Soon the men, who were at first unfavorably disposed towards the women's institutes, became ardent advocates. They saw that while almost all other clubs for women have the tendency to take her out of the home, this sent her back to it a more intelligent housewife, and a more efficient homemaker. The motto adopted was "For Home and Country," and in brief it defines the aim of the organization. This year the annual meeting was held in Toronto for the first time, as it had been always held at Guelph before. If you were to attend a session of the general meeting you would find over five hundred women representatives from all parts of the province, each with her pencil and notebook earnestly taking notes of all that was being said, in order to be able to go back to her own local club and carry any points that would be of service to others.

As to the work taken up, it is as the motto suggests, whatever concerns the home or is of interest to us as citizens of so glorious a country as ours. This includes the work of a woman as housekeeper, such as methods of household administration, the buying of food or clothing, and the preparation of food, the care of the sick, and all things that serve to make living of a finer quality

From the first this was looked upon favorably by the Government, and as the Department of Agricultural had been helping the farmers' institutes, so from the first they were willing to help the women's institutes, giving a small sum of money each year to each branch to help along the work. In 1907, Mr. C. C. James, the Deputy Minister of Agricultural for Ontario, said: 'It was one of the most healthy signs for the advancement of agriculture when the women's institutes were instituted. . . . It means that they have started a line of work that finds a response in the hon e life of the country. . . . We are at last getting a grip on the agricultural community such as we have not had before. . . . The women of this country can do what the men cannot do, and they can make the men do what they would not otherwise have done. The centre of the farm work of this country is not on the front concession or on the back road; it is not in the stable or in the fields, but it is right in the home where the farmer lives. If we can start within the four walls of that home we will accomplish a great deal more than we have ever been able to do through conventions or dairy schools or anything else. . . . The farmers' institute work grows very well, but the women's institute grows at a tremendous pace. You have no idea of the great social revolution that is taking place in connection with the agricultural life of this country.' . . . Such words as these from a man who is acknowledge as one of the foremost men in agriculture in Canada are worth considering.

A woman on a farm comes closer to her husband's business than the wife of a man in any other business, and the success or failure of the farm depends quite as often upon the farmer's wife as upon the farmer himself.

At first the monthly meetings were made up of discussions of methods of cooking, cleaning, dairying, gardening, and marketing, and many of these subjects are still discussed, and shall be so long as these continue to be of importance in each home. But later the women grew more confident and more capable; and took part in discussions and studied many subjects that were more difficult because more remote from their immediate experience, though bearing directly upon the absorbing work of home making.

Once a year a delegate is sent by the government to each district, and is instructed to visit each branch. Thus each part is kept in touch with the central organization, and there can be no doubt that Ontario has no single force that is doing so much good for the women in the rural districts as the women's institutes. While this organization is not intended exclusively for the rural districts, no more than it is intended that the country should have all the good homes, it can be easily seen that while in the towns and cities there are many things to interest, and many clubs and societies for social improvement, this is the only one outside the church that meets country conditions.

There are no denominational barriers, as people of all nationalities and creeds work side by side most harmoniously, and neighbors who scarcely knew each other by sight have learned to know and esteem the good qualities of each other, and have been willing to share all benefits to be so derived.

Meetings are held each month, usually at the homes of the different members, and since topics discussed belong to the home, it is easy to interest the members, and not difficult to carry on meetings- in some localities where there are few families, such an organization would be a great boon. The Women's Institute ought to be a factor in the rural life of these provinces.

We feel confident that we have many other lady readers besides "Farmer's Wife" who are interested in this question. Let us have your views for publication so that all working together for a common cause we may strenthen the movement as much as possible, and hasten its inauguration in these provinces by the sea.

ASK INTELLIGENT QUESTIONS.

The following timely note appeared in a recent issue of "Farm and Dairy."

"The Farmers' Institutes this year are producing their annual crop of smart fellows. These smat fellows as a general rule are not noted as being the best of farmers in the section nor have they ever proved themselves to be any wiser than other mortals. They do delight, however, in tormenting the speakers with uncalled-for questions and provoking laughter at their expense when in all probability the speaker has forgotten more than they ever knew. Questions asked in the proper spirit are always to be encouraged. Smart Alec men, however, will spoil the best of meetings with their ill-timed interjections."

There are still a few of the class referred to above in the Maritime Provinces but we are glad to say that their number is diminishing. It would do our readers good to see one of this species "taking a back seat" at a Dairymen's meeting in Summerside a year or two ago, when he tackled Prof. R. Robertson of the Nova Scotia Experimental Farm with a taunt in regard to plowing ability. He did not know that Prof. Robertson was one of the best plowmen in Canada, so his Smart Alecism was spent in the wrong direction.

A 1911 RESOLUTION.

On page 253 will be found an article which constitutes a part of an address at Perth, Ontario, by Mr. Chas. F. Whitley, who has charge of Dairy Records for the Department of Agricultural at Ottawa brings out some facts discovered and brought to light by himself, through the work of the Cow Testing Associations, that should convince every man who keeps a cow that he should know whether or not that cow returns a profit and to know that profit. Start the New Year with a resolution that you will be one of those who will get rid of as many poor cows as you own at the very earliest opportunity. Don't be one of those who will keep twice or three times as many cows as your neighbor to obtain less milk This is one of the cases where the old adage "In numbers there is strength" does not apply.

EDITORIAL NOTE.

Now is the time to send for the catalogues issued by various Seed Houses. Send to reputable firms for their seed catalogues, study them carefully and get your supply of seeds early.

* * *

Send us one cash in advance subscriber to The MARITIME FARMER at 80 cents and we will send, post-paid, one pound of Alfalfa Seed, or send two at 80 cents each and we will send you one pound of Alfalfa Seed and a bottle of Nitro Culture.

Maritime Annual Stock Breeders in Annual Session.

The Annual Meeting of the Maritime Stock Breeders' Association was held at the Agricultural College, at Truro, January 10th, 1911, and was well attended.

The keen interest with which the various matters were discussed would indicate that this institution still has work ahead.

One of the foremost subjects brought before the meeting was a Spring Horse Show. Expressions of opinion from the various members clearly indicated that, while our first show showed a balance on the wrong side of the ledger, it was a grand success. All the speakers were very emphatic about continuing it, and very hopeful about the outcome. It was decided to hold the show three instead of two days this year, and the dates chosen were, Tuesday, Wednesday and Thursday, April 4th, 5th and 6th.

The annual report and financial statements were presented, and at view of the fact that they paid out about $355.00 more in prizes, had to purchase two hundred new poultry coops in order to accommodate the tremendous entry of birds, and had a Horse Show defecit to face, their accounts which showed a defecit of nearly $400.00 may be said to be satisfactory.

The election of officers resulted as follows:

Directors for New Brunswick—R. A. Snowball, M. H. Parlee, Bliss M. Fawcett and A. E. Trites.

Directors for P. E. I.—Hon. John Richards, Jas. F. Roper, Gavin Harding and Albert Boswall.

Directors for Nova Scotia—C. A. Archibald, W. W. Black, R. S. Starr and S. A. Logan.

W. W. Black and R. S. Starr were appointed a committee to interview the Nova Scotia government for the purpose of trying to secure a grant for the coming Horse Show. Jas. F. Roper and Alex. R. McKay were appointed to interview the Prince Edward Island government and Col. H. M. Campbell and A. E. Trites were appointed to interview the New Brunswick government with the same object in view.

W. W. Black, R. S. Starr and A. E. Trites were appointed a committee to revise the Horse Show Prize List. 6

At a meeting of the newly elected Board of Directors, held immediately at the close of the annual meeting the following officers were elected:—President, Col. H. M. Campbell; Vice-President, for New Brunswick, Bliss M. Fawcett; Vice-President for Prince Edward Island, Hon. John Richards; Vice-President for Nova Scotia, C. A. Archibald, Secretary-Treasurer, F. L. Fuller.

At a meeting of the Directors the following resolution was moved by W. W. Black and C. A. Archibald and passed.

Resolution: Whereas the pure bred live stock interest in the Maritime Provinces is not in a prosperous condition, owing to the want of a demand for such stock at remunerative prices.

And Whereas; These Islands are lands are in direct communication with Canada through Halifax and St. John.

And Hhereas; These Islands are in need, and require a large amount of pure bred stock, as wellas grades, for which they are willing to pay prices that are far in advance of those obtained here.

And Whereas; The efforts already put forth by the Federal Department of Agriculture have produced good results.

Therefore Resolved: That this the Maritime Stock Breeders' Association respectfully request Hon. Sidney Fisher, Minister of Agriculture, to continue his efforts in the development of this trade.

A public meeting under the auspices of the Maritime Stock Breeders' Association was held in the Assembly Hall of the Agricultural College on Tuesday evening. When the meeting was called to order at 7.30 o'clock by President Campbell, the spacious hall was packed to the doors. @

On rising to introduce the speakers the President gave a short resume of the work of the Association, dwelling particularly on the Horse Show and the last Winter Fair.

W. W. Hubbard, Secretary for Agriculture for New Brunswick was then called and gave a very instructive and inspiring address on the Possibilities of Maritime Agriculture

Prof. Shutt, Dominion Chemist, Ottawa, followed with a carefully prepared and very instructive address on the Value of Stable Manure.

Old Farmers are Generally Set in Their Ideas.

We never could see why the farmer should be so much more reluctant to keep pace with the march of improvement than are the mechanics and other classes in villages, but it seems to be so.For instance, the average farmer's ideas about keeping up the fertility of his soil are very crude, as a rule. It seems to be an easy matter with about nine out of ten farmers to so manage their farms as to constantly reduce their producing power. This state of things has prevailed from the Atlantic States to the Middle West and it is going on still.

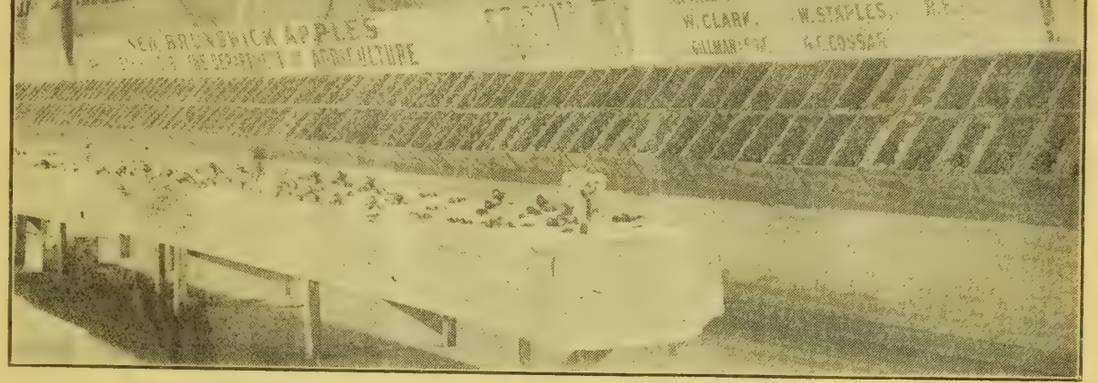
Do you suppose you could have induced the manufacturers of this country to so manage their plants as to destroy their producing power as we have destroyed the producing power of our farms and they do scarcely anything to stop it? No. Now why should we be so hard to convince, so stubborn against needed change, so set in our old and wasteful ways? We know our methods are wasteful, for our farms say so. Even the food consumers have become alarmed at the decline of our farms to produce food as they once did and so we have this talk on conservation.

One trouble in the way is that the farmers have not yet become willing to listen to what agricultural chemistry is telling them. Not one farmer in a hundred ever made a study of the chemistry of the soil. It is all Greek to them. And as one farmer said to us once: "We are all so mightily struck on our owm way of doing things that we don't learn much from others."

But in the meantime the soil is growing poorer. We ought to see farming add fertility to our farms? that. We farmers have made it poor. We ought to see that. Isn't it about time that we came down from our wasteful conceit to art the part of intelligent men? It is not intelligent to keep on wasting our fertility as we have done. We are responsible to the country for the way we handle our farms. The blight of waste is seen on every hand. It is a mighty poor exercise of brains that will allow that. Why is it?

We believe it is because farmers have not been willing to listen to the teachings of science. When the chemist has told them that their land needed lime have they believed him? Not really. They would say, maybe, "Why this is a limestone section." As though long years of tillage could not exhaust the surface lime and the land grow sour.

But it is difficult to get them to break out of the old ruts and do something in a wise way to stop the declining fertility. So they keep on, the great body of them, still disbelieving, still refusing to act. Here and there we may find a single farmer devoting time and a little money to the task of bringing up the productiveaess of his soil. But likely as not he is being laughed at by his neighbors. Can they laugh down the starved soil? Will sneers at book Our old ways have been destructive. Can we not see that?—Hoard's Dairy man.



Boxes of Fruit at the New Brunswick Fruit Show

The Big Fruit show held in St. John, N. B., last November was a clear demonstration of the fact that New Brunswick can grow apples of quality.

The 1910 Fairs in Nova Scotia.

A striking feature of agricultural progress in Nova Scotia is the rapid spread of country fairs. During the months of September and October twelve exhibitions were held throughout the province, exclusive of the Provincial Exhibition at Halifax. The interest aroused by these agricultural gatherings will have far-reaching activity in farming and stock breeding.

The series of exhibitions was bebun by the East Hants and Colchester Fair, which opened on 20th September. The display of live stock at this show was greatly admired. The exhibits included 176 cows, chiefly Guernseys and Holsteins and 100 horses, including high bred stallions and roadsters. A notable feature was the number of first class Clydedale colts. The butter exhibit was of natural rich color, and excellent flavor. Out of a possible 45 points allowed for flavor, not one of the samples was awarded less than 40. There was an extensive showing of fruit and vegetables, while the fruit shown was of large size, of good quality and rich in color. The poultry exhibit comprised 450 entries and was composed entirely of the best breeds.

The Nova Scotia Horticultural Exhibition for 1910 was held in Windsor on 11th October. There was a fine display of fruit, roots, grains, flowers, etc.—in all, 4000 exhibits. The horticulturists throughout the Annapolis Valley may be congratulated on their ability to display not only the large and highly colored fruit, but also such mammoth roots and vegetables. It is now predicted from various sources that in the course of ten years the apple production of the Annapolis Valley will amount to two and a half millions of barrels.

The Cape Breton County Fair opened on 12th October, and was a big sururise to visitors. That county is known as a great industrial centre, but is not so generally recognized as a rich agricultural district. There were in all 1421 exhibits, including 76 horses, 91 cows, 96 sheep and hogs, 38 dairy samples, 217 fowls and 396 roots and vegetables. These exhibits would be distinctly creditable to lands that are glowingly advertised as more highly favored by nature. Owing to the great increase of the industrial population, large quantities of agricultural products are imported into this county every year. The opportunity here for the skilled farmers and market gardeners with a little capital is unsurpassed in Canada.

The fair at Yarmouth, at the extreme west of the Province, was held on 12th October. This show is becoming bigger and better every year. The exhibit of cattle, especially the Guernseys, was particularly good. Among horses the Hackneys drew particular attention.

Successful exhibitions were also held at Shelburne, Digby, Bridgewater, Caledonia, Guysboro and Antigonish. The Bridgewater show for Lunenburg county was a record breaker both in point of attendance and quality of exhibits. The exhibition at Caledonia for Northern Queens was noteworthy for the excellence of the fruit and live stock shown. The various exhibits spoke eloquently of the agricultural possibilities of Queens County, which is rapidly taking a leading place among the best agricultural districts of Nova Scotia.

The little earth worm is a very valuable insect and should be spared whenever it is possible. By burrowing in the earth, the earth worm brings up subsoil and mixes it with top soil; opens the particles and permits air, water and organic matter to enter; and this causes chemical and physical changes that produce plant food.

If you have kept a record of your operations during the year, you can now determine what crops have paid you the best profits. This information will greatly assist you in arranging the rotation for your farm next year.

HORTICULTURE

Varieties of Apples, Plums and Pears for New Brunswick.

What are the best varieties of apples, plums and pears for New Brunswick orchardists to grow? That is a question which I, coming from Nova Scotia and knowing little of your fruit growing capabilities here, cannot answer. I can give you some suggestions and that is as far as I can go. The fact is just this:—The problem can only be solved by actual and careful experiments continued over a series of years and in different communities and localities of the province, because varieties that may be of the greatest value in the best portions of the St. John River Valley may be failures comparatively a few miles further north. You may have the experience of years—I dare say you have—pointing out the fact that you can grow in some localities varieties that are comparative failures a little further off. We find that in the Annapolis Valley certain varieties do better in one section and other varieties in another. Take for instance on the shore of Minas Basin there is a lime soil there, and Ribston Pippin and Blenheim do full better there, having a higher color, better form and texture, than in almost any other place in the valley. I think it is because of the limestone soil there. You have varieties of soil here that will be better adapted for one variety than another.

Now, in selecting varieties for planting, first and most important consider the varieties for home use. A man's first duty is to provide for his family and make them as comfortable and healthy as possible. Can he do anything better than by providing all the necessary fruits that the family use? There is scarcely a place in Nova Scotia or New Brunswick where a man cannot grow more or less fruit necessary for family use. That is the first essential to look after.

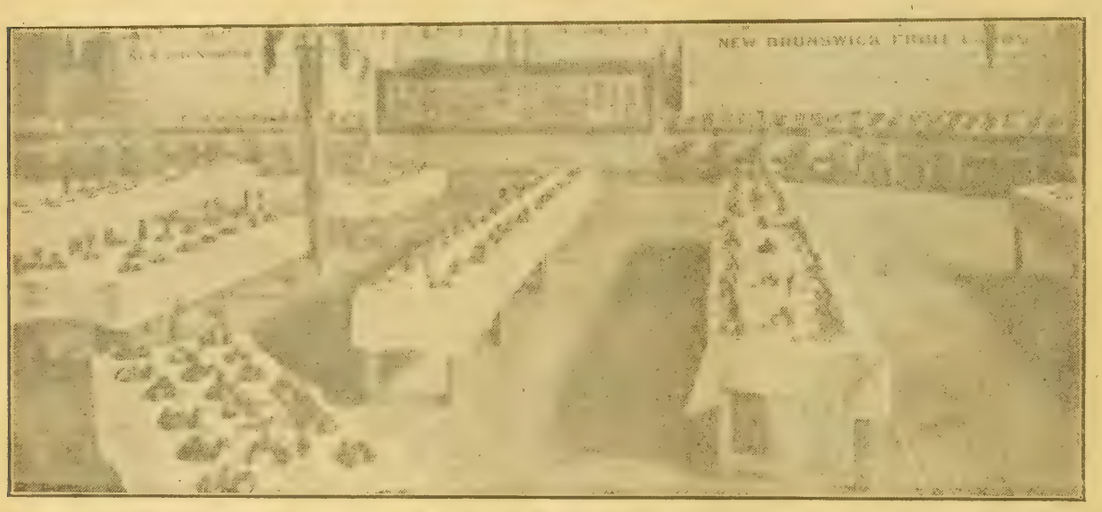
The following list of apples ripen about consecutively, from which a choice can be made—one may suit best in one locality and another in another. One of the earliest and the best of the early apples is an old English variety called the Early Red Merit. It is not of large size simply a medium but very early and a good table apple, usually very hardy. The second you might call Yellow Transparent, ripens early, a good bearer usually, a good cooking apple—that is about all you can say for it. The Red Astrachan is known all over the continent of America an is one of the best early apples. You all know it. The Early Harvest and Sweet Bough are also on my list. These are apples which should be tested and selections made of one or more for the use of the family. Then come Duchess and Gravenstein where it will succeed. I think the Gravenstein ought to succeed very well in the best of your fruit districts—in Kings, Queens and perhaps in Charlotte. The Dudley or North Star, AlexanAder, Ribston Pippin, Blenheim, and Wealthy are on my list. The King is a little bit tender but it is a splendid apple when you can grow it and there are few apples that can grow as well in Nova Scotia to-day. The Hubbard belongs to the rich Pippin family and grows well on light sandy soil. The Baxter, Wagner, Ontario, Yellow, Bellefleur, McIntosh Red and Spy are on my list also. The R. I. Greeoing, some of our growers claim, will do very well. The Baldwin, it seems it is a little too far north for that variety and the R. I. Greening also. We think the Annapolis Valley is about the limit. They do well in the northern part of New Brunswick or in P. E. Island, where they are improving very fast in fruit growing. The Ben Davis you want to sell late in the season—we will not say anything about that. Nonpareil, which is one of our standard apples is not a success on the Island—I do not know whether it would succeed with you. It is really the same apple called Roxbury Russet in the United States. It was imported from England as early as 1780 or earlier and became one of our standard apples. A few years ago there were more Nonpareils grown in the Annapolis Valley for shipment than any other variety, as many as all the rest in fact. I do not know wether it would suit you; it does not seem to do well in the northern part of New Brunswick or P. E. Island.

The President:—It grows very well in our locality. But isn't it a rather shy bearer?

Mr. Starr:—Not with us.

The President:—I think it is with us.

Mr. Starr:—The Newton Winter, which is a seedling, which has done well with us in Nova Scotia, also the Wellington, Cox's Orange Pippin and the Ross, so far as we have tried them, we think very highly of them. The fact is in all of these Maritime Provinces we have to look for new varieties to England and Maritime countries, that we do not originate among ourselves. No use going into the interior of the continent and getting such apples as the Stark, that the nurseries send out to us. The quality is not the same as grown here, it may be in time The best one of that class is the Ben Davis and the next best Gano, but of all other varieties we have tried the general verdict has been—we do not want them—Neither do you. It may be of some interest to know the value placed on some varieties as long ago as '63. At a meeting of the Nova Scotia Fruit Growers' Association after a full discussion a vote was taken each man writing the names of what he considered the sorts for a commercial orchard. With very little variation, the list was as follows: Gravenstein, Ribston, Yellow Bellefleur or Bishop Pippin, Nonpareil, Baldwin, R. I. Greening. In 1880 a list was called for in the same way. In a full meeting the ten best sorts was declared to be Gravenstein, Ribston, Yellow Bellefleur—the Baldwin was put up a little higher, Nonpareil, Spy, King Blenheim, Golden Russet and Fallawater. The Fallawater was then making a good deal of noise in the English market bring 30 to 35s. per barrel. Such varieties as Ribston, Blenheim, King, Baldwin, Nonpareil, and Golden Russet are the best known and are always wanted on that market. These varieties still hold the front rank and are rapidly gaining front rank in Glasgow, Liverpool and London. They are also gaining favor with the orchardist as reliable producers. Many of our best growers said this year, while our orchards were practically a failure, the Ontario variety of trees were loaded to fill capacity with excellent quality showing that it has stood the difficulties of the past sea-



Barrels, Boxes and Plates of New Brunswick grown apples at the big St. John Fruit Show.

Gourlay Pianos

CAN BE DEPENDED UPON AT ALL TIMES

If you possess a GOURLAY Piano there's no need to send for a tuner whenever you expect company, nor apologize for your piano's shortcomings when a friend sits down to play.

The GOURLAY non-varying end-wood pinblock system of construction provides a bearing from the tuning pin right to the iron plate that is non-varying sectional end-wood. Hence the need for tuning even under severe climatic changes is reduced to a minimum, and your certain pleasure in its exceptional tone quality assured.

Write for Booklet 6, which gives the names of 2500 Gourlay Piano Purchasers.

son—that is one of the good qualities we claim for the Ontario.

PEARS.

I have noted some varieties that succeed well in Nova Scotia they do as well in New Brunswick. Among the early ripening ones the best bearer is the Maria. It is a native and I can give you a little bit of its history. It was found growing in the garden of Dr. Curran in Windsor, early last century, and Mr. Prescott, the father of pomology, grafted scions from it in his garden. He thought so much of the variety that he named it Maria, after his wife. In Windsor it is known as the Curran Pear and should have been called that, but it is universally known as the Maria. That I would follow up with Klapp, then Bartlett.

The President:—Can the Maria be obtained in the nursery?

Mr. Starr:—Yes, from Mr. Peck's. It is one of the earliest varieties. We have the Comet and two or three early American varieties, but they are not any earlier or better as a table pear. It is a little liable to black spot and crack, something like Flemish Beuty, but not so badly It requires careful spraying and you will get the very best results. Sutton or Sutton's G. B. is another which is some two weeks later. It grows larger and is much more hardy than the Bartlett. The Ross is another that is doing well with us. Vermont or Vermont Beauty, a small pear of the cycle type, is rather larger and of a high flavor. They are excellent table pears and always in demand.

Mr. S. L. Peters:—We cannot grow the Flemish Beauty.

Mr. Starr:—Follow up spraying well. I understand it is a hardy bearer in Quebec.

Prof. Macoun:—That is so.

Mr. S. L. Peters:—It used to be with us till a few years ago.

Mr. Starr:—It has to be sprayed.—If you want to grow pears grow hardy ones. The old fashioned ones are as good in ripening qualities and otherwise as the ones brought into the country recently. There is the Hardy, a splendid pear; it does well with us and should with you in better places. The Camese is a good bearer; Geo. Barry told me some years ago it was the best bearer he had. The Hall is an American pear that is pretty hardy, it is not a first class pear but is good for market and growth. The Casual is another of the same quality but larger and better in many respects. And then for another bearer there is the Deango. For the more northward districts the Flemish Beauty and Hall will be the most likely to be hardy. They should be careful to spray to prevent blackheart and crack. The list of pears is very large; Downing describes some 2000 varieties. Several years ago George Barry gave me a list of the six of the best in his experience as follows:Camese, Bartlett, Ross, Hartt, Shelding and Dango. Every farmer should have at least three or four pear trees for home use. You must not neglect the home planting of fruit trees.

PLUMS.

The Hybrids Japanese and American are very pleasing to look at but as a rule they have not the quality either for table or preserves when grown in this northern climate. Neither are they as reliable producers as we could wish. The Red June Sheldon and Slender Plume are the most promising. Among the earliest of the prolific varieties are; Sanders, Nectar, Artic, Washington, Imperial Gage, Lombard, Smith, Salome, Golden Prolific, Yellow Egg, Pond's Seedling and among the newer English varieties are American Green Gage and Cox Imperial.

In conclusion I would say. Don't neglect to plant small fruits for home use—strawberries, currants, gooseberries. There is health and satisfaction in their use at home, if you have a sufficient quantity to send to market there is always a demand at good prices. You don't have to go very far from home to sell them. I don't know as I can say anything more except to answer some questions.

The President:—The Red Astrachan grows with us, St. Stephen, to perfection. 30 miles down the river it won't grow fit for anything.

Mr. Starr:—It does well on all parts of P. E. I. I have seen 35 plates on a table there on display.

Mr. Tappan Adney thought more attention should be given to determining the areas of New Brunswick adapted to fruit growing and in which certain varieties are ap to thrive or otherwise. Apples that will do well in one section will not be successful a short distance away, in many cases. More attention should be gipen to a proper naming of varieties.

An address by Mr. R. W. Starr before the N. B. Fruit Growers' Association.

FOR OUR

JANUARY AND FEBRUARY SALE CATALOGUE OF

SPECIAL BARGAINS

Every Article Listed in this Book will certainly appeal to you as being most useful and seasonable, while the illustrations, descriptions, and prices are proof positive that every item is an exceptional value placed within your reach through the enormous manufacturing, and cash-buying facilities, of Canada's Great Mail Order House.

TWO MONTHS OF SPECIAL SELLING

During January and February we are offering special values from every department—values which we have secured specially for this Great Sale. Whether you are needing them at present or not, you should, nevertheless, secure a good supply now, as every price is decidedly in your favor. This is an event which is looked forward to by thousands of Canada's shrewdest buyers. If you have never taken advantage of it in the past—do so now.

The Prompt Delivery of Goods which characterizes the **EATON** Mail Order Service is one of the many leading features of this Big Store. Most goods are shipped on the same day that we receive your order, there being no unnecessary delay whatever.

You are Absolutely Protected when you send your order to **EATON'S,** as our liberal guarantee allows you to return any article with which you are not thoroughly satisfied in every respect. In fact we ask you to return any such article, as we are perfectly willing to exchange it for you, or refund your money in full and pay all transportation charges. When you buy from **EATON'S,** remember that your money is not ours unless you are pleased with every phase of the transaction.

DAIRYING.

C. W. McDougall, Dairy Inspector, staff Contributor.

Feeding for Milk Formations.

Milk is formed in the milk glands of the udder, from the breaking down of the milk cells. Thus, in the ash of milk we find lime and phosphate derived from this tissue, and since milk is a direct product of the cells, it becomes the highest form of food in the nourishment of the young. Again, if we examine "colostrum" (the name given to the first milk after the birth of the calf) it is easy to find whole cells which later disappear.

The cells from which milk is derived were composed of albumen, whilAe the casein, so largely present in milk, is the result of the decomposition of cells. The milk glands absorb their nourishment from the blood, and the quantity and quality of milk depends entirely on the size of the milk gland. This fact must not be confounded with the mere size of the udder, it is the rapid breaking up of the cells, not mere size, that produces milk.

As will be seen from this short analysis the diet is only a secondary consideration in milk production, but yet the manner of feeding has an effect on the quantity of milk. There must be a good supply of albumen for the production of gland-cells.

The albuminoid— (protein) ration— the proportion between digestible albuminoids and carbohydrates— must always be kept at a high level. If it be too low, the secretion of milk will be arrested by the necessity of storing up flesh or fat; if too high, a considerable portion of the albumen will become decomposed and unfit for milk production.

The diet of a milch cows should be especially rich in nitrogen. Therefore, hay alone would never do, but must be supplemented with bean or other nitrogenous meal. The importance of this rule is often overlooked, owing to the fact that deep milking cows will keep up their yield for a long period even on foods that are poor in nitrogen. Such a yield, however, is accomplished at the expense of their condition and the cow loses flesh.

This should never be permitted, as it eventually tells on the quality of the milk, and some time is required to get the cow back into condition again.—Modern Dairy Farming.

An interesting conformation of the last part of the abov? statement is found in Professor Haecker's experiments at the Minnesota station. He fed 14 cows for a year, seven on a narrow ration, one of protein to five of carbo-hydrates, and the other seven on a wide ration—about one to nine, if we remember correctly. The cows on the wide ration gave about as much milk and milk solids as did those on the narrow ration for the time specified, but they broke down badly afterwards and never recovered.

There is one other consideration to be taken into account; the work of the dairy cow and the office of the feed she consumes is not alone for the production of milk. At the same time she is usually carrying a calf, and the making of another life calls for the consumption of an additional amount of protein. Now, when this double draft comes and the supply of protein is insufficient, in other words the ration is too wide, there must ensue a serious strain upon the vitality of the mother.

There is good reason behind the counsel to feed the dairy cow a well balanced ration.—Hoard's Dairyman.

Cost of Keeping A Cow.

The Office of Farm Management has during the last four years, been getting careful records from a large number of farms, and we find that the average cost of keeping a cow, in addition to the feed is about $45 a year. This includes labor, interest and depreciation on the oecessary barn room, dairy equipment, and interest and depreciation on the cow. If we credit the cow $10 for manure and $5 per calf annually, this leaves a net charge of $30 per cow, over and above the feed, or for five cows $105. This addition to $608 for the grain bill gives $758, which must be deducted from the gross income of $1,071, leaving $313 as the net income from 17 cows as compared with $756 from 12 cows. Do these figures not show us what is the matter with dairy farming in the east, and that change in the type of management is absolutely essential.

Some one may object that the class of cows assumed is not representative.

While I believe that the figures above are substantially correct for dairy sections generally, it is true that with better cows the figures are different. But let us see what the comparative figures are for a herd of cows giving an average of 300 pounds of butter each per year. These cows must be fed a little more than ordinary cows, and under the conditions assumed above the farmer can keep 11 such cows, raising everything. His income is now $90 per cow, the gross income from '11 cows being $900. By using all his concentrates the same farmer could keep 17 cows as above, the gross income being $1,530, but he must buy nearly 25 tons of grain and stand the extra cost of keeping six cows. After deducting the cost of the grain cows, we have left $550, as compared and $30 per head for the extra six witg $900 from 11 cows where the grain is raised.

Even if we adopt the most intensive type of farming, where the cows are fed soiling crops or silage during the summer and the valuable land is not used for pasture, the farm we have been considering can keep 17 cows, raising all their feed. Assuming the annual income for a cow to be $90, this gives a gross income of $1,530. Under the same system, by buying all concentrated feed used on the farm the famer could keep 35 cows, the gross income being $3,150. But in this case the grain bill is $1,592, and the extra cost of keeping 18 cows is $540, a total of $2,132, which deducted from the gross income leaves $1,018 from 35 cows, as compared with $1,530 from 17 cows. It seems perfectly clear, therefore, that under present conditions the dairy farmer who buys his concentrated feeds, unless his cows are bringing him a very large income per head, is playing a losing game.—W. A. Spillman, U. S. Department of Agriculture.

Mature Cows Best.

The production of milk and butter fat by dairy cows under normal conditions increases with each year up to the fifth and sixth year, when the cow is at her best. The length of time she will maintain her maximum production depends on her constitutional strength and the care with which she is fed and handled, says a bulletin from the Wisconsin Experiment Station. A good dairy cow should not show any marked falling off until after 10 years of age; many excellent records have been made by cows older than this. The quality of the milk produced by heifers is somewhat better than that of older cows, for we find a decrease of one to two-tenth of one per cent in the average fat content for each year till

219 Robert St. Toronto, Ont. Late of Picton, Ont.

the cows have reached the full age. It is caused by the increase in the weight of the cows with advancing age; at any rate there appears to be a parallelism between the two sets of figures for the same cows.

Young animals use a portion of their food for the formation of body tissue and it is to be expected, therefore, that heifers will require a larger portion of nutrients for the production of a unit of milk or butterfat than do older cows. After a certain age has been reached, on the average seven years of age, the food required for the production of a unit of milk or butterfat again increases both as regards dry matter and the digestible components of the food. A good milch cow of exceptional strength kept under favorable conditions, whose digestive system has not been impaired by overfeeding or crowding for high records, should continue to be a profitable producer till her 12th year, although the economy of her production is apt to be somewhat reduced before this age is reached.

Separator Cleanliness.

The care of the separator is one of the duties that often falls to the lot of the farmer's wife. However tired she may be the separator must be cleaned and aired. One woman who was especially careful to keep it clean, decided to try whether one thorough cleaning a day was enough, and so she tried at night merely running water through after the milk was separated. When she churned afterward she had inferior butter that lost her something when it was marketed. Perhaps here more than elsewhere absolute cleanliness is necessary. Milk deteriorates quicker than anything else about the farm, and scrupulous care is necessary in handling it. Put the parts of the separator in the sun but put them up high where cats and dogs can't rub against them and cover them with mosquito netting so the flies won't walk over them. Keep the brush for cleaning the pipes sweet and clean. Never use the cloth used for general dish washing. It pays for you family's sake and it may add a few cents to the market price of your butter.

Good October Yields.

During these days of late fall when the cheese factories are closing and there is not much doing in some creameries, there are a good many cows whose production is well worth noting. If records of milk and fat are to be of value to the dairy farmer, assisting him to determine which cows to keep and which to beef, particular pains should be taken to include the yields of the early and late months of lactation. Four or five weeks yields may make considerable difference in totals that are apt to be considered complete when the factory closes. Don't be misled as to the value of a cow by incomplete records. It would be well to use every endeavor to prolong the milking period into the season when prices for butter are advancing.

The contrasts below show that some men are doing this.

LIVE STOCK

The Sheep Industry.

The impression is evidently gaining ground amongst the breeders of pure bred sheep in Canada that the only prospect of securing for themselves a steady annual market for their surplus stock lies in the direction of the encouragement and development of sheep raising, as a business in our own country. A year ago they were confronted with quarantine restrictions imposed by the United States, which created conditions for which they were not prepared and which, in the end, depressed sales in a marked degree. During the greater part of the past season the market has no doubt been a buoyant one, but latterly the feeling of confidence in a continuous demand for Canadian sheep in the United States has steadily declined. The recent sheep sales at the International were none too satisfactory for Canadian breeders, and it was evident that the outlook for a steady or increased trade was not particularly encouraging.

It may seem most natural that Canada should be able to obtain a firm and advantageous foothold in the markets of the United States for her sheep and wool, but it is now quite clear that, until the trade policies of the two countries become more firmly established, the Canadian sheep industry, when depending so largely on the United States for its export market, rests upon a very unstable foundation. Fortunately, however, other and very encouraging outlets are available. It may be noted at this point that the home market is not unworthy of consideration. This year not more than five carloads of lambs were shipped to East Buffalo from Ontario, while in 1907 almost 1000 carloads went to that city. The Toronto and Montreal markets have absorbed practically the whole output during the past season and at prices equivalent to that paid for similar grades in Chicago and Buffalo, a fact in itself indicating the strong and growing demand for mutton on the Canadian market.

Notwithstanding the proximity of the United States, the safest outlet for the Canadian product is still to be foundin the British and, possibly at an early date, in the European markets. The English wool market is the centre of distribution for the product of the great wool producing countries of the world, including Australia, New Zealand and the Argentine. If the sheep industry in this country can ever be developed to reasonable proportions, it is not to be expected that any more natural or reliable market can be found for surplus Canadian wools. In addition to this, when the extent of the industry may make possibly the necessary grading and sorting of the produrt, such that it may be placed upon the British market in attractive condition, the prices realized may be found much more remunerative than those at present obtained.

It is also clear that the great and natural outlet for our surplus meat products, including those of mutton and lamb, is to be found across the sea, there the producing power of the land is unable to yield sufficient for the necessities of the crowded populations of long inhabited countries. Great Britain has hitherto absorbed all the surplus of the world's meat supply, but it seems probable that she is shortly to have competitors in the market for foreign meats. There is a movement in Australia an Germany which will eventually result in the opening up of these countries to a chilled and frozen meat trade. A steady market is without doubt thus assured for all the mutton that Canada can produce.

The breeders of pure bred sheep, therefore, if our argument holds, would do well to direct their best energies to the development of the sheep industry in our own country. As a matter of fact, a strong local demand is the safest market in the long run. A material increase in the sheep population of the country would create a thoroughly healthy home market for breeding sheep and one much to be desired. The opportunities in this direction may well be worthy of somewhat careful consideration.

It is fortunate that, at this time, the Federal Government is interesting itself in sheep industry in the Dominion and is making a thorough investigation, with a view to the adoption later of a policy which may lead to its general encouragement and development. There is reason to believe that sheep raising in Canada may become at no distant date a decidedly profitable industry, and the Minister of Agriculture has undertaken a measure which we may expect to be productive of much good result. We learn that the members of the investigating commission having completed their researches in the United Kingdom, are to spend the next few months in studying conditions in the Dominion and are now engaged in interviewing a number of the prominent sheep breeders of Ontario. We are hopeful that they may meet with the full co-operation of sheep raisers and farmers generally in the prosecution of their work.

Why do Buyers Shun the Aged Bull?

Anyone who has attended sales of dairy stock can not fail to be impressed with the attitude of the average buyer towards the aged bull. It is a little difficult to understand just what is responsible for this state of affairs, says Kimball's Dairy Farmer. At a sale of Jersey cattle a bull that had proven himself a getter of high-producing daughters went for $90. At a Guernsey sale another aged bull whose pedigree should recommend him to any breeder went for $70. This bull, would have been worth many times this price upon an ordinary herd of grade Shorthorn cows. He has been kept by one breeder long enough to show the quality of daughters that he is able to produce. If one has even one or two purebred females he could not find a better bargain than a bull of this kind. At another sale of Holstein cattle a Paul Beets bull sold for $90. At a recent Waukesha sale the ofttimes winner, Golden Ben, who has headed Fox Brothers' show herd for several years went for $155. That this bull has show ring qualities is testified to by the fact that he won first and senior championship in 1908 in Wisconsin, first and senior championship in 1909 in Wisconsin, Minnesota, second at the Alaska-Yukon-Pacific, and the Iowa State fair, and third at the National Dairy Show. He was shown with exceptional success at the Iowa, Minnesota, Wisconsin, Michigan and Illinois fairs and the National Dairy show this year. Yet when he was led into the show ring the auctioneer was forced to beg for sometime before the paltry bid of $155 was secured. At every one of these sales bull calves were selling all around the aged sires for several times these prices. Why is it? Why are breeders so short-sighted that they will pass up a tried and true proposition and gamble upon bull calves whose only promise of value lies in the records of their progenitors? Why is it that a man will pay more for an uncertainty simply because it is a calf than for an aged bull that has daughters and some granddaughters that will bear eloquenwt testimony to his breeding powers and the class of stock that can be put in the herd by the use of this sire? Possibly the young and inexperienced breeder feels like side-stepping the responsibility of having an aged bull upon his farm. His temper is always more oe less an uncertain quantity especially if he is of special value as a breeder. It is true that the utmost precaution must always be taken to protect the men upon the farm those who take care of the bulls and casual visitors from his easily excited wrath.

On the other hand, even the farmer who has nothing but ordinary Shorthorn cows would be justified in the building of a pen and a small stable where the aged bull can be kept with perfect safety to all concerned in order to have at the head of his herd a sire of such quality. Some of the best bargains that have ever been led out of a show ring are the aged bulls. Until people get over the notion that a bull must be sold to the butcher as soon as he begins to paw the dirt and show a few signs of his vigorous disposition the quality of the cows upon the average farm will not be materially improved. Every bull must be treated with respect whether he is cross or good-natured, young or old. His disposition is often about as uncertain as a stick of dynamite, but do not see farmers buying paper caps to blast rocks and clear stumps simply because they are safer than dynamite.

Cross-Breds vs. Pure Breds.

Everyone who is engaged in gereral farming ought to be interested in the production of pork on account of the high prices prevailing. There is every probability of these figures being maintained for some time. The number of hogs now in the hands of the farmers is said to be much smaller than eighteen months ago, many having been tempted to sell off their stock hogs.

One of the first questions asked by the farmer going heavily into hog-raising is: "Shall it be cross-breds or pure-brede?" A great deal has been said by the agricultural press against the crossing of breeds. For some years the writer raised cross-breds and for many years raised registered Berkshires, so he claims to be in a position to compare relative results.

If you go into the business of raising pure-bred hogs in these days of competition you must get stock with long and noted pedigrees, and with a certain conformation of body and color markings; these cost a great deal more than the average farmer can afford to pay. But the buying and raising is the easiest part; the tug of war comes when you offer your hogs for sale. You have to spend a large amount in advertising and keep everlastingly at it until you get a reputation, when you can cut the "ad" account to some extent. Most buyers do not come to your farm to see your stock, but write, asking descriptions, etc., and end by requesting that you ship the hogs to them "on approval." If the animal strikes their fancy, they keep him; if not, they send the hog back at the owner's expense.

Now, take the other side of the case. In buying purebred hogs to cross it is only necessary to get large young sows, not too ragged in conformation, but with no requirements as to points. They must, however be purebred. These can be bought for less than half price from almost any reputable breeder, as there are always pigs in every litter whose only defect is markings. Be

SHE HAD CONSUMPTION.

Dr. Wood's Norway Pine Syrup Cured Her.

Weighed 135 Pounds— Now Weighs 172.

Mrs. Charles McDermott, Bathurst, N.B., writes:—"I thought I would write and let you know the benefit I have received through the use of Dr. Wood's Norway Pine Syrup. Three years ago I had consumption. I had three doctors attending me and they were very much alarmed about my condition. I was so weak and miserable I could not do my housework. While looking through your B.B.B. almanac I saw that Dr. Wood's Norway Pine Syrup was good for weak lungs, so I got a bottle at the drug store, and after taking ten bottles I was completely cured. At that time I weighed 135 pounds and now weigh 172, a gain of 37 pounds in three years. I now keep it in the house all the time and would not be without it for anything, as I owe my life to it."

Dr. Wood's Norway Pine Syrup contains the lung healing virtues of the Norway pine tree, which, combined with other absorbent, expectorant and soothing medicines, makes it without a doubt the best remedy for coughs, colds, bronchitis and all throat and lung troubles.

WM. EWING & CO., Seedsmen
McGILL STREET, MONTREAL.

11

careful to see that he is not related to any of the sows.

It has been my experience that if you mate a Berkshire boar to a Poland-China sow or any of the pure-bred sows the pigs of this union will grow faster and are much larger when six months old than pigs the same age by parents of the same breed. But if the cross is repeated the same results do not follow; it seems the offspring of cross-breds commence to degenerate. As a rule a sow will produce thrifty pigs until she is eight years old and the male will retain his vigor equally long. When your sows are six years old serve to some pedigreed boar of the same breed and keep the best of the pigs to replenish your stock when their old age compels you to sell your sows to the butcher.

I made more money on my registered Berkshires than on my cross-breds, because I could only get three and a half cents per pound gross for the latter. If I could have gotten the prices now ruling for pork, the cross-breds would have come out ahead. Where anyone has plots sown in alfalfa, clover and rape, respectively, grazing them in the order named—the cost of raising pork today won't exceed more than four cents per pound gross, under our own conditions. Of course you have to feed a little corn all the time and a good deal in finishing off.

Altogether I think it much more satisfactory to raise hogs to sell as pork than to sell as breeding stock, because you always have a good pork market at your command—T. F.

Beef Cattle Industry

Every student of agricultural progress must realize that the time has come when in our farming operations the live stock industry must assert its rightful position of being the very right arm of a successful agriculture," said Mrs. Thomas McMillan, of Seaforth, in opening the address on the "Beef Cattle Industry of Ontario." The average quality and condition of beef cattle sent to market, he said, are not so good as they were in former years. In Ontario, he said, there are four beefing breeds handled for the purpose of beef production the Shorthorn, Hereford, Polled Angus and Galloway breeds.

The first reason for the lack of satisfactory progress in the beefing industry must be laid at the door of the Shorthorn breeders. For years, in their desire to supply the West with breeding males, they had forgotten that the Shorthorn was a milking animal, and the milking proclivities fell off.

Agricultural preachers, he continued, had gone all over the province and told farmers it was impossible to get a cow with both milking and beefing qualities. This was not a fact, as Mr. McMillan said he could prove. Good milking cows were the breeders of good feeding animals.

The positive indifference of too many of the beef-growing farmers also was to blame for the lack of progress of the industry. In too many instances cattle are not half fed nor cared for.

The duty of beef growers, he said, was to produce beef which the consumers desired. Market prices always were good for good meat, and Mr. McMillan said he hoped that in the near future Canadians would have free access to the United States markets. "If we do get into that market," he declared, "it will do more for the beef cattle industry of Ontario than all the Government enactments of a generation. It will give us a steady market at fair prices, all the year round. We will not then be, as we are now, practically shut out of the British market for six months of the year. It will be a welcome change which will help our business."

"If you are going to grow beef cattle," said Col. McRae, "grow it, and if you are going to dairy, dairy, but don't try to do both." He claimed that the dairy industry was responsible for the falling off of the beef industry. The Ontario Government, he said, had done a great deal for the dairy industry, but had done nothing for the beef industry. Through the carelessness of the Dominion Government Canada had lost the British market. He admitted, in answer to a question, that a cow would have to give milk in order to breed good calves.

"That knocks his argument on the head," said Mr. McMillan.

The Famous "Prairie State" Incubator

is now "Made in Canada" by Gunn, Langlois & Co., Limited

As the largest egg and poultry house in Canada, we have been trying for years to interest Canadians in **"More and better eggs and poultry".** The demand for poultry products is growing fast—prices are high—but the supply is not increasing. Why?

Chiefly because, as a thorough investigation shows, Canadian farmers lack the facilities for producing eggs and poultry on a really profitable scale.

To be able to market eggs and poultry in the "off seasons", when highest prices prevail, you must be able to hatch **as many healthy chicks as you want, when you want them,** and to do this you must have a **thoroughly reliable incubator.** We found no incubator made here capable of meeting this demand.

We decided, therefore as the first step in helping to make Canada's poultry production what it ought to be, to find, or if necessary invent, an incubator that would make good every time—to **manufacture it in Canada**—and to sell it at the lowest possible price.

A searching and unbiased investigation of every incubator on the market convinced us that the **"Prairie State" is the only incubator** whose principle is correct—whose workmanship is honest throughout—whose results have been proven, thousands of times, by experts and novices, under favorable and unfavorable conditions, invariably better than any other incubator can produce.

We found **more "Prairie State" incubators in use among really successful Canadian poultrymen than all other makes combined.** The "Prairie State" has received **326 awards for efficiency** in competition with the best of the other incubators in America, and for **more than a quarter of a century** its popularity has been steadily growing among poultrymen who know.

These facts satisfied us that the "Prairie State" is the incubator Canadian poultry raisers need—the incubator which we could safely endorse, make and sell. So we have made arrangements to manufacture the "Prairie State" in Canada, in our new factory at Ste. Therese, Quebec—the finest wood-working factory in the Dominion.

Our reputation for nearly 40 years of square dealing is behind our positive claim that the "Prairie State" is the best incubator on the market to-day, bar none. It hatches more strong, healthy chicks than any other incubator because—

1. It gives the correct natural heat at both top and bottom of **every egg** *in every part of the tray, regulated to a fraction of a degree.*

2. Its sand tray, beneath the egg tray, give an absolutely even and easily regulated supply of moisture to **every egg.**

3. It gives a steady, even supply of pure, fresh air, free from any trace of lamp fumes, with no draft on the eggs.

4. It works satisfactorily under practically any and all conditions.

Let us repeat that every incubator we manufacture is honestly made throughout. The machine we send **you** will be the same in every detail as the "Prairie State" incubators which have won prizes at every important Exhibition, and which hatch the great majority of chicks raised at every Agricultural College in Canada.

For fuller particulars read our advertisements which will appear in later issues of this paper, or better still, **write now for our Catalogue.** It's full of reliable, practical information for everyone interested in poultry and contains the results of **actual tests** made by poultry raisers throughout Canada and the United States. Just fill in the coupon and mail it—the Catalogue will be sent you promptly—**free.**

THE HORSE.

His Master's Voice.

Because a horse is disposed to lose his head and get panicky under certain conditions, he has been called a fool by some people who ought to know better. In this respect he differs from mankind in degree only, if at all. The spectacle of a panic-stricken crowd of people caught in a burning building furnishes a striking example of how the intelligent, thinking creatures may be impelled to commit foolish and insane acts when terror has usurped the throne of reason. Still, we don't call men fools because they occasionally fly off at a tangent under the stress of unusual momentary excitement. Except in rare cases of confirmed traits of meanness in a horse, accidents due to runaways might be avoided if the horse's master used a little judgment in handling his horse, especially if the horse has full confidence in the authority and good-will of his master. Doubtless good and bad dispositions in horses are modified to a certain degree by inheritance, but it is the observation of horsemen that environment—breaking, training and handling—are largely responsible for the making or marring of a horse's disposition. And in this respect he differs little from mankind. It is, we believe, an accepted fact among criminologists that criminal tendencies are inherited, and that an antidote for it is to take the child who is a victim of criminal inheritence, place him in a wholesome, moral atmosphere and to teach him to distinguish between right and wrong acts, and to realize the consequences that come to himself and to others as a result of his acts.

KENDALL'S SPAVIN CURE

is the remedy you can depend on. No other preparation has done so much for the horse and the horseman.

Kendall's Spavin Cure has saved **millions of dollars** for thousands of owners during the past 40 years. It is the quick, sure, safe cure that never fails to give the best results even when all other treatment may prove a failure.

KENDALL'S SPAVIN CURE

cures Spavin, Curb, Splint, Ringbone, Swellings, Bony Growth, Cuts, Sprains, Bruises and all Lameness.

Kendall's Spavin Cure makes a **complete and lasting cure** because it cures the **cause** of the trouble.

It leave no scars or white **hairs** because **it does not blister.**

Every Medicine Shelf

should have a bottle of Kendall's Spavin Cure — the best liniment in the world for man and beast. No telling when you will need it. Get it now and you will have the right remedy when the emergency arises.

$1 a bottle — 6 for $5. At all dealers. Ask for free copy of our book "A Treatise On The Horse"—or write us.

Dr. B. J. KENDALL CO.
Enosburg Falls, Vt. 50

The following item clipped from the "Western Horseman," and which we have no reason to doubt is authentic in all particulars, illustrates the possibilities of training and educating a horse when proper methods are used:

When George Sampson a horse buyer of Gaston, Ind., stepped out of a laundry in Muncie, prepared to go uptown, where he had left his horse and buggy, he looked up the street and saw a horse running at a breakneck pace down the street, and pedestrians and vehicles running to cover in all directions. When Sampson saw that it was his own horse. Stepping into the street, he shouted to the animal:

"Whoa, Frank, come here!"

The horse stopped short in its wild flight, turned around and meekly walked up to its master and rubbed its nose against him. Sampson caressed the animal and talked to it like a child.

Then, learning that a traction car had caused the animal's fright, "Sampson called to the horse to "come on," and the animal obediently followed him up to the car and walked all around it. Satisfying itself that the car was harmless, Frank, gave a loud neigh and was as tame as a kitten.

"The horse is part of my family, and he believes everything I tell him," was Sampson's explanation to the group of men who had seen the remarkable performance.

Feeding Broken Winded Horses.

For running horses, green food cannot be used. It makes the animal soft, but it may be fed to advantage to winded horses of slow draft. When that is done, it should be given in a fresh, succulent state; rye, vetches, etc., being fed before the seed begins to ripen, else it loses its digestive qualities, and a few roots or carrots with dry grain make a good winter feed.

In fact the principle to be recognised is to feed little and often, to avoid long fasts, and if it is necessary to work immediately after feeding, to go easily at first. Watering, too, should be attended to as well as the food, and long drinks when the horse is thirsty, avoided.

It is a good plan to keep a bucket of water in a corner of the manger, so that it can be taken when desired, if dry food is given, and in this way seldom will excess be indulged in.

When succulent green food is given of course there is not the same need for water. A little tar in the water may be found beneficial, and the animals soon begin to take it readily. A ball made of tar and tallow is greatly favored for broken-wind, if there is any sign of distress.

Cool, well ventilated stalls or boxes are of the utmost importance, as the animal should have as much pure air as possible.. Where the air is viciated by the emanations of excretions and the breathing of companions and the oxygen largely used up, the disease is liable to be aggrevated, and the affected animals should be regularly exercised.

Long spells of rest in the stable, followed by excessive spells of work only serves to aggravate the complaint. Good "hard" condition is wanted, and this can only be had with frequent exercise, or, when the horse is idle, a free run in the field.

Above all constipation should be avoided and the digestive organs carefully watched. A simule laxative like linseed oil may be used if necessary, but an occasional linseed or bran mash will fulfill the same purpose; but linseed mashes given to frequently are liable to make the animal to soft and induce excessive sweating. Such precautions may not cure, but they greatly reduce the original cause of the ailment and modify the trouble.

Ordinarily, medicines are not of much use, but when there is distress from excessive work an overloaded stomach, constipation, a hot stable, or close, muggy weather a sedative may be given as a temporary relief.

Gombault's Caustic Balsam

The Worlds Greatest and Surest Veterinary Remedy

HAS IMITATORS BUT No COMPETITORS!

SAFE, SPEEDY AND POSITIVE.

Supersedes All Cautery or Firing. Invaluable as a CURE for

Working Two Year Olds.

There are many men who work their two-year-old carting colts in April and May—working them half-days in busy time. Personally, I see not the slightest harm in such a plan. I have adopted it myself and never had any occasion to regret it. Indeed, I think that a forward two-year-old works easier to himself than a three-year-old does; but that may be a matter of opinion. But if you intend to work your two-year-olds you must be very geoerous to them during the winter months. Give them good food and plenty of it, and have them in good, not to say high condition when they are put into breaking bridles. Breaking a horse in takes a lot of steel out of him, and if he is at all below par when a start is made with him it is a sorry animal indeed that comes out of the breaking bridles to take up his work on the farm. It should be borne in mind that a horse's spirit is easily broken, and that when a horse's spirit is once broken he has lost much of his value. He should be taught to take delight in his work and he will do so if not heavily put to it, and if well fed and consequently light hearted. And it should not be forgotten that a horse's condition must be put on gradually; you cannot make a horse fat in a week. Regular feeding on nutritious food, in quantities which accord with the work he has to do—and growing is as hard work as a fairly used horse ever has—ensure condition, which, if once obtained, should never be lost by negligence.

But though I see no harm in working horses gently at two years old, I am by no means an advocate of breeding from mares at that age. During the last show season I have seen some three-year-old mares with foals at foot, and I was sorry to see them. It does not matter what is the breed. A man had better work his mares—even to work them hard rather than breed from them before they come to maturity. There are many who hold a different opinion no doubt, but if they will think the matter over carefully they will see that both dam and offspring must suffer and not a little from early breeding. In more than one case I have seen a good three-year-old mare shown in a brood mare class and make a mark, but I have always thought "there is a good brood mare spoilt." It does them no harm, is the dictum of men who adopt this policy, which, being interpreted, means that they continue to breed saleable animals. But what would they have breed if they had had a chance, and how would they have developed if they had their growth stunted by being bred from at an immature age? I am convinced that there is no greater mistake than early breeding and a mare should never have a foal till she is four year old, however, well grown she may be.

MARK LANE.

POULTRY.

Shipping Poultry.

To get the highest price for poultry, shippers should exercise care in seeing that all fowls are properly fattened before they are shipped. Thin, poor stock, means a loss for everyone, as there is no demand for that kind of fowls and in order to get rid of them commission merchants are compelled to sell at prices away below the market and this weakens the market for fancy, fat fowls.

There is no time when shippers should give the packing and shipping of poultry mire care than just before Thanksgiving and Christmas, for then the supply as a rule is large and the fancy stock will sell first and invariably thin poor stock is sold last, for much lower prices.

In packing in a barrel or box where more than one kind of poultry is put in the same box be sure to put a slip on top with the number of each kind the barrel or box contains. This may insure larger returns, as many times when a commission merchant receives a barrel of poultry the top is torn off and if is packed with chicken on top it is taken for granted that it is all chicken, unless there is a slip to tell what the barrel contains.

Shippers should see that coops are in good conditian before using, so that they are not liable to come apart while in transit, as they are roughly handled sometimes. The coop should also be high enough to allow poultry shipped room enough to stand up. Low coops should not be used, it not alone being cruel, but a great deal of poultry is lost every year by suffocation. For turkeys, higher coops than for chickens should be used.

Coops may be loaded heavier in cold than in hot weather. Do not overcrowd the coops. Coops often arrive with a good deal of dead stock. Do not blame the commission merchant for heavy shrinkage of poultry smothered in transit through carelessness in overcrowding the coops.

Keep different stock separate as much as possible. If a shipper has sufficient stock to fill coops it is best to ship the hens, spring chickens, roosters, turkeys, ducks and geese separately. Of course, if a shipper has not enough stock of each kind to fill a coop separately, mixed coops can be sent.

Spring chickens weighing less than one pound should not be shipped, as they become a drug on the market.

In the first place, keep eighteen hours without food before killing. To dress chickens, kill by bleeding in the mouth or open the veins of the neck. Leave the head and feet on and do not remove the intestines.For scalding chickens the water should be as near the boiling point as possible. Be careful not to tear or remove the outside skin, as it spoils the sale. To dry pick chickens properly the work should be done while the chickens are bleeding; do not wait and let the bodies get cold. Before packing and shipping, poultry should be thoroughly dry and cold; but not frozen. Always see that the animal heat is entirely out of the body. Appearances add to the sale, and of course, the price.

Poultry should be shipped so as to arrive on the market from Tuesday to Friday. Receipts generally increase toward the end of the week and there is enough carried-over stock on hand Saturday to supply the demand. Merchants, rather than carry stock over Sunday, would sell at a sacrifice, as the stock, when in coops, loses coasiderable in weight by shrinkage, and does not appear fresh and bright. Besides, Monday is usually a poor day to sell poultry.

Tags with the name of the commission merchant and the shipper should be tacked on the end of the coop. Tack two tags, one on each end, so that if one gets destroyed the other is likely to remain all right Never tack the tag on the tops of the coops. Be sure and write your name and address on the tag.—Twin City Bulletin.

HORSEMEN ATTENTION!

Dr. J. Woodbury's Horse Liniment and Dr. J. Woodbury's Condition Powders will save and preserve the life of your horses. They cure Cough, Cold, Distemper, Colic, Glanders, Spavin, Pink eye and all diseases of the Horse.

TRURO, N. S.

Dear Sirs,—One of my horses had a bad cough, and I made a complete cure with three bottles of Dr. J. Woodbury's Horse liniment. The cough was of twelve months standing. In my large expeience with horses, I consider this liniment to be the best made for all diseases of the horse, and I recommend it to my friends.

E. J. ANDERSON.

BEAR RIVER, N. S.

DEAR SIRS,—

We do not hesitate in recommending your Dr. J. Woodbury's Horse Liniment. We have used it in the woods for coughs, colds, distemper and cuts, and would say that no lumberman should be without it.

Yours truly,

CLARKE BROS.

In Laying Condition.

An old saying that a fat hen will not lay is true to a certain extent. The converse, that a very poor hen will not lay is equally true. The hen that is in the best laying condition must have some surplus fat on her body. The poultrymen that are liberal feeders of their stock, provided they feed with some certainty of judgment, usually have hens that are good producers of eggs. Those that starve their hens or are stingy of their feed will seldom get any eggs unless a few of the flock are strong fighters for supremacy at feeding time and get more than their share of the feed. A hen that has some surplus fat on her body has her want supplied and there has been some food to spare. She has some surplus energy. A poor hen has no surplus energy and she cannot lay well. It is all she can do to live and keep warm.

The first part of the egg to be formed is the yolk which contains 34 per cent. of albumen (which is a form of the proteids) and 64 per cent. of fat. A hen, the same as any other animal, takes food into her body to maintain it. Growth of the body and the production of eggs must come from the surplus, after the bodily wants have been supplied. Therefore, new eggs will not be formed until there is a surplus of fat to form the yolk. A hen may have so large a percentage of fat that it weakens her muscles and thus destroys the functions of the egg-producing organs. In such a condition she will not lay. An overabundance of fat will naturally make the hen sluggish and lazy. She will then become a drone and not a producer.

More than 65 per cent. of every egg is water. Water is also about 55 per cent of the body of the hen. It is necessary for the hen to have water in order to digest her food. It softens some foods and renders others partially dissolved and more easily digestible. All food contains some water. Vegetables contain a great deal, but the vegetable supply is not sufficient. Hens have no urinating organs and the water passes off through the bowels and a portion in the breathing. Hens need a very liberal supply of water in order to make eggs and digest their food. Many a hen that is a good layer and that is otherwise well fed, does not produce eggs simply because she does not get at sufficient supply of water.

When laying freely a flock of fifty hens will drink from four to eight quarts of water daily, depending upon the conditions. Where the albumenoids or proteins are fed largely to stimulate egg production, the fowls will drink more water because it takes more water to dissolve and soften that character of foods. The water should be supplied at regular intervals and should not be allowed to become stale or stagnant. If left standing it absorbs many of the impurities of the air. Water the fowls often and give them fresh water in clean drinking bowls. A little extra attention to the watering of fowls will increase the egg supply.

Care of Eggs.

Bulletin No. 140 from the U. S. Department of Agriculture gives the following rules for the production of good eggs:

Clean, dry houses and nests.

Daily gathering of eggs, and when very warm, twice daily.

Confining all broody hens as soon as they show symptoms of broodiness.

Rejection of all doubtful eggs found in hidden nests. Such eggs should be broken and used at home if good.

Placing all eggs as soon as gathered in a cool place in summer.

Keeping eggs perfectly dry at all times.

Keeping eggs cool and dry while on the way to town. (Many eggs are half roasted by carrying exposed to the hot sun.)

Marketing all eggs at least once a week and oftener when possible.

Keeping all eggs away from bad odors and musty places.

Using all cracked and dirty eggs at home.

The washing of eggs in warm weather is often objected to, as moistened eggs spoil more readily. The reason for this is that the moisture affords a breeding place for the germs of decay or other bacteria. If eggs are washed in a strong solution of baking soda and wiped dry this objection has little force, since the soda is a germ killer. Wet soda will scour off almost any stain from an egg shell, leaving it clean and fresh looking.

If every perspn who sells eggs were careful to sell only clean, perfectly fresh eggs that were known to have been gathered the day they were laid, there need not be the difference in price between what the producer gets and what the consumer pays, for the producer has to stand the loss in one way and the customer in another, and the producer of good eggs has to stand the loss the same as the one who sell old or bad eggs. It is not so much a question of oversupply that brings the price of eggs down in hot weather as that there are so many spoiled eggs find their way to market that the lower price is the middleman's protection and producer's loss. ...

Sale of Spot Eggs.

The report of Commissioner of Accounts Fosdick, who has been investigating charges that contraband food stuff has been largely sold in the city, indicates that a considerable amount of "spot eggs" has been consumed here contrary to law, chiefly by cheap bakers. No doubt the amount of this traffic has been exaggerated by the newspapers; and probably many undergrade eggs, not really unwholesome, have the reputation of being in tne "spot egg" class when they do not deserve to be totally condemned. But that dealers who handle eggs for local trade have sold all that they could find buyers for at the best price obtainable is doubtless true. There are few tradesmen who will throw away goods for which customers stand ready to pay a price, and especially when competition makes it necessary to work on close margins of profit.

We believe it may be confidently stated, however, that the rank and file of the egg trade here would be glad to see the law prohibiting the sale of spot eggs for food enforced strictly and jmpartially, if it can be done in a practical manner. It would be folly to attempt to construe the law to prohibit the sale of eggs from first hands in which any spot eggs were found, because nine-tenths of our egg supply would come under the ban of such a prohibition. But the great majority of our egg receipts are taken out of the cases and graded by wholesale dealers, and it is in this and smaller classes of trade where the sale of spot eggs can be practically and effectually stopped if the Board of Health can furnish enough inspectors of the right stamp to stop it.—N. Y. Produce Review.

The Sex of an Egg.

Referring to the above theory that eggs wrinkled at the narrow ends produce cockerels, an English writer says, to the student of embryology this fallacy is at once apparent. For the first few days the chicken is sexual; from then to about the seventh day it is distinctly hermaphrodite, and contains within itself the elements of both sexes. After this stage it diverges in one direction, one set of organs developing and the other diminishing according to whether the germ is going to produce a male or female. So that if the germ had a living consciousness it would not know at the sixth day which sex it would ultimately be.

THE FARM HOME

This Department is now being edited by a very competent lady, who will be pleased to answer all inquiries. She solicits the aid of all who are interested in home making. This aid may be given in the form of short articles dealing with your experiences, questions or timely suggestions. Ladies, this department is yours. Use it to the best advantage.

In Time of War.

By Annie Fraust.

"Shall you be at the cadets' ball this evening?" said Cora Hart to her Cousin Nellie, as they sat together in the latter's room at Cozzins' West Point Hotel.

"O yes, balls all winter, balls all summer! I wish mother would go into the backwoods, for a few months to rusticate." And Nellie Hart threw herself on a sofa, as if entirely weary of such dissipation.

"Now; Nell, how ungrateful! Were you not the belle, last winter?"

"Nonsense, Cora!"

"Well, look your prettiest this evening; these 'milintary' men, as our Irsih girl calls them, are quite fastidious. Wear white and curls."

"Can't. My hear positively refuses to curl in warm weather."

"Mine don't; I can't get the curls out of it." And Cora shook down a mass of black ringlets over a saucy, piquant face.

"Cora, who was that gentleman who stopped you in the hall this morning, after breakfast?"

"Lieutenant Hilde. You repeat his question. He stopped me to inquire who was the exquisitely beautiful blonde that arrived yesterday. Now, Nell, take care; the Lieutenant is at present devoted to me, so don't intrude."

"But, Cora, Henry ?"

"Oh, Henry is at home. I must flirt with somebody. Because I am engaged, must I turn nun ?"

"But Henry will be here to-morrow ."

"I shall have dismissed the Lieutenant by that time."

"O Cora ! Cora !"

"O Nell! Nell! Hark! the dinner-gong, and I am yet in my wrapper. By, by!" And the little brunette flitted from the room.

The large ball-room was brilliantly illuminated, and gay groups were clustered in various parts, chatting, flirting, some dancing. Two tall, handsome men, in lieutenant's uniform, stood near a window conversing. They were half hidden by the falling curtains, and criticised freely the company already assembled.

"See, Clarence, there is your last flame, Miss Hart. How beautiful she is, to-night! Who but her would dare to wear scarlet tissue in summer. Does she not look like some tropical flower ?"

"Look at her companion," said Clarence.

"That is her cousin, Miss Ellen Hart, and the dignified lady in black crape is her mother."

"Is she not lovely? Those soft braids of fair hair, with the tiny, starlike for-get-me-nots twisted so gracefully around her head, and that pure white dress! She is positively angelic!"

"Shall I introduce you?"

"Do, my dear fellow."

Arm in arm they sauntered across the room.

"See, Nell," said Cora, "here come Lieutenants Wilde and Harvey. You know Joe Harvey?"

"Yes."

"They are coming this way. Now, Nell, if you dare captivate my Lieutenant—Ah, good evening, gentlemen. My, cousin, Miss Hart."

The two lieutenants bowed low. Harvey offered his arm to Cora, while Wilde stood near Nellie.

"Mother, let me introduce to you Lieutenant Wilde," said Nellie, as Cora waltzed off with Harvey.

"Wilde! Excuse me, but was your mother's maiden name Curtis?"

"Yes, madam, Laura Curtis."

"Then I may claim acquaintance with the son of an old schoolmate. Nellie, you have heard me speak of Laura Curtis?"

"Often, mother."

The conversation, turning first on friendly inquiries on the part of Mrs Hart, grew lively, and, if Lieutenant Wilde had before admired Nellie for her lovely dace, she now was no less attractive to him by her intelligence and graceful address.

Nellie Hart was the only child of a widowed mother, and heiress to a large property; and jealously did her mother watch every friend she even her fastidious taste found no fault with this new acquaintance. Quiet, modest in his address, every word and gesture showed the gentleman; and Mrs. Hart smilingly nodded assent to Nellie's inquiring glance, as the Lieutenant asked her to dance.

Having arrived at West Point only the day before, Nellie had made no acquaintances at the hotel; and, although many gentlemen were introduced to the beautiful blonde, Lieut. Wilde kept near her almost all the evening, and like a wily diplomatist, spent the intervals in conversation with Mrs. Hart.

"Nellie, Nellie," cried Cora, "I did not expect this of you."

They were seated near the window of the same room in which they had spent the morning.

"Why, Cora, you were fairly besieged by the United States army. How could I imagine you wanted Lieutenant Wilde?"

"I didn't want him. Fudge! little

"Oh, Cora, Mr. Wilde is very handsome."

Carson is fifty times as handsom?."

"But such a bear!"

"A bear, Cora! His manners are perfect."

"And such a fool!"

"Cora, he is one of the most intelligent men I ever conversed with".

"Ahem! you'll do!" said Cora, laughing heartily.

"I—I—"

Nellie crimsoned, and then turned from her mischievous cousin and began to take the flowers from her hair.

"Is that a hint that you are very sleepy, and would like to retire?" said Cora, after watching her operations for some minutes.

"No, we can chat in a wrapper, but I want to [illegible]."

"It don't come off, does it, like Mrs. Potter's? She danced her false curls down on Captain Colton's shoulder, and they hung most picturesquely over his epaulets."

"There!" said Nell, shaking down her hair in a golden shower, almost reaching to her feet; "that is comfortable."

"You look like an insane angel. Oh, if Lieutenant—"

"Cora!" said Nell, imploringly.

"Henry is coming to-morrow, so you can have your Wilde admirer all to yourself. Mrs. Wilde—the name would suit your present costume admirably. There! don't blush; I'll stop. Hark! three o'clock! I must run. Good-night!"

After Cora left her, Nellie went to the window, and stood there for a moment. It was oppressively warm, and, after extinguishing her light, she stood at the open window, looking out on the beautiful scenery. It was moonlight, and the rays shone full upon her; but, supposing all asleep at that hour, she did aot draw the curtain. From a bench under a clump of trees, entirely concealed by the deep shadow, Lieutenant Wilde, smoking his cigar, studied this tableau. The white dress, flowing hair and graceful figure, all bathed in the moonlight, were no mean study, even had the soldier been an artist. At last, the curtain fell over the window, shutting out the vision, and Clarence Wilde lazily arose and sauntered towards the hotel. As he passed Nellie's door, he murmured, "That girl is my wife, if I can win her."

The days glided into weeks, and Mrs. Hart still lingered at West Point. Cora was at Saratoga, yet Nellie expressed no desire to join her. Slowly, almost imperceptibly, two hearts were knitting together in the pleasant walks and rides taken at West Point. Long evenings, spent on the porch or in the dimly lit parlors, added their effect; and Mrs. Hart was gratified, but not surprised, when Laura Curtis' son sought her, to ask the hand of her daughter.

They were married! In Mrs. Harts lovely house on the Hudson all three lived, for the widowed mother pleaded hard to keep her child near her.

"If you should be called away to serve your country," she said to Clarence, one evening, after he had been married some months, " let me be here with Nellie."

"But these are times of peace," said the young wife, clinging to her husband and turning pale at the very mention of a possibility which haunted her.

"Long may they continue so," said he, bending to kiss her, "for your sake, Nellie!"

Four years passed on quietly in that happy home, and the voice of another Clarence, a fair-haired boy, rang through the house and over the lawn and garden.

One afternoon, Nellie and her mother were seated in the parlor, conversing. Little Claire, tired out with a day's pleasures, was fast asleep in Nellie's arms.

"Mother," said Nellie, "do you notice how abstracted and troubled Clarence has grown lately, and so tender, so loving—"

"Is he not always that ?"

"Yes, but so sadly loving now. He holds me, sometimes, pressed close to his heart, and looks in my eyes with such a heart-breaking tenderness! Oh, mother, I fear—I cannot tell what, but I fear some evil".

"Sitting here in the dark?" said the voice of Nellie's husband, now Cqptain Wilde.

"Yes, come in," said Mrs. Hart. "Here is Nellie complaining that her husband is too loving."

"Mother!" cried Nellie, then added "Come Clarence, take Claire and put him on the sofa, my arms ache."

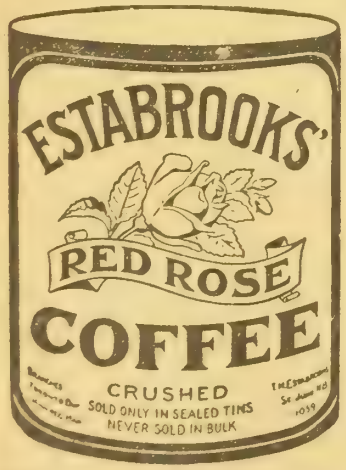
As Captain Wilde bent over his wife, to comply with her request, she felt that his hand was cold as death, and his whole frame trembling. He placed the child on the sofa, and then sat down beside Nellie.

"My wife," he murmured, drawing the golden-crowned head close to him, "oh, how can I leave her?"

"Leave me, Clarence, leave me?" cried Nellie, almost fainting with apprehension. "When? Why?"

"To-night, darling, to-night! My company sails from New York, to-morrow morning for Mexico."

Good coffee means a good breakfast. Nothing takes its place. Nothing tastes so good. Estabrooks' Coffee has the vigorous strength and delicate richness which brightens and satisfies the appetite. Clears the brain. A good starter for the day.



Sold only in 1 and ½ lb. tins.

Try it for breakfast to-morrow

OWES HER LIFE TO

Lydia E. Pinkham's Vegetable Compound

Vienna, W. Va.—"I feel that I owe the last ten years of my life to Lydia E. Pinkham's Vegetable Compound Eleven years ago I was a walking shadow. I had been under the doctor's care but got no relief. My husband persuaded me to try Lydia E. Pinkham's Vegetable Compound and it worked like a charm. It relieved all my pains and misery. I advise all suffering women to take Lydia E. Pinkham's Vegetable Compound."—MRS. EMMA WHEATON, Vienna, W. Va.

Lydia E. Pinkham's Vegetable Compound, made from native roots and herbs, contains no narcotics or harmful drugs, and to-day holds the record for the largest number of actual cures of female diseases of any similar medicine in the country, and thousands of voluntary testimonials are on file in the Pinkham laboratory at Lynn, Mass., from women who have been cured from almost every form of female complaints, inflammation, ulceration, displacements, fibroid tumors, irregularities, periodic pains, backache, indigestion and nervous prostration. Every such suffering woman owes it to herself to give Lydia E. Pinkham's Vegetable Compound a trial.

If you would like special advice about your case write a confidential letter to Mrs. Pinkham, at Lynn, Mass. Her advice is free, and always helpful.

HE WANTS THEM ALL TO KNOW

ABOUT GIN PILLS

They Cured Him and He Knows They will Cure Others

DAVISVILLE, ONT.

"I want to let you know what GIN PILLS have done for me. I had trouble with my Kidneys and Bladder so I got a sample of GIN PILLS and followed directions. I felt better after the first dose and I kept taking them for a month.

One day, Mr. Simpson of this town, told me about the trouble he had with his kidneys and I recommended him to try GIN PILLS, and gave him one to take. The next day he bought some for himself and both he and his wife have received great benefit from them. I have also induced many others to try them.

I am trying to get my sister-in-law to try them. I wish you would send me a sample box to give her."

HERBERT H. BAUER.

If you have a friend who is suffering from Kidney or Bladder Trouble or Rheumatism, send name and address, and we will gladly mail a free sample box of GIN PILLS. At dealers, 50c. a box, 6 for $2.50, or sent on receipt of price. Remember — GIN PILLS are guaranteed to give relief or money refunded. National Drug and Chemical Co. Dept. M. F. Toronto.

National Lazy Liver Pills regulate liver and bowels, and cure Constipation. 25c. a box. 46

INVENTIONS Thoroughly protected by patent in all countries. EGERTON R CASE, Registered U. S. Patent Attorney, Department J. TEMPLE BUILDING, TORONTO. Booklet on patents and drawing sheet on request.

"Oh, that fearful war! Must it be, then?" cried Mrs. Hart.

"Yes, war is now positively declared. I have been expecting this order for some time. Nellie! Nellie! she has fainted."

Poor Nellie! this confirmation of her worst fears was too great a shock; but after the first insensibility was overcome, she strained every nerve to bear the parting bravely. Her husband was a soldier, and his country claimed him, and a brave, heroic spirit, never before suspected in the lively, but gentle Nellie, now sustained her. Not till the last kiss was given, the last farewell spoken, did this firmness give way; but as the carriage rolled away from the door, bearing with it the sunlight of her home, Nellie sank fainting upon the threshold. I have passed over the parting, nor can I speak of the agony that ensued. Such scenes, such emotions are sacred; let them be respected.

Time passed wearily in that lovely home. Every day, Claire added fresh agony to the young wife's sorrow by lisping inquiries for "Papa," and the bitter longing for news, the sickening dread of evil were seen in Nellie's languid step, low voice and anxious face. Mrs. Hart watched her idol carefully, yet sympathized too deeply in the sorrow to chide her for betraying it.

It was a bright afternoon in July, and Nellie, taking Claire for a companion, strolled down to a grove near the house, to let the child sail a tiny boat on a mimic lake there. It was a spot endeared to her by many scenes with her husband. They had often passed whole evenings there, sitting or strolling in the moonlight, chatting or silent, as the mood varied, but, as Nellie now bitterly recalled, always loving, kind. After they left the house, Mrs. Hart drew forth from her pocket a letter, received that mo*ning, which she had not dared to open in Nellie's presence. It was directed in a strange hand, to her, and post-marked Point Isabel. If all was well, certainly Clarence would have written to his wife, and the mother carefully concealed the letter until she could open it alone. Alas! her fears were realized. There had been a great battle—Palo Alto—and Capt. Wilde was dangerously wounded in the lungs. Mrs. Hart shuddered with dread as the task of imparting this information to Nellie rose before her. Slowly, she left the house, and walked down to the grove. Long before she was near enough to speak, she could see Nellie and Claire under the trees. Her step grew slower, as she came toward them, till, heart-sick with her task, she leaned against a tree, looking at her child, who, all unconscious of her great sorrow was talking to Claire. The boy's face was raised to Nellie's, as, with a low, sweet voice, she told him of his absent father, painting to the eager listening Claire the dangers of war and his father's bravery and gallantry.

"When will he come home, mama?" asked Claire.

"I cannot tell, Claire."

"Show me my pretty papa."

Nellie drew from her bosom the miniature which Claire called his "pretty papa."

"I wish he'd come home!" said Claire again. "I'm afraid the nasty soldiers will kill my pretty papa."

Nellie raised her eyes in silent prayer, and then she saw her mother.

"A letter! Give it to me! Quick! quick!"

"Nellie dear, first let me tell you—"

"He is not dead!"

"No, my child, but—"

"The letter! let me see the letter!" she grasped, taking it. It was short.

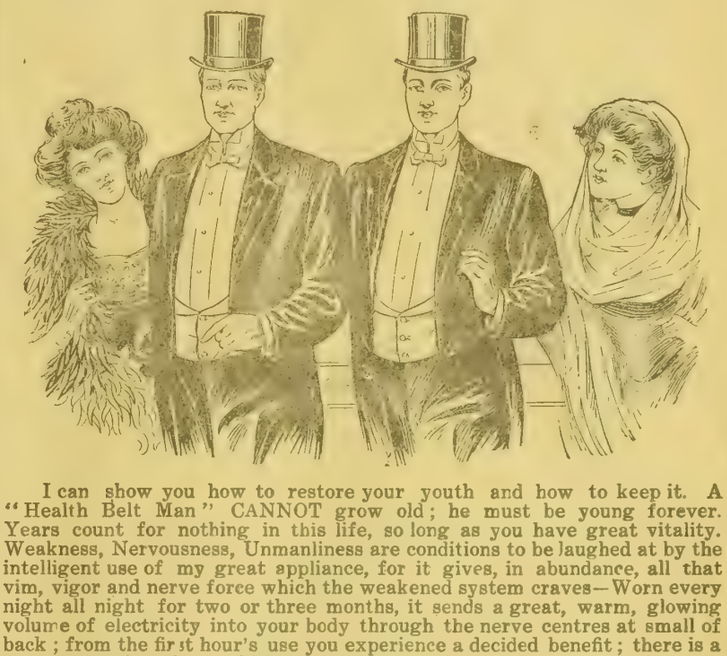
Vigorous Manhood.

Two "Health Belt Men." One 50 Years Old, the Other 30. Can You Pick Out the Younger?



I can show you how to restore your youth and how to keep it. A "Health Belt Man" CANNOT grow old; he must be young forever. Years count for nothing in this life, so long as you have great vitality. Weakness, Nervousness, Unmanliness are conditions to be laughed at by the intelligent use of my great appliance, for it gives, in abundance, all that vim, vigor and nerve force which the weakened system craves—Worn every night all night for two or three months, it sends a great, warm, glowing volume of electricity into your body through the nerve centres at small of back; from the first hour's use you experience a decided benefit; there is a great mysterious force which gets right to work. No drugs to be taken; no conditions imposed except that dissipation must cease. Help nature that much; the Belt will do the rest. It takes the weakness and kink out of your back; it drives rheumatic pains away from all parts of your body, you will feel and look young and strong again; woman and man noticing your physical change will be more attracted toward you on account of your new vitality and life; in two months you can experience the full vigor of perfect manhood, or you need not pay.

YOU CAN PAY WHEN CURED.

If you're sceptical I'll prove it first. I'll take all the risk by letting you have the Belt on Free Trial, not to be paid for until cured. Send it back if t doesn't do the work.

Let Me send You These Two Books FREE.

They fully describe my Health Belt and contain much valuable information. One is called "Health in Nature," and deals with various ailments common to both men and women, such as rheumatism, kidney, liver, stomach, bladder, disorders, etc. The other "Strength," is a private treatise for men only. Both sent upon application, free, sealed, by mail.

If in or near this city, take the time to drop in at my office that you may see, examine and try the Belt. No charge for advice, either at my office or by mail. They are better than a fortune for any one who needs new vigor.

DR. M. F. SANDEN, CO., 140 Yonge Street, TORONTO, Ont.
Dear Sirs—Please forward me your books as advertised free.

NAME.....

ADDRESS.....

Captain Wilde, desired me to write to you. In yesterday's battle he fell severely, we fear dangerously wounded, by a bayonet thrust, through the lungs. He is in the hospital, unable to write, but trusts to you to communicate the intelligence to Mrs. Wilde.

I remain, madam,
Most respectfully yours,
Joseph Harvey.

Mrs. C. J. Hart,
Palo Alto,w May 9th, 1846.

Nellie read every word. She did not faint, though her face grew white as marble and a cold chill gathered about her heart.

"I am going to my husband," she said in a calm, clear voice, as she returned the letter.

"Going to Mexico. No, no, I cannot let you!" cried Mrs. Hart.

"I must go. Come." And she moved for the house. She took but a few steps, and then fell upon the grass. All the forced calmness gave way, and she sobbed so violently and long that Mrs. Hart was alarmed. Yet, this paroxysm over, she persisted in her first intention.

(Continued next issue.)

Keep Minds and Hands Busy.

Women have a foolish idea that if they are shut out from fashionable society they are debarred form every thing that is best. Monstrous mistake! How little that is "best" one finds in fashionable society! The "best" things are open to us all. Cleanliness, comfort are simple things, affection, true thrift and economy, good reading, excellence in pleasant labor —all these we shall appreciate when we have learned to think. It is a pretty good rule never to allow yourself to think about any thing that makes you suffer helplessly. Sometimes it is good for us to suffer; but it is far better to put the painful thought aside with a strong hand and take up something that brings us a sense of harmony— the piece of needlework, the pleasant book. Women have a habit of torturing themselves over things that are in the past or over possibilities of the future. This is not thought, it is mere mental degeneracy.

I agree with the woman who started me on this subject that there is just now considerable morbid thought among women, superinduced by the vile reading. We have been deluged with, and perhaps, too, by some of the conscientious efforts people make to purify food and mental dirt and physical life. Shake off the lethargy of wondering and doubting and take hold of the nearest duty Put your best thought on the immediate thing that calls to you as necessary. Be sure it is worth thinking about if it is worth doing. The distressing "why?" of existence never bothers people whose minds and hands are busy.

Personal Responsibility.

There has been in the last few years a great change in the trend of popular thought. The old religious idea of casting our burdens on the Lord and relying on Him for care and for salvation has given way to a more material ideal of personal responsibility. The ideal of bodily and spiritual cleanliness as things for which the individual is directly responsible and which bear preeminently on his "salvation," the ideal of making humanity more "worth saving" by personal attention to the conditions that surround us, will go far towards bringing the millennium if we can only save the doctrine from its friends. People can be too clean, too pure, too honest, too pious—and some women never know where to

We will buy and give away hundreds of thousands of 50-cent bottles of Psychine (pronounced Si-keen). There is one for you. Do you think we could afford to do that were we not supremely confident of its great value?

Do you know another such sweeping proposition as ours?

Did you ever hear of anyone offering to prove any curative preparation along similar lines?

All the risk is ours, all the cost is ours.

You yourself are to be the sole judge of all we claim for Psychine.

Its beneficial effect alone will tell you, without prejudice, without any self-interest from any source.

It shows our confidence—this plan —does it not?

Yet our confidence to us is not phenomenal, not out of the way.

Nor would our confidence seem extraordinary to you were you in our place, and were you to know the things we know.

* * *

We've known Psychine for a third of a century—almost a generation.

We know of the hundreds of thousands it has cured.

We have hundreds of thousands of unsolicited testimonials.

It doesn't require any great stretch of confidence to know from facts like these.

* * *

Psychine cures by increasing and strengthening the white corpuscles of the blood, or phagocytes.

These white corpuscles eat every disease germ that finds entrance to the body, when they're strong enough and in sufficient numbers.

And Psychine builds these white corpuscles because of certain medical herbs it contains, nature's true remedy.

Which science now knows will do just that.

We go to great expense to make Psychine.

Our materials come from the ends of the earth.

They are compounded in one of the finest laboratories, in apparatus that is costly in the extreme.

But costly and all as it is we *know* what it will do, hence the reason of our buying a 50-cent bottle from your druggist and giving it you, free.

Now if you have any of these ailments, fill out the coupon and mail it to us to-day.

You'll never regret your decision so to do.

La Grippe	Bronchial Coughs
Bronchitis	Weak Lungs
Hemorrhages	Weak Voice
Sore Throat	Spring Weakness
Anaemia	Early Decline
Female Weakness	Catarrhal Affections
Indigestion	Catarrh of Stomach
Poor Appetite	Night Sweats
Chills and Fevers	Obstinate Coughs
Sleeplessness and	Laryngitis and
Nervous Troubles	Dyspepsia

After-effects of Pleurisy, Pneumonia and La Grippe

Now, we don't ask you to take our word for the tremendously beneficial effect of Psychine. Fill out the coupon below, mail it to us and we'll give your druggist an order (for which we pay him the regular retail price) for a 50-cent bottle of Psychine to be given you free of cost.

We will undoubtedly buy and distribute in this manner, hundreds of thousands of these 50-cent bottles of Psychine.

And we do that to show our entire confidence in this wonderful preparation.

A confidence that has been based on our thirty years' experience with this splendid preparation, with a full knowledge of the hundreds of thousands of cures it has made.

COUPON No. 77

To the Dr. T. A. SLOCUM, Ltd.
193-195 Spadina Ave., Toronto

I accept your offer to try a 50c. bottle of Psychine (pronounced Si-keen) at your expense. I have not had a 50c. bottle of Psychine under this plan. Kindly advise my druggist to deliver this bottle to me.

My Name.....

Town.....

Street and Number.....

My Druggist's Name.....

Street and Number.....

This coupon is not good for a 50c. bottle of Psychine if presented to the druggist —it must be sent us—we will then buy the 50c. bottle of Psychine from your druggist and direct him to deliver it to you. This offer may be withdrawn at any time without notice. Send coupon to-day.

A progressive locality like yours ought to have a telephone service

Life is worth living in a progressive locality like yours, with well-kept farms, good churches and schools, and congenial neighbors. But life would be even more enjoyable if your district enjoyed telephone service.

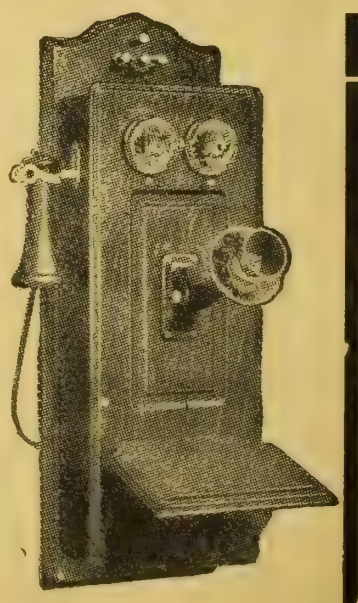
It's true you have got along very well without the telephone, but once you've enjoyed its conveniences and benefits you will never do without it. In fact, it is more of a necessity to the farmer than to the progressive city man. Our handsome book, "Canada and the Telephone," profusely illustrated by a leading artist, tells why the telephone is so necessary to the farmer.

Another book, our Bulletin No. 2, gives complete information regarding the building, equipping and operation of an up-to-date rural telephone system.

Send for both of these books.

They're free. And remember that we send telephones for free comparison test with others, and that all our telephones are guaranteed for ten years against defects in material or design.

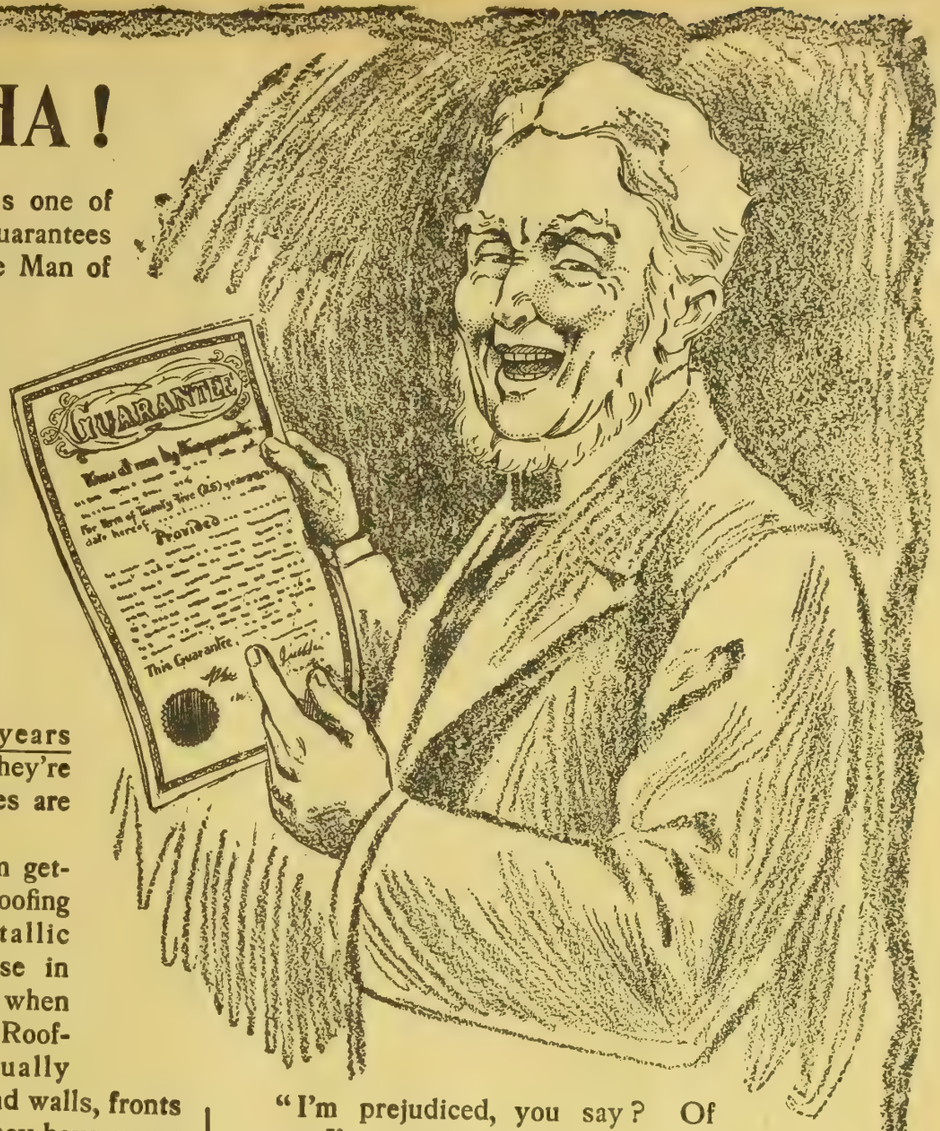
At our factory in Toronto we carry large stocks of all kinds of telephone supplies. Your orders will receive prompt shipment. Get our prices. They will interest you.



Canadian Independent Telephone Co., Limited.

1820 DUNCAN ST., TORONTO, ONT.

HA! HA! HA!



"Well, I'm blest! So this is one of those so-called metal roofing guarantees I've read about," laughs the Wise Man of Metal Town.

"It certainly is a good joke, for it doesn't really guarantee anything to anybody, and isn't legally binding. Ask your own lawyer and you'll find I'm right."

"Stripped of all its exceptions and provisions I don't see how anyone could be serious about it."

"I go by what I know has been done, not by what is promised. For instance, I know that 'Eastlake' Metallic shingles have been in use for twenty-five years right here in Toronto, where they're made, and that those same shingles are in perfect condition now."

"Just listen here a minute. I'm getting serious now. The Metallic Roofing Company began to make metallic shingles years before anyone else in Canada. They were made right when they were first made. The Metallic Roofing Company have been continually making new designs for ceilings and walls, fronts and cornices, but as for shingles they have never seen an improvement on the 'Eastlake' steel shingles which have been made, laid and proven for twenty-five years."

"I've noticed that most metal shingle manufacturers change their pattern so frequently that I'm led to believe they, themselves, haven't much confidence in their own goods. Yes, they even change the name to cover up some weakness in a previous product."

"I'm prejudiced, you say? Of course I'm prejudiced, but it's a prejudice founded on years of active use of the metallic goods made by The Metallic Roofing Co. It's an old man's prejudice based on a long experience."

"Write for booklet which tells more about 'Eastlake' Metallic Shingles. They are sure proof against fire, lightning, rust or weather in all climates. They are the easiest and quickest to put in place and the most durable when laid. If you send the measurement of any roof an accurate estimate of cost will be sent free."

—The Philosopher of Metal Town.

"TWO OTHER PERSONS' SAY-SO'S"

The Metallic Roofing Co., Limited, Toronto.

Simcoe, Ont., April 9th, 1908.

Dear Sirs:—"We have handled your 'Eastlake' Shingles for nearly a quarter of a century. They have been on the Court House, Free Library and other public buildings in this town for 18 years. We have used very large quantities during the past 25 years, and they have always given first-class satisfaction, and have never required any repairs."

(Signed) MADDEN BROS.,
Tinsmith and Hardware Merchants.

The Metallic Roofing Co., Limited, Toronto.

Lucknow, Ont., April 9th, 1908.

Dear Sirs:—"I take great pleasure in testifying to the good qualities of your 'Eastlake' Shingles. We put your painted shingles on our Town Hall here in 1885, 23 years ago, and although they have only been painted twice since that time they are in good condition yet. I consider the lock on the 'Eastlake' the very best, and believe that a roof covered with the galvanized 'Eastlake' will last for ever."

stop when it comes to carrying out some idea of "rightness."

Women take fright too easily at the idea that they may be doing wrong. Conscience is capable of being a fool, and I have known plenty of harm to result from people following it. If any woman, newly awakened to thinking, should read these lines let her remember that speculation is not necessarily thought. Introspection, a morbid looking into self, a mere wondering about sex reproduction and life and love and death and the hereafter is not thinking—or, at least, not thinking at its best.—County Contributor.

In Just One Glass.

A drinking glass used in a school for nine days, was recently put under a miscroscope, and here is what was found:

"The human cells scraped from the lips of the drinkers were so numerous on the upper third of the glass that the head of a pin could not be placed anywhere without touching several of these bits of skin. The saliva by running down the inside of the glass, had carried cells and bacteria to the bottom. By counting the cells present on fifty different areas on the glass, as seen under the miscroscope, it was estimated that the cup contained 20,000 human cells or bits of dead skin. As many as 150 germs were seen clinging to a single cell, and very few cells showed less than 10 germs. Between the cells were thousands of germs, left there by the smears of saliva deposited by the drinkers. No less than one hundred thousand bacteria were present on every square inch of the glass."

A nice, clean glass this! And yet in almost every schoolhouse today are similar glasses out of which our children drink.

Little Buster.

How she received such a name none but "Little Buster" and her schoolmates ever knew. Somehow the name in a droll way seemed to suit her, for she was always playing such amusing and unexpected pranks that she kept the scholars in a state of convulsions when the teacher's back was turned.

Little Buster annoyed the teacher sometimes in spite of the awful torture he threatened to inflict, which were in themselves enough to scare a South Sea cannibal. Little Buster was never afraid, but would sit with both hands tightly pressed over her lips, fearing every moment that she must give vent to her feelings in one shriek of laughter. It was well for her that she did not, for when Mr. MacGregor's temper was tried too severely, he felt like "scalping" Little Buster; but she was so little and he was so big, that he really had not the heart to do it. After all these gruesome facts had been duly impressed upon her wicked self, Little Buster crawled under the desk to eat an orange to soothe her ruffled feelings, also to tell her seat-mate Bliss what she thought of that terrible man. The "terrible man" saw her, but after one of these explosions it was convenient for him to become absorbed in his book, so after arranging matters to suit herself, Little Buster decided to reform and actually did half an exercise—a very difficult one—before recess came.

She could have done the whole exercise for Little Buster was clever, but she and Bliss read about "The Heathen in Japan" between times and did not quite believe Mr. MacGregor, when he said during lesson-hour that heathen children never acted in school and always knew their lessons.

"It must be dreadful to be a heathen child," said Little Buster with a pensive sigh.

Mr. MacGregor's lip twitched suspiciously. "It must be pleasant for the teacher," was his comment.

"That is where I shall teach some day," said one of Buster's little friends. "Little girls who are going to teach should not hold their books upside down," said Mr. MacGregor insinuatingly.

"Heathen children are smart ain't they?" asked Little Buster waving her hand frantically.

Mr. MacGregor frowned indignantly.

"I mean they be, ain't they?" Two mischievous eyes were dancing behind a mass of curls.

"Miss Margaret Churchill," in a freezing tone, "they are very clever indeed."

"Well," triumphantly, "it says in this book that they read sideways, upside down and every way."

Little Buster had gone too far. Mr. MacGregor had a quick temper and springing from his chair, he shook, yes, actually shook Little Buster.

"Do you think you are coming to school to act smart under my very oose? Do you?' with another shake. "Well I will soon show you who is teaching here and you had better improve your manners very quickly. With a clear conscience I could throw everyone of you into the cellar and leave you there all day. You deserve something worse than that too," and with this parting shot Mr. MacGregor stamped off in indignation. "Whatever shall I do with these little torments?" he thought. "If I only had the high school students I could manage but when one has to teach babies what can an old batchelor like I do? I did not plan to teach a nursery when I came here."

Mr. MacGregor had been accustomed to teaching boys only, and when his new pupils' awe of him abated he was in despair, for none of his methods of punishment could be used with girls. Mr. McGregor was in a decidedly bad humor and that day proved an eventful one. His hat was hanging on a peg behind Little Buster and Bliss, and by reaching over the desk Bliss succeeded in depositing it on her head. The girls in the front giggled and Buster in fear for her friend snatched the hat off, so of course it was she who was commanded in a terrible voice to stand in the corner.

Little Buster felt both injured and innocent, so she felt it only fair when she besmeared teacher's hat with mucilage while he was arranging his desk before going to dinner. But Mr. MacGregor did not take her innocence into consideration when he gracefully raised his hat to the primary teacher, and was astonished to see her quickly conceal her face under her sunshade with something which sounded like a suppressed giggle. The mucilage was not dry and

This Concrete Root Cellar Costs Less Than Wood and is Much More Durable

Cement is particularly adapted to the construction of Root Cellar floors and walls.

Experience proves that for the farmer, Concrete is superior to wood in every point of comparison.

Concrete permits of a desirable degree of coolness without freezing. There is no question as to its durability. Concrete lasts, not for years, but for ages; and needs no repair.

Anyone who has scooped vegetables from the old plank floor will appreciate the fact that Concrete offers a smooth, continuous surface with no projecting plank ends or nails to damage the scoop or ruffle the temper of the scooper.

The various uses to which Concrete may be profitably put, on the farm, are plainly and simply in our 160-page book,

"What the Farmer Can Do With Concrete"

which shows how the following farm buildings and utilities can be constructed of concrete:—

Barns, Cisterns, Dairies, Dipping Tanks, Foundations, Fence Posts, Feeding Floors, Gutters, Hens', Nests, Hitching Posts, Horse Blocks, Houses, Poul-Shelter Walls, Stables, Stairs, Stalls, Steps, Tanks, Troughs, Walks, and so forth.

Send for it—it's free—though it regularly sells for 50c. Write to-day.

You may send me a copy of *"What the Farmer Can Do With Concrete."*

54

it drew his hair on end with an expression which seemed to say, "I am alarmed." Mr. MacGregor did not know this, of course, and an embarrassed silence followed during which the poor man felt that the world was ill-using him, especially when no amount of tugging would remove his hat and he required the services of a barber before he was again presentable.

"You're in for it," called Little Buster's brother when he saw the teacher coming. "In fancy I can see yon hero's flashing eye. And lo! the gentle Annie is not with him."

Little Buster was not whipped, O no! But her punishment was almost as hard to bear. She and Mr. MacGregor had always been very great friends. He boarded next door to her and they often had interesting talks over the garden fence. To be sure he was not interested in dolls or playing house, but his shining knife made charming chaits and tables for this same household and on bright fine days they sometimes went for a boat row accompanied by Bliss and her other little friends. None of these good time now for Mr. MacGregor ignored her entirely except to bid her a cold "Good-morning" or "Good night," and was dreadfully cross when she did not know her lessons perfectly. In fact, she thought he did not like her a bit now and she tried to think he was a horrid, stiff old thing; but she knew better, and she knew it was only his marvelous control over his temper which kept him from punishing her many times before.

The coldness did not pass as the term drew near its close. Mr. MacGregor was not cross all that time, of course, but he thought he had spoiled Little Buster by amusing her out of school hours and he determined to have nothing to do with her in the future.

But one day something happened which changed his opinion of her. Little Buster lived very near a big lake; so near in fat that the wind blew the spray right into Little Buster's pansy garden. From one side of the lake there was an outlet to the sea in the shape of a tiny creek. Before it reached the sea it broadened gradually and when the tide was in the lower meadows looked like a twin to the Kilmarnock lake. In the midst of this meadow was a huge mound of earth covered with shrubs, resembling a small island. The shrubs were either dead or decaying, having of late years been continually washed by the water so that it was a desolate little island indeed, but on its summit were many curious stones and sea shells.

Mr. MacGregor was rather fond of geology, so one evening when he was feeling homesick, he took his books and miscroscope and walked over to the island. The sun was just shedding its last gleaming rays over the horizon and Mr. MacGregor paused a few moments to admire it; then wended his way to the top of the island where he had been examining a rock a few days before. He became so absorbed in his work that he did not notice the tide creeping in until awakened by the dull swish of water. To his horror, he saw that the path by which he came was transformed to a shining street of silver; the hush of darkness was settling down, and every means of escape cut off by the tide. Mr. MacGregor was a brave man, but he felt a shudder run down his spine, for it was yet early spring and even if he were not drowned the long chilling hours of suspense were enough to try the heart of the bravest.

He called several times but no answer came. There was a social in the next village and most of the people in the community were attending it, including Mrs. Hardy, his boarding mistress, and Little Buster's parents

He had not practised the art of swimming enough to be of service to him now for the distance was long. So around and around the island he paced, the most miserable man alive. "I'll swim it," he said in desperation. "If no help comes before the water gets to the top of this island. I will do it or die in the attempt."

The dackness grew deeper and deeper, so after placing his broad white handkerchief where it could wave in the wind he abandoned himself to his fate.

Now this very evening Little Buster happened to be left alone, her big sister having been called unexpectedly to practice for a concert.

As darkness came on and her sister did not return, Little Buster grew afraid. "I'll go over to Mrs. Hardy's," she thought. "Even if Mr. MacGregor does look at me as if I were a little savage. I will go upstairs and play with Irma's dolls." Irma was Mrs. Hardy's only daughter, who was teaching in a distant college and Mrs. Hardy gave Little Buster permission to play with the motherless dolls whenever she liked, providing she was careful of them, and Little Buster always was.

When she entered Mrs. Hardy's door, she was astonished to find everything in darkness. She knew Mrs. Hardy was away and like a flash she remembered seeing Mr. MacGregor going over to the island.

"My! S:posing he should have let the tide creep in around him. Papa did once," and with this dreadful fancy preying upon her mind, Little Buster clambored up in the window-seat and peered toward the lonely island. It was quite dark but she could see something which looked like a man and yes—she was sure she could see a white handkerchief fluttering.

She was certain now it was Mr. MacGregor's and he would be drowned. With a terrified sob Little Buster ran downstairs, straight down to the shore. She never thought of getting help, she never thought of any-

A CURE WITHOUT DRUGS

Wear My Belt Until Cured and Pay Me When the Work is Done

I have the grandest invention of the age for weak, rundown, wornout men; the surest and easiest cure for all nervous and chronic diseases. Its wonderful power is directed to the seat of the nervous system through which its vitalized strength penetrates into all parts of the body, carrying new life to every function which has been weakened by disease or dissipation, restoring energy to the brain and power to the system. No weak man will ever regret a fair trial of this invigorator.

Why will you be weak? Why do you go on from day to day when you know you are losing your nerve force—your manhood—when you see a cure within your grasp? Do not delay a matter which is the key to your future happiness. Whatever your condition to-day, you will not improve as you grow older. Age calls for greater vital force, and the older you get the more pronounced will be your weakness.

I want you—if that means you—to come to me, and if I say that I can cure you I don't ask you to pay me until I DO SO, if you give me reasonable security for the Belt while you use it. That is fair, surely. You take no chances, as I know what I can do, and I'll run the risk.

All men cannot be MILLIONAIRES, but thousands of them could be much better off FINANCIALLY, SOCIALLY, and in every other respect if they would guard their HEALTH. With VIGOROUS HEALTH—a body full of ELECTRIC ENERGY—a man can make OPPORTUNITIES if he don't find them, but, lacking in the COURAGE, and SELF-ASSURANCE that is born of MANLY VIGOR, he is but a derelict—a vessel without mast or rudder—cast hither and thither by every storm of life that besets his pathway. GIVE ME A MAN that has exhausted his VITALITY—suffering from PAINS AND ACHES — MENTAL DEPRESSION — SLEEPLESSNESS — NERVOUS DEBILITY — WITHOUT HOPE — AMBITION —COURAGE gone—drifting with the tide — and I can transform him into a STRONG MAN—a man of push—a man that will make his way in spite of all obstacles—if he has anything left to build upon, if he will follow my advice and use the DR. McLAUGHLIN ELECTRIC BELT as I direct. Save your tobacco money for a few weeks—cut out a few of your health-destroying, soul-destroying habits—procure one of these appliances—USE ELECTRICITY, and use it in the right way to invigorate your body, and you will look upon the day you gave your case to me as the TURNING POINT of your life.

Mr. Alex. Marr, Russell, Ont., says: "Anyone who is skeptical about your Belt, tell them to write to me. I feel like a new man."

Dear Sir,—I am able to say that I believe I am completely cured of Rheumatism. I have not felt a sign of it for two months, and I can recommend your Belt to any sufferer of Rheumatism.—Fred Lemon, Bognor, Ont.

Dear Sir,—I am pleased to report a good account as regards my health. I am beginning to find myself stronger in every way. Certainly your Belt does its duty and its work is sure. — William P. Morter, Box 87, Hawkesbury, Ont.

Dear Sir,—I wish to say that your Belt has done me more good than all the medicine I ever took. I used it every night for about three months, and since then I do not need it. I can sleep good, and feel as good as ever I did. I am only too pleased that I made up my mind to get your Belt. You have my permission to use this letter if you wish, as I will be only too pleased if it will help anyone to get a cure.—Yours sincerely, John Hunt, Davisville, Ont.

Dear Sir, — Received your letter of the 4th inst., and in reply I can say that your Belt gave entire satisfaction. With best wishes, I am, Sir, yours very truly, Ernest Ryerse, 106 Queen St., St. John, N.B.

Cultivate cheerfulness. It pays Energy and cheerfulness — that's a combination that can't be beat. Feed your system with this great Invigorator—Electricity. Apply it with my Belt—the only correct system, and it will overcome your weakness, your pains, your aches. Animal vitality, that's what you lack. If you want to feel strength and energy in every part of your system; if you want to feel the life-blood dancing through your veins; if you want to make your mark in the world, build up your vitality with my Belt, and you can be a Man among Men.

HAD HEART TROUBLE

NERVES WERE ALL UNSTRUNG.

Wherever there is any weakness of the heart or nerves, sagging energy or physical breakdown, the use of Milburn's Heart and Nerve Pills will soon produce a healthy, strong system.

Miss Bessie Kinsley, Arkona, Ont., writes:—"It is with the greatest of pleasure I write you stating the benefit I have received by using your Milburn's Heart and Nerve Pills. This spring I was all run down and could hardly do any work. I went to a doctor and he told me I had heart trouble and that my nerves were all unstrung. I took his medicine, as he ordered me to do, but it did me no good. I was working in a printing office at the time, and my doctor said it was the type setting caused the trouble, but I thought not. My father advised me to buy a box of your pills as he had derived so much benefit from them. Before I had finished one box I noticed a great difference, and could work from morning to night with out any smothering feeling or hot flushes. I can recommend them highly to all nervous and run down people."

Price 50 cents per box, or 3 for $1.25, at all dealers, or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

thing but that her teacher was going to be drowned and Little Buster must save him.

She could not row her father's boat. It was all she could do to lift an oar, but her brother had a small one which she could handle with skill, yet on a dark night, with the wind blowing a hurricane, the water was scarcely safe for a grown person.

Little Buster was not a bit brave—at least, she did not think she was—and her little heart beat fast when the cold spray blew over her face and the boat danced up and down. Oh, how it made her arms ache and how cold she was.

A fog was coming up, and Little Buster was drenched so her curls clung to her wet cheeks. It is strange when one is in the most danger or the occasion requires great solemnity, one is most apt to think of trivial matters and Little Buster though she knew how her kitten felt when it fell in the rain barrel.

The fog grew so dense at length that she could see nothing but the heaving water and dark, dark clouds In vain she strained her eyes, there was nothing but a deep sea around her and the scream of sea-gulls overhead. At length she grew so lonely and sick with cold that she let the oars drop to the bottom of the boat and kneeling down sent up a pitiful little prayer; but scarcely was the petition uttered before the boat gave a bump against something and she could see a faint outline of the island.

"O Mr. MacGregor!" she cried. "I'm here! do help me!" and scarcely realizing what she was saying, "I won't ever crawl under the desk anymore."

Mr. MacGregor had grown calmer before Little Blossom reached the island, but oh, what a thrill that cry sent to his heart. He could scarcely believe that his life was yet to be spared. He did not stop to wonder that a child was there in the darkness. As quickly as possible he drew both Little Buster and the boat ashore, his heart too full to speak. "Why, Margaret," he said, realizing for the first time, his rescuer was a girl. "However did you get here?", but Little Buster could not tell. She cuddled up in his arms and cried and cried.

Very gently he placed her in the boat and rowed for the shore. The cold grew so intense that he feared the child would perish, so he took off his coat and rapped her in it.

When half frozen, Mr. MacGregor, with Little Buster in his arms stumbled into the Churchill sitting-room he found a very excited family.

Buster's brother, after returning from the Boy's Club, was sent in search of the missing child, but when neither she nor Mr. MacGregor could be found, they began to fear that he had ventured on the river, taking Little Buster with him, and Mr. Churchill was on the point of starting for the shore when they came in.

Mr. MacGregor reproached himself bitterly, for having caused so much trouble, but they were so delighted to have Little Buster safe and sound that they readily forgave him. Indeed, there was no time to bear grudge for Mr. MacGregor and Little Buster were severely chilled, so that blazing fires had to be kindled, blankets heated and ginger tea prepared.

In spite of the danger to which she had been exposed, Little Buster slept that night, as happy as a queen, with her little black kitten curled up beside her. "Kitty," she murmured dreamingly, "Kitty," it's just like a story, only we didn't all get married and live happily ever afterwards."

A Means of Increasing the Profit Per Cow.

In this advanced twentieth century, we should seriously inquire, are there any cows in this county to-day that do not earn a profit)

Chart No. 1 gives the age and the production of each cow in an Ontario herd of 14 grades and is typical of scores of herds in that particular district, as well as, probably, many other districts. One thing is certain, it would be easy, from our records, to tabulate the results of plenty of herds far poorer than this. There is every indication of a dead loss with at least three poor cows, one of them a 7-year-old.

CHART NO. 1.—PRODUCTION OF AN ONTARIO HERD.

SEVEN BEST COWS.

Cow	Lb. Milk	Lb. Fat	Age
1	5460	185.4	5
2	5060	178.9	8
3	5000	170.3	7
4	4870	169.6	10
5	4620	165.6	7
6	4670	160.8	6
7	4463	160:3	9
	34,143	1,190.9	

SEVEN POOREST COWS.

Cow	Lb. Milk	Lb. Fat	Age
8	4150	144.4	6
9	4280	139.7	6
10	3790	132.6	7
11	3640	125.2	6
12	3480	124.0	3 Loss
13	3390	112.6	7 Loss
14	2890	98.8	3 Loss
	25,620	877.3	

From these figures there rings out the challenge of the poor cow, a challenge to a modern farmer's intelligence and forethought. How long is she to be allowed to misappropriate good feed and act as a common poacher? Should she not be arrested as a vagrant and waster ?

The figures also emphasize the heavy burnden on the good cow. They not only have to "make good" themselves besides helping to pay off the mortgages, but they have the herculean task of dragging a few hundred thousand poor cows up a heavy grade before all, good bad and indifferent alike, can be represented as showing anything like a fair average yield.

The following details of this herd are worth careful consideration:

ONE COW EQUAL TO 14.

Chart No. 2.—Analysis of Production of an Ontario Herd.—1. Average yield of herd, 14 grade cows, 4,269 lbs. milk 3.4 test, 148 lb. fat. Average yield of 7 best cows, 4,878 lb. milk, 3.5 test, 170 lb. fat. Average yield of 7 poorest cows, 3,660 lb. milk, 3.3 test, 125 lb fat. The best cows average 1,218 lb milk and 45 lb fat more than the poorest.

2. The total earnings of the best cows are $85.23 more than the poorest. The total earnings of cow No 1 are $20.70 more than cow No. 13

3. With cost of feed $35, the 7 poorest cows average $1.60 profit, making a total profit of $11.20.

4. Cow No. 1 makes $19.60 net profit. Cow No. 11 makes $1.40 net profit.

5. Thus cow No. 1 makes as much profit as 14 cows like No. 11.

ONE COW EQUAL TO 42.

Fancy keeping seven cows for a whole 12 months to make the magnificent profit of $11.20 ! This mean eight hours' labor for one cent. How many of such cows would a man need to make a profit of $1,000.00 ? Further than this, in comparing the yields of 524 Ontario cows, I found that one quarter of them gave an average yield of 282 pounds of fat and one quarter of them gave only 145 pounds of fat. With a value of 24 cents per uound on the fat, and $34.00 on the cost of feed, the profit in the one case is $33.68, but in the other only 80 cents. Stated in another way it means that one of the good cows made as much profit as 42 of the poor ones.

LOSS OF HALF A MILLION A MONTH.

As far as the ordinary factory patron is concerned he wants only good cows, cows that are profitable. Unless a cow is just on the dead line where income and expenditure just balance, she is kept either at a profit or a loss. If kept at a loss, in what does the loss consist? At least both cash and time. Let us make a very simple calculation to ascertain the loss in cash. In the month of September there were 3,000 cows recorded in Ontario testing associations with an average yield of 722 pounds of milk. On dividing tae cows into two groups, those giving above that average and those giving below it, we find that the better cows produced more milk than the poorer cows to the value of $2,852.00 On the average the better cows produced 163 pounds of milk more than the poorer cows. Let us be liberal and cut off all the odd 63 pounds; then assuming that half the cows in Ontario could have produced only 100 pounds more milk per cow, we arrive at thir astounding result, that through keeping poor cows instead of fairly good cows there was lost in just one month the huge sum of half a illion dollars. Every month the poor cows are behind the good cows in that proportion of cash earnings. The poor cow must go ! Cow testing helps to detect her.

ENERGY GOING TO WASTE.

There is also a most serious loss of time and energy. The chart indicates loss with three out of 14 cows. Some patrons are keeping twice as many, and in other cases actually three times as many, cows as their neighbors to obtain even less milk. It has frequently been stated, that one half of the cows in the Province do not pay, but so as to make no wrong deduction let us take only 3 out of 14; this would mean 214,000 worthless cows in Ontario. Estimating that the time spent in going after the cows, milking and feeding them, and cleaning the stables amounts to only 15 minutes per day per cow, this amounts to 90 hours lost during a year, which with 214,000 cows amounts to over 19 million hours' time lost in Ontario every year on poor cows. This is a teriffic waste of energy.

Time is money. We pay low-grade, casual, unskilled labor 15 cents an hour, sometimes 20. Is the farmer, the head of the going concern, the President of the company, to be rated as low or lower. What return per hour does he expect for his labor, for his thought and skill as manager? From the humanitarian and philanthropic standpoint especially, it is impossible to estimate the harm now being done to the country from this waste of time and human energy; or, on the contrary, the vast amount of good that would ensue not only to the men themselves, but to their immediate dependents, the women and children. if this Niagara of wasted power were turned into profitable channels. Two and a half million horse-power wasted as irretrievably as that of a squirrel in a cage—endless revolution nothing accomplished!

APPALING WASTE OF ENERGY.

An important national problem receiving attention to-day is the conservation of our natural resources. What we need, and I submit this is a problem of far greater importance, is an awakening to this appalling waste of dairymen's energy, this sacrifice of human life in Ontario.

Chart No. 3—Production of Two Ontario Herds.—1. Average, 15 grades, 6,210 lb. milk, 3.6 test, 228 lb. fat. Lowest yield, age 4, 5,210 lb. milk, 3.6 test, 191 lb. fat. Profit varies from $16.00 to $37.00 a cow. (Feed $40.00.)

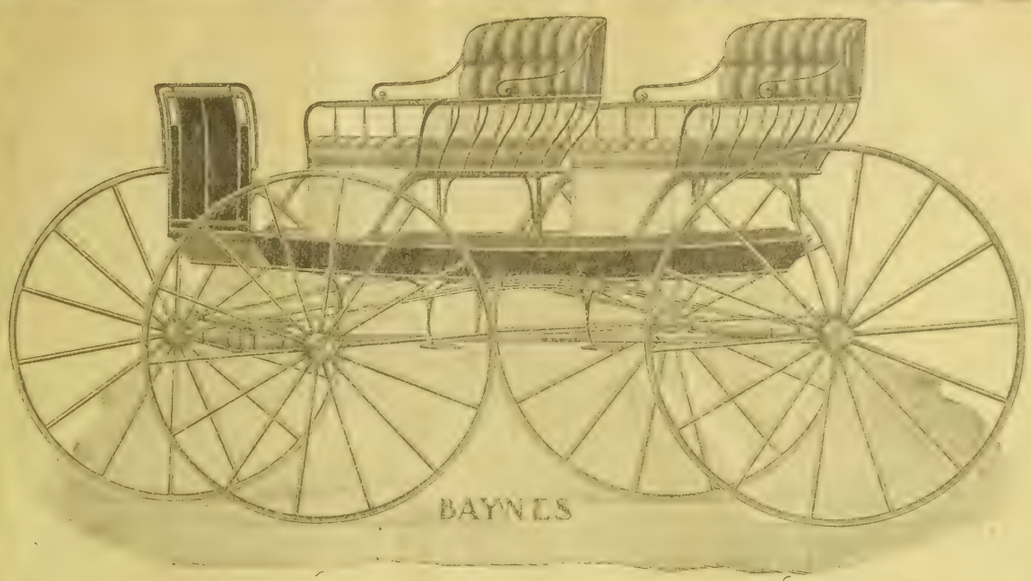
2. Average 9 grades, 6,567 lb milk, 3.6 test, 241 lb. fat. Lowest yield, age 2, 4,690 lb. milk, 4.0 test, 187 lb. fat. Herd includes two 2-year-olds, three 3-year-olds. Average profit, $25.00 per cow. (Feed, $40.00.)

Eeach cow made a fair profit.

Note the remarkable extra increase in profit as the milk yield increases. A yield of 4,500 lbs. milk may give $5.00 profit above cost of feed, but a yield of 9,000 lbs. milk may give $40.00 profit; that is, twice as much milk, but eight times as much profit.

Chart No. 3 is intended to emphasize one or two points. First and foremost is the fact that each cow in both herds earns a profit above the cost of feed. There are no exceptionally heavy yields, but there are no poor cows being carried at a loss. That is what makes these two herds so satisfactory. Both of the two lowest yields of fat (one from a 2-year-old) are actually higher than the best yield in the first chart. His brain should discriminate.

These represent two fairly good average herds, due to selection of records; herds of fairly uniform production, herds in good working order on a profit bearing basis, and herds that will probably be considerably improved. Such herds are needed on every dairy farm and are easily within the grasp of any man who will adopt cow testing.



No. 605—QUEBEC CONCORD.

Think how often you need a two-seated rig ! Here's the one that will give you genuine satisfaction. It is a strongly built wagon, that will stand lots of hard knocks, yet it doesn't look heavy.

Baynes Buggies

Hung on long, heavy, E. T. springs, it rides easy with one or four people. When you want to carry only one or two the back seat comes out in a jiffy. With the Baynes Quick Shifting, Ball Bearing Shaft Couplings you can change from shaft to pole or back again in about 20 seconds.

FARMER AGENTS WANTED.

We want farmers to sell the Empire Cream Separator. Our proposition is atractive and our machine the best. Write today for particulars.

The Empire Cream Separator Company of Canada,

Sussex, - - N. B.

If you do not happen to be a farmer and can handle our Separator we will be glad to hear from you.

SUBSTANTIAL INCREASE IN THE MILK YIELDS.

The brighter side of the picture is the steady growth of cow testing associations, in the number of individual farmers taking up the system privately, and in the substantial increase in milk yields they have obtained. Several instances of such definite gains were published in our last annual report. We still have much to accomplish, we should be able to show a similar or even a better increase than the dairymen in Sweden, who in six years have made a gain on 50,000 of 31 per cent. in the yields of milk. This will come when our farmers are known by the sign of the triple S''—silo, scales and samples.

The Dairy Division has endeavored to give just as much encouragement to cow testing in the East; a representative of the Department is always available to help any locality that shows any interest in the matter. The Department still offers to pay any maker at the local factory for testing the samples, so that the farmers are at a minimum of expense, having just to provide scales, dipper and sample bottle.

More than three times as many cows were under test in 1909 as in 1906, the figures running close to a total of 54,000 during the year. These are cows in connection with associations. In addition to this several thousand blank record forms have been distributed to individual farmers, not belonging to associations, who are always keeping records as a result of frequent announcements made by the Department.—Part of an address by C. F. Whitley, Ottawa, Can., before an Ontario Dairymen's Convention.

Alfalfa for Prince Edward Island.

(Continued from page 235.)

same time. The nitro-culture can be obtained by sending 25 cents to the Nova Scotia Agricultural College, stating you want a nitro-culture for alfalfa. It is best to sow alfalfa alone and not with timothy and clover; the dates of maturity differ very much.

A thin nurse crop may be used; say barley at the rate of three pecks per acre. If the barley seems to shade the alfalfa too much or seems to be stealing plant food from it mow down the barley, leaving it on the ground. The seed may be obtained from any of the Canadian seed houses.—C. W. McD.

Short Courses at the Nova Scotia Agricultural College.

...The seventh annual Short Courses at the Nova Scotia Agricultural College, held during the first two weeks of January, have just been completed. Each succeeding Course has been better than the former and that of 1911 marks the highest attainment yet. You can feel the spirit of progress in the air in the Maritime Provinces. For years, these provinces have been little more than marking time and, in contrast to the rapidly developing western provinces, have actually seemed to be going backward. But a new spirit is now manifest in the east, and nowhere is it more evident than at the Agricultural College in Truro—it is the spirit of optimism.

There were actually enrolled in the 1911 Short Courses 259 pupils, and a considerably larger intermittent attendance. Of these, 87 were from Prince Edward Island, 16 from New Brunswick, a few from Great Britain and the balance from Nova Scotia. From Nova Scotia itself, the attendance from the fruit counties, Hants, Kings and Annapolis, was 50 p. c. lower than in 1910, for the fruit crop of the past season has failed to bring in its usual stores of gold and, as a result, these people of the fruit trees are staying at home. But from the other parts of Nova Scotia the attendance has been a record one.

The enthusiasm of these Short Course students is what most strikes the visitor. They study the seeds, and listen to lectures on soil cultivation; they study fruit growing and spraying and all that sort of thing; they judge cattle and horses and hogs and sheep and poultry and learn how to care for them. to lectures on the treatment of diseases and wounds in stock; they study milk and how to manufacture They see demonstrations and listen it into its various products, the use of separators and other dairy equipment; and so on with poultry and farm drainage and manures and fertilizers they proceed, until they are almost bewildered with the fund of knowledge that it sets before them. But the best of it is not just what they learn, just what they see, but the spirit they manifest. It is the spirit of appreciation of eastern agriculture, the spirit of optimism, the spirit that more than anything else in the east will conquer and accomplish things.

There are men on the college staff well known all over Canada, but the management deems it best to offer to the students, in addition to these, the services of men supplied by the Department of Agriculture at Ottawa, men like Shutt and MacNeil, and Raynor and Clark and Robertson. Then there were men from the Departments of Agriculture of New Brunswick and Prince Edward Island and farmers who have accomplished things in the East. Notably among the latter when R. J. Messanger and F. C. Johnson, of Bridgetown, N. S., both of whom, as fruit and in a measure stock farmers, have attained an enviable degree of success and men like Bishop, of Auburn, N. S., the king of cranberry growing in the east.

When the Short Courses first began at Truro, the College could secure for demonstration purposes little else than the stock kept in the College Farm Stables. But in these years a leven has been working and from such men as Samuel Dickie, Central Onslow; C. A. Archibald, C. P. Blanchard, Retson Bros., and others near Truro, the demonstrators were able to gather in to the live stock pavilion a suberb collection of live stock of all kinds. The College itself possesses some uncommon fine stock. Such a collection, for example, as the Clydesdale stallion, "Royal Baron" (first at the Highland and Scotland and at the leading shows in America), the Hackney "Cliffe Rosador", a many times prize winner in England and the Thoroughbred, "Lucifer II.", erstwhile King's Premium horse in England, and the Standard Bred, "Achille," 2.15¼, whose progeny are winning such fame for him, make a quartette of stallions that we fancy could not be excelled anywhere in Canada. The same excellence exists among the cattle and other stock. There are cows with milk records running all the way from 7,000 to 18,000 pounds of milk per year, and beef cattle and hogs of equal excellence. Taking it altogether, the live stocv show made during the Short Course classes was such as to inspire every student in attendance to to improve his own live stock and so advance on the most permanent basis his own farming interests.

There was a Ladies Course too, attended regularly by 27 and intermittently by a great many more. These ladies studied dairying and horticulture and poultry and domestic science. They judged horses and cattle and they listened to many of the lectures given in connection with the Men's Shourt Course. This Ladies' Short Course is as yet in its infancy and it is hoped will form the nucleus of a thoroughly organized ladies department in connection with the agricultural College.

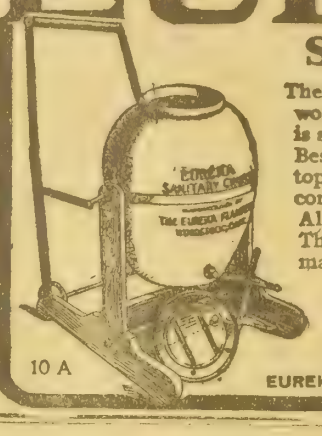
On one evening the Mayor and Councillors of Truro tendered a reception. They came over to the College Building and brought with them singers and speakers and tempting refreshments. It was a great evening. Men of the town and country met together and mutually joined in the delight of a rejuvenated agriculture which will mean so much to the eastern provinces of Canada. At this function speeches were made by the students from all the provinces and those from Prince Edward Island made use of the opportunity to express their appreciation of the Course by presenting to the College a Cup, to be competed for annually by the regular students in attendance in a competition for the best judges of grains and other seeds.

Principal Cumming and his colleagues have had a strenuous two weeks of it, but they all wear a look of satisfaction. They've had some hard work, but they say it is not hard work when you've got an appreciative lot of people to work for. Never was there a more appreciative class than that of 1911 and never was there a better satisfied faculty.

But the end has not come yet. These Short Courses, like the College itself, are only in their infancy. They have touched only the few. The great bulk must yet come and the numbers of students must grow. Much already has come out of these Short Courses. One man, before the rest of his class mates, stated that he had come because the College had been the means of getting his boy to stay at home and farm, another man said he had come because his neighbor, who had been at Truro before, had made such big improvement in his farm. Many more such tangible evidences of results that have followed attendance at the College could be given. But if it is for nothing else than to catch the contagion of enthusiasm, it will do the farmers and the farmers' sons of the east good to attend the College classes in years to come. The importance of agriculture in the Maritime Provinces is being realized as never before. It will pay those engaged in the calling to acquire every bit of information they can. Success to the Agricultural College.

EUREKA

SANITARY CHURN



There's no comparison between the ordinary wooden churn and the "EUREKA". Barrel is stoneware—top is clear glass.
Besides being absolutely sanitary, the glass top enables you to see how the churning is coming along without opening the churn.
Also made with Aluminum top.
The "EUREKA" is the easiest churn on the market to operate. By tilting back the frame until the weight rests on the wheels, the churn can be quickly and easily moved—while the barrel remain upright.
If your dealer does not handle the "EUREKA," do not take a substitute but write us for catalogue.

10 A

EUREKA PLANTER CO. LIMITED, WOODSTOCK, ONT.

Canadian Ayrshire Breeders' Association Annual Meeting.

The annual meeting of the members of the Canadian Ayrshire Breeders' Association will be held in Hall No. 6, Monument National, 296 St. Lawrence Main Street, Montreal, Que., on Thursday, February 9th, at 10 o'clock a. m., to hear reports of the President, Secretary-Treasurer, Registrar, Record of Performance, Test-Work, and of Committees. Also for the Election of Officers, and for the transaction of any other business that may properly come before the meeting.

All interested in the breeding of Ayrshire cattle are invited to attend.

The Directors will meet in the Parlors of the Queen's Hotel (corner of Windsor and St. James street) on Wednesday, February 8th, at 11 o'clock a. m.

A Banquet will be held in the Queen's Hotel, on Thursday Evening at 7.30 o'clock. A number of visitors and eminent speakers are expected to be present and give addresses. All are cordially invited to attend this banquet and hear Ayrshire interests discussed. Price per plate will be made known the day of the meeting, when tickets will be for sale.

On Friday, February 10th, the members are invited to visit Macdonald College at Ste. Anne de Bellevue, where an interesting and profitable day may be spent, inspecting the College, the Ayrshire herd at the College farm, as well as other noted Ayrshire herds in the vicinity of Ste. Anne de Bellevue. Make a point to wait over and take in this trip.

I beg to remind members that the annual fee for 1911 is now due. A prompt remittance to the accountant, National Live Stock Records, Department of Agriculture, Ottawa, Ont., or the Secretary-Treasurer, will be esteemed a favor. May I ask those who have not remitted the fee for 1910 to kindly do so at once.

JAMES BRYSON, President,
Brysonville, Que.
W. F. STEPHEN, Secy-Treas.
Huntingdon, Que.

The blacksmith should never be allowed to put his knife on the sole or frog of the horse's foot except to trim away ragged portions.

Most of the unsoundness of horses is due to a hereditary tendency bred into the colt. This is one reason why it is so necessary to select a good stallion.

Provincial Agricultural Exhibitions

Should They be "Ended or Mended"?

Editor Maritime Farmer:

Under the caption of "The Agricultural Exhibition—Should it be "Ended or Mended" over the nom de plume of Farmer's Son, Truro, N. S., the following article appeared in the January 12th issue of the Halifax Morning Chronicle:

"Re the Agricultural Exhibition, many are asking the question, whether it were better to mend it or to end it. In order to get at the real merits of the question, it is necessary to go back a few decades. Half a century ago the Government of the day was making generous contributions to the Provincial Colleges, but the curicula of these institutions at that time were extremely narrow, placing the very highest premium on professional work. The A B course in its design purely an arts course, in its working out proved itself an artful course as well, being admirably arranged (we do not say with intent), to make lawyers, doctors, teachers, etc., of farmers' sons, and it is not too much to say that because of this discrimination, the training a young man got 'in the early history of these colleges was indirectly, if not directly, prejudicial to the farming interests. The farmer, while paying seventy-five per cent. of the subsidies to these colleges, was getting little or nothing in return. (We are now speaking from the book.) This inequality could not exist for long; the times were ripening for a change, and with the change came the Agricultural Exhibition, the earliest recognition by special legislation of the farmer's rights. From this it would appear that the exhibition came not as a gratuity but as an equitable claim, it is fair to assume that the Agricultural Exhibition, in its infancy, was a centre of light and knowledge, and as such served well its day and generation.

THE SYSTEM OF AWARDS.

"It is not to our purpose to follow in detail the history of the Agricultural Exhibition. Like the individual it had its ups and downs, lining up somewhere at the end of the year. We wish only to note some factors, that in our opinion rendered the exhibition abortive of the best possible results. And first among them, was an imperfect system of awards, which in its application greatly favored the few at the expense of the many. Some one may ask, was ever a system of awards devised that did not do this? And let some one answer. To qualify what we have said, the system was not so arranged as to do the least possible harm to the many, which may be taken as the underlying principle, in the working out of any system of award.

"The decentering of the Provincial Exhibition, i. e., holding it in favored sections of the province, seems to have been mistaken policy, for the prize-list revised in the interests of the particular district, the tendency has been to align one section against another. The prize list itself has not escaped criticism. It is claimed that well defined rules of appraising have not been observed; that the farmers' interests might have been better served, had SPECIAL PREMIUMS been awarded to such products as were naturally best suited to the conditions of soil and climate, and that might therefore, be expected to yield the best returns for the labor expended. On the contrary, instances have been pointed out of some exotic stunt or prickly hot-house growth being placed at the very top of the sheet. The product of misapplied labor has been too often recognized as of the highest merit, while the more marketable product requiring the minimum of labor has been passed over as of little or no merit. There is always a strong temptation especially to the scientific farmer, to exploit the impracticable, to make go something that has been let go. Of the two, labor wisely directed or science unwisely directed in point of utility, the former is of more value than the latter.

"We do not think an absolutely perfect system of awards possible, and even more problematical one that can be expressed in terms of dollars and cents, but a wise policy of discrimination should do so much to minimize the defects and evil tendencies of an imperfect system.

THE PROFESSIONAL SHOWMAN.

"Misconception of the real object of an Exhibition must be held responsible for the existence of a professional type of showmen, who figure in the game solely for the fee simple, and it is a well known fact, that some of our leading agriculturists have been willing to exploit the finances of the exhibition in this way. While such are not to be classed as undesirables, neither are they, for obvious reasons, the most desirable exhibitors. The Agricultural Exhibition, in the past, has been monopolized or over-specialized in the interests of the few, while the average farmer, the great mass of the industrial world, have been looking on as mere spectators. We are here confronted with a most difficult problem: How are the hundred and one diverging elements to be brought together. The farmer of limited means cannot hope to successfully compete with his neighbor of unlimited means. No common ground can be reached through the prize-list. The only possible centralizing force is an INTELLIGENT HEAD. It is fair to assume that the average farmer has got beyond the stage where he can be satisfied with a cardboard distinction even though it may be gilt-edged. Granted everywhere in quality, quantity, classification, arrangement, etc., yet an Agricultural Exhibition is virtually a dead language without an interpreter. To be made instructive, the products of the farm, whether directly or indirect from the soil, must be studied in the light of the hundred and one conditions of their development. This has never been done in the past, and can never be done in the future, without a radical change in the whole system, and when this becomes an accomplished fact and the Agricultural Exhibition becomes an affiliated course, we will then and not till then look for a GENUINE FARMERS' REUNION.

THE FARMER'S STANDPOINT.

"There are those who are persuaded that, had the management, instead of featuring outside influences, wisely applied themselves along the lines indicated to the raising of the standard from a farmer's standpoint the Agricultural Exhibition might have been more successfully financed and without any sacrifice to the character of its status.

"We do not argue against an Agricultural Exhibition per se, on the contrary, if placed where it should be, UNDER THE DIRECT MAEAGEMENT OF THE AGRICULTURAL COLLEGE, we believe some practical scheme might be evolved, where by to better illustrate the teaching and in many ways add to the popularity of this very useful institution. This is purely speculative now, but we hope that someone in the near future may take up this aspect of the question.

"But, unfortunately, we have to do with PRESENT CONDITIONS. The Agricultural Exhibition has fallen into degeneracy; it has become a monstrosity, a huge white elephant, serving at best as a mere background from which to view the main features of the procession. If the Exhibition is to continue as such, if it is to be a continuous show, then by all means let the promoters, or performers, be held responsible for its financing. But we do not think public sentiment can favor the existence of a functionless and emasculate organism.

EVIDENCES OF PROGRESS.

"The Agricultural College at Truro with its efficient staff of teachers, conveniently arranged sessions and free tuition; the experimental farm in the heart of one of the most fertile areas of the Province, and model dairying and stock-raising stables within easy radius; the Horticultural School in the Annapolis Valley, the fruit growing section of the Province the specialized courses and subjects in the technical and common schools —these represent some, but not the sum total, of recent Government aid to the farming industry, and we must not lose sight of the fact that the expense of keeping these institutions up to a high standard must increase from year to year. Moreover, we must add to this the fact that the Provincial Colleges are no longer the special wards of the Government and that by widening their curicula they have been able to meet the farmer half-way, and effectually remove the last trace of inequality. With all these evidences of progress before us, we are compelled to sit up and count the fast receding milestones. By the introduction of better facilities, more scientific and more modern methods of teaching, the Agricultural Exhibition has been superseded and no longer has any right to be recognized as a necessary industrial factor."

A SUGGESTED REMEDY.

It is a well known fact that the Halifax Exhibition, although under the care of a competent manager, Mr. Hall, has failed to come up to that educational and financial standard which its progenitors hoped it would attain. Instead of the agricultural interests of the province having the balance of power in regard to the directorate of the exhibition, the industrial element in Halifax seem to have the most to say in the matter and have hampered the agricultural element as best suits their own ends. We feel confident that if the manager had a free hand to act the agricultural end of the show could be made more educational, and undoubtedly, in order to attain that end it might be a good idea to divorce the agricultural interests in so far as exhibitors are concerned and let each stand on its own merits.

I would heartily endorse a scheme that would bring our agricultural exhibitors in the Maritime Provinces under the direct management of the departments of agriculture of the various provinces and the College of Agriculture, at Truro.

With the latter institution at the head of such a movement we might look for a marked advaocement in the educational features of our fall fairs.

I would like to offer a scheme as a remedy for exhibition ills—a scheme which, I believe, would cost our governments and our people less money than exhibitions are costing them now, and which would greatly enhance their educational features.

I would advocate instead of holding large provincial exhibitions every year, that two-day district fairs be held at conveniently situated stations on the various railway lines and that a man be appointed to visit the secretaries of the respective fairs and assist them with the advertising, visit the town councils and help to create a healthy public interest. These fairs would be held in consecutive order and would each be held for say one, or at the most, two days, that a special demonstration train be equipped, carrying the most ideal individuals obtainable, of the various breeds of horses, cattle, sheep, swine and poultry from the herds and flocks of our most successful breeders. That ideal specimens of fruits and vegetables of all kinds grown in the Maritime Provinces be also carried on this train. These animals, fruits and vegetables would be used for contrast purposes after the local exhibits had been judged. That the train also carry a corps of practical agriculturists, headed by Prof. M. Cumming and members of his staff, who would act as judges at the fairs and deliver lectures on agricultural topics. Provincial fairs might be held, say, every second or third year, where the various district exhibitors could meet for provincial or inter-provincial competition.

I believe if this system were carried out that more of our farmers would come forward as exhibitors at the local fairs, and hope to win a fair share of success and that such successes would be the means of inducing them to go forward in the lines of stock improvement and generally improved farming and orcharding conditions. Having made improvements along these lines they would feel more confident in coming forward and help to increase the attractive and educational features of the provincial fairs.

I offer these suggestions with the hope that they may appeal to others as they do to me. I confidently believe that a scheme such as I have roughly outlined would revolutionize the exhibition affairs of the Maritime Provinces and would materially bring about that standard of education hoped for by the progenitors of our exhibitions and that our exhibitions would be "mended not ended."

JUST A FARMER.

Antigonish Co., N. S.

A Good Three Year Old Record.

We have recently received two snap-shots of a pure-bred Ayrshire heifer owned by T. J. Hawkins, proprietor of Fairview Stock Farm, Stewiacke East, N. S. We regret that the photos are not clear enough to make a presentable cut as the heifer in question Mayflower V., is an exceptionally fine three-year-old specimen. She drouped a nice bull calf on December 21st, 1910 and shows a well balanced, milky looking udder. She has been giving an average of forty-four pounds of nilk per day which is a good record for a heifer during her first l acation period. Mr. Hawkins' advertisement appears in this issue.

"Sells his Crown Wire and Iron Fences and Gates at factory prices, also barbed, coiled, and plain wire, fence tools, etc. Ask for free catalogue."

The Incubator.

Practically, the incubator marks the boundary between the conditions under which poultry growing may be made profitable and those under which it cannot ne made to pay the actual expenses ,normally at all events. Of course it must not be asserted on the strength of this that at all times and under all circumstances it is impossible to make a profit out of poultry raising without the help of the incubator. One man may have a particular strain of birds for which he can be sure of a ready sale at fancy prices. Another may be located in a place where poultry products are sure to bring extravagant figures; while still another may have such a low cost of living, such a total lack of other employment and such an overflow of help in his own family that he can make money out of his hens by the old-fashioned methods of poultry production; but these will, after all, be found to be the exceptions that prove the truth of the general rule.

The incubator is to the poultry raiser what the horse-rake or the self-binder, is to the hay and grain grower, and all who have given it anything like a fair trial, will willingly bear testimony to this. One good sized incubator will do the hatching, which, if done by hens, would take up the time that would represent the laying of over nineteen dozen eggs worth, in round figures from three and a half to four dollars at moderate market rates for good fresh eggs for table purposes, while it produced by high class pure bred fowls, they would be worth double or treble that sum at a low computation.

Then again, the life of a good well made incubator properly taken care of is such, that it need hardly enter into the farmer's calcilations, and the cost of furnishing it with oil for hatching of eggs, is also very trifling so that it is safe to reckon that the time spent by the hens in doing the work of one incubator, after the farmer had furnished them with the eggs would cost the equivalent of chickens already hatched.

Let it be looked at from any viewpoint, and the employment of hens for hatching and brooding chicks is a miserable waste of capital and energy. The wonder is that it can be even seriously contemplated by anyone who has given the matter a moment's consideration. A decently managed incubator will hatch a far higher percentage of chicks than will the most skillful and motherly of hens, and then, after the chicks are out of the shell, the simple inexpensive mechanical brooder will, with proper management, put the hen, in the matter of mothering, still more to the bad by comparison.

In considering the incubator and its bearing on poultry production, however, one must take into consideration that the use of the incubator and the brooder is the inevitable out come of thought and system in poultry raising, and this may of necessity count for much. The poultry raiser who even takes a serious view of the proposition cannot fail to be impressed at once with the folly of permitting the hens to do the hatching and brooding. This is the beginning of the introduction into poultry raising, and it takes into its wake regulations and restrictions which mark the difference between profitable and unprofitable poultry production.

The farmer who uses an incubator will not permit his hens to run all over the place and get beyond his observation and control. He cannot permit them to do so if he wants them to spend their time in laying eggs for the incubator instead of hatching whenever they feel like it. To keep them under observation they should be held within a walk or yard where they will be fed and watered regularly, and where they will lay eggs in clean sanitary nests which have been carefully prepared for them with several important purposes in view.

First, they must be kept free from vermin, dirt and disease germs of all sorts and they must be so arranged that the eggs will come out of them absolutely clean and free from soilure. The nests are so arranged that the poultryman knows not only the age of his eggs but the identity. This is an important matter for various reasons. It enables the poultryman to know just which of his hens are good producers, and which are not, and at the same time it enables him to have the eggs gathered as fast as they are laid, thus insuring their freshness. Every farmer who has paid any attention to poultry raising knows whether eggs are intended for hatching or for the table it is undesirable that tney should be subjected to the animal heat from the body of the hen any longer than is necessary, and that they should variably be removed before another egg is laid in the same nest. All these precautions contribute to the market value of the eggs whether they be intended for hatching or the table. True their observance costs a little attention but everyone knows that the advantages gained, more than make up for the extra labor.

The use of the incubator reduces the poultry business to something more closely resembling an exact science than usually characterizes farming ouerations, no matter how carefully they happen to be conducted. It enables the farmer to work out experiments in breeding and mating his fowls and thus encourages and facilitates the material improvement of flock, generation after generation, by the reservation of the best producing individuals and their offspring for breeding purposes. The poultryman is enabled with accuracy to trace the breeding of his fowls, and thus insure straight line breeding while making desirable family crosses of individuals within the tribal lines. It also enables him to protect his flock from the very undesirable effects of close and continued in-breeding, and this would be nearly if not quite i mpossible without the incubator.

In short, practically everything that makes for the intelligent and systematic production of proultry and eggs of the best types is contributed to by the employment of the incubator.

It is not pretended that none have failed to use the incubator with satisfactory results right from the beginning as they have made mistakes as all human beings are liable to do at times but if every allowance be made for these failures, and for the many other failures which have never been made, the balance of profit. would be found over-whelmingly in favor of the incubator, as one of the most important and even essential appliances of any profit-producing poultry plant.

By the employment of the incubator the hens on the place may be kept up to the highest possible point of productive efficiency from the beginning to the end of their career. The hatching hen is apt to be thin and badly out of condition after having brought out eight or ten chicks, and reared half the number to partial maturity, and if the greatest of care is not exercised, she is liable to become infested with vermin which, if not carefully eradicated, may bring serious trouble into the whole flock. Hens with ragged coats, and with comb and gills pale and colorless, have no place in the poultry plant which is operated with incubators and along up-to-date lines. The poultryman feels that he cannot afford to have useless and inefficient fowls about the place. It will cost more to put hens which have fallen so far back into good marketable condition than it would to produce a good, fresh and healthy pullet by the incubator route.

It appears strange that there should be any conservative feeling among Canadian agriculturists in the matter of recognizing the value and even the necessity of the incubator on the farm today.

The only point that the purchaser of an incubator wants to bear in mind, is that he get a machine that is built for the cold climate of Canada.

The Famous Rayo

The Lamp with Diffused Light

should always be used where several people sit, because it does not strain the eyes of those sitting far from it.

The Rayo Lamp is constructed to give the maximum diffused white light. Every detail that increases its light-giving value has been included.

The Rayo is a low-priced lamp. You may pay $5, $10 or even $20 for other lamps and get a more expensive container—but you cannot get a better light than the Rayo gives.

This season's Rayo has a new and strengthened burner. A strong, durable shade-holder keeps the shade on firm and true. Easy to keep polished, as it is made of solid brass, finished in nickel.

Once a Rayo User, Always One.

Houdans.

Subscriber, Westmorland Co., N. B.,—I saw some Houdan fowl at the recent Moncton Poultry Show. They had a rather attractive appearance. Will you please tell me what are the most prominent characteristics of the Houdans ?

Ans.—The Houdan breed is one of the best of French breeds of poultry, combining the useful with the agreeable. The flesh is delicate and savory. It has also the advantage of early maturity a quality which is more and more in demand at the present day. On a farinaceous and milk diet, well considered and applied, a Houdan chicken of from four to six months may make a fair show in the market. The flesh is of capital quality, the eggs are large, the shell milk-white, weighing between 2 and 3 ounces. In point of flavor, too, they have their merits. From the market standpoint, of course, it is not so much delicacy of flavor as size that counts.

The Homestead Holsteins.

Editor the Maritime Farmer:—

Your correspondent had the pleasure of a visit to "Homestead Farm" a few days ago and found all the stock in splendid growing condition. There were about 60 head of Holsteins still on hand with some 6 or 8 head to be shipped in a few days.

This herd has a great record. Starting some twelve years ago the Messrs. Logan Bros. bought Nina Rooker (Imp. from Holland) and three of her daughters from the Experimental farm and three of the famous Jacoba family from Messrs. J. E. Page & Sons. These together with their noted bull "Pete Van Voran" made one of the best foundation herds in Canada. Since that time have been exceedingly successful in the selection of sires and have maintained the standard of the herd so far as conformation is concerned and are gradually increasing the per cent of butter fat and keeping up the quantity of milk, and we might add, that they are improving the stock of their fellow breeders and dairyman, not only in the Maritime Provinces, but as far as the Pacific Coast.

This year at the Maritime fall shows I find that with only one or two exceptions every first prize animal in the Holstein class was of their breeding or a descendant of their stock.

Twelve head were sent this year to the New Westminister show after being shown at St. John, and although over two weeks in the cars they won first in every class shown, where more than one was shown in a class they followed up with 2nd and 3rd.

The following is a list of the winnings in strong competition:

Bull, 2 years old—1st, Van Voran Vale.

Bull, 12 months old—1st, Dandy Dick; 2nd, Prince Oatka.

Aged Cow—1st, Lady Mary Rooker; 2nd, Princess Lida Posch; 3rd, Artis Juba Oatka.

Heifer, under 2 years—1st, Jacoba Rooker.

Heifer, under 18 months—1, Fanny Orne Rooker.

Heifer, under 12 months—1, Sadie Korndyke.

Heifer, under 6 months.—1, Homestead Ida Rooker.

Champion Male—Dandy Dick.

Champion Female—Lady Mary Rooker.

Aged Herd of 5—1st prize.

Young Herd of 5.—1st prize.

Three animals of the get of one sire—1st prize.

Milk test open to all breeds—1st to Lady Mary Rooker.

Champion Dairy Cow, open to all breeds—Lady Mary Rooker.

They also won the specials of both Canadian and American Holstein Associations.

These cattle were sold to Thos. R. Pearson, "Sunny Croft Farm", Port Hammond, B. C., and will make the foundation of a great herd.

Besides these, Messrs. Logan shipped 5 head of two-year-old heifers to the Wyoming Experiment Station, at Laramie, Wyoming, and several choice individuals to different parts of the Maritime Provinces.

At present they are offering for sale a few young bulls about fifteen months old. They are in good condition and are a very breedy looking lot.

Their Shropshires number about 40 typical uniform breeding ewes and a dozen ewe lambs. All the rams are sold. For the last four years they have been using imported rams from England and by feeding and careful selection have a flock that would be hard to duplicate.

Last but not least, we took a look at the Clydesdales and they are certainly worth more than a passing glance. The first is a row of six brood mares, all imported but one and all in the pink of condition. Handy Andy is getting more massive as he matures and the three of his get were all first in their classes at both Halifax and St. John Exhibitions and we think he is the coming sire.

This season's sales include the yearling stallion "Labori Again", sold to Fred C. Clark, Victoria, P. E. I. This is a very promising colt and we may expect to hear from him later. The yearling filly, "Homestead Rose" was sold to Donald McIntyre, of Amherst.

Logan Bros. are always glad to have visitors who are interested in good stock.

Encouraging Results in Sheep Raising

Editor Maritime Farmer:—

Roderick Lee, of Kenneth, Carleton Co., N. B., sold to Mr. John McIntosh, of Glassville, N. B., 12 lambs the first week in August. The twelve weighed 1180 lbs., for which Mr. Lee received $59.08. These were April lambs.

Mr. John Anderson, of East Glassville, N. B., sold to the same buyer 13 lambs from 7 ewes for $50.00. They were about the same age as Mr. Lee's lambs. Mr. Anderson also sold the wool from the same ewes, together with a ram's fleece—54 lbs. of washed wool in all—for $11.88. That is, his flock of 7 ewes and a ram produced for him $61.88.

These figures are an indication of what care and good judgment can do in this county in sheep raising. The writer has not seen any Ontario results that will beat this— fancy stock raising barred out.

REV. F. W. MURRAY.
Glassville, N. B.

Farmer Ads. Bring Results.

Editor Maritime Farmer:—

Please take my advertisement out of your paper, or I will not be able to keep a hoof on the farm. Everything advertised is sold and orders have been turned down that could not be filled. Sales extended from Pictou County, N. S., to Northern New Brunswick, with one order from Charlestown, Mass. Patrons invariably expressed satisfaction, which is very pleasing to the breeder. Sheep went into winter quarters in good condition and inquiries are already coming in for next season's delivery.

ANDREW McPHERSON,
Rocklin, Pictou Co., N. S.

Clydesdale Horse Association of Canada.

The annual meeting of the Clydesdale Association will this year be held on date of Friday, Feb. 3rd, at 2 p. m., in the King Edward Hotel, Toronto.

1 Cent a Word.

This department is one of the most valuable in the MARITIME FARMER. At a cost of only one cent a word, you can advertise anything you wish to buy, sell or exchange. The address must be counted as part of the advertisement and each initial or a number counts as one word. Cash must accompany each order and advertisement must have address on, as we cannot forward replies sent to this office. Copy must be received not later than Friday before the date of issue, which will always be found on the editorial page of the proceeding issue. No black faced type or display of any kind will be allowed under this head, thus making a small ad. as noticeable as a large one. The rate for this column is one cent a word, each insertion. MARITIME FARMER, Sussex, N. B.

E. T. JORDAN,
Kentville, N. S.

Charlottetown Prices.

GRAIN.—Oats, white 34c, black 37c.

FEED STUFFS.—Bran, retail, $1 25; Shorts, $1.40 to $1.50; Middlings, $1 45 to $1 50; Oil Cake, $2.25 to $2 50; Corn Meal, $1.75 to $1.80.

LIVE STOCK.—Butcher's Cattle, 4½c dead; 5c live; Stockers, $20 to $30; Milch Cows. $30 to $60; Sheep, $3.75 to $5 00; Hogs live, 6 to 7c per lb.

DRESSED MEATS.—Beef (carcass) 7c to 9c per lb; Beef, (retail) 9c to 14c; Mutton, (carcass) 8c to 9c; Lamb, 9c to 10c; Pork, 8c to 9c.

HORSES.—Drafters, $150 to $225; Roadsters, $150 to $225; Carriage, $150 to $225.

DAIRY PRODUCTS —Creamery Butter, 23c to 24c solid; Prints ½c to 1c more; Dairy Butter, 19c to 21c.

POULTRY AND POULTRY PRODUCTS.—Eggs, 30c to 35c; Fowl, 10c to 11c; Chickens, 10c to 14c; Ducks, 13c to 15c; Geese, 13c to 14c; Turkeys, 20c to 22c.

FRUIT.—Apples, $2.50 to $4.00 per bbl.

VEGETABLES.—Potatoes, 45c to 50c per bus.

MISCELLANEOUS.—Hay, $8 00 per ton; Straw $5.00 to $6.00 per ton; Beef Hides. 8c to 8½c Sheep Skins, 50c to 60c; Lamb Skins, 40c to 50c.

Since last report there has been little or no change in prices here except in pork which has advanced sharply and is now selling at 9 cts for selects dressed for inspection with heart, liver and lungs left attached, which really means 9¼ to 9⅜c for hogs dressed as they used to be. Although the price is lower than a year ago it is a good one and there should be money in growing hogs at this price. The supply has kept up fairly well but the trade could take care of very many more than are coming out

Trade has been on the quiet side in all lines, the want of snow has prevented travelling and very little oats and heavy produce is being offered and the market is without special interest. Poultry is practically all cleaned up and our quotations are merely nominal, We understand that Beef of strictly first-class quality is very scarce, but the market is well supplied with the lower grades. We are pleased to report that the Earl Grey is keeping up communication between here and Pictou which means a lot to merchants in general and particularly to the shipper of farm produce. Eggs are purely nominal in above quotations and while a few could be placed at this price it would be impossible to sell any quantity over 28c or 30c. Limed stock can be bought in case lots at 26 to 27c.

Halifax Prices.

Dairy Rolls, 23 to 24 cts, per lb; Cheese, Twins, 13½ per lb.; Cheese, Large, .12½ per lb.; Storage Eggs; .26 per dozen; New Laid Eggs .32 to 35 per dozen

E. I. per bag 2.25; Potatoes, N. S., per bag 2.25; Apples per Bbl 2.25 to 4.50; Parsnips, per bbl. 1.50; Cape Cod Cranberrie, per bbl 10 00 to 12.50; N. S. Cranberries, 9.00; Celery, per doz. 1 00.

FRESH MEATS AND POULTRY.—Fowls, per lb. 12c; Turkey. per lb, 24c: Lamb, per lb. 10c to 12c; Chickens, per pair 70c to 1.00; Geese, per lb, 16c to 18c; Ducks, per lb, 15c to 18c; Beef, per lb. 9c to 10c; Mutton, per lb 7c to 8c; Veal, per lb. 7c to 8c; Pork per lb, 8½c to 9½c; Blue Wing Duck, per pair 60c; Rabbits, per pair 10c to 15c.

FLOUR AND FEEDS—$4.70 to 6.30.; Beans, 1.95 to 2.10; Peas Round, 4.75 to 5 00; Peas Split. 5 75 to 6.00: Oatmeal Standard in bbls. 5.30 to 5.40; Oatmeal Standard in bags 5.10 to 5 30; Rolled Oats in bbls 4.80 to 4 90; Rolled Oats in bags, 4.60 to 4 70; Middlings. 25 00 to 26.00; Bran 22.50 to 23.00; Shorts 24.00 to 24 50; Feed Flour, bag 98 lbs 1,65 to 1.75; Cornmeal, in barrels, 2 95 to 3 00; Cornmeal in bags, 1.40 to 1.42½; Feed Oats in bags, .47 to .48; Hay 10.00 to 12 00.

PORK.—American Clear Fat Backs, $26.50; P. E. I Mess, 24 50; P. E. I. Short Cut Backs, 25.50; American Bean, 28.00; Rumps, none; Jowls, 14 75; Pigs Feet, .50; Hams, .16: Roll Bacon, .13½; Side Bacon, .17; Lard in pails, .15; Lard in cases .16

BEEF.—American, $19.50; Best Canadian, 20.50; ½ Bbls. Pork and Beef, 50c extra.

BUTTER CHEESE AND EGGS.—Creamery Prints, 28 cts, per lb.; Creamery Solids, 26 to 27 cts, per lb.; Dairy Solids, 23 to 24 cts, per lb.;

St. John Prices

GRAIN.—Oats, 45c to 50c per bushel, Buckwheat, $2.25 to $2,75.

FEED STUFFS —Bran, $22 per ton; Shorts, $24 50 to $25 50. Oil Cake, $2 20 per cwt Linseed Meal, 7c per lb.; Cottonseeds Meal, $41 per ton; Corn Meal, $1.25 per bag; Flour, $5.30 to $6.25.

Live Stock.—Butcher's Cattle, $9 00 to $10; Milch Cows. $35 to $40.

DRESSED MEATS,—Beef, (retail) 10c to 20c, Mutton, 10c; Veal, 10c to 12c; Lamb, 9c to 12c; Pork, 9c to 9½c

HORSES —Drafters, $175 to $225; Roadsters, $160 to $180; Carriage, $175 to $200.

POULTRY AND POULTRY PRODUCTS.—Eggs, 30c per doz; Fowl, $1 00 to $1.50; Chickens, $1.00 to $1.50; Ducks, $1.25 to $1 70 per pair; Geese, $1.25 to $1 60; Turkeys, 26c to 28c per lb

Fruits.—Apples $3 25 to $4 00; Cranberries, $8 00 per bbl.; Maple Products, 30c per bottle.

VEGETABLES.—Carrots, $1 25 per bbl.; Potatoes, $1.60 to $1.80 per bbl.; Beets, $1 20 per bbl.; Turnips, 90c per bbl.

MISCELLANEOUS.—Hay, $10.00 to $11.50 per ton, Straw, $8 00 per ton; Wool, 23c washed, unwashed, 16c to 17c; Beef Hides, 8½ for green, 9 to 9½c cured; Calf Skins. 15c to 17c; Sheep Hides in good demand, fresh take off; Tallow, rendered, 7c; Tallow, unrendered 3c; Bones, 50c per barrel; Slaughter Fat, unrendered, 4c per lb.

The Market is poorly supplied in all kinds of produce, poultry and meats. I think on account of the want of snow, potatoes and poultry are in strong demand. Veal, of good quality, would bring a good price at the present time.

Dates to Remember.

Canadian National Dairy Show, Montreal, Oct. 2nd to 7th, 1911.

Chatham Exhibition, Chatham, N. B., Sept. 11th to ——, 1911.

Maritime Horse Show, Winter Fair Building, Amherst, N. S.. April 4, 5, and 6, 1911.

Fredericton Exhibition, Fredericton, N. B., Sept. 16 to 23, 1911.

The Everitt Car Growing.

The Tudhope Motor Co., of Orillia, have closed a great many agency contracts for their new "Everitt" car. Montreal, Toronto, Winnipeg, Regina, Saskatoon, Calgary, St. Catharines, Ottawa, and other centres are now represented.

Quality and Quantity.

Editor Maritime Farmer:

Following are Government tests of Jersey cows owned by B. H. Bull & Son, Brampton, Ontario.

	P. C. Butter Fat.
Brampton Cicero Tilley	5.6
Brampton Lady George	4.2
Bramptoo Agatha	68.2
Brampton Blue Fern	6.
Brookhill Financial Countess	6.2
Brampton Alecente	5.9
Brampton Blue Fly	5.2
Brampton Betty	5.4
Artocrtaic Fanny	5.
Brampton Ruby	4.1
Stockwell's Rosy	5.3
Brampton Lady Oaklands	5.9
Brampton Fereor Tister	5.3
Brampton Lady Hauplo	5.2
Brampton Japs Blonde	6.1
Nunthorpes Susanne	4.7

Lowest test 4.1.

Highest test 8.2.

Average for 16 cows under test 5.51

Quality or quantity? But these Jerseys are doiog both.

Brampton Lady George, the little two-year-old, finishinb her year's work on the 8th February, is going to make a record well up in the five figure column. Now milking nearly eleven months she is still giving thirty pounds per day. She was in the dairy test at Guelph and competed in the test at Ottawa when milking nearly twelve months. She is just one of the two hundred in the Brampton Jersey Herd.—B. H. Bull & Son.

Belvoir Farm.

In Ayrshires and Yorkshires, R. J. Messenger, of Bridgetown, N. S., is laying some good foundation stock. His motto in Ayrshires is "Production Not Show." His stock bull is a son of McQuitliston Secretary, one of the best production bred bulls that ever came from Scotland, and whose dam is a 12,000 lb. cow. He has two cows that have closely approached the 7000 lb. mark, on indifferent care and feed. Another heifer in the herd is a grand-daughter of Barcheskie Kings Own and Nellie Burns. In Yorkshires the females are of the Oak Lodge Cinderella Strain. While the present stock boar is from Gus. Langelier's prize winning stock. His sire is a championship and 1st prize boar at several shows, while his dam is a 1st prize sow.

The busiest and mightiest little thing that ever was made is Chamberlain's Stomach and Liver Tablets. They do the work whenever you require their aid. These tablets change weakness into strength, listlessness into energy, gloominess into joyousness. Their action is so gentle one don't realize they have taken a purgative. Sold by all dealers.

Orchard Hill Farm

Offers for sale White Plymouth Rocks, 1 cock, 1 cockerel, 2 hens, 4 Pullets; R. C. White Leghorns, 2 pullets, also 2 geese and gander.

F. W. SHORT,
Brown's Flats, N. S.

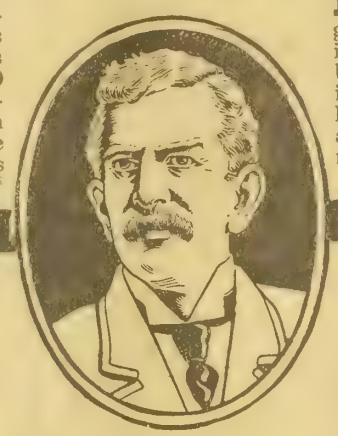
B. H. BULL & SON, Brampton, Ont.

Refuse Any Roofing Which is NOT Guaranteed for at Least 25 Years

Why should you take ANY risk when you can make the maker take ALL the risk? The cost to you now will differ very little, no matter what roof you put on. So you might as well get the most you can for your money. Don't you think so?

OSHAWA Steel Shingles are clearly, positively, responsibly guaranteed—signed guarantee written in plain English—which plainly states that if your roof of Oshawa Steel Shingles gives any kind of roof trouble within 25 years from the day it's first put on, you get an entirely new roof free. There's $365,000 capital, 50 years' of honorable dealing, and the biggest business of its kind in the British Empire back of this written guarantee making it as legally binding as any that could be given you, Now then, why on earth will you take chances with any other kind of a roofing?

IT'S only natural that salesmen for other roofing should "knock" this guarantee of mine. How else are they going to get around it and induce you to buy their roofing, which is **NOT** guaranteed? What do you think my business reputation would be worth in a year or two if I issued a guarantee that wasn't absolutely square? Don't let any man bluff you—get his promises down in writing, and signed—like mine are. Then the roof will **HAVE TO** make good. Then **FIRST** cost will be the **WHOLE** cost, and you'll know what you can count on.



The ONLY Roof That is Guaranteed At ALL

Isn't it reasonable to assume that makers of other roofing would give you a written guarantee if they **dared?** If they are so sure their roofing will last as long as mine, why can't they do as I do—give a guarantee that's good for a new roof if the first one gives any trouble? There is nothing to prevent them giving you such a guarantee except their roofing. Is it because they are afraid to take the risk of having to give you a new roof? They want YOU to take that risk. Will you do it? Or will you buy our guarteed Oshawa Steel Shingles, and have something you can positively depend on? Which is the best bargain from your point of view?

Isn't This The Kind of Roof YOU Want?

A roof that you are absolutely sure will settle every solitary bit of roofing expense for a whole quarter-century. A roof that you pay the same for **NOW** as you pay for other kinds of roof, but which will need no patching, no fixing or replacing for the next twenty-five years. A roof that makes your building absolutely weatherproof, with never a crack or hole for water or wind to squeeze through, a roof that is fireproof, wind tight, lightning-proof, a roof that needs no painting, no repairing—spring or fall, summer or winter, for all of twenty-five years. They **SAY** these things about some other roofs—but I positively guarantee them for my Oshawa Steel Shingles.

Cost Far Less Than Wood Shingles

Don't be too quick about deciding that a wood-shingle or a tar-paper roof is the best you can afford just now. You ought to do a little figuring. Get all the facts about Oshawa Steel Shingles. You'll find they cost about the same as wood-shingles to put on—then, of course, far less to keep on and keep in perfect condition. Figure cost per year, and Oshawa Steel Shingles are by far the cheapest. That's no mere idle talk, either. I guarantee my roof, remember, which means that its cost **NOW** is the **ONLY** cost **FOR TWENTY-FIVE YEARS.**

Proof Against Both Fire and Lightning

This alone makes my "Oshawa Steel Shingles" worth more to you than any other kind of roof. Half a million dollars wouldn't cover the damage lightning does to Canadian farm buildings every year—all of which would be saved if these buildings were roofed with my Oshawa Steel Shingles. If there were no other reason for your choice of Oshawa Shingles, this one alone would be enough.

For the life of me I can t understand why any sensible man will go blindly ahead and buy an out-of-date wood shingle roof, or a metal roof which is **not** guaranteed in writing, without seriously investigating the facts about my Oshawa Steel Shingles.

It is so clearly to his own advantage to get the most he can for his money—you'd think he would be glad to know more about roofing material which is better than any he has yet used. Surely it must be that tendency in human nature to doubt things which seem "too good to be true." By giving way to it many a man robs himself of the fruits of modern industrial progress.

Here I offer to sell you a roof which you know to be good, and which I guarantee (with a guarantee I have to back up or go out of business) to stay a good roof for all of 25 years. Now will you please give me any good reason why any man—YOU, my friend for example—should not be interested enough in getting the best roof for HIS OWN buildings, to send for my book and get all the particulars about my Oshawa Steel Shingles? The book is free—the information it contains is valuable to any man who owns or will ever own any kind of a building. Will YOU please write for it?

G. A. Pedlar

PEDLARIZE All Your Buildings—Inside and Out

By "Pedlarizing' I mean doing for the whole building what Oshawa Steel Shingles do for the roof. I make other kinds of sheet metal building materials—for ceilings, side walls, outside—that make your whole building more fire-proof, more sanitary, more beautiful, more substantial. You should know about them. May I send you a booklet and pictures that tell the whole story? It's free. Just ask me to tell you about "Pedlarizing.

Can't Leak, Rust Rot, Warp or Burn

Oshawa Steel Shingles cover your roof with one big, seamless sheet of heavyweight galvanized steel, without a crevice or crack anywhere for water or wind to get into. And it stays that way for twenty-five years. I guarantee it. No leaks of any kind. Keeps out the cold of winter and heat of summer—and being steel affords the best kind of fire protection. Can you imagine any better kind of roof?

I Want to Send You My Valuable Book--"Roofing Right"

Let me have your name and address, please. I want you to read my book, I believe that when you really get a clear and correct understanding of all sides of this roofing question you'll never be bamboozled with flimsy, unsatisfactory roofs which soon become little better than no roof at all. Do get my book of facts. Write the address nearest you (see below) and they'll send you a copy entirely free.

YOU Can Furnish Your Home FREE!

ANY housewife buying goods at the stores mentioned below may have their cash purchases apply on Asepto Soap Premiums. Every cent you spend counts toward a premium. A sure and mighty convenient way to save without increasing living expenses. Over 300 premiums of honest value to select from. The list will be increased every few weeks. Furniture will be offered next. The old way was to allow premiums to apply on Soap Wrappers only. Now at any of these stores—no matter what you buy—everything has its equivalent in Soap Wrappers. That is every five cents spent counts the same as one wrapper, while purchases of our goods as here advertised entitles you to two coupons—the one the merchant allows and the ones found in or on our goods themselves.

Dr. White's Honey Balm.—A cough syrup that is safe and sure. We are positive that no other cough syrup equals it. Price 25c. Equal to 5 soap wrappers.

Pendleton's Panacea.—The best hot medicine, in use nearly 100 years. Every person knows it is good. Price 25. Equal to 5 soap wrappers.

Brown's Cutilive.—A witch-azel cream for chapped hands, sunburn, etc. Price 25c. Equals 5 soap wrappers.

Scott's.—Salts, Senna, Sulphur, Saltpetre, Borax and Alum in 5c packages. Equal to 1 soap wrapper.

Brown's Spearmint Tooth Paste—Sweetens the breath, prevents decay, hardens the gums and whitens the teeth. Price 25c. Equals 5 soap wrappers.

Napatho Soap.—A pure laundry soap, containing naptha and incorporated by a process that prevents it from hurting the hands, as other Napatho Soaps do. The wrappers count for Premiums.

Scott's Fruit Syrups and Lime Juice.—Pure and excellent flavor. 10c, 15c and 25c. Coupon on the bottle.

Ebony Polishes—None better, both paste and lustre. Coupon on each box. Try them.

Sapid Tea.—A blend selling at 40c, in 1 lb. packages only. Blended by J. Harvey Brown, one of the most competent tea men in Canada. Each package carries a coupon equal to 8 soap wrappers.

Dr. Scott's White Liniment.—The largest bottle and best liniment. Price 25c. Equal to 5 soap wrappers.

Banner Spices.—In packages only. Absolutely pure. ¼ lb. packages carry coupon equal to 2 soap wrappers.

Venus Floating Soap.—Made from pure vegetable oils and unexcelled for the toilet and bath. Price 25c. Coupon counts for premiums.

Banner Flavoring Extracts.—All flavors and from 10c to $1.25 per bottle. Coupon on each bottle.

Herner's Dyspepsia Cure.—The only kind that tells you to eat what you like while taking it. Money back if not good. Price 35c. Equal to 7 soap wrappers. Price $1.00. Equal to 20 soap wrappers.

Brown's Stomach and Liver Pills.—A good family pill. Price 25c. Equals 5 soap wrappers.

Scott's Furniture Polish.—Renews the life of old furniture. Price 25c. Equals 5 soap wrappers.

Asepto Soap.—Is equal to the best and contains the same anti septic features that Asepto Soap Powder does. The wrappers count for premiums.

Scott's.—Nitre, Glycerine, Iodine, Iron, Squills, Friar's Balsam, Carbolated Oil, Camphorated Oil, Castor Oil, Sweet Oil, Oil of Tar, Sewing Machine Oil, Spirits of Camphor. Price 10c per bottle. Equal to 2 soap wrappers.

Asepto Soap Powder.—Has been the greatest success of any soap or powder ever put on the market. This is the best evidence of its quality. It is antiseptic as well. It absolutely sterilizes every article washed. Think what this means to a family. Price 5c, and the trade mark counts for premiums.

Farmers of Quality

Stationary and Mounted, in 1 1-2 to 30 Horse Power

Want Quality!

Readers of THE MARITIME FARMER are of the quality stamp; we realize their discerning ability to pick an article of machinery that is correct in every mechanical detail. That is the reason why such care is taken to see that the **Ideal Gas and Gasoline Engines** are what we claim for them.

Every part of the **"Ideal"** is interchangeable—a mighty strong feature. The cylinder, instead of being cast with the base, is cast separate and bolts on the base. The valves, instead of sealing directly on the cylinder head are enclosed in a valve cage, and the valve cage is inserted in the cylinder head, so that when the valves become worn, the valve cage and valve can be taken out and ground without removing the cylinder head.

The idea of casting the cylinder separate from the base is a good one, for when the walls of the cylinder become worn, you don't have to buy a complete new engine, you only require a new cylinder that can be bolted on the base. Another good feature is an extremely long piston with double rings instead of using three rings. We use three sets of two rings each on the Ideal.

Another thing, there is a speed regulator on this engine which enables you to run the engine at any speed, and, of course, when you reduce the speed of the engine, you also reduce the fuel consumption. For instance, if a man had a 6 H. P. engine and wanted to run a cream separator with it, he could reduce the speed and thereby cut down his fuel consumption to suit the work.

All these are points to consider when looking for a gasoline engine of quality—one that stands without a peer.

"Ideal" Gas and Gasoline Engines are built on honor and built to give their operators satisfaction, and they do it. We do not build a cheap or low grade engine, but do cater to that class of buyers who wish a first class article at a reasonable price.

THE MARITIME FARMER

AND

CO-OPERATIVE DAIRYMAN.

Official Organ of The Farmers' and Dairymen's Association of New Brunswick; The Nova Scotia Farmers' Association, The Nova Scotia, New Brunswick and P. E. Island Fruit Growers' Associations, The Maritime Stock Breeders' Association and The Maritime Bee-Keepers' Association.

Volume 16. Sussex, N. B., February 7, 1911. Number 9.

Nova Scotia Farmers in Annual Convention.

A Large Delegation and Interesting Meeting.

THE fifteenth annual convention of the Nova Scotia Farmers' Association was held in the Opera House, Windsor, N. S., on January 24th, 25th and 26th. A delegation of upwards of one hundred farmers representing the County Farmers' Associations, Agricultural Societies, Nova Scotia Fruit Growers' Association and Maritime Stock Breeders ' Association were present when Howard Kennedy, President of the Association, called the first meeting to order on Tuesday, January 24th, at 7.30 p. m.

THE PRESIDENT'S ADDRESS.

To the Officers and Members of the Nova Scotia Farmers Association.

Gentlemen:—It now becomes my duty and I assure you I esteem it a privilege, to present the opening address to the Nova Scotia Farmers' Association as President of that institution.

In reviewing the agricultural situation throughout the province I feel that we have great reason for encouragement, in many respects greater than ever before. The results of agricultural operations for the year just past, although rather disappointing in some lines, (notably in fruit) have been unusually satisfactory. In regard to fruit we have to record the nearest to a complete failure that we have experienced in many years. Yet, after all, conditions are not just as bad as they might be, as on every hand I hear the encouraging report that the trees never showed better indications of good results in coming years. So while we sympathize with our brothers in the Western Counties, or at least those of them who are especially engaged in fruit farming, on the failure of this year, we also rejoice with them in the prospects of successful years to come.

The root crop has varied to a considerable extent throughout the Province, but will come well up to the avergge. I am pleased to note here is shown year by year, an increased area devoted to roots. To my mind nothing better indicates a tendency to better cultivation, rotation, economical feeding and better farming in all lines. All other crops are exceptionally good, especially hay which has never been excelled in our Province.

Live stock, which is really the backbone of agriculture, is receiving more attention, both in regard to breeding and feeding, and is sure to respond accordingly.

Agricultural education has been carried on in all the lines of former years, with considerable advancement at the Nova Scotia Agricultural College. This institution we are pleased to see doing its best to keep up with the requirements of the Province; and we need have no fear about it keeping up. The principal trouble seems to be to get the farmers to recognize their needs and to see in the College an opportunity for their relief. I feel that whether others do so or not, we may well congratulate ourselves on our College, with its efficient staff and equipment. When doing so we should try our best to persuade as many young men as we can, who intend to follow agriculture as their occupation, to start by taking a full Course at the College. I feel sure that you will agree with me that, of all things working against our succes as farmers, none are having so serious an effect as lack of agricultural education.

The Provincial Exhibition, although not the success financially that we would like to see it, was more than usually encouraging as far as the agricultural showing is concerned. Live stock in most lines was exceptionally good, as were also roots, garden vegetables, etc. Although we may not agree with everything regarding the management of our annual Provincial Exhibition, yet we must admit that it is yielding a great influence towards the betterment of our conditions. Country fairs are all right and should receive more attention than they do. I feel that if we gave moe attention to County Shows, it would not only stimulate the production of a better article or animal, as the case may be, but also that the exhibitor would thereby become educated, not only in producing but also in fitting and showing, when after a few successes locally, we would expect to see him try his fortunes in the Provincial also.

The local fairs held throughout the Province, are all reported to have been eminently successful in all respects. The winter fair continues to show marked improvement each year and is fully justifying its establish-

A. S. McMillan, C. H. Black, S. Freeman, R. M. Jackson, Wm. O'Brien, W. H. Woodworth, Howard Kennedy, F. W. Bishop, H. W. Corning, C. R. B Bryan, E A. Archibald

Officers of the Nova Scotia Farmers Association for 1911-12.

ment.

Now, Gentlemen, considering the advantages of all these institutions together with the work carried on by our County Associations, Agricultur-all Societies and other sources of education at our command, should we not ask ourselves the question—are we, as farmers, making the improvement we should with all these advantages? Let each one seriously consider and answer for himself. But let us very briefly look at the facts as they exist. Let us consider the small proportion of farm produce we supply in our own markets (which are constantly growing) and the satisfactory prices ruling in these markets. Yet all we supply them is very small compared with what is imported from other Provinces of the Dominion, and in many cases, from places where agricultural conditions are no better, if as good, as our own. Yet we find the farmers of the other Ptovinces competing with us in our own markets and making satisfactory profits, notwithstanding they are suqject to heavy freight charges, middlemen's profits and many other disadvantages.

Is it going too far to say that we should at least supply our own markets with all the finished products of the farm, such as meats, dairy produce, poultry, eggs, fruit, vegetables, etc.? I think not, as the fact that we can do so has been already demonstrated by a few throughout the Province who are now doing their full proportion towards that end.

In conclusion let me remind you that each annual meeting of this Association should mark a long step toward the goal, to which we as farmers, should be striving. And that to uphold this standard the active assistance of each member is required.

I now solicit the co-operation of each one of you that this meeting may be just a little better than any of the past. As then, and only then, will we be justified in feeling that we are making some advancement.

My sincere wish is that not only this Association but also all in any way interested in agriculture throughout our Province, may experience a greater amount of happiness and prosperity throughout the coming year than they have enjoyed in any of the years of the past.

The President's address was followed by the following addresses of welcome:

"THE MAYOR'S ADDRESS."

The President and Members of the Nova Scotia Farmers' Association:—

Gentlemen:—

As Mayor, it gives me great pleasure to welcome you, on behalf of the citizens, to the town of Windsor.

You represent a profession the most ancient, the most independent and the most important in the world. The first man prcticed it; it is self-supporting and dependent only on the Almighty; Humanity cannot exist without it. Farmers should never forget this and respect themselves accordingly.

Your association has done a great work for the farming community in advocating the establishment of colleges and model farms, and in the dissemination of knowledge. In days gone by physical strength was considered the great, if not the only requisite for making a farmer, but now the successful farmer must also be a scientist and a good business man. I hope the day will soon come when your efforts will bear fruit to such an extent that our farmers can supply the wants of Nova Scotia in many lines, now largely supplied from outside sources.

We are delighted to have you with us in the Avon Valley and hope you will find your sojourn here pleasant as well as instructive.

I have the honor to be,

Yours respectfully,

FRED CURRY, Mayor.

WELCOME TO MUNICIPALITY OF WEST HANTS.

Mr. President and Members of the Nova Scotia Farmers' Association.

On the behalf of the Municipal Council of West Hants, we extend to you a most cordial welcome to this, the Shiretown of our County.

Our Council, composed as it is almost entirely of farmers, and representing a district which is to a great extent an agricultural community, has a very special pleasure in greeting its fellow agriculturists from the various sections of the Province.

We look with pardonable pride upon this Caunty of Hants, with its central position, its varied resources its dyke lands and its orchards, its fertile valleys and its broad uplands, its possibilities for dairying and stock raising and we feel that when the sons, yes and the daughters, of our farmers learn more and more to appreciate the beauty and nobility of their profession and apply to it more and more of the ever developing science of agriculture this County will, together with the other Counties of our fair Province take its proper place amongst the food-producing sections of our Dominion.

We therefore realize that such a gathering as this of the farmers of the Province, with its comprehensive programme and its able speakers, must be of great interest and will surely prove a wonderful stimulus to those of our people in a like occupation.

We trust that the business of your association may be satisfactorily accomplished and that your leliberations may tend to further that great industry which you have already done so much to develop.

W. K. DIMOCK,

Municipal Clerk.

ADDRESS OF WELCOME BY THE WINDSOR AGRICULTURAL SOCIETY.

Mr. President and Members of the Nova Scotia Farmers' Association.

It gives me a great deal of pleasure to welcome you on behalf of the Windsor Agricultural Society to our twon.

We cannot help but remark on the good results obtained by the pleasant intercourse between the members of the association, as well as from instructive addresses delivered by the experts who we note are to address us.

At the last meeting of the association held in this town, your members could see a new Windsor raising from the ashes. To-day you see a town prosperous to an extent equal to the best period of its prior existence.

If it were possible, we would like to take the members of the association for a drive through this country and we think we could show them an equal advance in the farms. We have learned much and perhaps better still, we have learned to apply our knowledge in the improvement of our places. This is due to no small extent to such institutions as the Nova Scotia Farmers' Association.

Even if we are not all privileged to attend the meetings we learn from our delegates, and as the best mode of instruction is undoubtedly through the eye, and as we see our good farmers by improved methods bettering their conditions so we, with this object lesson before us, endeavor to pattern after the best models of what we know to be good farming.

We look forward with a great deal of pleasurable anticipation to the rich treat your association has provided for us in the way of addresses by the best authorities on agriculture, and we join with the citizens of Windsor in most heartily welcoming you and them amongst us.

On behalf of the Windosr Agricultural Society.

WM. O'BRIEN, President.

A Typical Leiceter Ewe.

First in the class for ews, two shears or over at the 1910 Halifax and Charlottetown Exhibitions and at the Maritime Winter Fair. Owned by Albert Boswell, Pownal, P. E. I.

REPLY TO ADDRESSES OF WELCOME.

Mr. W. H. Woodworth, 1st Vice-President of the Association, replied to the addresses of welcome by making fitting reference to the kindly reception given the association at this meeting and at the meeting held in Windsor in 1903. He was glad to note that although Windsor had suffered a severe reverse by the devastation of fire, it had a class of optomistic citizens who had again rebuilt larger and better than ever. The cotton factory. the fertilizer factory and other industries were a credit to their town as was King's College and their other schools, which had left their impress in the many fine scholars sent out to the various avocations. He was glad to state that old theories in regard to farming were being exploded and that the majority of Nova Scotia's citizens realized that a combination of mental and physical forces were necessary to the successful prosecution of an agricultural calling. The Agricultural College was rapidly making its influence felt along these lines and improved farm machinery was lessening the drudgery of farm life.

COMMITTEE ON CREDENTIALS.

Following the reading of the above addresses Messrs. Samuel Freeman and C. H. Black were appointed a committee on Credentials, after which Professor M. Cumming delivered an able address on

THE RESOURCES OV NOVA SCOTIA.

Before beginning his address Prof. Cumming referred to an incident that occurred at a dinner party recently held in Toronto, at which he was a guest, and at which a prominent member of the Canadian Northern Railway Company remarked that Nova Scotia was destined by its wealth of natural resources to be one of the most talked of countries on the American continent during the next ten years. He was sorry to state that a good many of our people do not seem to realize the extent of their heritage and were rather prone to discourage rather than encourage intending settlers. Nova Scotians must cease knocking and, encourage a boosting campaign.

The development of Nova Scotia's natural resources was bound to make it burst forth as one of the foremost provinces of the Dominion. He showed the great advance made in agriculture, manufactures, minerals, fishing, etc., and said that if such progress was made in other places the papers would be full of it and all the people would be talking about it. The advances made along industrial lines had created a great demand for agricultural products. The comprehensive survey of Nova Scotia's forest resources, by Dr. Ferno, marked an initial step in the conservation of our forests and he was glad Nova Scotia had led the way in this movement. Nova Scotia's varied resources had not, however, rightly helped her agriculture as divided attention and consequent lack of agricultural interest, in some sections, had been the result. The professor stated that too often farmers were soil robbers and in order to get out of that old rut they must plow more extensively, grow more clover and roots in order that more live stock, our main reliance in conserving soil fertility, may be maintained. Inxcreased numbers of live stock meant increased fertility and farmers ought to interest themselves in improving the quality of live stock as well as increasing their numbers as the keeping of poor cows was a crime. Feeding, breeding and weeding should be the farmers' motto in live stock operations. He went on to enumerate some of the advances that would follow such a system and used Denmark's record as an example. The fruit growing industry was increasing by leaps and bounds and rightly so, as Nova Scotia had the best fruit growing proposition in Canada.

Nova Scotia's markets were unlimited yet large amounts of money were annually being sent abroad for products that could be home grown. While farmers were beginning to get the full value of their products it was not due to any system of cooperation on their part but owing to the unhealthy development of population viz:—A decrease of rural population and an increase in urban population. He referred to the large number of great men contributed by Nova Scotia farms to fill places of importance in every walk of life and said that it was a noticeable fact that every great man traces back in one or two generations to the farm, where our young people are brought up under healthful influences. There was only one solution for the remedying of the distress and want of work that prevailed in populous centres and that was a "back to the land movement."

PROF. CUMMING'S WORK APPRECIATED.

Mr. L. D. Robinson spoke of the splendid opportunities afforded to young men by the Agricultural College and gave great credit to Prof.

We will give $5.00 to the school boy or girl who makes the most number of words from the letters contained in the words "The Maritime Farmer". No letter is to be used in one word oftener than it appears in the words "The Maritime Farmer." The only condition is that each person competing must send in at least one paid in advance new or renewal subscriber to "The Maritime Farmer." Make up your lists boys and girls, show them to your friends, get them to help you win the prize by subscribing to The Maritime Farmer. Contest closes March 15th. Address Circulation Manager, Maritime Farmer.

Cumming, whom he considered the best authority on agriculture in Canada.

Rev. G. R. Martell moved a vote of thanks for the splendid address of Professor Cumming. He said that he had hundreds of country boys under his care and as a rule when they left home it was because fathers never gave them anything to own, or rear, not even a calf to make merry with. He urged farmers to give their boys an interest in the farm, a piece of land to cultivate, some money occasionally, some good clothes, and if they did we should not hear so much of our young men going away. No boy can do better than stay in Nova Scotia, a goodly heritage. C. P. Blanchard seconded the motion, which carried with a hearty vote.

Professor Cumming responding said that whatever success attended the Government's agricultural policy was not all due to himself. There were others joined in the common cause for the betterment of agriculture who deserved their share of praise.

ON WEDNESDAY MORNING

The following reports were received and discussed:—

REPORT OF DIRECTORS.

The duty of your Directors is to report at this time upon the progress and work of the year passed; not only should we report our own work, but that in which we are particularly interested, the progress of Agriculture in the Province.

The attendance at our annual conventions continues to increase, and at these times we are glad to meet old faces and heartily welcome the new.

With regret we have to refer to the loss we, not only as subjects, but as agriculturists, were called upon to bear last May by the death of our late beloved King Edward VII. He seemed to be drawn very close to us by the love and interest he took in agriculture and its advancement. Later on, one who was his representative in this Province, we refer to our late Lieut.-Governor, D. C. Fraser, was called by Him who knows best, to join those who have gone before. Him most of us personally knew and loved and your directors at a meeting shortly afterwards, passed the following resolution and forwarded it to his sorrowing widow and family:—

"Whereas, the late The Honorable D. C. Fraser, Lieutenant-Governor of Nova Scotia, had, during his term of office, so prominently identified himself with the gatherings of this Association, with the various exhibitions, with the public meetings and classes held at the Agricultural College, and, in fact, everything pertaining to the advancement of the agricultural life of the Province, and

Whereas by his whole souled manner in accomplishing these missions he had endeared himself to every member of this Association.

Therefore, be it resolved, that the Nova Scotia Farmers' Association put on record, on behalf not only of its own members, but of the whole farming community of the Province, their feeling of personal loss in the decease of the late Lieutenant-Governor."

The Crop Report of the Secretary for Agriculture, shows that with the exception of fruit, which has been a signal failure, and potatoes which have been a partial failure, they have been exceptionally good, and the year has been one of the most prosperous.

The Provincial exhibition was a success as far as exhibits went, but the attendance and receipts were disappointing. Several successful County Exhibitions were held, and the Horse Show in the spring at Amherst, and the Maritime Fat Stock Show were most decided successes.

The Agricultural College continues to grow in usefulness and attendance. It becomes the members of this Association to do all in their power to encourage the shows and exhibitions, and urge the young men and young women of this province to take advantage of the opportunities afforded by having such a College in their midst.

We might say that this Association received invitations from the Canadian Council of Agriculture, the United Farmers of Alberta and from one or two Western newspapers to send delegates to Ottawa to join with delegates from other provinces, chiefly the West, to approach the Government in respect to "reduction in the tariff and other reforms." The finances of the Association and the indefiniteness of the program we considered did not warrant us sending one, or committing ourselves without authority and discussion by members of this Association.

The Programme for this meeting was arranged a little earlier than usual and distributed to Agricultural Societies and County Associations and others, so that they might prepare themselves for the subjects to be brought up.

We extend a hearty welcome to Prof. W. H. Day, Professor of Physics, Guelph, who has taken an advanced position in the Drainage Question in Ontario and we shall no doubt acquire much valuable knowledge from his address and talks.

The Financial Statement shows a balance, but at the expense of a reother expenses. We understand the duced report, a thing we regret but we saw no other way and meet our matter of finances will be brought up for discussion in the Secretary's paper upon the "Future Policy of this Association," so we do not further refer to them, than to present the balance sheet for the past year.

In conclusion we invite and anticipate all will endeavor to make this convention a profitable one by taking part in the discussions and giving your thoughtful consideration to the questions and resolutions that will be brought before you.

FINANCIAL STATEMENT.

To be presented at the Annual Meeting, Windsor, January 24th, 25th and 26th, 1911.

J. P. LANDRY,
Auditors
Truro, N. S., January 4th, 1911.

REPORT OF EXHIBITION COMMISSIONERS.

Mr. President and Gentlemen of the Nova Scotia Farmers' Association.

Your representatives upon the Board of Commissioners beg to report, that, the last Provincial Exhibition, (from an exhibition standpoint) would compare favorably with any show held in Eastern Canada. As many of you were there, either as visitors or exhibitors, a short review of the different departments is all that will be required.

The Main Building made a very creditable appearance while the annex contained the "Made in Halifax" exhibit, which was certainly very attractive to all and a credit to the firms exhibiting.

Machinery Hall and the Transportation Building contained a good showing of Machinery, Carriages, Automobiles, Motor Boats, etc., as well as a fine display of road machinery. The latter being put to good use by giving actual illustrations on the grounds.

FISHERIES.—While on the whole the display was not as large as it might be expected from a Province situated as Nova Scotia. Yet there was a fairly good display of Cod, Herring and Lobsters. Also a fairly good showing of Models and Marine Architecture as well as something entirely new in the show of Sea Plants, Ferns, Shells, etc.

The Mines Building contained a good exhibit of minerals, both in the raw and finished state and was a source of revelation to strangers.

The Art Building contained, probably the finest exhibit, ever held in Halifax, and consisted of many valuable works from noted artists. Some pictures in this building coming from Toronto, Montreal and even Paris.

The Educational Exhibit was probably the fullest and best in our history and deserves particular mention.

AGRICULTURAL HALL. contained a grand display of Seeds, Vegetables, Roots, etc., while the Dairy Products exhibit was also good We expected from the small crop of apples to see a very poor showing of fruit, but strange to say, Horticultural Hall contained one of the best shows ever put on within its walls.

LIVE STOCK.—In the horse department, the best show of heavy horses ever seen on the grounds was held. While the medium weight and light weight horses made a show above the average. The beef cattle were not as strong as we had hoped, but the dairy cattle exceeded any show ever held in the Maritime Provinces. Sheep and Swine were fair, while the poultry exhibit was by far the largest ever held at a provincial show in Eastern Canada.

From an agricultural, industrial and educative point of view we consider the past show one of the best ever held, but we regret to say that the people did not attend in the numbers in which we expected them.

After considerable thought the Commission cut out all special attractions for the past two years. But it now seems plain to us, that they must return to them even to a greater extent. One thing which we again wish to impress upon you, is the manner in which the grant is paid. Unless some change is made, in its payment, also the free use of the grounds for legitimate purposes, during the summer months, is obtained thereby putting us on an equal footwith other provinces, we can never hope for success.

Under present conditions we are handicapped even at the beginning of the new year with a large sum of money on the wrong side of the ledger.

We, therefore, wish to again impress upon you the necessity of some means by which the present conditions can be changed. The idea has been advanced from some quarters that future provincial shows be held in different parts of the province. This we think would be a mistake when we take into consideration the plant that we have, the accomodation for the people, and the central point at which the show is held. We consider that it would be most disastrous to think of moving any where else.

We would again appeal to you as citizens of Nova Scotia, to help, not knock, this our own provincial exhibition and demonstrate to the world at large, that we, the province by the sea, which is likely in the next few years, to be the most talked of province in the Dominion, can put on a show equal to the best.

In closing this report, we wish to refer to the kind treatment we received as your representatives on the board, and to the good work which was again done by Mr. Hall, the secretary and manager. Largely to his efforts was due the success of the first "Work Horse Parade," which proved such an attraction on the opening day.

We conclude by thanking you, gentlemen, for the honor you have placed on us by electing us your re-

We conclude by thanking you, presentatives on the wishes to the best of our ability.

Respectfully submitted,
R. S. STARR,
CHAS. R. B. BRYAN,
Commissioners.
Windsor, N. S., 25th Jan. 1911.

(Continued next issue.)

Looking for Ideas.

Editor Maritime Farmer:—

I hope to glean some good ideas from articles contributed to the columns of the Maritime Farmer by successful Alfalfa growers. I sowed nine pounds of seed last year, on ground where I had a good crop of potatoes the previous year. I sowed it with half the usual quantity of wheat as a nurse crop but it was a failure, although I had a fine crop of clover on the remainder of a two acre plot.

H. H. GREENE.

Cheverie, N. S.

A $5.00 Prize.

We will give a prize of $5.00 to the person making the largest purchase from one or more of the firms advertising in the February, March and April issues of The Maritime Farmer. Send for catalogue and information to each advertiser and see if they have something that you want. The only condition attached to this offer is that you mention the Maritime Farmer when writing and that you send us a list of those to whom you have wrutten and the amount purchased from each advertiser. We believe our advertisers can offer you better value than can be obtained elsewhere and see no reason why you should not patronize and secure this prize. All lists must be mailed us by April 30th. Address, Advertising Manager, Maritime Farmer Sussex, N. B.

THE MARITIME FARMER

DO SOME PLANNING.

Take time right now to do a little planning, and include in your plans all the various departments of your profession. Start at the house with your plans, make some much-needed improvement, especially at the woodpile and woodshed that will keep the wood for kitchen use dry; let the good wife aid you with her timely suggestions; she spends greater part of her time here, and knows her needs better than you do.

Go next to your stables and note any little changes that would expedite your own labors—a feed chute, a trap door, or an additional window would save many, many steps. Note the shingles and boards that have been drawn by the sun and need nailing down. Look over your henhouses and see if they can't be improved on, the same in regard to your fattening pens, that they may be in readiness for the pork when the time comes for it to be rounded into shape for slaughter. Look to your fences, the protection of your crops; a loose board or slack wire may mean the loss of considerable money. Your fields, from which you draw sustenance for yourself and family, are to be objects of much planning. The crops to be planted, the rotation which you are to pursue, the fertilizers you are to use, the best methods of caring for and applying the manure produced on the farm, the grasses, grain crops, forage crops and pasturage grasses should be imported points in your plans.

Systematize these plans. Every business man gets his accounts into shape, and once a year, at least, takes stock, and finds where he stands. Each year business methods are increasing among our farmers. Look around you and you will see that the men who succeed are the men who plan, and having planned, carry into execution such of their plans as are deemed best. We farmers plan too little. We have farming methods and ways different from any other sections of our country, and the fault is largely due to our failure to study conditions as they exist, and plan to better them. Plan to increase your forage crops, so as to have plenty for your own use and to sell; plan to increase the yield of your poultryhouse; plan to make your dairy more of a success; plan to give your family more reading matter; plan to increase the circle of your social life; plan to join a farmers' organization, if there is one in your neighborhood; if not, form one and be among its charter members; plan to raise the best, and get the best price; plan to be a factor in your county—an advocate for good schools, good roads, good churches, and good offices. You will be surprised how much you will expand during the coming year.

THE RIGHT KIND OF A FARMER.

The right kind of a farmer is a man of brain, as well as brawn. Indeed, the business of farming in these days, with its varied machinery, calls more for brain than muscle. He should be a man who, first of all, feels a real professional pride in being a farmer, who brings up his sons to feel proud that their father is a farmer. Then, he should give them some fair chance to be proud in the character and appearance of the farm Such a man will make good farming grow in the hearts of the men about him. Being a man of brain, he will of necessity be a reader and student. He will bring to the daily work of farming a mind trained to study and think, and he will reach out for the thoughts of other men.

He will be an animal farmer for only in the association of varied animal life can a man grow in intellect as he should and the farm grow in fertility Every other style of farming lessens the mental interest of the farmer, and the productivity of the soil.

He will be a man of taste, in the order and arrangement of his farm buildings and his home. He will try as far as he can to make the farm a thing of beauty as well as profit. He will be a public spirited man taking solid interest especially in the district school, striving always to make it the intellectual center of his community. A farmer who takes but little interest in the district school is giving proof at the outset that he cannot fill his place.

In a word, the right kind of a farmer will strive "toward the mark of his high calling". He will look on it as the most honorable, progressive vocation among men. He will constantly give evidence to his fellow men that he thinks "there are some things better than money", and that chief among them is being. ',The right kind of a farmer", and one good thing about it is that such a man will make dollars where the wrong kind of a farmer makes pennies. Besides, think, how much larger and firmer is the satisfaction he derives from the life he lives.

ARE YOU INTERESTED?

We are fully convinced that alfalfa can be successfully grown in the Maritime Provinces. Seeing is believing. We have seen it growing in various parts of Maritime Canada. We have seen it after outliving the rigors of three winters and each succeeding season gave a thicker and heavier yield than the preceding crop. Farmers who are intimate with the wonderful properties of the alfalfa plant must be convinced that it is worth giving a trial. Many have given alfalfa a trial; some have made a decided success of the undertaking others have made a decided failure. Those who have been successful in establishing small plots are preparing to go forward and increase their alfalfa areas. These are they who have carefully studied the plant, perhaps by reading how others had conducted their operations or perhaps by experimenting year after year and by eliminating, one by one, the mistakes of previous attempts. They persisted and were rewarded by a bountiful crop. They now understand how to treat, and succeed with, larger areas. Those who have failed to get a proper stand of alfalfa have not fulfilled all the conditions conducive to the plants' growth. To those we would say do not give up, but study the conditions affecting alfalfa growing. Study your soil conditions and make the latter conformable to the former and we feel confident that ere five years have elapsed large fields of alfalfa will be flourishing all over the Maritime Provinces. Tell your fellow readers through the columns of the MARITIME FARMER how you have succeeded and thus give them the benefit of any ideas you have gleaned. Our columns are open. Use them for your own and your fellow readers' mutual benefit.

MAKING YOUR ORDER INDIVIDUAL.

A popular girl once received roses, violets and bonbons on the same day from twelve different admirers.

One of these tokens had a card bearing the giver's name. Most of them did not.

As a result, most of the gifts lacked a distinct personality and were piled in a heap till they could be sorted.

That is the way with inquiries and orders which come wandering into a salesroom by thousands every day.

The correspondent looks his order over and does his best to figure out from it, what kind of a person he has to deal with.

Sometimes he succeeds and puts his precious ten minutes of letter-writing time, not on the small boy, but upon the man with money to spend.

Often he does not!

There is a story of a salesman who followed up a very promising automobile inquiry and found that it came from a ten-year old boy in a tenement.

At best such letters are piled in a heap, all to be treated alike. We wish you might know how differently treated is the letter which comes from a MARITIME FARMER Reader.

"Here," says the merchant, "is another letter from a Maritime Farmer,—one of those solid, progressive, straightforward, intelligent soil-workers and citizens of the Maritime Provinces. We can afford to extend him every courtesy, because year after year he will be well worth the trouble."

It pays to begin your order with the words: "I am a MARITIME FARMER subscriber."

PAY ATTENTION TO LABELS ON SEEDS.

When buying seeds we should always look for he information concerning certain weed seeds, which, if present in any quantity at all, should go with seeds that are offered for sale. These labels apply to 15 noxious weed seeds. These weed seeds appear mostly in seed grain. Two of them, viz., ragweed and wild mustard may be present in Alfalfa and red clover so that a label is required.

Some of the seeds besides the two just mentioned and about which information should be given are wild oats, purple cockle, cow cockle, perennial sow thistle, ergot of rye, field bindweed—and what should be looked for in any seed coming from the Prairie Provinces, ball mustard, hare's ear mustard and pennycress.

Some of the wholesale houses protect themselves by putting on the labels. Some of the dealers, however, neglect to do this as they find that farmers will not buy such seed when labelled. Inspectors are insisting on the label being present.

EDITORIAL NOTES.

Did you ever know a farmer to become rich or happy or popular, or make his wife and his family more satisfied with their homes, or do any good in any other way, by always declaring that the farmer is the oppressed and downtrodden of the world? Yet some farmers are always talking that way and never seem to want to see the other side of the picture.

* * *

"Hello, Dick."

"Hello, Charlie: How do you find the pure bred live stock trade this winter?"

"How do I find it? Why I find it by advertising in the MARITIME FARMER, of course."

How Can Alfalfa Growing Receive a Boost in the Maritime Provinces?

Alfalfa can be Successfully grown in the Maritime Provinces. In every issue for the last two months we have asked for suggestions from our readers in regard to best means for "Boosting Alfalfa Growing in Maritime Canada." Not more than eight or ten readers have offered suggestions or asked questions. Surely this subject deserves more attention and assistance than our farmers are devoting to it. We know that a large number of our 10,000 subscribers have experimented with this useful legume. We want to hear from the unsuccessful experimenters as well as the successful ones. By relating your experiences you may lead the way for some other farmer to follow in your successful path or to avoid paths in which you have not been successful. If you have been successful, we know you have discovered enough merit in this wonderful plant to make you anxious to tell your fellow farmers about it. If you have been unsuccessful, the fault may lie at your own door; perhaps you left some essential condition unfulfilled.

State the methods you followed in preparing soil and seed, and by thus helping others you will be helping yourself. If you do not wish your name to appear we can with-hold it. Ask questions, read what other farmers say about Alfalfa Growing and intelligently apply any feasable ideas you may thus glean. Address communications to

THE MARITIME FARMER, Editorial Department, Sussex, N. B.

James A. Telfer.

The above cut is a picture of Mr. James A Telfer, Proprietor of Sunny Brae Sheep Ranch, Sussex, N. B. Mr. Telfer is the pioneer sheep rancher in New Brunswick of which we have any account. After visiting nearly every sheep raising section on the North American Continent Mr. Telfer's choice fell on the Markhamville hillsides where he has purchased a thousand acre farm where he purposes to engage in sheep raising on an extensive scale. Mr Telfer is well known by reputation to many of our readers as one of the active members of the firm of Telfer Bros., Paris, Ontario, who have an enviable record in sheep showing records all over Canada and the United States. Mr. Telfer is young, industrious, and is an optimist of optimists to whom many of our readers look for inspiration in furthering the sheep raising industry. Nova Scotia, New Brunswick and Prince Edward Island have thousands and thousands of acres of hillside pastures such as Mr. Telfer has selected that are crying out to our young men "Remain on the farms and develop their natural resources.

The Nova Scotia Agricultural College Encouraging Alfalfa Growing Expeirments With Nitro-Culture.

Editor Maritime Farmer.

I have during the past few days been compiling a report of the returns from the use of nitro culture on the various leguminous crops throughout the Maritime Provinces. We have this year shipped 524 cultures, as compared with 430 in 1909, 110 in 1908, 75 in 1907 and 50 in 1906. The reports and results of experiments with nitro culture on the Alfalfa crops, of which over 250 were tried in the Maritime Provinces, are very interesting to note, being as follows: Alfalfa showing good results from the use of nitro culture reports 23 cases of excellent crops, 15 good crops, 19 fair crops and 10 poor crops. Alfalfa showing no difference from the use of nitro culture reports two cases of excellent crops, 5 good crops, 8 fair crops, and 20 poor crops, making a total of 102, and these from Nova Scotia alone. About the same percentage were found for New Brunswick and Prince Edward Island, with the exception of a poor crop of no difference, that being considered lower in the other two provinces than in Nova Scotia. All this is briefly summarized in the Report of the Secretary for Agriculture for 1910, which Report will be out of the printer's hands about the first of March.

I am enclosing a letter from J. R. Dunn, of Lyon's Brook, Pictou Co., N. S., in re his experience with Alfalfa, as this is a very fair representative of fully 40 p. c. of the reports from the use of nitro culture on Alfalfa.

I have been very much interested in your discussions in re alfalfa, quite naturally, when you consider the amount of work and also the data which we have collected in this co-operative work, for, although the farmer pays 25c per bottle for the culture, the same only pays for the material and, as we are short handed the extra work which devolves from this has been performed mostly after hours.

We also have had very fair results from nitro culture in our experimental work during the past year, so much so in fact that I am planning to try several strains, under different methods of treatment with lime, phosphoric acid, potash, cultures, with and without a nurse crop, different dates of trimming, dates of seeding and the like. I would not, however, advise our Governments to take any such steps as the testing of this in various parts of the province as yet, reasons for the same are, I think, apparent to you. On the other hand, if we have sufficient persistent and energetic farmers to thoroughly test this crop, we will have more satisfactory returns and more interest will be taken in the same.

Wishing you and your paper success, I am,

Yours sincerely,
E. S. ARCHIBALD.

Truro, N. S.

Following is Mr. Dunn's letter:—

Lyons Brook, N. S.,
Lec. 29th, 1910.

E. S. Archibald, Esq.,
Agricultural College Farm,
Truro, N. S.

Dear Sir:—

In reply to your letter of Dec. 23, I may say that in 1909, I sowed one acre of Alfalfa. I used culture on the whole field. I sowed it on July 1st. On August 15th, I ran mower over it to catch weeds of which Sow Thistle was most promiaent. Clover was then about 10 inches high. Later I cut the second crop over about one third of field for feed as it looked as though it was too heavy and going to smother. The next summer, 1910, the uncut was the heaviest and thickest although the whole field produced about 4 tons of hay in the two cuttings. I did not cut the third crop as I wished to leave all for protection this winter. A small part of this field was killed by water, but did not lay on it; it just seemed to fill the soil as it seeped from the higher portions of the field. I intend resowing this field after two more years and tiling this low portion.

A Champion Oxford Down

This One-year-old Oxford Down Ewe was champion over all Hamshires, Oxfords and Suffolks at the 1910 Maritime Winter Fair and also champion at three State fairs,
Owned by Jas. A. Telfer, Sunny Brae Sheep Ranch, Sussex, N. B.

A Good Colswold Ewe.

This Two-year-old Colswold Ewe was first in her class at the 1910 Maritime Winter Fair and also champion at three State fairs.
Owned by James A. Telfer, Sunny Brae Sheep Ranch, Sussex, N. B.

The culture I procured in the spring of 1910, I used on seed for a 4-acre field which I sowed on June 14th with barley. This does not do as I have a poor catch and a lot of other grass and weeds which would naturally crowd out the Alfalfa. Of course the soil will be inoculated but my experience with Alfalfa leads me to the conclusion that it is only a waste of time to use any nurse crop to start Alfalfa. This is not my first experience with Alfalfa and I have had failures enough to convince me that a good stand of Alfalfa can only be secured by giving it a dry soil, preferably clay, in good state of cultivation, a thorough treatment of culture, (which must be fresh) and allow 25 lbs. of seed per acre. Clip down all weeds before they seed and leave some aftermath for protection. Possibly Alfalfa should not be cut after Sept. 15th. I have some very nice fields of Alfalfa and some not so nice and the best has been handled just as I outlined above. In preparation of soil I prefer a last year's root field. By thoroughly discing in spring at intervals of 10 days until every seed is germinated and killed you have my ideal soil for Alfalfa. My advice to farmers, generally is, sow Alfalfa every year and use culture (unless you find by experiment that your soil is inoculated) if grass gets in re-sow and you will find that every time you cultivate and sow Alfalfa you get better results. I consider one acre of good, thick Alfalfa worth $100.00 to any stock feeder and will answer all inquiries sent to me.

Trusting this will be satisfactory, I am, Sir,

Yours respectfully,
J. R. DUNN.

Getting Soil Gradually Inoculated.

Editor Maritime Farmer:—

After four or five attempts to get Alfalfa established on my farm, I am not at all disappointed with the results.

My plan has been to sow a small quantity of seed, say 5 lbs. per acre, along with my other clover seed using nitro-culture, then when I followed this with clover again I plowed under my aftermath have my soil inoculated so that I am surer of a catch than I am on land that has never been so treated.

The Apple Scab and its Control.

At the forty-seventh annual meeting of the Nova Scotia Fruit Growers' Association, at Windsor, N. S., November 28, 1910, the first and the most important question was "What shall we spray?" This is the more important than the other question, "What shall we spray with?" We are convinced that the poor set of fruit in some sections of New York State the past season was due to no other reason than that the spraying was not done at the right time. Hundred of thousands of dollars are lost each year because of such mistakes and neglect in regard to spraying. The scab disease of apples is caused by a very minute plant which we call a fungus. It grows in the skin of the apple, forming the black spots so familiar to you all. Every scab spot starts from a spore (or seed) which germinates, grows into the skin of the leaf or apple, and continues to grow until the scab spot is formed. Now it is just as impossible for these spores to germinate without moisture as it would be for a wheat seed to germinate in a dry bin of the granary. This explains, then, why we have so much more scab during wet than dry seasons.

Now, we may ask, How does the spray prevent infection? It does so by coating the surface of the young fruit or leaf with a substance which preveots the spores from germinating. Bearing this in mind, we can return to the question, "When shall we spray?" We must spray before this infection has taken place. Since infection takes place in the rain, or while the trees are wet, we must spray before rains to prevent it. This is a disease you cannot cure; you must prevent it. Don't wait until the rain is over, fearing that it will be washed off. Twenty minutes before the rain comes is sufficient to to hold it quite well. After the wet weather is over the spray is not needed. "How early in the season must we begin to spray?" This depends largely on how early the spring crop of spores is ripened up. The fungus is carried over winter on the dead leaves on the ground, developing a crop of spores in the spring which are shot into the air like peas from a pop-gun and carried to the young leaves and fruit buds by the wind. Watching this for the past three years we find that in New York State these spores begin to ripen up about the time the blossoms are ready to open. Therefore we can usually prevent the early scab infection by spraying just before the blossoms open. This application is important when the early season is wet, for two reasons. First, the scab attacks the stems of the blossoms and they fall. You will complain of a poor set anh consequently a light crop. Secondly, it attacks the leaves; and although often not conspicuous it breaks the skin of the leaf, so that when spray is applied later it enters the leaf and burns it. We are often asked how early may this first application for scab be given? Will the dormant spray for blister mite made before the leaf buds burst answer for this also?

Remembering what I have already stated, that we prevent scab only by coating the surface of the young fruit bud and leaf to prevent the fungus from getting into it, the case seems clear. How can we coat the buds and leaves with the spray before they are opened?

This is not all theory, however. We have tried it for the past two years and find that the dormant spray has practically no effect in controlling apple scab. The proper time, then, for the first application for scab, at least under New York conditions, we find to be after the buds and leaves are exposed so that you can get at them, but before the blossoms have opened, getting it on ahead of the rains if possible.

A block of 75 Duchess trees well sprayed in our experimental plot yielded 16 times as many pears per tree as the adjoining block in the same orchard, sprayed by the owner only after the blossoms fell. The set was poor in this case even on our plot, but the contrast was evident, nevertheless it is true that these results would not be obtained every season. If we were sure the early season would be dry this early spraying could be omitted without loss. It is largely, then, a form of insurance. Perhaps if one could watch the weather closely enough, this could be omitted many seasons. The second application should be given immediately after the blossoms fall, or when about two-thirds have fallen. By this time new surfaces have been exposed by growth, which will not be protecteh by the early spray. important of all from the standpoint This is usually found to be the most of uroducing scab free fruit.

If only one application is to be given I should make it at this time. This is also the most important in plison combined with the fungicide controlling the codlin moth, and the makes this application the most important one for the two worst enemies of the apple crop—scab and coddlin moth. This should never be omitted. The third application should be made about two weeks after the second. Like No. 1, its importance will vary with the season.

after Some seasons a fourth is found to be necessary, about seven to eight weeks after the third, to prevent a late infection that sometimes occurs as the fruit begins to ripen up; and also to protect against a possible second brood of codlin moth. Whether either of these possibilities require consideration under Nova Scotia conditions or not you know better than I.

Now comes the question, "What shall we spray with?" As you all know, Bordeaux mixture has long been the standard fungicide for this purpose. It has been very effective in controlling the fungus, but has under certain weather conditions shown a decided tendency to russet the fruit, and in some cases cause objectionable foliage injury. This has been known to occur in many cases where all known precautions have been taken, and it has been demonstrated beyond doubt that wet weather following soon after the application favors Bordeaux injury, causing russeting of fruit and burning of foliage. It is only within the past two years that considerable agitation has been aroused concerning the substitution of sulphur compounds for Bordeaux in the control of fungus diseas of plants. Confining ourselves to the work on apples, we find that concentrated lime sulphur solution properly prepared and applied, in combination with lead-arsenate, has been successfully used in an experimental way for the past four years and by many practical men on a commercial scale during the past season.

Prof. Cordley, of Oregon, reports successful control of apple scab as early as 1907, and that the russeting of fruit which resulted from the use of Bordeaux was avoided. His results were equally good in 1908 and 1909. Scab was as effectively reduced in every case by lime sulphur as by Bordeaux. There was no russeting on lime sulphur sprayed fruit, while on the Bardeaux plats it ran from 31 to 52 per cent. Prof. Scott, of Washington, D. C., reports experiments in Arkansas in 1908, and in Virginia in 1909. The results in both cases agreed in general with those obtained by Cordley in Oregon.

Scab was controlled as well by lime sulphur as by Bordeaux, and very slight or no russeting of fruit followed the use of the lime sulphur spray.

Prof. Brooks, of New Hampshire, reports that in 1908 scab on McIntosh was reduced from 61 to 15 per cent. by Bordeaux and 14 per cent by lime sulphur.

In 1909 at Cornell, scab on Greenings was reduced from 42 to 36 per cent. by lime sulphur, and to 3 per cent. by Bordeaux. In 1910 it was reduced from 98 to 11 per. cent. on Baldwins by lime sulphur, and to 18 per cent. by Bordeaux in one archard, and to 14 and 17 per cent. cent. respectively in another. On Greenings it was reduced from 79 to 10 per cent, by lime sulphur and to 17 per cent by Bordeaux. The Hubbardston had 94 per cent. on the unsprayed and 3 per cent. on the lime sulphur trees. There were no Bordeaux trees in this variety. Another Greening orchard gave 6.9 per cent. on trees sprayed with lime sulphur, and 6.6 per cent. on the Bordeaux plan.

Summarizing these results we have a record of three years for Cordley in Oregon, two years for Scott in Virginia and Arkansas, not including the present season and two years of our work at Cornell. Aside from this experimental work, a few growers made the venture and used lime sulphur as a summer spray in 1909, and a very large number in 1910. Some conflicting results are reported as would be expected. The conclusions to be drawn from the sum of all this work, however, is that lime sulphur solution, properly prepared and used, may be successfully substituted for Bordeaux mixture as a summer spray for apples, its chief advantage being that it largely if not entirely avoids the danger of russeting of the fruit which so often follows the use of Bordeaux, and that aside from russeting, the fruit has a decidedly finer finish where the lime sulphur is used. It is well known that Bordeaux injury is most likelt to occur when wet weather follows soon after the application. With the lime sulphur spray, we seem to be less at the mercy of the weather conditions. The chemical propeties of the two fungicide are entirely different. In properly made Bordeaux the copper which is doubtless the caustic or burning ingredient, is in the insoluable or harmless form when applied, and does not cause injury until it has been chemically changed by exposure to certain weather conditions. In case of lime sulphur, the soluble sulphur which is doubtless the caustic ingredient is applied in the soluable form and soon changes to the insoluble. We are convinced, then, that whatever burning is caused by lime sulphur is caused at once, while the spray is drying on the tree. The weather following the application would, there-

Gourlay Pianos

ARE AN INSPIRATION TO MUSICAL ACHIEVEMENT

As the owner of a famous Cremona violin cherishes his instrument, so are Gourlay Pianos regarded by those musicians fortunate enough to possess one.

Their intimate, sympathetic singing-tone quality of even purity from lowest to topmost note, combined with a richness and volume heretofore found only in Grand pianos of best foreign make, stimulate every effort of both pupil and teacher, and furnish an inspiration to higher musical achievement that is continued and abiding.

May we send you Booklet 6, in which will be found the names of 2500 owners of Gourlay Pianos.

fore, be expected to have little or no influence on the amount of injury in the case of lime sulphur. In fact, we have sprayed with lime sulphur in all kinds of weather, and from carefully kept notes have been unable to correlate the amount of injury with any particular weather conditions. We are convinced, however, that the weather conditions of the season previous to time of application may have an influence in producing a foliage that is more or less susceptible to injury. We have noted that in general apple foliage seemed to be more easily burned by lime sulphur in 1910 than in 1909 in New York State. This we believe to be partly due to the fact that the wet spring of 1910 was more favorable to fungus infection which, as already described, made the leaves more susceptible to spray injury. It is also quite possible, as claimed by Prof. Cordley, that the season affects the leaf physiologically to make it more or less susceptible to spray injury.

It is therefore true that while there seems to be little danger of fruit injury from lime sulphur, we do have the problem of foliage injury to [illegible] growers have had slight, and a few, quite objectionable injury. In most cases this occurs all at once, and the trees soon recuperate.

What we want to know then is, what precautions can be taken to avoid the danger of an objectionable amount of foliage injury? Most cases that we have been able to inspect personally have been traceable to one or both of two causes. In many cases a miscroscopic examination would reveal the fact that the scab fungus was present in almost every burned spat, and in many cases the trees or certain branches had been too heavily drenched. Over-drenching of the foliage is very likely to cause injury some seasons. The spray should be thoroughly applied or evenly distributed so as to coat all parts, remembering that the spray only protects those buds that are actually coated. On the other hand, holding the nozzle still in one place too long to over-drench that part of the tree should be avoided. We have been able in this way to spray many acres of orchard, satisfactorily controlling scab and codlin moth and retaining as healthy a foliage as could be desired. A slight spotting of some leaves occurred soon after the application, but this could hardly be detected a few weeks later.

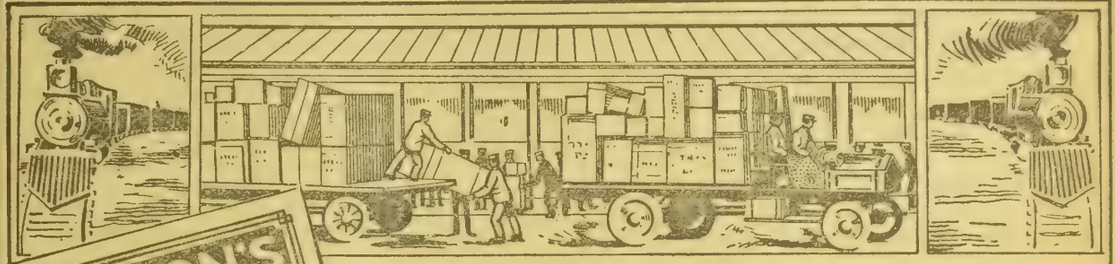
Another important question is what poison can be combined with the lime sulphur to control the codlin moth and other insects? All the above discussions refer to the use of lime sulphur combined with lead arsenate. It had been predicted that the addition of lead arsenate would reduce the fungicidal value of the lime sulphur solution because of a chemical reaction. We have tested this point very thoroughly this season, and find that the effect is exactly the reserve of this prediction. The fungicidal value of lime sulphur sulphur seems to be almost if not quite doubled by the addition of the lead arsenate. Evidently then the chemical change is beneficial rather than otherwise. Arsenite of lime was quite highly recommended by some a year ago, but the work of the past season has demonstrated that this combination is likely to cause serious foliage foliage injury. Paris-green has given similar results. At present lead arsenate is the only poison that we know to be safe to use with lime sulphur on foliage. There are many forms of lime sulphur preparations. The above remarks apply only to the concentrated solution. It can be prepared at home or purchased from several manufacturing firms. The home boiled urohuct, if properly prepared, gives practically the same results as the factory boiled. It is prepared by boiling together in a large pot 60 pounds lime and 125 pounds sulphur, with enough water to give 50 gallons at the finish. Boil about one hour. When cooled to 60 degrees Fahr. its strength is measured by testing with a Beaume thermometer and diluted accordingly.

A good commercial concentrate should test about 33 degrees Be. and should be diluted about 1-40. To this may be added lead arsenate at the rate of 4 to 6 pounds per 100 gallons and the spray is ready for use.

In conclusion, let me say that I have talked with a large number of growers of Western New York, and feel safe in saying that more than 90 per cent. of those who watched the results of the past two seasons will not use Bordeaux mixtdres for apple scab next year. Bordeaux as a summer spray for apple scab, we believe, is largely a thing of the past. We would not say that lime sulphur solution has come to stay. It will stay only until we find a better. It is not perfect, and we are not going to rest until those imperfections have been overcome or a more perfect substitute has been found.

The ideal spray would be one which could be effectively applied under all conditions without the slightest possibility of injury to fruit or foliage. This is not an impossibility. We beliefe it is coming soon.—By Prof. Erritt Wallace, of Cornell University.

EATON'S



PROMPT SHIPMENT
OF
ALL GOODS

OUR JANUARY AND FEBRUARY SALE CATALOGUE places before you hundreds of useful articles—mostly daily needs — all priced most surprisingly low — all SPECIAL VALUES of the kind that has made this Great Store famous—all specially secured for this Sale in such enormous quantities that we obtained unusual price concessions. Remember—this big selling event lasts until February 28th only. If you have not received a copy of our Special Sale Catalogue, write for one to-day and take advantage of the values we are placing before you. They are certainly most unusual.

EATON'S FREE DELIVERY OFFER

We have a Free Delivery Offer which we think is fair and just. It is so arranged that we pay delivery charges on all orders amounting to **$25.00** or over. Delivered in Ontario, Quebec and Eastern Provinces.

EVERY PRICE QUOTED IN OUR CATALOGUE means what the article will cost you laid down at your nearest Railroad Station, provided your order amounts to $25.00 or over. We can handle large orders more economically than small ones — there being less clerical work and less packing—consequently we can pay the freight without lowering the standard of our merchandise or increasing the cost to our customers of a single item. If you are not wanting $25.00 worth of goods, try and induce your friends to include their orders with yours and thus make up the necessary amount to obtain **FREE DELIVERY.**

25.00 **On $25.00 orders and over we deliver free to your nearest railroad station in Ontario, Quebec and Eastern Provinces all goods listed in our Catalogue.** **25.00**

While it is often impossible to prevent an accident, it is never impossible to be prepared—it is not beyond any one's purse. Invest 25 cents in a bottle of Chamberlain's Liniment and you are prepared for sprains, bruises and like injuries. Sold by all dealers.

FARMER AGENTS WANTED.

We want farmers to sell the Empire Cream Separator. Our proposition is atractive and our machine the best. Write today for particulars.

The Empire Cream Separator Company of Canada,

Sussex, - - N. B.

If you do not happen to be a farmer and can handle our Separator we will be glad to hear from you.

DAIRYING.

C. W. McDougall, Dairy Inspector, staff Contributor.

Value of Good Milk.

There is no subject of much greater interest to any living creature than good milk. It is an article of food that is indispensable in many of our homes and enters every household in some form or other. Dr. D. F. Luckey, state veterinarian of Missouri, before the Missouri State Dairy Association, gave some very interesting and valuable information concerning the food value of milk and the farmers' relation to the production of good milk. We take the following paragraphs from his address, which we consider worthy of serious consideration:

Good, pure milk is a precious food. It gives life and strength to the babe and the invalid. To the laborer who goes forth in the full strength of years it gives more energy than other food that he can purchase at the same cost. To the professional man it is ever a restorer of his wasted nerves. To the housewife it is the ultimate consummation of convenience and usefulness. It is the one perfect food of the Divine Chemist. In the great plans of nature there is no substitute for it. The man who produces it should have a clear mind clean hands and a pure heart.

Bad, impure milk may be dangerous food. It any of its natural properties are removed from it, or water adhed to it, it loses, at least a part of its food value. It may only fill space at a time when nourishment is most needed. If it contains either filth or preservatives, it may actually become poisonous. If it is from diseased cows or is contaminated with disease germs on its way to market, it may produce disease and even death. It should not be produced and handled for the human family like a scavenger gathers offal for hogs.

Dairymen should never go on record as oppsong reasonable reforms in the dairy business. No one can deny that heretofore there has been a general lack of cleanliness and sanitation about dairies. Long practice of watering, skimming and adding preservatives to milk has apparently led some dairymen to believe that they have an inherent right to practice such fraud There can be no doubt about it being wrong to sell milk from tuberculous cows; or to sell skimmed milk for whole milk; or to use preservatives in milk; or to sell filthy milk. When a few dairymen stand out in the open in favor of these fraudulent practices they cast serious reflections upon the whole dairy industry. The public is led to believe that dairymen are a lot of crooks. The respectable dairymen should be the most severe in reproof of those who are bringing disgrace upon this, the most honorable of all industries.

Dairymen should not only discountenance practices that are palpably wrong; they should take active steps to right all wrong. It will pay. If the dairymen do not correct their own faults, the public will do it for them. The public is already aroused on the milk question and are demanding corrections. Opposition by a few crooked dairymen to reasonable reforms, not only brings the dairy industry into bad repute, but turns people from the use of dairy product.

Good milk is the cheapest article of food now in use. Filthy milk from diseased cows is dear at any price. The demand for the highest priced milk in the cities, on account of its high class, is greater than the demand for the cheaper grades. Dairymen should strive to produce nothing but milk of high quality, free from dirt, preservatives and disease, and then ask a profitable price for it. The public has already shown a willingness to pay a profitable price for good dairy products. Instead of trying to produce milk at a low cost, epen at a sacrifice of its purity and quality dairymen should go to any necessary trouble and expense to produce wholesome milk and then ask a profitable price for it.

A pint of milk is said to equal in food value four eggs, one-half dozen oysters or a pound of steak. It is available as a food for infants and invalids. It is easily digestible. It is little trouble to prepare for the table It can be used in a great many different ways in cooking. Altogether it stands alone for convenience and usefulness. Compared to other articles of food and drink milk is selling too cheap today. If dairymen will stand together and discountenance the dirty filthy practice of some of their own number, make an effort to secure absolute purity in all their own products and educate the public up to the real value of good milk they will not only command better prices, but are sure to create an increased demand for their products.

Greatest Profit in Feeding Young Cattle.

Prof. F. B. Mumford, head of the agricultural department of the Missouri College of Agriculture says:

"It requires about one-half as much grain to produce 100 pounds of gain on calves as on two-year-olds. The work of the Missouri Agricultural college has definitely demonstrated that the most profitable age to fatten cattle is while they are still young. The older the animal the more food is required to produce a given gain." Other stations have also investigated this question and have arrived at the same result.

The central experiment station farm at Ottawa, Canada, found by comparing 1,000 pounds live weight in the case of calves, yearlings, two and three-year-olds, that the profit for each, 1,000 pounds was:

For calves	$31.00
For yearlings	27.00
For two-year-olds	19.10
For three-year-olds	12.80

When all of the cattle of all ages were purchased at 4 cents a pound and sold at 5 cents a pound, the profit on $1,000 invested in feeding cattle was:

For calves	$577.50
For yearlings	284.00
For two-year-olds	198.75
For three-year-olds...	177.50

Nine-tenths of all the cattle fed in the middle west are two-year-olds at the beginning of the feeding period. When these cattle are in thin condition at the beginning of the experiment they are often fed with profit; but starting with calves in the same condition it is unquestionably true that the calves return more profit for each thousand dollars invested than the older cattle.

Wonderful Advantages Found Only in the World Famous SHARPLES Dairy Tubular Cream Separator

The Tubular produces twice the skimming force, skims faster and twice as clean as others. Saving in cream, as compared to others, soon pays for machine.

The Dairy Tubular bowl contains no disks or other complicated contraptions to wash, rust or wear. World's only simple separator bowl. Sanitary. Many times easier to wash than others. Produces finest cream. Greatest railroad in Canada uses Tubular cream in its dining cars.

Fewest wearing parts. Perfectly self oiling. No oil holes, cups or tubes. Uses same oil over and over—three pints lasted one man three and one-half years, running machine twice daily.

No wonder Tubular users are enthusiastic. They say, "Thank goodness I have a wear-a-lifetime Tubular and not some exasperating, short-lived machine bought of a 'peddler' or elsewhere." You can have that same satisfaction by using a Sharples Tubular.

Later than, different from all others. Wears a lifetime—guaranteed forever by the oldest separator concern on this continent. One of Canada's leading industries. Local dealers everywhere. If you do not know our dealer, ask us his name and address. Write for Catalogue No. 194.

THE SHARPLES SEPARATOR CO.

Toronto, Ont. Winnipeg, Man.

What Profit Per Cow in 1910?

Business men of Canada will shortly take stock, close their books for another year's trade, and figure out how they stand financially as a result of their hard labor and enterprise. How many farmers are preparing their 1910 balance sheet which will act as a sign post for 1911 transactions? Perhaps the steers paid well, while small fruits and poultry brought in a good supply of cash. But did each cow in the herd earn a good profit, or are some being kept as thankless guests?

A very few minutes book-keeping per month might show a clear profit above cost of feed of forty dollars with some cows, only three dollars with others, and possibly no profit at all on one or two. It would not take long to decide which to dispose of. Would it not be a sensible resolve to keep only such cows as will make good returns? Determine that your herd shall show an increase of forty per cent in the milk yield inside three years; you can easily gear the whole herd up another notch or two if some poor cows are beefed. The scores of dairymen who are now reaping large profits per cow date their success invariably to the time when they commenced keeping milk and feed records of each separately. Blank forms are supplied free on application to the Dairy Commissioner, Ottawa.

Fat Lost in Buttermaking.

Butter consists chiefly of butterfat, and therefore the aim of the buttermaker is to collect as much of the fat from the milk as possible, and then convert it into butter, so that a minimum amount of fat may be lost in the process of manufacture. Where butter is made for prafit it will be found more economical to employ a centrifugal cream separator, than to obtain cream by any other method. When cream is obtained by the separator there is about .1 per cent. of butterfat left in the separated milk, but by the shallow pan system of cream raising there is as much as .7 per cent. of butterfat in the skim milk even when the cream raising is carried out under the best conditions This means that when a cream separator is utilized the butter yield is increased by about 10 per cent. or 10 pounds in every 100. The first loss of fat occurs in the process of extracting the cream from the milk, which although it can be reduced to a negligible one, cannot be avoided altogether. Afterwards the amount of fat lost depends chiefly upon the skill of the buttermaker. Prime butter contains from 84 to 86 per cent. of butterfat, the remaining 14

A FLOOD OF LIGHT FROM KEROSENE COAL OIL

THE ALADDIN MANTLE LAMP generates, with Coal oil (Kerosene), a light far more brilliant than gas or electricity. It is simple, durable, portable odorless and safe. Satisfaction guaranteed.

AGENTS MAKE BIG MONEY by showing the lamp, the light makes the sale. It revolutionizes rural lighting; needed in every home. The SUNBEAM burners fit all ordinary lamps. Ask for Agency proposition or how you can obtain a lamp FREE to introduce it.

Largest Manufacturers of Concrete Machinery in Canada

to 16 per cent. consisting of the constituents of milk other than butterfat, viz; water, casein, etc., and salt, if, as is usually the case, it is added to improve the flavor of this product. If butter contains much less than the above stated percentage of butterfat, when freshly made it has a milky flavor which soon changes to rancidity. When butter contains much more than 86 per cent. of butterfat the flavor is rather 'fatty' and to most people it is unpalatable In many instances an undue loss of butterfat is sustained through failing to ripen the cream previous to churning. Where the cream is properly ripened, and other parts of the process of buttermaking are skilfully carried out the loss of fat is reduced to a minimum. The butterfat globules when in the milk are not in quite a free state—they are held in a kind of mechanical entanglement with the casein. Butterfat globules vary in size in the milk of each particular breed of cow, and also in the milk secreted by each individual cow of any one breed. In the ripening of the cream the viscosity of the casein is largely destroyed. The fat is then free and the smallest of the fat globules can be collected together with the large onces in the process of churning, instead of being washed from the butter in the buttermilk. It will thus be observed that by ripening the cream an undue loss of fat is avoided.

Watering the Milch Cow.

Did it ever occur to you that a cow giving a large quantity of milk must drink more water than one that is dry or one that gives a comparatively small quantity? If you will stop to think a moment you will readily see that it is logical to suppose that it requires a great deal of water to produce milk. Eighty-seven per cent. of milk is water. Of course, if a cow gives only a gallon of milk a day—eight pounds—she would only require about seven pounds of water for the milk production. If she gives three gallons she would require 21 pounds; if six gallons, 42 pounds. That water must come from what she drinks, especially so if she is fed principally on dry feed, as most cows are.

There is no theory about the water consumption of dairy cows. It has been demonstrated the amount consumed bears a certain ratio to the milk produced. Missouri Chief Josephine, the cow that produced 100 pounds of milk a day at the Missouri Experiment Station last year, drank 81 gallons, or 258 pounds of water, a day through the winter months. The practical side of this question is an important one. You know that to warm 250 pounds of water on a stove heated from the freezing point to 100 degrees F., with burning fat, for instance, would take a considerable amount of fat and that it would be expensive. Whether you heat water on a stove or allow a cow to heat it in her stomach, the same amount of heat is reqdired. For this reason it is better to give the dairy cow warm water than ice water. It saves feed; it also saves a shock to the delicately organized system of a high-producing cow. If you want to get maximum returns from your milk cows this winter, do not compel them to break ice in the water tank. If you have no better way of supplying water several degrees above the freezing point, get a tank heater. The cost is nominal, the expense for the fuel is very small and it is correct to say that even a small herd of good milk cows will pay for a tank heater in a short time.

How "Eastlake" Steel Shingles will save you money

Talk No. 1

Quality

By

The Philosopher of Metal Town

Bank your dollars on quality.
Inferior quality, whether in building material or farm implements, is the source of constant worry and needless expense.
It's poor economy to save on first cost, and then—
Pay out two or three times the original cost in repairs, wasted time, inconvenience, etc.
In barn roofing much depends on quality—the safety of your crops, your implements and live stock.
"Eastlake" Steel Shingles are an absolute assurance of safety.
They are made of the finest and toughest sheet steel, perfectly galvanized.
The "Eastlake" workmanship is the best—careful inspection at each turn in the big "Metallic" shops guarantees perfection.
And perfection means satisfaction—a roof that lasts a lifetime.
"Eastlake" Steel Shingles are highest quality, yet cost you no more than inferior roofing that requires replacing or repairing in a few years.
And an "Eastlake" roof means clean rain water for household use.
Let us send you our illustrated booklet, "Eastlake Metallic Shingles." Write to-day—just your name and address on a postcard.

"EASTLAKE" STEEL SHINGLES

We also manufacture Corrugated Iron, Barn and House Siding, Eavetrough, Conductor Pipe, Ventilators, etc.

The Metallic Roofing Co. LIMITED

Toronto - Winnipeg A60

Milking After Freshening.

Many dairymen make the mistake in milking their cows clean immediately after calving. This is not a good plan, as it has a tendency to produce milk fever. If one stops to think, one realizes at once that milking a cow clean as soon as the calf is born is not Nature's way of doing. While the new born calf begins to suck very soon after birth, it does not take large quantities of milk the first few days; in other words, it does not suck its dam's udder clean during the first week. To aid in preventing milk fever do not empty a fresh cow's udder, but milk her only partially clean during the first few days. In keeping the udder somewhat distended milk fever is prevented, just as it is by the air treatment of this disease, which is one of the best remedies ever invented. As most dairymen know, this treatment consists in pumping the udder full of sterilized or filtered air, tying the teat orifices and then gently kneading the udder. Imitating Nature's methods usually give good results, and keeping the udder of a fresh cow distended during the first few days is one of the things the dairyman, who is apt to be troubled with milk fever, should bear in mind. —American Exchange.

Herd Building.

1. Milking clean—to obtain all that a cow can give, and to prevent early drying off.

2. Use of purebred sires — from strain of large producers, to acquire good qualities and perpetuate dairy tendencies. Of what value is a "scrub?"

3. Regular and careful feeding—as to time, quantity and quality; adjusting the grain ration to the production of milk and butterfat; to get the utmost value for the foodstuffs grown or purchased.

4. Providing succulent feed— as roots, ensilage and soiling crops, to sustain and prolong the flow of milk.

5. Culling out poor cows.—No one wants them either to feed or breed from. Beef them.

6. Good care—including kind treatment, and everything conducive to comfort, cleanliness and health so as to give the cow an opportunity to work to the best advantage. Better methods, not necessarily much outlay of cash.

LIVE STOCK

Beef Raising in Canada.

Bulletin No. 13, on "Beef Raising in Canada," issued by the branch of the Live Stock Commissioner department of Agriculture, Ottawa, is a splendid piece of work. It has the proportions of a complete volume, and 83 beautiful half-tone illustrations, which to the eye of the beef cattle fancier must be as delightful as interesting. To the student and beginner also it affords ample means of learning much of the different beef breeds by comparison.

The bulletin itself is compiled by Mr. J. B. Spencer, B. S. A., for the Live Stock Branch, Ottawa, and published by direction of the Hon. Sidney A. Fisher, Minister of Agriculture. It will undoubtedly be the means of disseminating much useful knowledge with reference to the best breeding, feeding and marketing of beef cattle. In its preparation, it is stated by J. G. Rutherford, Live Stock Commissioner, every effort has been made to secure the most accurate and reliable data regarding the industry. The publication of the information contained in it, together with the views of experienced feeders and, in many cases, descriptions of the methods which they have found most successful, should be of considerable value to all interested in the subject of beef raising.

The following subjects are taken up and discussed with great amptitude. The Beef Bullock; Modern Breeds of Beef Cattle; The Breeding Herd; The Beef Herd; Rearing and Finishing; Fattening in Central Canada; Fattening in the Maritime Provinces; Veal; Cattle Feeding in Alberta; The Beef Industry of British Columbia; Housing; Marketing the Principles of Feeding; Dehorning; Estimating of Weight of Live Cattle Fresh Beef for the Farmer's Table; Constitution of Beef Ring.

The section devoted to the fattening of cattle in Central Canada will be of peculiar interest to farmers engaged in that industry in the Prodince of Ontario. In order to arrive at the best systems of fattening cattle, sets of questions covering the principal points in the process were submitted to a number of the leading feeders who have for many years been successfully fattening steers on a more or less extensive scale. In addition to the valuable information submitted by these men the lessons learned from the experiments conducted at the experimental farms have been drawn upon, and these with the practical knowledge of the writer form the basis of the tresise.

Farmers engaged in beef raising in any part of Canada will derive much benefit from the up-to-date conclusions arrived at upon this important industry.

Small Sheep for Small Households.

An interesting and important experiment is being conducted on a farm near Six Mile Bottom in Cambridgeshire. Its object is to determine what breed of sheep is the most suitable to the wants of the British household. In this matter the Colonial producer showed himself in advance of those who remained at home, for long before our own farmers recognized the fact he saw that the want in Great Britain was for small joints. Fifty years ago the fattest and biggest sheep was ever considered the best, but in those days the appetite for cold meat seemed to have been much greater than it is to-day, when the householder wants a small joint that can be practically consumed at a single meal.—From Country Life.

A DAIRYMAN'S PROBLEM SOLVED.

Starr's Point, Oct., 28, 1910.

A. A. ARCHIBALD, ESQ., Truro, N. S.

DEAR SIR:—In reply to your inquiry as to the success I have had in feeding Blatchford's Calf Meal. I am pleased to report that I have used a great deal of meal during the past four years and have found it a great help in raising young calves and pigs when milk is scarce As I have been selling all my milk; I have substituted the meal entirely to young calves after they were a week or ten days old and found no trouble to raise good calves in this way. I have had grade Jersey heifers started on Blatchford's Meal drop their first calf at eighteen months and give 20 pounds milk per day I can recommend the use of this meal as a substitute for milk if fed with judgment.

Yours truly,
J. RUFUS STARR.

MOST dairymen are tempted to sell all the milk that they can produce. It may not be the best for them to do so, but when bills have to be met, something must be done, otherwise embarrassment for the time being often stares them in the face. We believe they all realize the importance of raising the young heifers and bulls, but you know how it is, things must be arranged temporarily at least, it is impossible to give calves the milk This is something that institute speakers overlook, nevertheless it is an actual condition that must be met somehow. There was a time when one could go out in the back districts and get new milch cows, but that day has gone, too. How to get calves to maturity without milk is the problem. We have solved it for you, but unless we can tell you more about it and unless you will have confidence enough in what we have to suggest, you should not read another line. Our

Blatchford's Calf Meal

is not a tonic, a patent medicine or an offal from a large manufacturing plant. It is a substitute for milk and **will** make bone, flesh, fat and muscles, etc. It is not only the best, but it has stood the test. We have been manufacturing it for a longer time than any of the other supposed calf foods.

We thoroughly understand dairy conditions in the Maritime Provinces and have given your conditions a great deal of attention. We know what you want and so do you, but unless you give Blatchford's Calf Meal a trial, you will still be without what you want. Nothing short of a trial will convince.

Let us assist you in your business. We can do it. Write today for catalogue.

Blatchford's Calf Meal Factory, = Waukegan, Ill.

Or A. A. Archibald, - - Truro, N. S.

Wintering the Calf.

With the approach of cold weather, when most of the spring calves ase cut off their skim milk and pasture, the dgiry calf faces a critical time in its development. In the first place, the dairy calf is very susceptible to cold, and should never be exposed to cold drizzling rains. Its winter quarters must be warm and comfortable. A shivering calf will mean a shabby looking calf, in spite of the best feeding. A clean, warm, dry, well-bedded, well-ventilated stable with a sunny exposure, is the proper place for a calf during cold and rainy fall and winter days. You cannot get too much sunlight in a calf barn, hence see to it that it is propided with plenty of windows.

A good winter ration for a spring calf is good clean clover or alfalfa hay, supplemented with silage and a little grain. Clover hay is rich in muscle-forming elements and its bulkiness tends to develop a strong, capacious stomach in the young animal. Silage has a wholesome, tonic effect upon the calf, giving it a healthy, vigorously growing condition.

In addition to the rough feed the calf should be fed about three-quarter pound of grain daily. This amount should be gradually increased, so that toward spring, when the calf is about one year old, it will receive 1½ pounds a day. One part linseed meal and two parts wheat bran make a very satisfactory combination of grain. The linseed meal, beside being rich in growing elements, has a tonic value, and gives the calf a sleek, fine looking coat. bran is valuable because of its bulkiness and because it is especially rich in bone-forming material.

Keep salt constantly before the calves. They have a craving for it and need it. Also see to it that the calves receive plenty of water.

Calves must also have exercise for best development. A strong constitution is of first importance, and this cannot be developed by continuous confinement. The calves should therefore, be turned out daily. During cold weather an hour at noon will be sufficient. If they have been properly fed they will jump and kick around enough to keep them warm for a short time outside, even on very cold days.

Do not neep the calves tied up in rigid stanchions except during feeding. The best plan is to provide pens holding about half a dozen calves each. The calves in each pen should be as nearly the same size as possible. It is a bad practice to place a little calf with a lot of big ones. Clean the pens and feed thoughs every day. Watch the calves to see that they don't suck each other. As soon as one begins to suck place it in a stanchion and keep it there a few days.

Potatoes as Cattle Feed

Several inquiries have been received this season asking what value is possessed by potatoes as a feed for stock, especially cattle. The low price of potatoes this year has left a great amount of the crop in the producer's hands, and to realize any profit on the crop many were obliged to find some other outlet than the regular market. One farmer gives his experience in feeding potatoes as follows:

"Having a dairy and plenty of small potatoes this winter, I thought I would try feeding them to my cows. I had no pigs to feed them to, and even if I had, I should have fed them to the cows, if the

value had been equal, and it is a good deal more trouble to cook and mash the potatoes and mix in meal than to feed them raw. Out of the dairy of ten cows, two were fresh, and two were farrow, the rest due to freshen before April 20th, except one due in May. The ten were fed one bushel per day among them, beginning early in January, but the fresh cows, which were getting one pound of grain to three pounds of milk, showed no effect. The other eight were getting one pound of grain to four of milk, and after one week of feeding potatoes, they came right up on their yield. I will give their record of the six cows with calf, and also that of the two farrow ones, three weeks before, and one month after I started the potatoes.

Week Commencing	Six Cows	Two Cows
Dec. 12	605	204
Dec. 19	610	209
Dec. 26	541	208
Jan. 2	573	208
Jan. 9	628	232
Jan. 16	637	240
Jan. 23	530	232

"It was during the week of January 2nd, that the regular feeding of potatoes began, although some had been fed before that time. It will be noticed that although the farrow cows did not fall appreciably during the two weeks beginning December 19th and 26th, respectively, the six with calf dropped from 610 lbs. to 541 lbs., or 69 lbs. It is only fair to suppose that this drop was not due to any outside condition or the farrow one would have fallen off to the same extent, whereas, their difference was only one pound, a negligible quantity. It is also fair to suppose, that had the potatoes not been fed, these six would have continued to drop, and the two farrow ones would have remained the same during the whole period. We find, however, a gain of 16 pounds a week for each cow, during December 26 and January 16th, including those which were farrow. At the price I received at this time for milk, $1.78 per 100 pounds, this figures out to 40.9 cents per bushel apiece per week. This is the amount of potatoes brought, owing simply to the increased production caused by them. Since, without potatoes, they probably would have continued to fall off, still more should be credited to the potatoes, but 41 cents per bushel is pretty good. Many of these potatoes were unsalable, even as small ones, there being many of them which had been partly frozen. They were not even cut, so the only labor was the feeding of them. These cows have 40 pounds of good silage per day, so that they were not in need of succulent food. If they had been they would come up even

"I thought at first that perhaps more on their milk yield. their ration was too narrow to furnish them sufficient carbohydrates as the grain fed was cotton-seed meal and pea meal—but had this been the case the two fresh cows would have shown more gain; and their ration was narrower; whereas, they showed none. If I had fed these eight cows one pound of grain to three pounds of milk, and they had risen on their milk flow as much as they did on the potatoes, the grain equivalent of one bushel of these potatoes would have been 13 pounds, worth 20 cents. As after trial with more grain than one pound to four of milk, I had decided that that was the most profitable ratio, for cows that were drying up, I feel certain that the amount of grain would have had no more than that much effect, and it might have had less. Under these circumstances, I felel justified in concluding that potatoes are worth at least 20 cents a bushel, to feed cows."

THE HORSE.

Azoturia.

The cause of Azorturia, "Monday morning disease," may be ascribed as we have formerly stated, to the fact that horses in good, hard flesh and being fed oats and good hay, while working, are rested for a day or two on the same amount of feed as when at work. While the horse is idle, the nourishment from the feed is not used by muscular exertion, but is stored in the liver. Nothing will be noticed in regard to the patient being sick until after it has moved, say half a mile or so. The horse usually comes out of the barn feeling unusually well; will jump and play for a quarter of a mile, says Prof. Barnes of the Colorado Experiment Station. Then he becomes dull and stupid, lags back and gets lame in one or both hind legs. If allowed to stop, he may recover in one or two hours so he can be taken back to the barn. If compelled to keep moving will sooner or later drop in the harness.

The explanations of the symptoms seems to be that the nourishment which is stored in the liver is thrown onto the muscles all at once, and causes a congestion, so that the muscles cannot take care of it; hence the stiffness. The muscles over the rump and hind leg are usually hard or board-like. The urine is coffee-colored, and in a great many cases, is as black as blood. The coloring matter of the blood comes through in the urine.

For treatment, the first thing to do is to stop the animal as soon as the symptoms appear. Then draw the urine. Rub the muscles over the affected parts. Give the horse some form of laxative. Keep the horse on his feet if possible. Give him assistance when he makes an effort to rise, or otherwise the horse loses courage, and will remain down until he dies. If treated early, most cases of Azorturia recover.

That's the only way you can afford to keep them, because any lameness means less work and less profit to you.

Spavin, Splint, Curb, Sweeney, Ringbone, Swelling or Lameness need not prevent your horses from working. Simply use Kendall's Spavin Cure.

It works while the horse works—takes away the pain—reduces swellings—makes legs and joints sound and strong—leaves no scars or white hairs because it does not blister.

Kendall's

Spavin Cure

has been the horseman's standby for 40 years and is used all over the world.

Burns, Ont. Sept. 10th 1909.
"I have used Kendall's Spavin Cure and it cures Old Stubborn Cases."

Dr. B. J. KENDALL CO., Enosburg Falls, Vt.

Shoeing the Fractious Colt.

Before a colt is shod for the first time, it should be prepared for the shoeing by handling its legs in such careful manner that it will understand that no harm will be done. The colt is taken to the blacksmith shop first, but this is a poor plan, because it does not understand what is to be done and generally causes trouble.

The following is a good method for preparing the most vicious colts for shoeing. Tie a long strap around the colts neck, passing it along near the side and between the hind legs, making it fit closer to the body; then pass it under the strap which is around the neck; then tighten up the strap gradually, holding the colt by the bridle.

The colt will probably pull some at first, but speak kindly. When accustomed to the strap lower it to a point just above the hock and gradually pull upon the strap until the leg is lifted, at the same time pull back or to the side of the bridle to keep the colt from stepping ahead; then take hand. The same can be done with the other leg, and after this process has been carried through several times it is easy enough to lift the colt's legs.

Blankets for Horses.

Horse blankets are a necessity upon every farm. Every farmer well appreciates the fact that his horses need protection when they are hitch-out of doors during cold or stormy weather as is almost daily necessary. While every farmer appreciates the necessity of having blankets to protect his horses out of doors, not all, and probably not a majority, appreciate the fact that there is economy in using blankets in the stable. The saving of labor in grooming the horse, his improved appearance which is the result of a shorter and sleeker coat of hair, together with a saving of feed, due to the fact that less of his rations is needed to keep up the animal heat in cold weather, and his greater utility in the harness due to the fact that he will perspire less freely, will all argue for the use of stable blankets upon the horses which are to be worked or driven during the winter months. Here it will pay better to use a good grade of blanket than for use out of doors because the blankets are in use continually and the cheaper and poorer quality will soon become worn and useless.—Michigan Farmer.

DR. J. WOODBURY'S HORSE LINIMENT

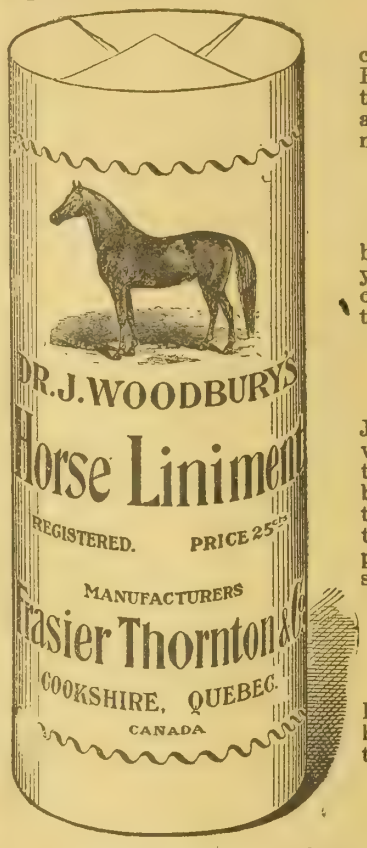
INFALLIBLY THE REMEDY

For the removal of Splints, Bog Spavins, Enlargements of any and every description it has no equal. Given internally, it will promptly relieve and remove any and every character of Cough, Enlargements of the Glands, Affections of the Kidneys. For Distemper, Strangles and Colic it is infallibly the remedy.

All horses that are stabled should have an application of Dr. J. Woodbury's Horse Liniment to the hoofs of the fore feet to prevent their becoming feverish, dry, brittle, hard, contracted or otherwise injured.

Insist on having Dr. J. Woodbury's Horse Liniment. We warrant it to effect that for which it is recommended when used according to directions.

Its beneficial effects are so prompt and decided that it has excited the admiration of the leading horsemen of the Dominion and secured their highest confidence.



Bear River, N. S.
Dear Sirs:—We do not hesitate in recommending your Dr. J. Woodbury's Horse Liniment. We have used it in the woods for coughs, colds, distemper and cuts, and would say that no lumberman should be without it. Yours truly,
CLARKE BROS.

Hubbard's Cove, N. S.
Dear Sirs:—I have used Dr. J. Woodbury's Horse Liniment in my stable for years and consider it the best liniment on the market for both internal and external use. Yours truly,
C. C. McLEAN.

Truro, N. S.
This is to certify that I have used Dr. J. Woodbury's Horse Liniment with the very best results for colds, coughs, distemper and all lung diseases. It is the best thing to give horses in the spring to keep them in condition. It purifies the blood, cleanses the lungs from impurities, which may exist, and gives the system healthy action.
NEWTON LEE,
Owner "All Right," 5817.

Elmsdale, N. S.
Dear Sirs:—Kindly send me 6 dozen Dr. J. Woodbury's Horse Liniment. I have not a bottle in the store and it is the only kind my customers will take.
Yours truly,
ELMSDALE MERCANTILE CO.,
Elmsdale, N. S.

Dear Sirs:—I cured my horse with Dr. J. Woodbury's Liniment. It was a bad case of distemper. I always recommend this liniment to my friends as the best for all diseases of the horse.
Yours truly, H. R. WHITEHEAD.

Dear Sirs:—One of my horses had a bad cough, and I made a complete cure with three bottles of Dr. J. Woodbury's Horse Liniment. The cough was of twelve months' standing. In my large experience with horses, I consider this liniment to be the best made for all diseases in the horse, and I recommend it to my friends. E. J. ANDERSON, Truro, N.S.

Dried Hoofs.

A condition that bothers horsemen quite frequently, is that of dried or brittle hoofs, and this is more especially noticed during the fall months. Most authorities agree, that while this condition may be due, in part, to dry weather, that it more often indicates a debilitated condition of the animal and a lack of proper nourishment. The time honored method of treating a case of this kind is the use of a cold mud poultice. However, one authority suggests that allowing the horse to stand his feet in cold mud over night is about as comfortable and beneficial as if the owner were compelled to do the same thing. For immediate remedies, it is suggested that the horse's feet be bathed in warm water and then oiled, preferably with olive oil. It will be noted in most cases that brittle hoofs and also thin hoofs, and the only way of properly remedying this condition is to increase the rations which the horse is receiping, and be careful to give him the most nourishing feed. This will increase the circulation of the horse, and enable him to build up hoofs that will be stronger and possessed of the proper amount of moisture.

If troubled with indigestion, constipation, no appetite or feel bilious, give Chamberlain's Stomach and Liver Tablets a trial and you will be pleased with the result. These tablets invigorate the stomach and liver and strengthen the digestion. Sold by all dealers.

POULTRY.

Getting your Chicks Over the Critical Period.

If all the chicks that are hatched every year lived through what is commonly termed the critical stage of their lives, that is, the first ten days or two weeks, the number of fowls raised to maturity for breeding purposes and market would be increased by nearly 50 per cent.

The problem of getting chicks safely over this point is no doubt the greatest drawback of any which confront those interested in poultry culture. It is a factor, the cause for which has been attributed to nearly everything connected with the artificial process of changing an egg to a chick, from the moment the egg has been placed in the incubator to the time the chick has finally closed its drooping eyelids forever in its struggle to weather the trying ordeal of the first few days of its life.

It is doubtful if those who have experienced this unfortunate, seemingly unaccountable circumstance, realize how much consideration, experiment and study has been devoted by experts and others keenly interested in this particular problem for the purpose of finding a successful remedy.

Those who have specialized on breeding, have sought to find a solution in mating their pens to produce a higher fertility, more vigorous germ, purer blood, etc. Others have depoted their attention to the kind of brooder, hover, colony house, etc. that would give ideal conditions in temperature, ventilation and range as a means of giving new born chicks a start in life that would safely carry them over the "dead line" as it were. And still others have spent years in perfecting the machines which have superseded the "old hen" as hatchers in an endeavor to produce chicks with strength, life, vigor and actipity that, on the day they popped out of the shell they would have an "air"—an expression if you please, they possessed "life that's eternal," except for the hatchet.

During the past summer the Prairie State Incubator Co., started out to solve this perplexing problem on an entirely different line and conducted a series of investigations and experiments that will intensely interest every one anxious to learn how to overcome this ever prevalent loss.

The methods they pursued were particularly unique, yet so commonsense and practical that they gain the endorsement of all who have learned of them immediately, and the success which has been attained in a number of actual tests proves their investigation as being one of the greatest achievements of recent years.

At the outset they concluded that as Nature held the secret of the cause for the loss of so many chicks during the first few days after hatching, the only successful solution would come through a better knowledge of her process—her methods of hatching strong, vigorous chicks. With this "natural" clew they began studying Mrs. Hen, and so anxious were they to let nature have full, uninterrupted sway that they waited until the old hen "stole" her nest waited until the eggs were laid—until she began to set, and then they set to work. With the most accurate apparatus they could obtain they tested the temperature under the hen, the ventilation she allowed the eggs; obtained the humidity, moisture) from time to time, making very careful and accurate record of all this.

There object was to find out just what kind of condition "nature" obtained, for they realized, and you have noticed that the hens which "stole" a march on you and brought off their own broods invariably have brought off more chicks than those you took the pains to set in a nice, hand-made nest. But above all she rarely ever lost her chicks during the critical period. And why? Because they were hatched right. That's the whole secret.

It is without qdestion the greatest step ahead in artificial incubation ever attained. They applied this nature— knowledge to the construction of the egg chamber in the 1907 Prairie State Incubator, and if you were fortunate enough to attend either the New York or Chicago Shows you must have seen the biggest, happiest lot of incubator hatched chicks you ever looked upon. Chicks just like the old hen that "stole" her nest brought off. Chicks that were full of red blood and activity; with abundance of strength and vigor to cross the "dead line" and thrive. Read their adveryisement in this issue—then send for their catalogue, and get the most interesting bit of poultry news you have read in many a day. It tells all about over 60 experiments they made with hens and incubators, and how they improved their machine so that it "hatched like a hen" and hatched every fertile egg.—Inland Poultry Journal.

Why Eggs Are Stale.

Very little is known about eggs. Everybody knows that fresh-laid eggs are far superior to stale rggs, and in consequence, great prices are paid in time of scarcity for eggs which approve themselves as fresh-laid. That an egg may be stale when laid seems almost incredible, but it is known to be a fact; a fresh laid egg, which had barely time to become cold after being excluded by the hen, has been known to be positively "stale" and in a condition of semi-decay. The probable reason was that the hen laying the egg had carried it in the oviduct for several days, and the high temperature had caused it to get quite a start towards rottenness.

A recent number of the New York Produce Reviews tells of a case, gleaned from a Kansas paper, which illustrates the point. In telling of work which is being done at the Kansas Agricultural College, the account says: "For years it has been the general belief that a fresh-laid egg was sterile, but this theory has been exploded by finding all kinds of contamination within the shell of a fresh laid egg. The worst discovered so far in one egg has been a minute worm and a piece of stable manure. This may sound 'fishy', but if a person understands the anatomy of a hen, it will seem perfectly feasible. The fact that the alimentary canal, oviduct and uretur all have one common outlet, makes possible the above mentioned contamination. Should the hen be in poor condition, it would be possible for foreign substances and bacterial contamination to become inclosed in the egg."

These studies into the causes of the deterioration of eggs will do much good and not a little benefit will come from the killing of the useless male birds. No males whatever should be kept excepting those needed for breeding, and all market-egg layers should be kept free from the contamination of the male. A fertilized egg decays quickly—"the germ of life is the germ of decay"—and the germ within a fertilized egg begins to develop from the animal heat of the hen's body, while being passed along the oviduct. The development is arrested by the egg becoming cold, after exclusion, but may begin again by the eggs being stored in a warm place, as a kitchen pantry in summer or a freight car exposed to the hot rays of the summer sun.

Decided progress will have been made towards a better state of things when all the male birds not needed for breeding are killed off, eliminating the danger of contamination from the male germ.—Profitable Poultry.

Editor Maritime Farmer:

I desire through your columns to offer a word of commendation in behalf of the proposed poultry circles—co-operative societies— which have been so prominently adpocated of late throughout our Provinces.

The plan as outlined is a good one though it does not go as far as I should like to see it, nevertheless I am glad that a commencement is being made.

For a number of years I have been making investigations into, and taking part in this work in different portions of the world, and wherever it has been my privilege to see the matter taken in hand, or wherever I have viewed it as an established fact, I have invariably noted that the effect of such efforts has been to the immense benefit, not only of the producers, but also of the consumers.

Co-operation is the one and only way by which the poultry industry of the Maritime Provinces will ever attain to the position which it undoubtedly should hold; so strongly am I convinced of this that I find some difficulty in writing in unexaggerated language upon the subject.

Coincident with a heavy increase in the price of meat both in Africa and England, I noted a wonderful increase in the demand for poultry as an article of diet, a demand which enabled poultrymen to increase their prices and yet to keep them below those asked for prime beef or mutton. This state of affairs must hold sway here if our farmers and others will engage more extensively in poultry raising.

I should also like to offer a word of commendation in respect of the resolution which has lately be placed before us asking for legislation to restrict the sale of unsound eggs, this is a highly creditable step and one which will inevitably benefit the producers; it is worthy of the support, active support, of every poultryman in Eastern Canada! May the good work go on and prosper.

JNO. BAYNES.
N. S. A. College, Truro.

A Few Precautions

Never feed mashes on the ground or in the runs. Some of it is certain to be left over, be fouled and become sour and breed disease. Feed mash in a trough and scald the trough regularly with boiling water, thus keeping it sweet and clean. Where filth accumulates bad smells arise and germs of disease are multiplying. It is Nature's warning. The majority of diseases among poultry are caused by the owner's neglect. The prompt removal of a sick, dumpish fowl to sunshine, fresh air and special treatment and a thorough disinfecting of the poultry house will prevent a spread of disease. Watch your flock. Note the color of the fowl's comb and their droppings. Watch for soft shelled eggs and egg-eaters and the feather eaters. Look out for lice, one of the worst enemies of the poultry and see to the dusy bath in winter so that the hens can rid themselves of these miserable pests. A slight odor of good lice killer in the poultry house is a good indication that things are right but it is not conclusive unless there is cleanliness with it. Always keep an eye on the nest box. Here also lice hide.

Our New Term will begin Tuesday, January 3rd.

We wish to thank the people of the Maritime Provinces for the patronage enjoyed during 1910—the most generous in all our history of 43 years.

We will show our appreciation by striving to prove ourselves worthy of the confidence of our patrons.

THE FARM HOME

This Department is now being edited by a very competent lady, who will be pleased to answer all inquiries. She solicits the aid of all who are interested in home making. This aid may be given in the form of short articles dealing with your experiences, questions or timely suggestions. Ladies, this department is yours. Use it to the best advantage.

His First Night Away.

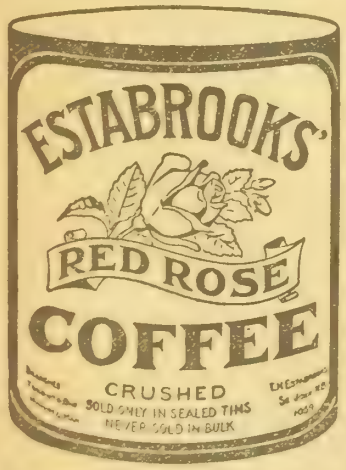
By Strickland W. Gillilan.

The neighbor lad had teased, and so had he,
Till Mother sighed: "Well, if it has to be!"
Anh Father said: "Sure! Let him run along;
It's so near by there's nothing can go wrong."
So Mother rolled his gown into a lump
Smaller than one her throat held; put his comb
In with it; and he left, with joy a-jump—
First time he stayed all night away from home!

He choked a little when he said good-night
To stranger-parents; and he saw a light
Shining in his own house, two worlds away
In the next block; then dreamed till dawning day
That he was homeless. At their breakfast-time
He could not eat, but made his homesick flight
Without adieu—to him no social crime—
When first he stayed away from home all night.

And Mother met him with her arms outspread,
And in her loving bosom hid his head
A long, long time while neither of them stirred
Nor anybody said a single word.
In her pang old as maternity
Forewarned her of long partings that must come;
For him has ended all eternity—
First time he'd stayed all night away from home!

Estabrooks' Coffee is full of snap and fine flavor. It gives genuine satisfaction to the last drop, and brings back the cup for more. It is as uniformly good as Red Rose Tea. It does not contain an atom of chicory, nor any other adulterant. You will certainly enjoy it.



Sold only in 1 and ½ lb. tins.

Try it for breakfast to-morrow

In Time of War.

(Continued from last issue.)

In vain her mother begged her to desist from her preparations for departure, she remained firm in her resolve; and, leaving Claire with her mother, she sailed from New Yark a few weeks after the news reached her of her husband's danger. There were other ladies, officer's wives on the vessel; and, when Nellie's sad errand was known, much sympathy was shown, and many little attentions paid her. She looked so fair and frail to start upon that long voyage to a country where war was raging, and the terror lest she should reach Mexico only to find herself a widow, kept her lovely face touchingly sad and pale. Mrs. Colton, the wife of the captain of the vessel, who had nerself two sons in the war, was very kind to Nellie, and, when the vessel arrived at her destined port, she offered to accompany her on her search, pleading a desire to see her own "boys" as an excuse to cover the kindest intentions towards the sad sufferer. Through the long voyage, Nellie had been calm and quiet; but now that certainty was so near, the trembling frame, flushed cheeks, and nervous, hurried manner, all betrayed the torturing suspense.

The troops landed, and Nellie and Mrs. Colton, comfortably perched upon bags of provisions, in the baggage wagon, drove slovly after them towards the interior.

After all her travels, Nellie stood at last, with her kind friend, at the door of the large church where, making a temporary hospital, the wounded from Palo Alto still lay. Months had passed! Was Clarence there? Nellie went in with such a faltering step and pallid face that Mrs. Colton thinking she was fainting, made the inquiries herself.

Captain Wilde, discharged after several weeks' illness, had left the hospital, and joined his regiment.

"Where is he now?"

"I cannot tell. My post is here."

"But he is well?"

"O yes; the wound was not so dangerous as was supposed."

"We must find him."

"Stop, Mrs. Wilde!" said Mrs. Colton, "you can do nothing to-night; sit down. There, I knew she would faint!"

But Nellie did not faint! She saw that nothing further could be done then, and, after one glad, silent prayer of thanksgiving, she turned to Mrs. Colton.

"There are others here needing assistance as much as my poor husband did. Cannot we be of some use?"

"We are very short of nurses, that is a fact," said the man, who acted as porter; "but I guess you ain't got the stuff in you for a hosuital nurse"

"Let me do something," said Nellie, imploringly. "I cannot sit here and think. To-morrow I will find my husband."

But many to-morrows passed, and found them still in that old church; and many a hard soldier blessed the soft hand, sweet voice, and tender care that replaced the often careless treatment of the hired nurses.

At last, Nellie heard of Clarence. He was at Monterey, again wounded; and Nellie finding travelling difficult and her position a painful one, took leave of Mrs. Colton, who was obliged to return to her husband, and joined the regiment as a sulter-woman, in place of one left ill at the hospital.

Marching over a new country, heart sick and weary, Nellie still bore up bravely, in the hope of seeing her husband. One day, weary and disheartened, she was leaning against a tree, crying bitterly, when some one touched her on the shoulder.

"What's the trouble, my girl?"

She looked up.

"Captain Harvey!"

"Mrs. Wilde, Nellie Hart, how did you come here, and in this dress?"

"Oh, Captain Harvey, where is my husband?"

"At home, I hope."

"What do you mean? This is no time for jesting."

"Nor do I jest. Clarence lost an arm at Monterey, and sailed from here for New York nearly three weeks ago. Come! do not look so white. A lame husband at home is better than a dead one here."

"At home! Oh, what shall I do?"

"Why, you had better come with me. Mrs. Harvey is with me, and we will decide what is best for you."

Nellie followed him mechanically to the tent, where Mrs. Harvey conducted camp housekeeping. There the overtasked frame gave way, and she sank down fainting. For many days she lay very ill, and then came back to consciousness to find herself in a private room in a hospital. It was no unkindness that left her thus so lonely. Captain Harvey's duties called him forward, and his wife had no choice but to follow hi. Returning health came slowly, and, finding that there was no vessel bound for home for several weeks, Nellie quietly resumed her own hospital cares. Like some angel visitant, that fair face bent over the sufferers, often increased now by battles on all sides, many carried long miles to die on their arrival at a place of rest, many delirious with pain, many swearing and cursing till she turned faint with horror. Up and down the long aisles from obe bed to another she passed, keeping up her own strength with the comforting thought of her husband's safety at home.

"We shall be loth to lose you," said one of the physicians taking her aside one morning, "for you have the steadiest nerves I ever saw in such a fraile frame. Can you assist me now? and your reward shall be a piece of good news."

Accustomed to the sight of blood by frequent contact, Nellie's ready skilful fingers were at his service for a long tedious operation; and silent blessings were showered upon her h?ad by the sufferer, who, manfully crushing back every groan of pain, felt his heart swell almost to bursting, as her low voice whispered comfort in his ear, and her hand wiped away the drops of perspiration from his face.

"That is over," said the doctor, as she gently laid the soldier's head on the pillow. "Now for the news".

"Yes, tell me now."

"A homeward bound vessel leaves Point Isabel next week, and you can join the disabled soldiers who go from here to-morrow. May God reward you for the good you have done here," the doctor added, solemnly, "and bring you safely to your husband."

In the parlor of Mrs. Hart's home on the Hudson, early in the year of 1847, were collected a group of old friends. First, seated on the sofa, was Captain Wilde, his one arm round Claire, who asked now as constantly for "mamma" as he had before done for "papa." Mrs. Hart Hart,sat opposite, sewing, and on another sofa, sat Cora, now Mrs. Henry Russell, and her husband.

"One more day" said Cora. "Nellie will surely be here to-morrow."

"She will hardly come to-night. The vessel arrived to-day. Oh, if I could only meet her!" said the Captain, who, still ill from the effects of two wounds, had been with much diWculty dissuaded from going to New York to meet Nellie.

There was a light step in the hall and up the stairs, but nobody heard it. A moment later, Cora left the room to look at her little girl, who slept in a room overhead. As she opened the door, one cry escaped her but she surpressed it and went in.

"Oh", cried Captain Wilde, again, "I feel as if I could not wait an-

"Ladies and gentlemen," cried Cora, at the door, "allow me to introduce— O pshaw, she's gone!"

other night before seeing Nellie."

A figure glided by her towards the Captain, and Nellie was in her husband's arms.

THE END.

Match Making.

"Olive, what do you suppose I have been thibking of?" said Miss Lois Palmer, as she clipped off her thread, with a pair of bright, substantial scissors, at the end of a long seam.

"It is impossible for me to im-

HER PHYSICIAN ADVISED

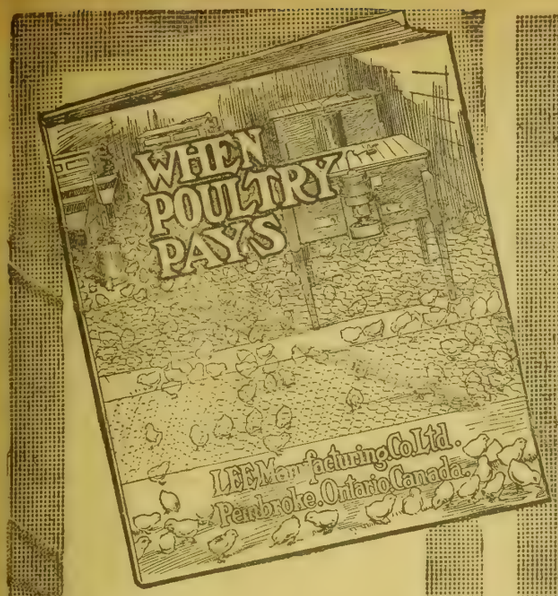
Taking Lydia E. Pinkham's Vegetable Compound

Columbus, Ohio.—"I have taken Lydia E. Pinkham's Vegetable Compound during change of life. My doctor told me it was good, and since taking it I feel so much better that I can do all my work again. I think Lydia E. Pinkham's Vegetable Compound a fine remedy for all woman's troubles, and I never forget to tell my friends what it has done for me."—Mrs. E. Hanson, 804 East Long St., Columbus, Ohio.

Another Woman Helped.

Graniteville, Vt.—"I was passing through the Change of Life and suffered from nervousness and other annoying symptoms. Lydia E. Pinkham's Vegetable Compound restored my health and strength, and proved worth mountains of gold to me. For the sake of other suffering women I am willing you should publish my letter."—Mrs. Charles Barclay, R.F.D., Graniteville, Vt.

Women who are passing through this critical period or who are suffering from any of those distressing ills peculiar to their sex should not lose sight of the fact that for thirty years Lydia E. Pinkham's Vegetable Compound, which is made from roots and herbs, has been the standard remedy for female ills. In almost every community you will find women who have been restored to health by Lydia E. Pinkham's Vegetable Compound.



THIS BOOK FREE

After you have read "When Poultry Pays"—read the host of facts that it has to offer you—you will realize why poultry-raising ranks among the biggest single industries in the world.

CO-OPERATION, the corner-stone on which The Peerless Way rests, is the factor that is building up the poultry industry in Canada,—is the factor that has made possible the big profits in this business. This book, "When Poultry Pays,"—the book that goes to you FREE on request—is a volume you cannot afford to be without if you are even the least bit interested in better-strain fowl, more eggs, higher prices, assured markets; in short, in

The Poultry Method That Ensures Success In The Canadian Climate.

The Peerless Way is more than merely a system for raising poultry—it is a system that is complete from the moment the chick is hatched until either the fowl or its eggs has put profits into your pocket. The Peerless Way is both a poultry-raising system and a co-operative marketing method.

The Peerless Way will show you how to "make good" in hatching and brooding—in rearing your chicks—in feeding them right—and bringing them most quickly to market size or to egg production—to the profit stage. The Peerless Way will find you a market at highest prices—and for spot cash! That is an important part of the service. The Peerless Way guarantees absolutely to put you in touch with buyers who will take off your hands every cent's worth of your entire output at topnotch figures.

THE PEERLESS WAY

This book is full of valuable facts and figures and expert knowledge—information tha will make you open your eyes as to the real profits in poultry—information that you owe it to yourself to have.

Use The Coupon

and the book will come to you by return mail. It will tell you a story of success achieved by 15,000 Canadian poultrymen who have adopted The Peerless Way—a story of a business in which you can succeed just as others have succeeded—of a business into which you can go almost without capital—of a way that will increase your present profits, if you are already in the poultry business. You will find in it practical information that is the result of costly experiments which you, perhaps, could not afford to make—and which you don't need to make when you have the book.

Offers You Co-Operation In Breeding, Rearing And Marketing In The Most Productive Branch Of Agriculture.

Canada, with all her natural advantages and her special adaptability to the breeding of an extremely hardy strain of poultry, needs only to be awakened to take her proper place as the greatest poultry country in the world. But that awakening must come through YOU—each individual farmer, poultryman — each Canadian — must realize what a veritable gold-mine this field has to offer if it is only worked and worked RIGHT! And The Peerless Way is forcing this awakening — has already awakened 15,000 Canadian poultrymen to the possibilities of the industry — and CAN show you. The Peerless Way will show you the unequalled opportunity for extension that exists in the poultry business—how its numerous and varied branches are capable of rhythmic combination and unison; it will illustrate how the business may be adapted to your locality, either as an individual business of considerable size or as a work secondary to some other, either upon enlarged or confined limits.

Get Into An Under-Supplied Market With Rising Prices

When you stop to consider how the prices of both poultry and eggs to the consumer have doubled within the last ten years, you can readily see that the market must be a tremendous money-maker for someone. Why should not you be among those who are taking the easy profits? You can be as successful as any poultry-raiser in Canada if you will only let The Peerless Way show you how — if you will only follow out our methods, and devote just a little time and more or less common-sense to the work. Poultry-raising is a long way from being over-done. One user of The Peerless Way sold nearly a quarter of a million fowl last year—over twenty-five carloads. And he started just as YOU can start—with practically no investment at all. Do not put this off—it only costs a two-cent stamp to know—write now for the book and the proof. Put the burden of proof up to us and make us prove our case—we can. Merely send the coupon.

SIXTEEN MONTHS ON CRUTCHES!

NOW COMPLETELY CURED

PERTH, N.B.

"I am writing this to let you and sufferers from Rheumatism know of the wonderful benefits I have derived from GIN PILLS. For two years, I was an invalid, incapable of work of any kind. For sixteen months, I was unable to move without the assistance of a crutch and cane. I was treated by our best doctors as well as taking treatment from a specialist in Chicago. I did not improve and had about given up hope of ever being well again when a friend advised me to try GIN PILLS. This I did, and with a two months treatment was a well man again. This was four years ago and I have had no return of my trouble since.

I still use a box or two of GIN PILLS a year, just as a preventative and am enabled to go fishing and shooting in the spring and fall, and lie out on the ground at night, without any inconvenience.

GIN PILLS are a wonderful medicine and I take great pleasure in recommending GIN PILLS to all sufferers from Rheumatism, for I have no doubt that if they will persist in the treatment, GIN PILLS will do for them what they have done for me".

ALEX. W. STEVENSON.

GIN PILLS are sold by all dealers at 50c. a box—6 for $2.50. Sample free if you write us. National Drug and Chemical Co. Dept. M. F. Toronto.

National Lazy Liver Pills are just what you need if the bowels are "tight" or the liver torpid. They act gently but surely. 25c. a box. 65

agine, Aunt Lois; what have you?"

"Something that concerns you."

"Me ?"

"Yes, and a certgin other person."

"I can think of no one you would be likely to associate in your mind with me."

"Well, there is somebody, and this isn't the first time I've thought of it."

"About what?" was the question Olive longed to ask, but she restrained her impatience.

"'Twould be a capital match," said Miss Palmer in a way as if she was speaking to herself, and was unconscious of the presence of her neice.

Clasping her plump, rosy hands, and pressing them firmly down on the sewing work which rested on her lap, her countenance assumed a look of abstraction, as if, by turning the matter in her mind, she was endeavoring to prove, in a manner satisfactory to herself, the truth of what had involuntarily escaped her lips."

"Yes, a capital match," she repeated after what seemed to Olive a long time, and nodding her head with a quick decided motion, by way of giving emphasis to her words. She then drew a long breath, and settled down into the easy attitude natural to her, as if content with the conclusion she had arrived at.

All this time, she had been totally oblivious of the bright expectant face turned towards her.

"I declare, Olive," she said with a little start, "I'm so used to being alone, that I forgot you were here. You want to know about it; I see by your looks that you do. But, after all, there isn't much to tell. The truth is, a few days ago, I was passing by where Mr. Annesley lives, and the thought struck me, all at once, what a nice thing it would be if you could be mistress of the fine old mansion, surrounded by grounds laid out so beautifully, and in a manner so exactly suited to your taste."

"But the owner of the house and grounds might be of a different opinion."

"I don't believe he would—I have a particular reason for thinking so." The last part of the sentence, however, merely passed through her mind so that her neice was none the wiser for it.

"My opinion may be in the way, then," persisted Olive.

"You would stand in your own light then, as many a foolish girl placed in a similar position, has done before you."

"Well, aunt, for the sake of breaking up the monotony of this dull afternoon, and diverting our attention from that incessant drip, drip, drip from the eaves, what if you should describe Mr. Annesley to me?"

"You know, child, I've no talent at description; when you see him, you can judge for yourself

"You can at least tell me how old he is."

"He doesn't look as if he was a day older than thirty-five, though people do say—"

Here Miss Palmer abruptly broke off, setting her lips firmly together. Olive, who half suspected that, on second thought, her aunt concluded that it would be best not to divulge what was supposed to be his age, looked up from the low ottoman on which she was seated, with a smile warm and bright, though, as must be confessed, with a spice of mischief in it.

"What is it that people say about Mr. Annesley's age?" said she.

"No matter," replied Miss Palmer a little captiously.

"Now, Aunt Lois, it is too bad to excite curiosity, and then refuse to gratify it."

"What is the use of repeating the idle gossip that is always floating about in a country village like this?"

W. D. BEATH & SON, LIMITED TORONTO

A MAN'S BOOK.

A PRIVATE TREATISE, WITH ILLUSTRATIONS, RELATING TO DEBILITY, ITS CAUSE, EFFECT AND HOME CURE.

Let Me Send It to You FREE.

Here is a little volume of cheer and helpfulness which all men, young or old, can read with great profit, it contains much valuable information, of a private nature, is is fully illustrated, and represents the practical knowledge I have gained from forty years of actual experience in giving help to upwards of 100 000 enfeebled, nervous, discouraged men. Just a post card with your name and address and the book will be forwarded free, sealed, by return mail, and with it as well, I will enclose a full description of my new 1910 model Electric.

Health Belt

If you need new strength, this wonderful appliance must appeal to you. It generates a pleasant, exhilarating currant instantly felt, though it can be made any degree of strength from mild to strong by simply turning the needle of the current regulator; worn nights while you are sleeping, it pours quantities of health-giving, soothing electricity into your sick, weak nerves you get up mornings feeling bright, strong, full of courage and ambition; it takes all the weakness and pain out of your back; it is a great remedy for your kidneys, bladder, stomach, liver and other vital organs; it cures rheumatism in all parts of the body; it is a courage-giver of the highest order; it brings new strength where weakness exists; it will restore you to vim, rigor and true manhood as sure as night follows day; it makes you feel young and look young; you will live longer for its use; you can throw away all drugs and commence to live as Nature intended you should—a man among men healthy, happy and vigorous. I can send you thousands of testimonals if you care to see them.

"Your Health Belt cured me of Nervous Debility, Lost Vigor, Kidney and Bladder Troubles after all else failed.
"CHARLES L. SNELL,
"Middleport, N. Y."

In all instances I concentrate the full positive current at small of back; it thus enters the system at the nerve and vital centre,

passing thence through the different weakened organs, giving them new life and force. You can get the Belt.

ON TRIAL UNTIL CURED

or for cash at a discount, just whichever you wish. Send your address on postal or fill in coupon; or, call at my office, you who live in or near this city, Advice concerning your case will be cheerfully given without charge or obligation.

DR. M. F. SANDEN CO., 140 Yonge Street, TORONTO, Ont.

Dear Sirs—Please forward me your book as advertised free.

NAME.....

ADDRESS.....

Was Terribly Afflicted With Lame Back.

Could Not Sweep The Floor.

It is hard to do house work with a weak and aching back.

Backache comes from sick kidneys, and what a lot of trouble sick kidneys cause.

But they can't help it. If more work is put on them than they can stand it is not to be wondered that they get out of order.

Doan's Kidney Pills are a specific for lame, weak or aching backs and for all kidney troubles.

Mrs. Napoleon Larmour Smith's Falls, Ont., writes:—"I take pleasure in writing you stating the benefit I have received by using Doan's Kidney Pills. About a year ago I was terribly afflicted with lame back, and was so bad I could not even sweep my own floor. I was advised to try Doan's Kidney Pills, which I did, and with the greatest benefit. I only used three boxes and I am as well as ever. I highly recommend these pills to any sufferer from lame back and kidney trouble."

Doan's Kidney Pills are 50 cents per box or 3 for $1.25, at all dealers or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

When ordering direct specify "Doan's."

"What is floating about in the village, I shall be certain to hear before long."

"That is true, on the whole I may as well tell you as not. People do say that he is ten years older than he looks to be."

"And what does he say?"

"To confess the truth, I don't think that any one has ever heard him contradict it; but then he would not care if people said he was twice as old as that. At any rate, he is a good man, and that is better than both youth and beauty."

"Aunt Lois," said Olive, with a look of great demureness, "why don't you set your cap for him."

"Olive! Olive Palmer! never you speak of such a thing again," replied her aunt. "I wouldn't set my cap either for him, or the best man in the United States, even were I sure of succeeding."

The voice in which this was spoken was sad rather than stern, while a look of patient, sorrowful resignation, which Olive had seen more than once dim the brightness of her aunt's face—usually the impersonation of cheerfulness and good humor during the few days she had been with her—revived the memory of a conversation she had heard when a child, which, though she was too young to fully comprehend its import, left a vague impression on her mind that something many years previous had happened to cause unhappiness to her father's only sister. Tears sprang to her eyes in a moment.

"Forgive me, dear Aunt," said she "I didn't mean to say anything that was wrong, anything that would hurt your feelings."

"I know you didn't, dear child, so there is nothing to forgive."

Miss Palmer remained silent a few moments, many a sleeping memory of long ago assuming sudden vitality and flitting through her mind, mirroring, as they passed, their lights and shadows on her countenance.

"Olive," said she suddenly, and with an air as if it had cost her an effort to break the spell, which those revived memories had woven around her. "I am going to tell you what made the subject I spoke to you about, suggest itself to my mind."

"You mean about this Mr. Annesley?"

"Yes. At first I thought I would not, but if you would like to know, I don't see as 'twill do any harm."

"I should, of course, like to know, for, as my father tells me, I am a true daughter of Eve."

"Well, it was because you look so much like a young girl Mr. Annesley once expected to be married to."

"Were you acquainted with her?"

"O no; I never saw her, and had disappointment. It isn't more than never seen him, till long after his five or six years since he came to live at Beechdgle."

"Then how do you know that I look as she did?"

"I will tell you. About three months after Mr. Annesley moved here, as I was passing his house, the sun broke through the clouds which had obscured it all the morning, when, twenty or thirty paces in advance of me, a gleam of something bright, like gold or silver, flashed out from the midst of a luxuriant tuft of clover which grew by the wayside; I remembered, at the same moment, that it was the first day of April, which caused me to call to mind the old adage, 'that all is not gold that glitters.' Not caring to excite the merriment of a group of boys, who had stationed themselves at a short distance to watch the fate of several packages of sand and sawdust they had deposited on the sidewalk, I concluded that I would pass the tuft of clover so leasurely as to enable me to decide whether it was tin or silver, gold or glass, which shone with so much brilliancy."

"And which did it prove to be?"

"Gold—a plain gold locket, with a black ribbon attached to it."

"And did you find the owner?"

(To be continued.)

At Last The Perfect Washer

Our "Champion" is easily the champion of all washing machines.

All cogs and machinery covered.

Lever and High Speed Balance Wheel operating together simply cut the work of washing to the lowest possible point.

Don't think of buying a washing machine until you have seen the "Champion". If your dealer can't show it, write us for booklet. 76

DAVID MAXWELL & SONS, - ST. MARY'S, ONT.

How to be Content.

Talk and discuss matters, but let them be mainly matters pertaining to your business, and get the foundation for thoughts and the texts from discussions from good, reliable papers and books, and then apply the methods of practical tests and see if you are not only more successful in financial matters, but also more happy and contented on the farm. The young people certainly will be. One of the best methods for keeping them on the farm is to supply plenty of good reading, giving them a little time to read and encouraging them to stay at home, and do so yourself as far as possible. Work less, read more, think more and gain more happiness, contentment and wealth.

GUNNS "Prairie State" Incubators

Get the Most Chix

because they come closer than any other incubator to matching Nature's own conditions. The hen sitting on the ground is still, on a small scale, the most successful hatcher. But she **can't hatch** 20 or 30 dozen eggs at a time, and she **won't hatch** them at the right season to make winter layers or cockerels that are ready for market at off seasons, when prices are highest.

The most successful Canadian poultry raisers therefore use the "Prairie State" Incubator because it practically equals, on a great big scale, the hen's success with her little setting.

Gunns Prairie State Incubators are built not so much to sell, as to hatch chicks. Note that. We are making incubators and marketing them at rock-bottom prices simply because they will help in our campaign for "More and better eggs and poultry"—not because we want to make profits out of incubators.

Gunns Prairie State Incubators are **honestly made** in our own factory at Ste. Therese, P.Q.—the finest wood-working factory in the Dominion. No poor material or flimsy construction is tolerated, for we have a reputation for 40 years of square dealing at stake.

They are designed so that the **heat is distributed evenly** to every egg in the tray. There are no cold or hot spots.

The **correct temperature is maintained,** within a fraction of a degree, whether the temperature outside the incubator be zero or 80 degrees.

The moistened sand tray gives an absolutely **even and easily regulated supply of moisture** to every egg. This prevents drying up the eggs, and brings out big, strong, healthy chicks.

An even **supply of fresh air,** free from lamp fumes, is provided, greatly increasing both the hatch and the vitality of the chicks.

Thus Gunns Prairie State Incubator supplies so perfectly the conditions of natural hatching that it not only brings out a very high proportion of chicks, but **the chicks live.** When

GUNNS UNIVERSAL HOVERS

are used for brooding, results are even better than those secured by natural methods. These Hovers enable you to raise chicks successfully at any season and in any numbers. Gunns Combination Colony House Brooders make the most convenient, practical equipment known.

Write for our book on Practical Poultry Raising. It tells all about the "Prairie State" line, and how to raise poultry for profit by common sense methods that have proved successful. Meantime, note these prices:

Stock Raising a Valuable Fruit Raising Ajunct.

Editor Maritime Farmer:

Frequently when speaking to the fruit growers of the Maritime Provinces, I have expressed my surprise at the extraordinary quantity of commercial fertilizer used by them. I have inquired very carefully from a large number of the fruit growers, who use fertilizers in the Maritime Provinces, and am bound to say that where the fertilizers have been used with intelligence and where careful experimenting has been done, the fertilizers pay the fruit growers well, though I am persuaded that there are hundreds of tons that are wasted for want of careful experimenting upon the part of the users. I am convinced, therefore, that it pays Maritime fruit growers to use commercial fertilizers if they use them intelligently.

I write, however, to suggest that there may be a substitute that would pay even better than commercial fertilizers. The substitute which I have suggested on many occasions in the buying of concentrated animal feeds and the keeping of stock—poultry, pigs, beef or dairy, or a combination of these, as the individual needs may suggest.

The criticisms that meet me at once are that poultry can only be grown profitably in small flocks and are not large fertilizer producers; that hogs, beyond a few for home use can only be kept profitably in combination with a dairy; that beef production and dairying cannot be carried on profitably by fruit growers. And there is much truth in these criticisms. Nevertheless, the case is by no means proved that the fertility of our apple orchards cannot be maintained by a proper combination of poultry, meat and dairy production.

Without dogmatizing, I would suggest that there may still be a good profit in poultry production in the Maritime Provinces in connection with the orchard, and I would also come to the rescue of fowl as producers of fertilizer. In proportion to the food which they eat, and making allowance for the large quantity of plant food removed in the form of eggs, I believe there are no better fertilizer producers on the farm than poultry. This is particularly true in the case of the orchardist inasmuch as the orchard is an ideal place for poultry, and if kept under proper conditions, the manure value of the feed is distributed to the very best advantage. I would also say that as consumers of the waste product of the dairy nothing exceeds in value the hen. She will turn skim milk into money value to a greater advantage than any other animal. As consumers of waste products from the dairy, the hog also takes a high place. Consequently, hogs can also figure on the fruit farm as a profitable by-product within certain limits.

I am inclined to concede that under present conditions it would be extremely difficult to make beef growing profitable, except it may be an occasional steer, reared or produced under chance circumstances.

But I make a stand in favor of dairying, and I am firmly of the opinion that notwithstanding the high price of feeds, the scarcity and consequent high price of good fodder and pasture lands, and the limited local ing were intelligently followed, the market for dairy products, if dairy-food bought co-operatively as large quantities as commercial fertilizers are, and the by-products carefully fed for pork, eggs and poultry, a good profit could be secured, with only a very nominal value given to the manure.

I am willing to admit, however, that this cannot be done with the

J. D. FRIER, - - Sussex, N. B.

HORSEMEN ATTENTION!

Dr. J. Woodbury's Horse Liniment and Dr. J. Woodbury's Condition Powders will save and preserve the life of your horses. They cure Cough, Cold, Distemper, Colic, Glanders, Spavin, Pink eye and all diseases of the Horse.

TRURO, N. S.

Dear Sirs,—One of my horses had a bad cough, and I made a complete cure with three bottles of Dr. J. Woodbury's Horse liniment. The cough was of twelve months standing. In my large expeience with horses, I consider this liniment to be the best made for all diseases of the horse, and I recommend it to my friends.

E. J. ANDERSON.

BEAR RIVER, N. S.

DEAR SIRS,—

We do not hesitate in recommending your Dr. J. Woodbury's Horse Liniment. We have used it in the woods for coughs, colds, distemper and cuts, and would say that no lumberman should be without it.

Yours truly,
CLARKE BROS.

ordinary three thousand pounds a year cow, nor can it be done in the slipshod way with the inconvenient dairy buildings too often doing service for these purposes on the fruit farm.

However, my purpose is not to go into details as to how this may be done, but to express my firm conviction that it can be done, and to ask that the poultry and dairy men of the province come to my rescue and show the details whereby the fertility of the soil can be maintained by animals that will give a profit in themselves, with only a nominal value estimated for manure, and this in sufficient quantities so that the enormous drain on the resources of the Maritime Provinces for commercial fertilizers may be stopped. In all probability it will be found fruit grower is too indifferent and, not that my proposition is impossible on the fruit farm, but that the therefore, probably too ignorant of the problem involved in the keeping of animals, to work this out successfully. Let us hear from the fruit growers as well as the dairy and poultry men on this question.

A. McNEILL.
Chief Fruit Division, Ottawa.

FLORICULTURE.

Inquiries in this department answered by H. E. Goold, Sussex, N. B.

A Chatham Correspondent:— Can different colored roses be budded on one bush and when should it be done? Is it safe to plant gardy lilies in the ground as late as the middle of December? I have a corner of a bed that can be covered so that the frost will not reach it until that time. Could tulips also be planted then? What is the best season of the year to purchase palms and where can they be obtained?

Different colored roses can be budded together and the spring would be the best time to do so.

It is quite safe to plant the lilies if well protected, but they must be well covered, as green bulbs thus planted are apt to rot if they freeze and thaw much. I have never planted tulips as late as you speak of, but I have understood from others who have done so, that they do well. I am afraid that I hardly understand your meaning, as to the best time to procure a palm. They are for sale at all seasons of the year by the principle florists who would give you directions for their care, when you make your purchase.

H. O. P., St. John, writes:— I have an Amaryillis that was sent me last spring. I potted it in a large pot and it grows nicely but no bloom or sign of bloom yet. I give it plenty of water and it is in a good sunny window. Should it have any fertilizer? If so, what?

The large pot is the trouble with your Amaryllis. Probably it will not bloom until it is thoroughly pot bound. Do not give it any fertilizer until buds appear, when a few applications of cow manure will improve the size and appearance of the flowers.

H. A. M., St. Stephen, writes:— Will you kindly tell me the treatment for asparagus? Mine has grown well until recently. It is turning brown and nearly all the sprays had to be taken off. I have tried parafine emulsion, but it has not saved it. I do not think it has been dry but perhaps too wet.

The foliage sent is of the Asparagus Phimosus Nanus. It has the appearance that this plant sometimes has when the roots have become decayed from allowing water to stand about the roots. It does not usually present this appearance for any other cause. I would suggest drying the soil partially and spraying the remaining foliage frequently with clean tepid water, spraying the crowns thoroughly. Be very particular that no water be allowed to remain in the jardinere or saucer if such is used. Treat this plant in a general way, exactly as you would a fern and see that it is protected from cold draughts. It will undoubtedly be slow in starting but have patience and it should come all right as there is no appearance of insects or any disease beyond the trouble spoken of. Never use kerosene emulsion unless there are insects on the plant, as it can do no good and if improperly used will do much harm. It would be interesting to know the formula you need.

M. A. H., St. John, wants to know if she should have the deep snow removed from her bulbs.

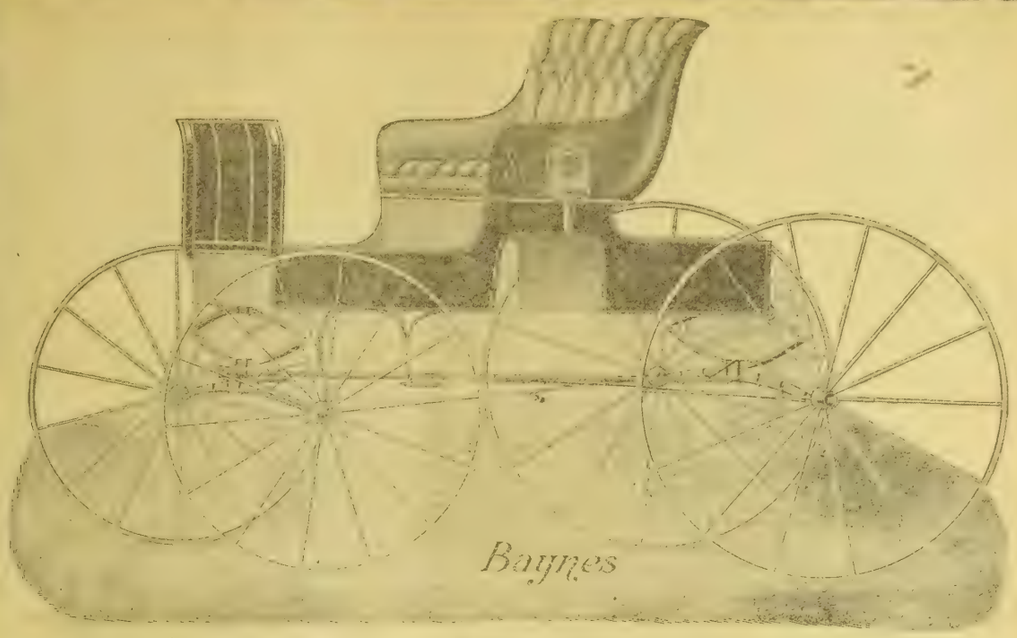
Snow in the garden is useful and welcome as a mantle on the ground it is the best kind of mulch and helps the bulbs and everything else that is living over winter. Do not bother to remove the snow from beds, and do not worry if you have to throw the snow over the beds when cleaning the walks. It is much better to have the snow there than the bare ground. Bare ground lets off moisture in the sunshine and in the wind.

If not done before winter arrives, and you have plenty of stable litter on hand, it will be a good plan to mulch around all plants, trees and shrubs that are set out in the fall. Put the mulch on the snow but be careful if there is danger of injury from mice or rabbits.

If you have cold frames with vegetables, give air whenever possible. That is when the sun is shining directly on the frames, there is little else to be done. The spring opening will soon be here and now is the time to attend to all repair work by seeing that tools and equipments are ready. Look over the stock of seeds. Get the catalogues and make out your new orders for the season's supplies.. Remember that old carrot, beet, lettuce and parsnip seeds had better be thrown away. Most other seeds can be used if only one year old.

Old Fuchsias put in cellars last fall can now be brought to the light and repotted. After new growth has started, be careful not to let the leaves of the plants touch the glass during frosty weather.

From time to time, wash off the leaves of all house plants, using perhaps just the merest trifle of soap in the first washing water. Some



No. 325—MURRAY WAGON, TWIN AUTO SEAT.

This new Twin Auto Seat just adds the finishing touch to one of the best road wagons we have ever designed or built. The cut under body is as handy as it is stylish and the wagon throughout is made for wear as well as for looks.

It has the "Twentieth Century" Shafts with which we are now fitting all.

BEWARE OF IMITATIONS SOLD ON THE MERITS OF MINARD'S LINIMENT

Minard's Liniment Co., Limited

people use a drop or two of ammonia in the washing water and while it will clean the leaves efficiently, it Rill do no harm. Use tepid water and a clean soft sponge.

Bulbs that are potted and bedded in the cellar can be brought to the light now and by bringing them in at different times a succession of bloom can be had until out of door flowers put in an appearance. Easter Lilys and Duch Hyacinths will last a long while if kept in cold storage.

R. O. A., writes:—Chinese Primroses started from seed in Septem. now in 3-inch pots and about three inches high and not budded. Do you advise throwing them out or carrying them over until next year? If the latter what method would you follow?

Chinese Primroses now in 3-inch pots and not in bloom or budded are very useful at this time. Potted now into 5-inch pots they will grow fast, but are best kept in a temperature of from 50 to 55 degrees. Chinese Primroses are not satisfactory if kept until they are too old.

Miscellaneous Questions.

Constant Reader:—I have several acres of old potato land which is quite rich. I want to seed it down to timothy and clover without taking a grain crop off it. When should I sow it to get a crop of hay next year?

2. How could old poor meadow land be built up to grow hay without too much expense for fertilizers?

3. Will clover grow on land which is not deeply drained?

4. Which takes the most plant food out of the soil, oats or buckwheat?

The land in question cannot be so treated as to give a crop of hay from any grass or clover seeding in 1911. If, however, it is particularly important to get a crop of hay rather than a crop of grain next year, the following plan is practically certain to give good results.

Prepare land thoroughly and sow at usual time next spring. Sow a mixture of oats 2 bus. and peas, 1 bus. or vetches ½ bus. per acre. At the same time sow 10 lbs. red clover and 12 lbs. timothy per acre. Cut the crop of oats and peas or vetches in July when just beginning to turn in color, or possibly even a little earlier.

2. Old meadow cannot be built to grow hay without using plenty of barnyard manure, or else following a short rotation, and using small quantities of manure. Roots, grain, clover hay and pasture is a good rotation.

3. Yes, alsike clover especially will do well even on undrained land.

4. Buckwheat is probably the more exhausting crop to grow for the reason that it will do better on poor soil than will oats.

J. H. GRISDALE.

Cross-Firing.

Will you kindly suggest a possible remedy for cross firing in a four-year-old pacer? He toes out slightly behind. He appears to be ballanced; goes straight and is strong. Have squared the toes of hind shoes and weighted them on the outside.

There is no rule laid down by which every horse that cross fired can be shod so as to overcome the trouble. It can only be obtained by careful experimenting. It would be folly for me to advise you at long range to shoe him without seeing him go. If he was nearby where I could see his gait I might be able to assist you.

The Famous Rayo

Does Not Strain the Eyes

Don't use a small, concentrated light over one shoulder. It puts an unequal strain on your eyes. Use a diffused, soft, mellow light that cannot flicker, that equalizes the work of the eyes, such as the Rayo Lamp gives, and avoid eye strain.

The Rayo is designed to give the best light, and it does.

It has a strong, durable shade-holder that is held firm and true. A new burner gives added strength. Made of solid brass and finished in nickel. Easy to keep polished. The Rayo is low priced, but no other lamp gives a better light at any price.

Once a Rayo User, Always One.

The Westmorland Poultry and Pet Stock Show.

The Westmorland Poultry and Pet Stock Association held its 3rd and most successful exhibition in the hall over the Market, Moncton, N. B., on Jan. 12th, 13th and 14th. There were over 1000 entries and much more competition than last year. The birds were also of better quality and in better condition. Mr. George Robertson, Ottawa, judged the birds Of course, we cannot say it was satisfactory to all concerned because some people never can see why the other fellow beats them, but there is one thing quite sure Mr. Robertson placed the awards on the birds that were entitled to them and the birds that were not entitled to them did not get them even though it was the only bird in its class. We think the exhibitors will take the hint so forcibly placed before them and put up better birds next year for the show. The new Poultry Inspector for the province, Seth Jones, was present and added to the success of the show by giving lectures and demonstrations at different times on such subjects as "The Breeding, Care, Housing and Feeding of Poultry," and "The Killing, Dressing and Marketing of Chickens."

One exhibition worthy of special mention were two Ferrets belonging to Mr. J. V. Jackson. Ferrets are great rat killers and to give the enthusiasts an idea of their ability in this respect, two rodents were set free, separately, and were quickly put out of existence by one of the Ferrets.

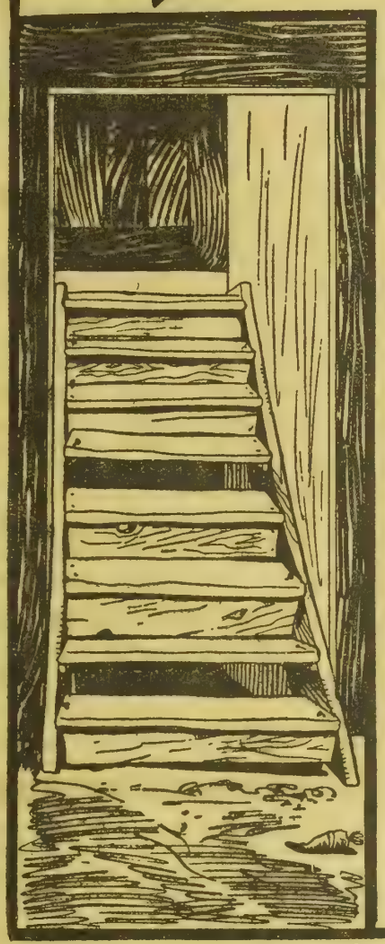
Concrete Stairs Need No Repairs

Easy to Build and Last Forever



NO matter how you view it wooden stairways can never be considered economical.

Wood deteriorates rapidly under ordinary usage, and requires frequent, and often extensive, repairs to keep it in good condition.

Concrete stairs will be as good fifty years later as the day they are first put up. Age, which proves so destructive to wood, serves only to intensify the strength and hardness of concrete. Needing no repairs or painting, concrete first cost is last cost.

Let us send you our new illustrated book free—"*What the Farmer Can Do With Concrete.*" Photographs and diagrams show many examples of concrete work as applied to the construction of farm utilities. Much of this work you'll find you can do in your spare time. **Write for the book to-day.** It may save you dollars, though it only costs a cent.

Canada Cement Co.

THE "B T" LITTER CARRIER HAS FEATURES THAT YOU WILL APPRECIATE.

Its construction is simpler than any other—fewer parts to wear out.

Its parts are heavier and more strongly built.

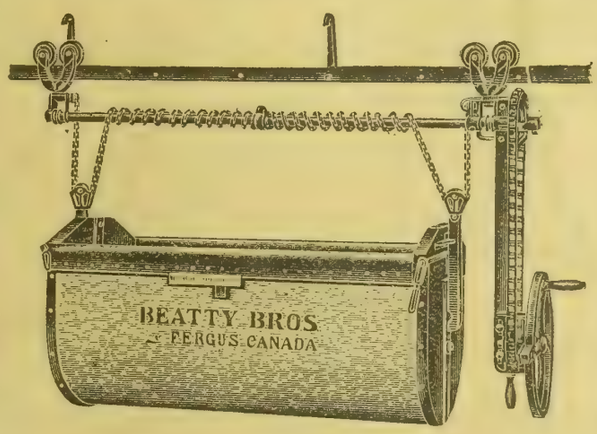
Only the very best of materials are allowed to enter into the construction of the "BT" Carrier.

These features together with the following points of advantage have made the "BT" Litter Carrier famous.

1st. In lifting we use double purchase. This is an exclusive feature of merit on our carriers.

2nd. The bucket on the "BT" Carrier can be tipped either way to discharge—most buckets will tip only one way.

3rd. It is made of 18 gauge galvanized steel, being some four gauges heavier than the material used by the other firms.



4th. The bucket can be elevated higher than any other. The bottom of the box is within three feet of the track when wound up.

5th. The "BT" Litter Carrier Track is heavier per foot and stronger than any other on the market. It is made of the toughest and stiffest high-carbon steel.

If you are thinking of buying a Litter Carrier, let us send you our new catlogue on the "BT" Litter Carrier. It is just off the press and it is free.

Write to-day for catalogue and information.

BEATTY BROS., Fergus, Ont. - - -

We also manufacture Steel Stalls, Stanchions and Hay Tools.

These Mighty Weeels are Tried and True

Thousands of users testify to the superiority of T-K Wide-Tire Steel Wheels. They have four times the strength and durability of ordinary wheels—defy the worst roads, rocky sandy, hilly or muddy, and lighten the draft on horses from 25 to 50 per cent.

TK Wide Tire Steel Wheels and Handy Farm Wagons

Our wagons are designed especially to meet the demands of farmers for a wagon to do all kinds of work on the road and around the farm. They are built low for ease of loading and unloading, and will roll over the ground with the heaviest load without tiring the horses.

Write for descriptive catalog telling how T-K vehicles and wheels will earn more money for you.

Tudhope-Knox Co., Ltd., Orillia, Ont.

The Halifax Seed Co., Ltd., of Halifax, N. S., have leased the four-story stone building 166 Granville St., just one block north of the old stand. This move was made necessary by the rapidly increasing business of their Mail Order Department. Farmers and market gardeners generally throughout the Maritime Provinces are sending their orders into this house, rather than to the Upper Provinces, and the United States as their goods are delivered in much less time than if sent to these points. The Halifax Seed Co., Ltd., will send postpaid their 1911 Seed Annual to any parties who may be interested in this line.

Kindly mention The Maritime Farmer when sending in your name and address.

Intercolonial Railway Calendars for 1911.

The 1911 calendars of the Intercolonial have more of real artistic merit than for several years past, being a new departure in design and coloring and those fortunate enough to receive them will find them tastefully ornamental as well as all they should be in the way of general utility.

On a background of green and brown, a capital representation of pine cones, the words "Canadian Government Railways", "Intercolonial Railway" and "Prince Edward Island Railways" appears at the top in block letters of shaded guinea gold. From the centre of the lettering space the I. C. R. emblematic moose head appears, surrounded by a halo of scarlet, in which is the usual text " The Fast Line, The People's Railway."

The centre of the calendar is taken up with a richly colored sketch of the "Ocean Limited Express" skirting the shores of Bedford Basin, on the way out of Halifax. The scene is well chosen, the cloud tints and the coloring of the far blue expanse of water having a most natural effect, especially to those familiar with the scene and its surroundings. The calendar tab is of sage green, with lettering and figures of white. On each side of the tab a panel of dark brown with yellow lettering is devoted to extolling the excellence of those two famous I. C. R. through trains, the "Ocean Limited" and the "Maritime Express". A border of purple gives a finishing effect to the general design and completes a calendar that ought to be greatly admired and eagerly solicited.

DAY AFTER DAY-YEAR IN YEAR OUT AN IHC PAYS BIGGEST -PROFITS-

NOT only should your cream separator pay you the best possible profit at the start—but it should keep on paying biggest profits for a lifetime.

The durability of a separator is just as important as its skimming qualities. Many separators break down just when they are beginning to pay for themselves. Avoid loss and disappointment by getting an I H C Cream Harvester. They skim as clean and run as easily years hence as on the day they were bought.

I H C Cream Harvesters

have proved their value by years of perfect service. If you investigate all cream separators you will appreciate I H C features and advantages all the more. You will find that I H C Cream Harvesters are the only separators with gears which are dust and milk proof and at the same time easily accessible; I H C Cream Harvesters are protected against wear at all points by phosphor bronze bushings—not cast iron or brass. I H C Cream Harvesters are constructed with larger spindles, shafts, and bearings than any other separator, insuring greater efficiency and durability; the I H C bowl is free from slots or minute crevices—that is why it is so remarkably easy to clean.

A Style and Size for You

Made in two styles—Dairymaid and Bluebell—each in four sizes The I H C local dealer will be glad to explain the many I H C Cream Harvester advantages, all of which have much to do with your dairy profits. Ask him for catalogues and all information, or, write nearest branch house for information desired.

Cup donated by J. B. B. Toombs for Silver-laced Wyandottes, won by R. A. Knight.

Cup donated by H. T. Brewster for Single Comb White Leghorn, won by Odbur James, Sunny Brae.

Silver Cup donated by A. A. Tuttle for four best birds of any breed, won by Odbur James.

Prize, value $7, donated by J. D. LeBlanc, for four best birds of any variety, won by Odbur James.

Special prize donated by George E. Dawes for the whitest bird, won by Odbur James.

Special prize donated by A. B. Bray for the best conditioned bird, won by Odbur James.

New Brunswick Crops 1910.

The following statistics gathered by the Provincial Department of Agriculture show the crops for 1910, so far as statistics are gathered, to have been better than last year, with the single exception of the potato crop. The yield per acre of wheat was last year 18.5 bushels per acre, this year 19. , af oats last year 29.1 bushels per acre, this year 29.7; of buckwheat last year 24.7, this year 24.6, of potatoes last year 187. bushels, this year 127., of turnips last year 511, this year 500.8. The hay crop, for which statistics are not gathered, was an usually large one, running it is estimated fully 25 p. c. above the average crop.

The number of live stock kept on farms in December, 1910, compared to December 1909, was as follows:—

	1909	1910
Horses	57,715	61,042
Cattle	199,481	215,829
Sheep	143,274	147,489
Swine	70,010	80,022

Following are the crops and total yields of the crops for which statistics were gathered in the two years:

1909.	Acres	Bushels.
Wheat	14,447	268,079
Oats	194,815	5,682,338
Buckwheat	56,735	1,405,775
Potatoes	47,853	8,968,098
Turnips	6,531	3,340,862

1910.	Acres	Bushels.
Wheat	13,988	265,848
Oats	196,795	5,847,877
Buckwheat	56,305	1,390,717
Potatoes	47,744	6,067,276
Turnips	6,310	3,160,158

Prize Winners at the P. E. I. Poultry Show.

The third annual show held under the auspices of the Prince Edward Island Poultry Association was held at Charlottetown on January 4th, 5th and 6th, 1911. There was keen competition in nearly all classes. The exhibit was a splendid one and was well worth seeing. The members of the association are to be congratulated on the good showing they made and the excellent management by which their show was maintained. ...

L. G. Jarvis, Grimsby, Ontario, placed the awards.

Following is a complete list of the prize winners:

NOTE:—c, cock; h, hen; r, cockerel, p, pullet.

SWEEPSTAKES.

Cock and hen—John Whitlock, Sr.
Cockerel and Pullet—H. E. Miller.

The Hartland Poultry Show.

The Carleton and Victoria Poultry Association held their third annual show at Hartland on the 17th and 18th of January. As a show it was a marked success, and well handled, reflecting great credit upon the officers of the association. This association was the first organized in the province, and its work has been pushed with commendable zeal and energy. There were not more than a dozen exhibitors 3 years ago, there were at this show thirty nine. There were but 300 birds at the beginning, at this show there were 822 birds. They have also given special attention to the education of their members along practical lines, such as how to produce more and better poultry. Addresses have been given on how to fatten, kill and dress poultry in the most approved manner. The question of egg production and marketing of the egg product has been considered.

Fowls have been fattened and exhibited. Killing and plucking contests have been held, these were a special feature. We regret to learn that this association has now reached a crisis in their work. The demands are now so great that the government grant of $100.00 is entirely inadequate, and unless ways and means can be provided to meet the expenses of the association, they must discontinue their splendid work, which certainly would be much regretted by all those interested in the development of the business.

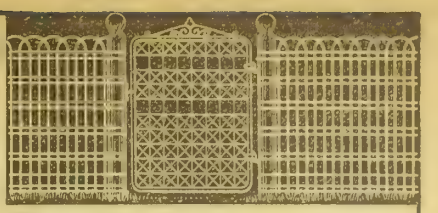
Handsome enough for the city lawn — Strong and cheap enough for the farm

Peerless Lawn Fence is made from heavy, No. 9 steel wire, all galvanized and coated with white enamel paint. It is built so strongly that it will last for years and it cannot rust. It costs less than one wooden fence and will outlive two. It will add to the appearance of any property. Let us send you the cost of fencing with



Peerless Lawn Fence

the Peerless Lawn Fence and electrically-welded, solid frame gates.

We make a full line of poultry and farm fences and gates. Write for particulars.

FREE TO WEAK MEN

SEND FOR IT TO-DAY

To the man who wants to regain his youth, who wants to feel like he did when he was budding into vitality, I offer a book which will show him the road to happiness—a book which is brimful of the things he likes to read, which will give him courage and enlighten him as to the causes and cure of his troubles. It will point out the pitfalls, and guide him safely to a future of strength and vitality. It is beautifully illustrated. It tells what other men have suffered and how they have cured themselves. It is free. I will send it, closely sealed, without marks, if you will send this ad. If you are not the man you ought to be, send for it to-day.

Dr. McLaughlin's Electric Belt

builds up broken-down men, restores youth and vitality and makes men look and feel strong. It will cure every case of Rheumatism, Nervous Debility, Weak Stomach, Kidney and Liver Troubles, Lame Back, Sciatica, Varicocele, Loss of Power, and every evidence of weakness in men and women. It will not fail; it cannot fail, as it infuses in the weakened parts the force of life and strength.

I am not giving Belts away. I am offering to cure first and be paid after you are cured. I have an Electric Belt which DOES cure. I know there is no better way to prove my confidence in the wonderful curative power of my Belt than to cure you before you pay for it. This offer is open to any one who will secure me. All I ask is that you give me evidence of your honesty and good faith by offering reasonable security. I will then take your case on the conditions of

NO CURE, NO PAY

Put it on when you retire; you get up in the morning refreshed and vigorous, with courage in your heart and a clear head, full of ambition for your daily work.

Man of 63 Feels Like a Young Man.

Wells P.O., King's Co., N.B.

Dear Sir:—Your Belt has done me a lot of good. I think I have done extra work enough during the time I have worn it to pay for it, besides the comfort of having good health. In fact, I almost feel like a young man.

John V. B. Foster.

Cured His Back.

Cobourg, Ont.

Dear Sir:—With reference to your Belt, will say that I am feeling fine now. I have not had the Belt on for some time now, for I do not need it at present. I used it for a weak back and it did me a world of good. Thanking you, I remain, Joseph McGinnis.

I have sold Electric Belts for twenty years, and keep pace with the times in making improvements. The Belt I offer you to-day is recently patented, and is a grand one. No burning, no blistering current; a fine regulator and cushion electroder, a current that feels like a glowing warmth all over your body. There is a free electric suspensory with each Belt. It is nice to wear and quick to cure. If you have another kind that does not satisfy, I will take it in trade. It is curing your neighbors. Don't you think you ought to give it a trial? Save doctors' bills.

FREE TEST—Any man who will call at my office may test my Belt free and satisfy himself of its great power to cure. I offer free book to every one. Call to-day. To-morrow you may not be well enough.

Put your name on this coupon and send it in.

M. K McLAUGHLIN, 214 St. James St., Montreal, Can.

Dear Sir:—Please forward me one of your Books, as advertised.

We don't want your money—this test of Psychine is at our cost—we'll buy a 50-cent bottle from your druggist and give it you free to prove.

This is a hopeless, cold world to many.

"A vale of tears" in very truth sickness, suffering, sorrow.

And sickness is the cause of most of the misery.

Now a good many people accept sickness as something that has to be a visitation.

They may make ineffectual attempts to cure themselves, but they don't get well.

Now we want such hopeless ones to let us buy for them a 50-cent bottle of Psychine from their druggist, which we'll give them free of charge to let them know that there is at least one preparation that is hope for the hopeless, that will surely benefit them.

* * *

We've been making and selling Psychine for the third of a century.

We have sold many millions of bottles in that time.

Psychine has cured many hundreds of thousands of hopeless cases.

We have received hundreds of thousands of unsolicited testimonials.

Psychine has proven itself to be the most remarkable preparation for the cure of disease.

Now Psychine's power comes from its ingredients.

Psychine is made from herbs—nature's own remedies.

And the herbs from which Psychine is made are beneficial to the body because they increase the number and strength of the white corpuscles of the blood ,or the phagocytes, which devour every germ of disease that finds entrance to the body.

That's why Psychine cures where other old time remedies fail. That's why Psychine has stood the test of time for the third of a century. That's why we can afford to buy and give away hundreds of thousands of 50-cent bottles.

Now Psychine is indicated in the following diseases.

Read this list carefully and then fill out and mail us the Coupon without delay.

La Grippe	Bronchial Coughs
Bronchitis	Weak Lungs
Hemorrhages	Weak Voice
Sore Throat	Spring Weakness
Anaemia	Early Decline
Female Weakness	Catarrhal Affections
Indigestion	Catarrh of Stomach
Poor Appetite	Night Sweats
Chills and Fevers	Obstinate Coughs
Sleeplessness and	Laryngitis and
Nervous Troubles	Dyspepsia

After-effects of Pleurisy, Pneumonia and La Grippe.

Now, we don't ask you to take our word for the tremendously beneficial effect of Psychine. Fill out the coupon below, mail it to us and we'll give your druggist an order (for which we pay him the regular retail price) for a 50-cent bottle of Psychine to be given to you free of cost.

We will undoubtedly buy and distribute in this manner hundreds of thousands of these 50-cent bottles of Psychine.

And we do that to show our entire confidence in this wonderful preparation.

A confidence that has been based on our 30 years' experience with this splendid preparation, with a full knowledge of the hundreds of thousands of cures it has made.

COUPON No. 77

To the Dr. T. A. SLOCUM, Ltd.
193-195 Spadina Ave., Toronto

I accept your offer to try a 50c. bottle of Psychine (pronounced Si-keen) at your expense. I have not had a 50c. bottle of Psychine under this plan. Kindly advise my druggist to deliver this bottle to me.

My Name.....

Town.....

Street and Number.....

My Druggist's Name.....

Street and Number.....

This coupon is not good for a 50c. bottle of Psychine if presented to the druggist—it must be sent us—we will then buy the 50c. bottle of Psychine from your druggist and direct him to deliver it to you. This offer may be withdrawn at any time without notice. Send coupon to-day.

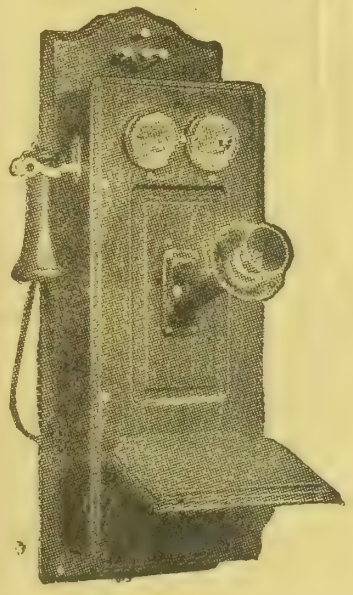
Let Us Send You Expert Advice on Constructing Telephone Lines



Our Engineers are at yonr service. Write and ask for their expert advice on constructing your rural telephone line. This service will cost you nothing, yet it may save you a good deal of money and trouble.

Thousands of Canadian Independent Telephones are giving complete satisfaction in rural districts. You buy Canadian Independent Telephones and construction materials outright, instead of paying a high rental to the trust. Consequently Independent rural phone companies can give lower rates.

Canadian Independent Telephones are guaranteed for ten years. Their quality is so superior that we offer to arrange a free trial for the sake of comparison with others. If interested just write us at once.

Also ask for our new book, "Canada and the Telephone," with thirty-two clever illustrations showing the value of the telephone in rural homes.

1 Cent a Word.

This department is one of the most valuable in the MARITIME FARMER. At a cost of only one cent a word, you can advertise anything you wish to buy, sell or exchange. The address must be counted as part of the advertisement and each initial or a number counts as one word. Cash must accompany each order and advertisement must have address on, as we cannot forward replies sent to this office. Copy must be received not later than Friday before the date of issue, which will always be found on the editorial page of the proceeding issue. No black faced type or display of any kind will be allowed under this head, thus making a small ad, as noticeable as a large one. The rate for this column is one cent a word, each insertion. MARKETS.

Charlottetown Prices.

GRAIN—Oats, White 34c, black, 37c; buck wheat, 50c to 65c.

FEEDSTUFFS—Bran, retail, $1.20 to $1.25, shorts, retail, $1 40 to $1.50; middlings; retail, $1.45 to 1.50; oil-cake, retail, $2.20 to 2.50; corn meal, $1.60 to 1.65.

LIVE STOCK—Butchers cattle, 4½c to 5¾c; stockers, $20.00 to $30.00; milch cows, $30.00 to $60.00: sheep, $3.75 to $5.00; hogs, live 6½ to 7-15c.

DRESSED MEATS—Beef.(carcass) 6½c to 8½c beef, (retail) 9c to 14c, mutton, carcass, 9c to 9½c, pork, heavy, 8c, selects, 9c to 9¼ for inspection.

HORSES—Drafters $1.50 to $2.25; roadsters, $1.50 to $2,25; carriage, $1.50 to $2.25

DAIRY PRODUCTS—Creamery butter, solids, 33½c to 24c; prints, 23½c to 25c; dairy butter, 20c to 21c.

POULTRY & POULTRY PRODUCTS—Eggs, 24c new laid, storage, 22c to 23c; fowl, 10c to 11c: chickens, 11c to 13c; ducks, 13c to 15c; geese, 12c to 14c; turkeys, 16c to 18c.

FRUIT—Apples, $2 50 to $4.00.

MISCELLANEOUS—Hay, $7.50 to $8.00; straw $5.00 to 6.00; beef hides, 8c to 8½c; sheep skins, 45c to 60c; lambskins, 40c to 50c.

Since last report markets has been poorly supplied and trade has been slow and prices are without any particular changes and there is little of interest to report, what produce has offered has been readily taken up at prices within range quoted. Eggs, while in very limited supply are quoted lower and it would take only a very small quantity to put prices still lower. Butter is quite plentiful and no one is looking for much at the higher figures. Pork is scarce and while a few could be placed to-day at 11¼c; packers are not willing to pay this and we quote their prices dressed for inspection which means ¼ to 3-8c more than appears. Weather is cold and there is no vegetables offering. Winter boats have gone on the Georgetown Pictou route but are keeping up communication there and in this report we have little to complain of so far this season Hay is plentiful and prices are easy and farmers are obliged to hold a bulk of their surplus stock till spring. The purposed agreement with the United States, permitting our farm produce to enter the United States free of duty is looked on here as likely to be of very great benefit to the farmers in this province and we are of the opinion that it will increase the value of our farms and farm produce should the scheme come into effect.

Halifax Prices.

FLOUR AND FEED.—Flour, $4 70 to $6.30; Hard Wheat Patent, $6.30; Beans, $2.00 to $2.15; Oat Meal Standard, in bbls. $5.30 to $5.40; Oat Meal Standard in bags. $2 10 to $5.20; Rolled Oats in bbls $4.80 to $4.90; Rolled Oats, in bags $4.60 to $4.70; Middlings, $26 to $27; Bran, $23.50 to $24.00; Shorts, $25 to $27.50; Feed Flour, bag of 98 lbs. $1.65 to $1.75; Cornmeal in bbls, $2.95 to $3.00; Cornmeal in bags, $1.40 to $1.42½; Feed Oats, in bags 48c to 49c; Hay, $10. to $12.

The butter market is easier.

Eggs have declined considerably since our last report owing to the arrival of new laid stock. We may look for still further declines as the season advances.—Creamery Prints, 28c per lb; Creamery Solids, 26c to 27c per lb; Dairy Solids, 23c to 24c; Dairy Rolls, 23c to 24c; Cheese, twins 13½; Cheese, large 12½; Storage Eggs, 26c per doz; New Laid Eggs 28c per doz.

Sussex, N. B.

"I saw your advertisement in the Maritime Farmer" is the easiest way to start your letter when writing advertisers.

The **horse** does all the work except holding the pole, with the **H. P. Spramotor.** It can be operated by either horse or hand. Has 8 nozzles at 175 lbs. pressure, which practically smoke the tree with spray. All automatic. The number of nozzles can be arranged to suit size of trees. The largest tree may be sprayed. Same price for one or two horses.

The **H. P. Spramotor** can be arranged for vineyards, row crops, strawberries or grain crops. The nozzles will not clog. **Agents wanted.**

We Send this Book Free On Request—Use the Coupon

YOU only need to look at the contents page of this book to see how complete and comprehensive it is. In all the hundred pages between its hard, cloth-bound covers, there is not one single superfluous word--nothing but a carefully indexed mass of necessary information. There is no other book in existence that deals so thoroughly with every vital, essential fact--that so clearly tells the farmer

"How to Build Rural Telephone Lines"

When you get this book, read it over at least twice. You will need to do that to assimilate the information it contains. No matter in what phase of the work you are interested—whether you want to know about telephone company organization, whether you want to know about the actual construction of the line, whether you want to know what other community-owned telephone companies have done, or whatever it is you do want to know, you will find the facts set forth in detail in this book. This volume has cost a lot of money and careful study to prepare and we really ought to charge for it. As long as the edition lasts, however, we will send it **free,** but only to those who, by asking for it, signify that they are really interested. Are **you** interested? If so, clip the coupon, fill in your name and address and mail it to us today.

CONTENTS

YOU Can Furnish Your Home FREE!

ANY housewife buying goods at the stores mentioned below may have their cash purchases apply on **Asepto Soap Premiums.** Every cent you spend counts toward a premium. A sure and mighty convenient way to save without increasing living expenses. Over 300 premiums of honest value to select from. The list will be increased every few weeks. **Furniture will be offered next.** The old way was to allow premiums to apply on Soap Wrappers only. Now at any of these stores—no matter what you buy—everything has its equivalent in Soap Wrappers. That is every five cents spent counts the same as one wrapper, while purchases of our goods as here advertised entitles you to two coupons—the one the merchant allows and the ones found in or on our goods themselves.

Dr. White's Honey Balm.—A cough syrup that is safe and sure. We are positive that no other cough syrup equals it. Price 25c. Equal to 5 soap wrappers.

Pendleton's Panacea.—The best hot medicine, in use nearly 100 years. Every person knows it is good. Price 25. Equal to 5 soap wrappers.

Brown's Cutilive.—A witch-azel cream for chapped hands, sunburn, etc. Price 25c. Equals 5 soap wrappers.

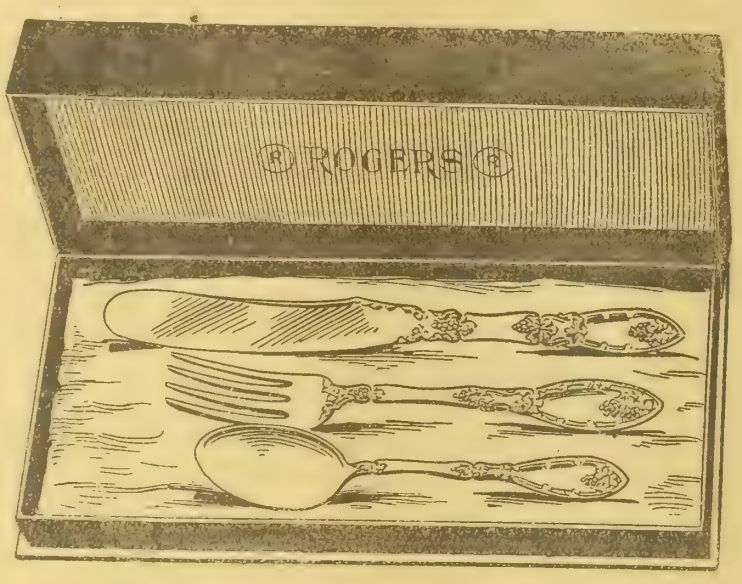
Scott's.—Salts, Senna, Sulphur, Saltpetre, Borax and Alum in 5c packages. Equal to 1 soap wrapper.

Brown's Spearmint Tooth Paste—Sweetens the breath, prevents decay, hardens the gums and whitens the teeth. Price 25c. Equals 5 soap wrappers.

Napatho Soap.—A pure laundry soap, containing naptha and incorporated by a process that prevents it from hurting the hands, as other Napatho Soaps do. The wrappers count for Premiums.

Sapid Tea.—A blend selling at 40c, in 1 lb. packages only. Blended by J. Harvey Brown, one of the most competent tea men in Canada. Each package carries a coupon equal to 8 soap wrappers.

Dr. Scott's White Liniment.—The largest bottle and best liniment. Price 25c. Equal to 5 soap wrappers.



Banner Flavoring Extracts.—All flavors and from 10c to $1.25 per bottle. Coupon on each bottle.

Herner's Dyspepsia Cure.—The only kind that tells you to eat what you like while taking it. Money back if not good. Price 35c. Equal to 7 soap wrappers. Price $1.00. Equal to 20 soap wrappers.

Brown's Stomach and Liver Pills.—A good family pill. Price 25c. Equals 5 soap wrappers.

Scott's Furniture Polish.—Renews the life of old furniture. Price 25c. Equals 5 soap wrappers.

Asepto Soap.—Is equal to the best and contains the same anti septic features that Asepto Soap Powder does. The wrappers count for premiums.

Scott's.—Nitre, Glycerine, Iodine, Iron, Squills, Friar's Balsam, Carbolated Oil, Camphorated Oil, Castor Oil, Sweet Oil, Oil of Tar, Sewing Machine Oil, Spirits of Camphor. Price 10c per bottle. Equal to 2 soap wrappers.

Scott's Fruit Syrups and Lime Juice.—Pure and excellent flavor. 10c, 15c and 25c. Coupon on the bottle.

Ebony Polishes—None better, bothpaste and lustre. Coupon on each box. Try them.

Banner Spices.—In packages only. Absolutely pure. ¼ lb. packages carry coupon equal to 2 soap wrappers.

Venus Floating Soap.—Made from pure vegetable oils and unexcelled for the toilet and bath. Price 25c. Coupon counts for premiums.

Asepto Soap Powder.—Has been the greatest success of any soap or powder ever put on the market. This is the best evidence of its quality. It is antiseptic as well. It absolutely sterilizes every article washed. Think what this means to a family. Price 5c, and the trade mark counts for premiums.

The following stores are now in a position to explain to you what this offer means :—**McLeod & Spence, Port Elgin, N. B.; F. L.** Rayworth, Bayfield, N. B.; W. H. Chapman, Northport and Amherst Shore, N. S.; The Sussex Mercantile Co., Ltd., Sussex, Petitcodiac, Penobsquis, Elgin and Havelock, N. B.; R. G. Innis, Norton, N. B W. H. Martin, Waterside, N. B.; F. C. Fillimore, Riverside, N. B.; Thorne & Perry, Cody's, N. B.; J. S. Robinson, Narrows, N. B.; H. G. Turnbull, Digby, N. S.; Baird & Craig, Hartland, N. B.; I. M. Tompkins, East Florenceville, N. B.; E. Foster Nicholls, Clyde River, Shel. Co., N. S. Others are being added continually. If your dealer has not got coupons see that he gets them.

EATON'S

JANUARY AND FEBRUARY SALE

Have you got your Share of these Values?

THE MOST EXTRAORDINARY EVENT WE HAVE EVER HELD

THE REASONS WHY

"PHENOMENAL VALUES" accurately describe the different articles listed in our January and February Sale Catalogue. They are certainly worthy of your investigation, and as this Great Sale will positively end on Feb. 28th you should lose no time in taking advantage of it. Every item is a special value, specially selected and specially priced, to induce quick buying.

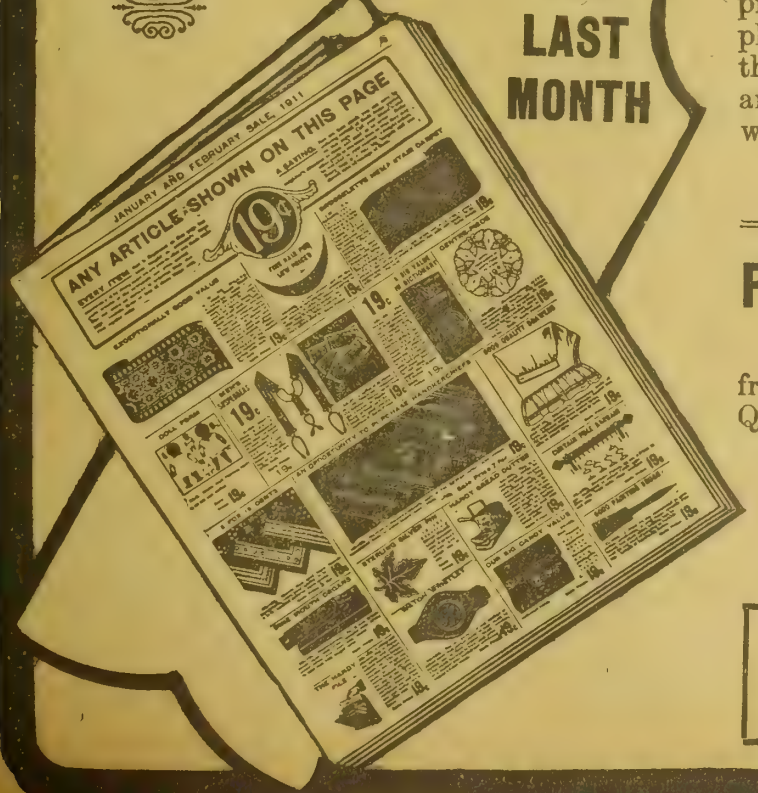
A CAREFUL EXAMINATION of our Catalogue will convince you that now is the time—now is your opportunity to secure a good supply of every-day needs at prices far below what you have been accustomed to paying.

QUICK SERVICE is a characteristic feature of the **EATON** Mail Order Department. The most prompt attention is given to every order. Whether it amounts to 5c or $100 makes not a particle of difference, as we aim to please and satisfy you all. If we fail to do so

WE WILL REFUND YOUR MONEY IN FULL

Take Advantage of this Great Sale

THE LAST MONTH



OUR ABSOLUTE GUARANTEE

Stands behind every purchase, and it protects you in every possible way. You run no risk, you take no chances; in fact, you cannot possibly lose a cent when you send an order to **EATON'S.** If the goods don't arrive promptly; if they are damaged in transit; if they do not please you in every way; or if you do not consider them the best values you ever obtained, send them back at once and we will refund your money in full, and furthermore we will pay the transportation charges both ways.

EATON'S FREE DELIVERY OFFER

Make your order up to $25.00 and we will pay the freight charges to your nearest railroad station in Ontario, Quebec or Maritime Provinces. There is less packing and less clerical work in connection with large orders than with small ones, consequently we can afford to pay the transportation charges on large orders without raising our prices or lowering the quality of our merchandise.

DR. PUBLOW SAYS

DeLaval Cream Separators are the Best

Picton, Ont., Nov. 18, 1910.

The DeLaval Separator Co.,

Gentlemen,—When one is connected with a State educational institution in dairy work, he is frequently asked by intending purchasers, "what is the best cream separator to buy?" They are usually given a number of names of the different makes and told to give some of these a trial. Now that I have severed my connection with college work, I am at liberty to express my opinion at will, and while I know that you are continually receiving excellent testimonials from users of your machines, still I wish to express to you the satisfaction it has given me to use **DeLAVAL SEPARATORS** in over twelve years of successful work, **n creameries, on the farms** and **in dairy schools**. My experience **has taught me that you have the best cream separators on the market and if I were to purchase a new one of any size to-day, it would be a DeLAVAL**.

Yours very truly,

C. A. PUBLOW, M. D.

The Dr. has simply added his testimony, born of experience that qualifies, to that of the other Dairy Authorities the world over.

NOW, as a dairy farmer, do you know of any good reason why you should not buy a DeLaval Cream Separator? There's an agent near you. Send for our catalog.

The DeLaval Separator Company,

173-177 William St., Montreal, Que.

POTASH Means PROFIT

During the fiscal year, ending March 31st, 1910, the consumption of Potash in the form of **Muriate of Potash and Sulphate of Potash** increased 89% over the previous year, which testifies to the beneficial effects attending the use of POTASH on all our crops.

Order your potash supplies early from reliable fertilizer dealers or seedsmen.

We cannot sell you fertilizers, being engaged exclusively in educational propaganda work, but it is our business to advise you how to **Purchase and use fertilizers economically.**

Write us for Free Copies of our Bulletins, which include

"Artificial Fertilizers: Their Nature and Use".

"Fertilizing Orchard and Garden."

"Farmer's Companion,"

"Records of Fertilizer Experiments," etc., etc.

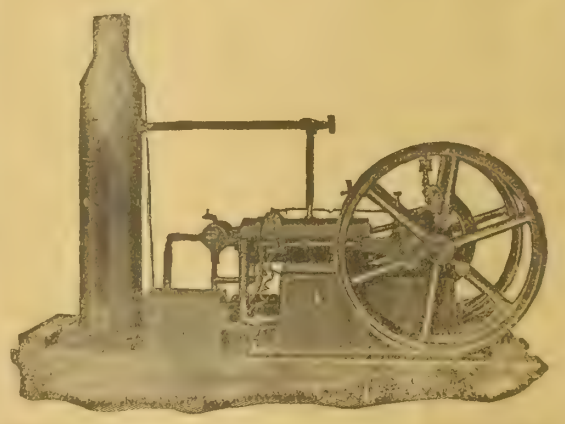
1102-1105 TEMPLE BUILDING, TORONTO, ONT.

Farmers of Quality

Want Quality !



Stationary and Mounted, in 1 1-2 to 30 Horse Power

Readers of THE MARITIME FARMER are of the quality stamp; we realize their discerning ability to pick an article of machinery that is correct in every mechanical detail. That is the reason why such care is taken to see that the **Ideal Gas and Gasoline Engines** are what we claim for them.

Every part of the **"Ideal"** is interchangeable—a mighty strong feature. The cylinder, instead of being cast with the base, is cast separate and bolts on the base. The valves, instead of sealing directly on the cylinder head are enclosed in a valve cage, and the valve cage is nserted in the cylinder head. so that when the valves become worn, the valve cage and valve can be taken out and ground without removing the cylinder head.

The idea of casting the cylinder separate from the base is a good one, for when the walls of the cylinder become worn you don't have to buy a complete new engine, you only require a new cylinder that can be bolted on the base. Another good feature is an extremely long piston with double rings instead of using three rings. We use three sets of two rings each on the Ideal.

Another thing, there is a speed regulator on this engine which enables you to run the engine at any speed, and, of course, when you reduce the speed of the engine, you also reduce the fuel consumption. For instance, if a man had a 6 H. P. engine and wanted to run a cream separator with it, he could reduce the speed and thereby cut down his fuel consumption to suit the work.

All these are points to consider when looking for a gasoline engine of quality—one that stands without a peer

"Ideal" Gas and Gasoline Engines are built on honor and built to give their operators satisfaction, and they do it. We do not build a cheap or low grade engine, but do cater to that class of buyers who wish a first class article at a reasonable price.

Future Policy of the N. S. Farmers' Association

Formulate for Future Advancement

By C. R. B. Bryan.

Mr. President and Members of the Nova Scotia Farmers' Association:

IT is not with the idea that something of the past policy has been wrong or that any radical changes are necessary that the future policy should come up for discussion, but to create a little more interest in the Nova Scotia Farmers' Association work. As time passes we should grow and new planks should be added, we should formulate for the future advancement of the Association and the agricultural interests of the Province.

During the sixteen and a half years that this organization has been in existence there have been great changes and advancement in agriculture; directly and indirectly this Association has helped towards that end, and from the appreciable interest shown by the yearly increase in numbers of delegates, we should be encouraged to continue our work with renewed effort.

A BRIEF REVIEW OF THE PAST may not be out of place, showing what has been accomplished, before we talk of the future.

The first move of the Association was the advocacy of the Annual Provincial Exhibition, there are always differences of opinion, but to my mind it was a right move, but as this subject was so prominent this morning I need not say more upon it, but I think its leading to the great improvement of stock, etc., justified its inauguration.

Photograph taken by A. G. Turney; Provincial Horticulturist, April 29th, 1910.

Then, the outcome of agitation in this Association and the N. S. Fruit Growers' Association has led to the establishment of a grand and thoroughly efficient Agricultural College, had it not been for the no uncertain sound of these associations, it is very doubtful whether it would have been established on the basis it has, and of which the Province is so justly proud.

Further, the County Farmers' Associations, organized by us, have been the means of carrying education and new ideas, to the farmers stirring up a more lively interest in our pursuits disseminating valuable information to, and encouraging not only the young, but those of more mature years, who cannot or are past the age of attending the Agricultural College. They have undertaken other things besides holding meetings. They have in some counties held exhibitions and fairs, initiated Mutual Fire Insurance Companies, run excursions to the Dominion and Provincial Farms, etc., are in good working order and are ready for more work. The organization of these County Associations was a good move.

The bringing together of farmers from the various parts of the Province to become acquainted with each other and discuss problems met with in their work is not the least good this association has done. The discussions that have not accomplished much, such as the Sheep and Dog Question; Rural Telephones and others, only want further action and work to attain a successful settlement.

No one is perfect, we have done good work, not perhaps but what we might have done it a little better, but considering our financial resources, I think we may be fairly satisfied.

Now what of the future?

KINDRED ALLIANCES.

Since the establishment of the Agricultural College, the organization of the County Associations and the re-organization of the Department of Agriculture by the appointment of a Superintendent of Agricultural Associations, all doing excellent work, the question has crossed my mind more than once, has not all this tended to a certain extent to curtail the work of the Provincial Association as set forth in clauses B and C of the objects of incorporation, which read as follows:—

"(b) to afford an opportunity for bringing before agriculturists, orchardists, horticulturists, dairymen, poultry-keepers and others engaged in agricultural and other rural industries, such improvement and discoveries as may be capable of useful introduction and practice in the provinces;

(c) to secure the assistance of eminent scientific or practical agriculturists at meetings of the association."

This leaves us with Clause A, which is:—

"(a) to enable the members to confer together for the interchange of information with a view to united action is matters relating to the progress and welfare of the province generally, in the several departments of agriculture and other rural industries;"

Which I think now is and should be our real object, but should be more thoroughly and practically carried out, and our future policy should be to work this clause more. We have here delegates from the various parts of the province, who have been appointed by Agricultural Societies and County Farmers' Associations, gathered together to hear some practical addresses and to take part in the discussions, they have, except in a few cases, no special mandate from the society they represent more than to come and use their own judgment upon matters brought up. Every farmer cannot attend but I think our deliberations and resolutions would carry more weight if the questions had been brought before the various Agricultural Societies and County Associations, thoroughly discussed throughout the length and breadth of the Province and delegates sent fully qualified to give the views of the section they represent upon specific questions.

These questions to be taken up for discussion and action should chiefly be settled at a previous annual convention, others might be promulgated by the directors from time to time. County Associations and Agricultural Societies should be asked to discuss them and we should even be in a position to delegate qualified men to put the matters before them. Our final decision on the matter would be taken at our next annual meeting and would be an expression of opinion of practically the province, and not as I now view it, of a few. Then when we are agreed and settled upon a subject, the matter should not rest by simply forwarding the resolution as compared to deputations to carry them, the forwarding is a poor substitute.

To illustrate the idea of subjects to be brought before the farmers and finally to our Convention, take the subjects or some of them the delegation from the West went to Ottawa about. It was not policy to send delegates upon such matters, without some discussion upon the reforms advocated and giving our delegates specific instructions on the chief points. We know now some of the questions they took up, some of them very broad ones, ought not we in the East discuss some of these and take our part in the future. I don't say we should discuss just these matters, but I use it as an illustration.

SUGGESTIONS FOR FUTURE WORK.

I would make our annual convention more of a business meeting cutting out most of the addresses which could be left for the County Associations and Agricultural Society meetings.

This is one suggestion for the future work of this Association and would be a progressive move, some may have other suggestions.

THE FINANCIAL OUTLOOK.

I am now going to touch on the financial end of this Association.

Without considering this we cannot look for much progressive work. In the past we have had to cut out our coat according to the cloth, consequently it has been too tight a fit to be comfortable. By husbanding our resources we have managed to come out square on the $1000 grant and a few 50 cent subscriptions, but we must not forget that we were able to do this by the help received from last Live Stock Commissioner, Mr. F. W. Hudson, who in 1904 paid most of the expenses connected with the organization of County Associations, and sent speakers free of all expense for the next year. Or of the aid received from the Secretary of Agriculture in 1905, 1906 and 1907, when he found us $409.00, $305 and $135. respectively from his departmental funds, for Institute work.

The finances will have to be discussed with a view to placing them upon a better footing. It is a problem now, with our increasing attendance, how to meet our present obligations! We managed it last year by reducing our annual report, a thing we were obliged to do but really this should increase in value not go back.

INCREASED GRANT.

It has often been said at our meetings that we should get an increased grant, I, in the past thought we ought to look another way, I do not favor the number of delegates from County Associations in proportion to membership and I have some little antipathy to it still, though it has brought some of our most progressive men here. I have thought that for us to call ourselves a Farmers' Association and only be able to raise a few dollars by subscription was a reproach, let us try and help the association ourselves before we claim for a larger grant, we would also have more personal interest.

The Government is not slackening its hands in our interests, the grant to agriculture has increased greatly of late years, including an increased appropriation to the Superintendent of Agricultural Associations' Department for institute work, and we have secured grants to the several County Associations, we should take these things into account and do more ourselves.

REDUCING EXPENSES.

The matter of reducing our share of delegates' expenses from one-half to ne-tnird has been spoken of, this may not meet the approval of some of you from a personal view, but in the interest of the advancement of the association and its work, and taking a wider view you may see some wisdom in this suggestion, you have in the past derived benefit from attending these conventions, are you willing to help out now by passing a resolution for an amendment to the act to reduce the Association's share of your expenses from one-half to one-third and the Agricultural Society and County Associations share likewise.

When we do things like this and increase our subscription list to about the amount or at least half the amount of the grant, it shows we are trying to help ourselves, and then if we find our work really is held back by depletion of the treasury, the Secretary for Agriculture would have good grounds for recommending that more of the agricultural grant revert our way.

We all have the welfare of this Association at heart, it has accomplished much, may it continue to accomplish much more. I have given one or two of my views upon how we might anticipate to keep it progressive and a useful institution and hope the discussion thgt follows may lead on to future usefulness and prosperity.

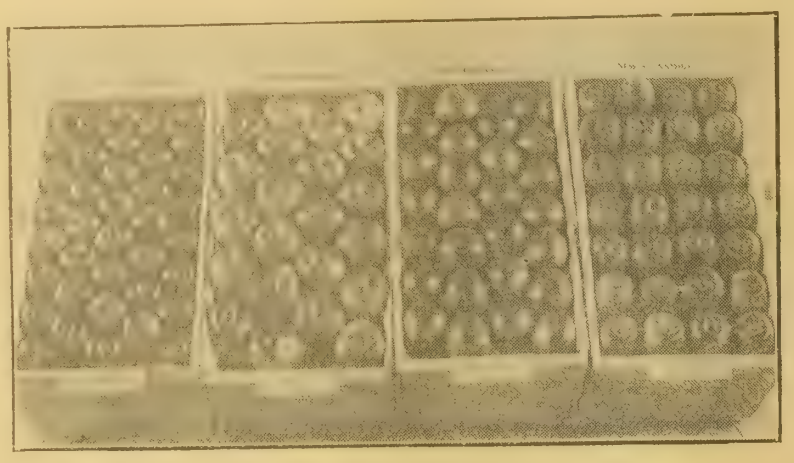
Have You Pure Bred Stock for Sale—Does this Proposition Interest You?

We have a communication from Mr. R. A. Snowball, Chatham, N. B., in which he states that quite frequently breeders of pure bred stock in the province of New Brunswick, have written to him to know if he was open to buy certain pure bred animals that they were offering for sale. He states that on several occasions he has been able to dispose of some stock for his fellow breeders. He advances the idea that it would be a good plan for New Brunswick breeders to get together and hold a sale in Fredericton, or some central point, about the second week in April.

We understand Mr. W. W. Hubbard, Secretary for Agriculture has been approached re this matter and that he is willing to assist in any way possible, if breeders will state what they have in stock to offer at such a sale.

As a great many agricultural societies are, as a rule, looking for pure bred sires at that time of the year and as the cold weather is then over to such an extent that animals would not be liable to catch cold in transportation, we believe a sale, such as is suggested by Mr. Snowball, might be profitably made an annual event.

We would like to hear from some more of the live stock breeders of New Brunswick on this question, and would earnestly recommend that all breeders interested in the movement would send a list of stock they could offer for disposal at such a sale, to Mr. W. W. Hubbard, Fredericton, N. B., at their very earliest opportunity.



Who Said Apples?

Boxes of Fruit at the New Brunswick Fruit Show, St. John, N. B.

Local Experiment Farms Needed.

Editor Maritime Farmer:—

Without reflecting upon the splendid work of the provincial experimental farms, it can be truthfully said that they cannot be of full value to the province in which they are located until they become clearing houses of agricultural knowledge, gleaned from the various different portions of the province. Every agricultural province has need of branch experiment farms to gather facts of a local nature but of vast importance locally because specific knowledge is needed to meet local needs. One part of the province has a particular kind of soil, or a different climate , of a different topography than the site of the experiment farm, and hence the provincial experiment farm can not advise farmers whose conditions are vastly different. The best variety of small grain in one part may be unsuitable for another part and unless the provincial experiment farm has definite data, from each locality, on each kind of grain, or field and orchard crop, how then can it advise? Farmers have regarded experiment farm bulletins of little value because they have too often found them faulty or misleading for their locality. It is well known that the closer to home you buy your seed the better. But what variety is best for your locality? Is the kind you grow best or is your neighbor's grain superior to yours? How do you know?

It is the business of the experiment farm to know these things, but how can it? The farm cannot secure the assistance of farmers for a sufficient number of years to secure reliable data on soils and crops. Therefore, there should be sub-farms here and there under the supervision of the provincial experiment farm and reporting to the clearning house. In this way the experimental farm can continue a soil test or a variety test until the real facts are available. It seems that these additional subfarms can be established and to my mind should be established in sections where there are farm lands that are only raising about half what they can be made to produce.

I believe that some of these subfarms would be the means of encouraging the sluggard farmers and would lead the province to prosperity.

J. A. MERSEREAU.

Doaktown, N. B.

Co-Operative Farmers' Store

Correspondent, Wentworth Station, N. S.:—Can you give me any information about Co-operative Union Associations.

1. What are the lines on which they are run?

2. What should be the amount of capital in proportion to the number of members who would deal with the Associations?

3. What proportion or percentage of the gross profits would be probably required for up-keep and expenses, i. e., wages, truckage, (2 miles from station), rent, insurance, etc.

I know that a great deal must depend on the number of members and the volume of their trade and if you yourself cannot give me what you consider satisfactory information I would be glad to have from you the names of any associations, to the secretaries of which I might write for information.

Ans. We referred the above letter to the Canadian Co-operator and to Mr. M. F. Bergman, Secretary of Farmers' Co-operative Store, Ltd., Pugwash., N. S., and following are the replies.

CANADIAN CO-OPERATOR'S REPLY.

1. As incorporated companies with shares usually of $5.00 each bearing a fixed rate of interest only 5 p. c. or 6 p. c., net profits being divisible amongst purchaserz by way of dividend or percentage on purchases. Most societies pay half-dividends to purchasers who are not members. A member has one vote only and it must be registered in person, proxies not being allowed.

2. It depends upon the variety of lines a society handles and whether or not the society intends to sell for cash only which Co-operators recommend.

3. This again depends upon circumstances. Manifestly with a large trade the expense ratio is much less than would be the case with a small turnover.

One of the economic purposes of Co-operation is the elimination of competition whereby the expense ratio of distribution may be considerably reduced. The Sydney Mines N. S. Quarterly Statement just to hand gives for its central grocery a wages expense of 4 p. c. and profits of 14 1-8 p. c. The Dry Goods Department showed wages 4 1-8 p. c. and a profit of 24 p. c. In the branch store the wages were 5 p. c. the average gross profit for 3 quarters being 9 p. c.

The percentage information asked for by your correspondent is not supplied to me by the Societies but probably you could get an approximate idea by writing to the Secretaries of the Societies at Glace Bay, Sydney Mines, or Dominion, N. S.

MR. BERGMAN'S REPLY.

Our store, at Pugwash, is only one year and ten months old. We got all the stock we could subscribed in five dollar shares, and in this way we got over a hundred persons interested in the movement. To my mind, in starting a Co-operative store, it is very important to get the stock subscribed, if only in small shares, by individual farmers. Our patrons took from one to twenty five shares—most of them took only one or two shares a piece. We now have about two hundred and thirty interested members. When you get one or two hundred interested subscribers you have the business worked up. After you have the business established, and a good Board of Directors appointed, the rest is easy. Our store is run on the Co-operative system and we pay 6 p. c. on capital invested.

After this year we expect to pay a dividend to shareholders on the trade they give to the store. Your third question is a hard one to answer.

I should say, by our experience, that if you were doing about thirty thousand dollars worth of business per annum 6 or 7 p. c. on invoice prices ought to carry it on, if your truckage is done reasonably.

We adopted the New Annam Commercial By-Laws and have not had any printed as yet.

If you wish, we may be able to give you a report of our annual meeting in March. We handled thirty thousand dollars worth of goods during our first year and paid ten thousand dollars cash to farmers for produce.

M. G. BERGMAN.

Secretary of Farmers' Co-operative Store Limited.

If troubled with indigestion, constipation, no appetite or feel bilious, give Chamberlain's Stomach and Liver Tablets a trial and you will be pleased with the result. These tablets invigorate the stomach and liver and strengthen the digestion. Sold by all dealers.

Agriculture in New Brunswick Legitimate and Illigitimate.

Editor Maritime Farmer.

Will you allow me through your columns to give the farmers the benefit, if any, of a few of my findings during over twenty years study and practical application of theory to practice?

1. Are the majority or any of us, getting from the soil the best possible returns within our reach?

2. Are the farms that have been under cultivation, (or if you will, destruction) for the last fifty years, producing as much now as they did when first cultivated?

3. Are the majority of the farmers making the most of the information and natural resources at their disposal?

4. Are the majority of our farmers getting the best possible or any help by way of legislation? The latter question I will not discuss at present, but simply submit it for your serious consideration.

I think there will be no opposition to "No" in answer to question No. 1.

If any man rejects the same answer to No. 2, let him read the statistics of crop reports then and now and take a tour through the Eastern and Northern counties, or, confine it to Westmorland and Kent counties, for this is the section constantly under my constant observation.

In proof of the deterioration of the soil, a pioneer settler showed me where he dug one bushel of potatoes from 5 yards in one drill, and I have seen him thresh 20 bushels of oats from 1 bushel of seed, and he sowed 4 bushels to the acre, off land in the virgin state.

I have seen the same soil lately produce 30 bushels of unmarketable potatoes on half an acre, and 25 bushels of oats, so-called, from 25 bushels sowing. If this will not convince the most skeptical, I can give many more similar results in different parts of the section referred to above. The above results must surely be the fruits of illigimate practice.

From this hypothesis I wish to proceed in simple language that will appeal to the uncultured mind.

For over twenty years I have been been studying this agricultural degeneracy. My business has been such that gave me ample opportunity of coming into contact with all classes of farmers and enquiring into their different modes of dealing with their land and farm products, and I can sum up my findings in two words, "Ignorance and Extravagance."

These names may be repulsive to some, but "open rebuke is better than secret love," and the more quickly we come down to facts the nearer we will be to reform.

The leaks on the farm are too numerous to innumerate in one letter, for they are in the house, in the barn, in the fields, in the woods, in the town, on the road to town. No matter where you turn your eyes through the country you detect some form of waste. One or two serious ones, however, I want to refer to in particular. The manure heap, perhaps comes first, which is exposed to the wash of the rains and unrestricted formentation escaping to the air and washed down stream to some unused plot or perchance out to sea by a brook. There is the ashes thrown out at the kitchen door to be bleached by slops from the chamber and the wash from the kitchen, left there to breed flies and become a common death trap. "Good trade for the doctors." To these I am going to add the permiscuous habit of selling whole milk off the farm. But the milkman says, "It is so nice to have a check coming in at the end of the month."

The consequence of reduced crops and exhausted soil has not been so seriously felt in this district in the past as it must be in the future. The majority of the farmers have been existing largely, or at least, in part, by lumbering and hauling wood off their land to the towns and cities, which soil has also been depleted. Now, they are turing in vain, and many in despair to the soil for food; but it is not there. We are lost.

REDEMPTION.

There is no more sense in looking on and growling at the mistakes of the farmer and his pitiful dilemna than there would be to sit in despair and rail at Adam for eating the forbidden apple. We are in the hole and must find our way out, and we are not far from shore.

I believe that things are just as God intended them to be or at least knew they would be from the fact, that he has stored up sufficient reserve plant food against the day of need, to tide us over; many of which we are tramping under our feet daily unnoticed.

FASHIONABLE SCIENTIFIC REFORM.

At least 30 years ago the scientific man beheld the situation and set to work to reform at great, but not too great expense, with but little practical visible results so far. He has fallen into the same or similar rut of wasted energy, so far as seventy-five per cent of the farmers are concerned.

Yearly reports and bulletins are issued and circulated among the farmers but to no purpose, they are neither read nor believed when read. They tell of the potash mines of Germany, Nitrate of Soda beds of South America and the Phosphoric Acid of the Southern States and an endless list of fertilizers costing from $20.00 to $50.00 per ton, which is just about as helpful or gratifying to the poor farmer, as the stork's dinner was to the fox when he dined before him out of a long necked bottle.

The farmers have no money to buy fertilizers, nor knowledge to profitably apply them.. It is just about as risky for the uneducated farmer to buy and use commercial fertilizers as it is to drink patent medicine—it may cure you, and it may kill you.

Do not understand me to be down on the above fertilizers—if I had the money to buy them, I would use lots of them; but not ready mixed.

What then are the poor 75 per cent. to do if science is not reaching them. As this comes under the head of my fourth question, I cannot go further, as I said I would not touch legislation in this matter.

AVAILABLE HOME REMEDIES.

My letter is already too long, but as briefly as possible, I want to point out how to stop the leaks on the farm and prosperity is in sight without money. Brains and muscle will do it.

If I am corredtly informed, New Brunswick is favored far above some of the other provinces, especially Ontario, in our unlimited quantities of black mud, which is of more importance to the poor farmers than all the potash in Germany or nitrate soda of South America, because it forms a perfect cure for all wastes arising from wash and evaporation to be returned to the soil in available plant food form and in a reverted state at that. It also serves in that capacity as one of the best possible disinfections and to a large extent cuts off the doctor's bill. Black mud together with hard wood ashes, two abundant assets of nearly every farmer in New Brunswick thus far have been trodden under foot unused, while they might have prevented the exhaustion of our farms.

I am prepared, after 20 years of careful experiments to back up the above statements.

I have a large quantity of the best quality of black mud and I prize it as I would a gold mine.

My letter is already too long to give results of my experiments but to give some idea of its use as an absorbent in manure, by using it dry for bedding, 5 lbs. taken from the pit weighs only 6 ozs. when perfectly dry, independent of its constitutional effect upon the soil.

It is good on all soils, in all seasons, for all crops.

A top-dressing of black mud at the time of seeding always secures a good catch of clover; and I believe it will have the same effect with alfalfa, but, my experiments have been too limited with the latter to speak definitely.

From half an acre top-dressed with seven loads of black mud I got 16½ bushels of No. 1. wheat, with an excellent catch of clover. From one acre of same land undressed, I got 5½ bushels only fit for hen feed, and no clover.

One row of potatoes 20 rods long, without, gave 5 bushels. The same length of row with mud in drills gave 6½ bushels. Many other tests gave similar results.—D. McDougall.

A $5.00 Wire Fence Prize.

We will give $5.00 in gold to the person who finds the word "fence" or "fences" the most times in ads. in this issue. It doesn't cost you one penny to try for this $5.00 but in looking for the word "fence" note which fence ads. interest you most, and write those advertisers, sending an order or asking for free catalogue. In your letter to us telling how many times you find the words "fence" or "fences" you must give us the names of all fence advertisers in this issue to whom you have written mentioning The Maritime Farmer. This is an easy condition, and the catalogues or fences you buy will be worth much more than you pay. Go to work. How many times do you find "fence" or "fences" in this issue? The $5.00 will be mailed promptly to one finding them the most times. Tell how many times you find them on each page. In case of tie the prize will be divided. Don't delay. Don't cost a cent to enter. You might as well have the $5.00 as you are going to write for catalogues, so do it now. Lists must be mailed by May 31st, 1911.

The N. B. Provincial Seed Fair.

The New Brunswick Provincial Seed Fair, held under the auspices of the New Brunswick Farmers' and Dairymen's Association, open to the farmers of the Province of New Brunswick, will be held in the basement of the Opera House, Fredericton, N. B., on Thursday and Friday, March 2 d and 3rd, 1911.

$3 00, $2 50, $2 00, $1 50 and $1 00 are offered as 1st, 2nd, 3rd, 4th and 5th prizes in each of the White Fife, Red Fife, White Russian and any other variety classes of wheat, and on Banner, Abundance, Storm King or Tartar King, Sensation, Early Blossom. Any other variety White Oats and on any other Black Oats.

In each of the two rowed and six rowed barley classes prizes of $2.00, $1 50 and $1.00 for 1st, 2nd and 3rd places are offered.

There are four prizes of $2.50, 2.00, $1 50 and $1 00 offered for samples of Buckwheat of each of the Silver Hull, Grey, Rough or Yellow varieties and similar prizes for field Peas.

Beans, Timothy and Corn have four prizes each of $2.00, $1 50, $1 00 and 50c.

Clover, Red, White and Alsike, have four prizes of $3 00, $2.50 $2.00 and $1.50 in each class.

Green Mountain or Delaware, Irish Cobbler, any other white va iety; Rose type, any variety; Red skinned, any variety; Dark skinned, any variety. Potatoes have five prizes of $2.00, $1 50, $1.25, $1.00 and 50c in each of the classes above enumerated and similar prizes for Potato Onions.

$2 00, $1 50, $1 00 and 50c are offered as 1st, 2nd, 3rd and 4th prizes on two pound samples of Turnip seed

Following are the rules governing Seed Fair:

1. All seeds entered for competition must have been grown by the exhibitor within one year previous to the exhibition All exhibits of seeds shall be held to be representative of the total quantity of such seed offered for sale by the exhibitor.

2 No premium shall be awarded on exhibits that contain impurities which, in the opinion of the Judges, are of a noxious nature No exhibitor shall receive more than one prize in any section. Judges will not necessarily award prizes on any exhibit unless such exhibit is deemed worthy of the prize.

3. All samples of the seed must be labelled with the name of the exhibitor, name of the variety, the amount of seed for sale or for personal use and the selling price.

4 A statutory declaration that the above rules have been complied with, may be required from any exhibitor.

5. All exhibits for competition for prizes must be in the basement of Opera House, by Thursday, Mar 2nd, at 9 a m, and shall not be removed until the close of the Fair.

6 Quantities to be shown of wheat, oats, barley, buckwheat, peas, potatoes, 1 bushel each; timothy, clover seed and beans ½ bushel.

7. Persons sending seeds to th Fair and not being able to attend themselves, if they will consign them to the Secretary of Seed Fair, Fredericton, freight prepaid, they will be carefully attended to. Seeds sent in this way must e in Fredericton not lat r than Wednesday noon, March 1st.

8. No entrance fee will be charged.

Arrangements are being made with the railways to return all seeds free. Freight receipt must accompany the entry.

Excursion rates on C. P Ry. and I. C. Ry.

Buy a single fare first-class ticket to Fredericton and ask for a Standard Certificate which, when filled in and signed by the Secretary, will entitle you to free return.

Remember no refund of fare will be made because of failure of delegates or other person to obtain a Standard Certificate

Farmers will notice that only one bushel of grain is required in each section This is done in order to encourage all to bring out something and thus help to make this the best "Seed Fair" ever held in New Brunswick. Think it over, and get busy make your entry early

An oppo tunity will be afforded for the sale and exchange of various classes of seed. Come to Fredericton, you will enjoy both the Farmers' Meetings and the Seed Fair

Hamilton Incubator
Hatches Big, Healthy Chicks

You never find the Hamilton guilty of hatching deformed chicks, or allowing chicks to die in the shell. That is because the heating and ventilating systems introduce the correct amount of life-giving oxygen and moisture into the egg-chamber—because the heat-regulating system is accurate to a fraction of a degree—because the directions are so simple and correct. The Hamilton Incubator hatches every fertile egg. The chicks are so plump, healthy and lively they make the old hen jealous of the Hamilton. You can make a success of hatching chicks with the Hamilton Incubator, and just as big a success of raising them with the Hamilton Brooder. Send for our **free booklet** and get complete information about the always successful Hamilton Incubators and Brooders.

Act as Our Representative

In your locality. Take orders for Hamilton Incubators and Brooders. Our line is a ready seller. And you will want to be our agent as soon as you read our proposition. Write us to-day.

The Hamilton Incubator Co., Ltd., HAMILTON, ONTARIO.

THE MARITIME FARMER

And Co-operative Dairyman.

Semi-Monthly Journal devoted to the interests of the farmers of the Maritime Provinces.

Official Organ of The Farmers, and Dairymen's Association of New Brunswick; The Nova Scotia Farmers' Association The Nova Scotia and P. E. Island Fruit Growers' Associations The New Brunswick Fruit Growers' Association; The Maritime Stock Breeders' Association; The Maritime Bee-Keepers Association, and The New Brunswick Poultry Association.

Subscription Price $1.00 per year. When paid in advance 80 cts. Persons taking advantage of the 80 cent rate when subscribing are only entitled to it by paying in advance each year. When subscription gets in arrears, $1.00 per year will be charged. Subscribers are requested to bear this in mind. This paper is sent to subscribers unless a definite order for discontinuance is given.

The date after your name on the little green label on front Page is, in every case, the time to which your subscription is paid.

OUR GUARANTEE.—With each subscriber to the MARITIME FARMER, we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within one week from the date of any unsatisfactory transaction, with proof of the swindle and loss, and within one month from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser be said :—**"I saw" your adv. in the MARITIME FARMER.**

THE INDIFFERENT MAN.

One of the problems which are confronting the men who are most deeply interested and actively working for the advancement of the agircultural industry, for the betterment of farming, the improvement of the farms, and the greater prosperity of the farmers, is that problem which has to do with the man who is indifferent, who will not put himself in the way of receiving any of the benefits of modern farming thought.

Anyone who is interest in the work of the institutes or any of the many business associations of farmers, such as the breeders' associations, the dairymen's association and other of like character, realize how difficult is is to secure the attendance at such meetings, of the men who most need the good that may be received there. It is probable that those who will not attend such meetings, with exceptionss of course, do not believe that they can receive any benefit there which will help them make more money out of theirfarms, or that will help to make farming easier or more enjoyable.

Almost without exception, the farmers who attend such meetings and perhaps participate in the discussions, are those who have studied and are still studying their subject, but are anxious to receive more light and willing to improve every opportunity to do so. Further than that, they are, without exception, the men who have made and are making the greatest successes out of their farming operations; perhaps not all large successes, but the greatest successes according to the measure of their means and opportunities, nevertheless. The men who know methods of increasing their product in some line, or methods of growing crops which other men cannot grow successfully, are willing and anxious to attend the institutes and other meetings and tell their friends and neighbors their experiences for the general benefit, as well as to learn still more from others.

It would not be fair to say that all of the men who stay away from farmers' institutes and dairy association meetings are indifferent to their own interests, and unwilling to learn anything that will help them along in their farming, but their is a large class of those who, while not indifferent to their own successes are indifferent to the great movement for the betterment of the farming industry and skeptical of the possibilities of learning anything that will be helpful by any such means.

SOW CLEAN PLUMP SEED.

Now is the time to prepare the seed for the soil, which is quite as important as to prepare the soil for the seed. Farmers lose a million dollars a year through neglecting to properly clean and grade the seed and grain planted. This loss gets larger as land values increase We shall never have any more land, and the value of this farm land is going up each year. So every farmer is confronted by the absolute necessity of getting more and more in the way of crops from each acre. Nothing so easy will do more in this direction than greater care in getting good seed. Even if you keep up the fertility, follow thorough tillage, cultivate assiduously, what will this avail if the seed is poor or if it contains weeds, imperfect grains or other substances not wanted in the plantings ?

Really we should give back to the land the best that it gives. Hence the plump seeds, heavy with vitality, only should be used, and the shriveled seeds and the weed seeds should be discarded. Take this matter up earnestly enough to investigate now and you will not drop it until you have a fanning mill and seed grader. Indeed, to do otherwise is to sustain needless loss. Hence each year it pays to clean and grade the seed sown or planted. For instance, consider your hay crow. You sow the grass seed mixed with weeds. You get weedy hay and feed most of it, not all of it, to your own stock. The weed seeds go through the animal and remain in the manure. Then you spread that manure over any or every field; the result is more and more weeds, every year everywhere.

Moreover, grass and grain seed, if selected as is ordinarily done, run down, get poorer and poorer, and in time often get quite choked with weeds. This ought to be stopped. There is no compromise. There is no excuse for a compromise. Nothing will do so much in cleaning a farm of weeds as a good fanning mill. Through its use a man can soon breed up his crops. This will yield better and be of better quality; and this kind will give him a reputation in the community for having seed or grain that is worth a good price. The fanning mill, therefore, is worth many times its cost to every farmer.

INTEREST THE BOYS.

The farmers' institute is the farmer's school. It is the young farmers and the boys who will be farmers in a short time who especially need the instruction, which the institute is intended to furnish. Therefore, it should be attended by the boys whether the old folks attend it or not. The young folks have less to forget. They are less wedded to preconceived ideas. They are more open minded, and therefore more receptive to new ideas.

We never count on much good from an institute where there are no boys or young men. Where an institute is filled up with retired farmers, as many of them are, there is not likely to be much good accomplished. That class of men have largely quit thinking about agricultural problems. Many of them have become stranded on the sidewalk. Many of them are prejudiced against any new ideas and new methods. The boys are largely free from this. They are more likely to catch the spirit of the new agricultural. They are not nearly so likely to weary the audiences with theories long since exploded.

Get the boys out to the institute, even if you have to stay at home yourself. Encourage them to ask questions. We would rather have one question from a boy than two from a retired farmer. The question reveals the state of the boy's mind, and incidentally the state of the minds of the boys in the neighborhood. This acts as a sort of range-finder for the speaker and enables him to state facts and principles which otherwise might be overlooked.

There is a class of farmers who are boys unti they are old men; that is they retain the receptivity of the boys mind, the hunger of the boy for new ideas. There can not be too many of these in an institute, no matter what their age.

If your boys are really interested in agriculture or if you wish to interest them, get them to the farmers' institute. Take them with you, if you can; but if some one must stay at home, let it be the father. The agriculture of the future in this country depends largely upon the young men and boys. Therefore give them every advantage.

READING IN THE FARM HOME.

Dairy farming has come to be a business that demands preparation, study and thought. It is forever out of the drudgery class. Some of the brightest men of the times are devoting their attention to a class of literature that will be helpful to dairymen. Every farmer's reading table should contain something besides the most recent magazines and the most popular novels. There should be books on dairying. It is as necessary that he study books upon the question of soil management and cultivation, and breeding, handling and feeding stock as for the attorney to read the most recent legal works or the physician to keep posted upon anatomy and pathology. The time when the book farmer was a joke has forever passed. The time when it was necessary to merely plow, plant and harvest has become ancient history. Today thought and care and study are as necessary to successful farming as they are in commercial life or professional life or life in the factories.

One reason why many young people have drifted to the cities is because they did not appreciate the possibilities of the farm. It was looked upon as a life of drudgery and hardship and deprivation. This is not the case today and there is nothing that will lead one to realize the possibilities of farming so much as reading that will stimulate thought and development. The reading table should have a large place in the life of the home at all times but especially during the long winter evenings. See that it is well supplied with the right kind of books.

IMPLEMENTS AFTER HARVEST.

The other day we observed standing in the corner of a meadow a raking machine that was new in the early summer, and had stood out there ever since the close of the hay harvest. On another farm we saw a mowing machine standing in the yard exposed to the weather and just as it was after it had finished the last day's work. We fail entirely to see any reasonable excuse for this kind of thing, and cannot understand a farmer paying money for expensive machines and then allowing them to be neglected in this way. The cost of machinery is now a big item to farmers, but we are convinced that implements would last considerably longer if better care were taken of them when not actually in use. In the ordinary course of events we have wet days when little can be done in the way of outside labour. Surely the time on wet days could not be better spent than in overhauling the harvesting implements, cleaning, oiling, and putting them away in good order, against the time when they are required once more.

ORDER SEED EARLY.

This is a good plan to order seed early in the year. As their stocks run down the seedmen will naturally fill orders with whatever they have on hand and it is safe to assume that the best seeds will be the first to go out. Another advantage in ordering seeds early is the opportunity it affords of testing their germinating qualities. If they do not test satisfactorily they can be exchanged and other seeds can be obtained in time for early planting. Still another consideration is the danger from delays in transit. This is particularly true in sections where the transportation facilities in many of the communities are rather slow. It is a safe plan for the farmer to make up his seed order right away. He can plan his spring work with profit in advance and thus get a good start. Many men are apt to put off ordering seed until the last minute with the result that they get the culls and have to plant without testing, besides running the risk of their seeds arriving too late or not arriving at all.

How Can Alfalfa Growing Receive a Boost in the Maritime Provinces?

Alfalfa—Root and Branch.
If you prepare your soil and seed properly you can grow from three to four crops per year, yielding at least $100 per acre in feeding value. Are you going to give it a trial?

Pennsylvania Railroad Encourages Alfalfa Growing.

Mr. G. F. Marsh, B. S. A., who made his headquarters during the last year, at Elmira, New York, as Agricultural respresentative of The Pennsylvania R. R. writes:—"I saw by your last issue that you are much interested in Alfalfa and thought that the following notes might have a bearing on that important subject.

I sowed fifty acres last year, hope to have 50 or more acres sowed next spring. We have made good money out of Alfalfa seed in my district. Another thing, new to Ontario farmers is the cultivation of Alfalfa with a spring-tooth cultivator. I cultivate mine after each cutting and first thing in the spring with a heavy spring-tooth cultivator. While travelling through the Maritime Provinces some years ago, I wondered why the farmers did not sow more Alfalfa as the soil is ideal. Since then I have thought that perhaps the lack of lime may be responsible for poor success. I wish the Maritime Farmer success in its good work."

Mr. Marsh reports an especially successful season, as the farmers have been greatly interested in the work the Pennsylvania R.R. is doing, by taking every advantage, even to coming into the stations and driving him 10 or 15 miles out in the country to examine their soils, and to address Grange and other farm meetings.

Lectures have been delivered on different farm subjects at over two hundred Grange and other farm meetings. These meetings have been well attended, frequently going as high as two hundred.

Much valuable educational work has been done by means of this publicity bureau, as the press has been found very friendly and anxious to publish matters of benefit to the farmer. In all, about 400 articles have been published, varying in length from a few inches to a couple of columns.

Although results in agricultural educational work are slow to appear, still there have been returns even for the first year, as the increased cost in lime would pay the entire expense, for it is estimated that 300 more cars will be used this year than last year, and at an average freight rate of $25.00, it would total up to $7500. for nine months' work, so that this work benefits the railway as well as the farmer.

In addition, a plot of Alfalfa was sowed at each station as an object lesson. These have all made good growth and are a definite proof that alfalfa will grow any place, if given proper care. These plots were the means of stimulating the farmer, and at least 2000 acres were sowed, chiefly in one and two acre plots, which have been so successful that ten times this amount will be sowed the coming spring.

The success of alfalfa growing will mean much for the dairy districts of New York and Pennsylvania, as the farmers are paying $25.00 to $30.00 for bran, where they can grow from 4 to 5 tons of Alfalfa hay per acre, equal ton for ton to bran.

The interest in orcharding has been greatly increased, both in the planting of new orchards and also in the plowing, cultivating, pruning and spraying of the old orchards.

As there are many old orchards along the line, this will greatly increase the yield as well as quality, thus increasing the returns to the farmer, as well as materially increasing the freight receipts.

Peaches are being planted largely, as the few that have been planted have given good returns and topped the Philadelphia market for quality and price.

This work has been the means of increasing the interest in good farming generally, including good roads, better cultivation, rotation of crops, judicious fertilization and scientific feeding, work which will not only increase profits of the farmer and freight receipts of the railway this year, but will yield increasing returns each year, both to the railways and to the farmers.

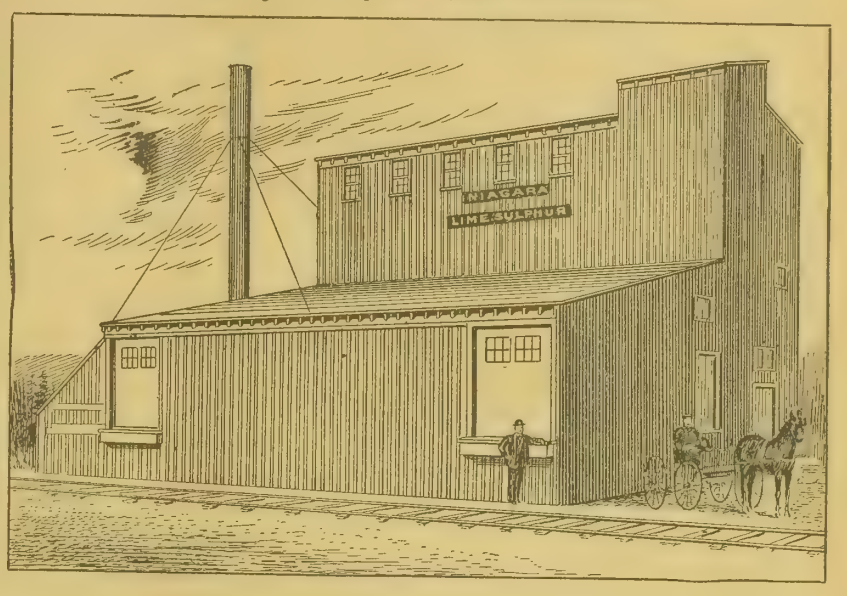
Alfalfa and Hogs.

This subject seems to be coming to the front, and is surely practical, as the primary question in a degree at least is to cheapen pork production as much as possible. There is something apart from just putting pounds on with corn when it comes to making money. We prefer the third cutting of alfalfa hay for the hogs. For two winters our brood sows have been fed alfalfa. We use the ordinary feed cutter, cutting it as fine as possible. We moisten the cut hay and usually feed a very small ration of middlings or ground rye, mostly ry?, adding the shelled corn, and feed it in a deep trough, one feed per day. We do not feed the hay on the percentage basis, but give probably two-thirds of a pound per hog. It is weighed after being cut in dry form. We have not tried a heavier ration of alfalfa, as this amount carries our hogs along nicely. Alfalfa is thrown from the mow into a box on the barn floor, so there is no waste of leaves.

Last winter our fall pigs were fed alfalfa from the latter part of January until March. I doubt, considering the waste made by crowding, if they consumed one-fourth of a pound. Some lots of pigs as a matter of fact will consume more than others. One can get the pigs to consume a greater quantity by adding a heavy ration of ground feed to the alfalfa, but this is not advisable. We would suggest feeding a small amount and noting results, as no set rule will answer. While I was away from home last winter a mistake was made in their ration; they were fed more than they would eat; but no bad results followed. There has been some question if the short-cut stems might not injure the pigs inwardly. We have had no such experience as yet, and will feed the ration this winter when the pigs are old enough. We

Niagara Lime-Sulphur Plant at Kentville

Daily Output 4,000 Gallons.



In response to the invitation of the Manager, C. O. Allen, one of our staff recently visited the plant of the Niagara Spray Company of Nova Scotia, located west and north of the Provincial Sanatorium on the C. V. Railway and just outside the town of Kentville.

The rather unpretentious looking building, from the exterior, has somewhat the appearance of the grain elevator of the west. But if there is nothing striking about the outside, the visitor has but to enter when he cannot fail but to be impressed with the amount of machinery, tanks, etc., packed so snugly, everything fitting into just the right place, but at the same time crowding is entirely lacking.

A fine running elevator took our correspondent and party to the upper story where the lime is slaked, and sulphur added. From there the mixture passed into the vast tank holding 7,000 gallons where under the proper conditions it is boiled to just the point by steam heat. From this tank the solution passes to the filter, where under immense pressure every particle of solid, not dissolved, is removed. Then it passes on to the strong tank 15 feet high, with a diameter of ten feet, holding 7,000 gallons, next the liquid passes to the measuring tank from which it is drawn off into new casks manufactured expressly for the trade by Mr. J. I. Gates whose cooperage is at the foot of Joe Bell Hill.

A 60 h. p. boiler with 15 h. p. engine furnishes the power for the plant and for the dynamo, which supplies light for the whole building.

A force of nine men are needed to keep the factory running the whole 24 hours, the wages paid adding considerable to the revenue of the country while the saving of $2.50 freight on each cask from Ontario will this year amount to thousands of dollars to those using lime-sulphur as a spray.

Space forbids us giving a fuller description of this plant but it is well for the proposed user of spray material to know that the Niagara Brand of Lime Sulphur for which this company paid thousands of dollars for the exclusive right of using the formula in the Maritime Provinces is acknowledged to be the best brand of the article manufactured to day, and also that Mr. F. A. Frazier of Oregon, who installed this plant, has erected, equipped and run every Niagara Brand factory in existence, and further that Mr. Frazier, who probably knows as much about lime-sulphur as any man living, with Prof. Cordely, of the Agricultural College, Corvallis, Oregon, worked out this formula used by the Niagara Brand Spray factories in the United States and Canada.

Some of this finished product tested by Mr. Frazier with a hydrometer marked in the Beaume scale, showed a reading of 32.5 degrees, one-half of a degree better than the guarantee of the company. In some varieties of commercial Lime Sulphur, when enough solids have been dissolved to give a test as high as the above, crystalization has taken place and the efficacy of the solution has been much impaired, but the Niagara Brand Lime Sulphur is guaranteed to test 32 degrees without the least trace of any crystals being formed, in the concentrated article.—From Kentville Chronicle.

prefer having the pigs weigh 50 lbs. or so before beginning the ration, although in some cases they might consume enough to pay for the extra work earlier. We feed the ration in the same form as to the old hogs, differing in proportion as a matter of course.

As to brood sows, we will start in this winter on about the same ration; but as some of the sows are older the ration may be increased. Alfalfa is practically taking the place of mill-feed; it is a supplement that has protein and makes a bulky ration for winter feeding that is necessary. Our spring pigs come nine and strong. In very cold weather water is warmed for the older hogs, so as to moisten the ration, and this is more necessary for pigs. It would be much easier simply to throw out the corn and let it go at that; but experiments furnish positive evidence that a protein feed will make corn more efficient and decrease the cost of production, and we are certain that we have discovered no facts to the contrary.—J. W. Nicodemus in Successful Farming.

Agents Wanted !

We want farmer agents in all parts of the Maritime Provinces to sell the Acme Stee Ladder.

It is one of the best propositions ever offered to a farmer who wants to make money during his spare moments.

Write to-day for particulars as to territory, etc.

The Acme Steel Ladder Co.,
Sussex, N. B.

DEPT. OF MILITIA AND DEFENCE
OTTAWA

SEALED TENDERS (in duplicate) for the supply of Coal and Fuel Wood required to heat the Military Buildings at St John, Fredericton, Woodstock and Sussex, N. B., for the year ending March 31, 1902, will be received up to Saturday, March 1 next. Each tender is to be marked 'Tender for Fuel, and addressed to the Director of Contracts, Militia Headquarters, Ottawa.

Printed forms of tender containing full particulars may be obtained from the Directors of Contracts, Militia Head Quarters, Ottawa, or at the office of the District Officer Commanding St. John, who will furnish all information required

Each tender must be accompanied by an accepted cheque on a Canadian chartered Bank, payable to the order of the Honourable the Minister of Militia and Defence. for five per cent of the amount of the tender, which will be forfeited if the party making the tender decline to sign a contract when called upon to do so. If the tender be not accepted the cheque will be returned.

The Department does not bind itself to accept the lowest or any tender.

EUGENE FISET, Colonel.
Deputy Minister of Militia and Defence,
Ottawa, Feb. 9, 1911.
(H. Q 99—8—13)

Newspapers will not be paid for this advertisement if they insert it without authority from the Department.

Strawberry, Raspberry.

Blackberry and other small fruit plants. Hardy varieties, Freshly dug, Low prices. Satisfaction guaranteed, Also Bees and Bee-keeper's supplies. PRICE LIST FREE. Dept. F.
E. L. COLPITTS.
Petitcodiac, N. B.

You Want to Boost Alfalfa Growing in the Maritime Provinces.

Let us help you. In order that you may begin with at least a small plot—about one-twentieth of an acre—we have decided to offer anyone who will send us two new paid-in-advance subscriptions at 80 cents each, one pound of Alfalfa seed and a bottle of Nitro Culture. Full directions for preparing the soil, location, etc., will be sent at the same time. Every farmer should read the Maritime Farmer. Thousands say that they would not be without it if its cost was double what it is.

Small Accounts as Important as Larger Ones.

I suppose if this account had been one hundred and eighty dollars instead of cents, no doubt it should or would have been paid long ago. However, small bills have quite as I suppose if this account had of should be attended to sooner.

I must say that I enjoy reading the Maritime Farmer and I have been scattering it over many parts of our Dominion. You will find P. O. order for $1.80 amount of account rendered enclosed.

Yours truly,
J. R. LOWDEN.

A $5.00 Prize.

We will give a prize of $5.00 to the person making the largest purchase from one or more of the firms advertising in the February, March and April issues of The Maritime Farmer. Send for catalogue and information to each advertiser and see if they have something that you want. The only condition attached to this offer is that you mention the Maritime Farmer when writing and that you send us a list of those to whom you have wrutten and the amount purchased from each advertiser. We believe our advertisers can offer you better value than can be obtained elsewhere and see no reason why you should not patronize and secure this prize. All lists must be mailed us by April 30th. Address, Advertising Manager, Maritime Farmer Sussex, N. B.

THE HORSE.

A Wind Sucker.

Subscriber:—I have a nine months old colt that I fear is a wind sucker. When two or three months old he would eat any kind of extra feed mostly oats and bran, some crushed corn and oats, with his mother. I used to tie him and feed him for fear he would eat too much. Mare had plenty of milk and colt always looked fat. I have thought for two or three months that the colt looked too much filled out and his manure food than a large colt of the last three months has been bran and oats. About a month ago, for a few weeks, I scalded the oats. The colt eats and drinks well and is large and strong, but acts a little dull. Perhaps a good many people might think him all right, but I fear he is not. I weaned him at six months. Will you tell me how to feed him?

Ans.—The above description of the colt is not full enough to permit me to advise quantities of food necessary as breeding of the colt is not stated. A large draft colt would require more food than a large, light colt of the light class. As to his being a wind sucker can easily be discovered by watching the solt and not satisfactorily in any other way. The feed for the last three months has been too concentrated. While oats and wheat bran are excellent feeds for colts they should be supplimented by some more bulky food such as early cut well cured mixed clover and timothy hay. I would advise feeding reasonable quantities of oats, wheat bran and hay three times a day, wetting the bran with warm water every other night and adding a handful of linseed meal and on alternate nights giving some roots pulped turnips, mangels, sugar beets or carrots—the qunatity to be governed by size of animal and effect on digestive tract. If there is too much softening of the dung lessen quantity of roots, flaxseed and bran mash. Give water as desired, not less than three times a day and give exercise in the open once or preferably twice a day for several hours, at a time. For several hours between each meal keep the colt from getting any food. Place salt so that it can be had when desired.

J. STANDISH, V. S.

Itchy Legs and Sore Eyes.

G. J. H.—Please inform me what to do to cure my horses. They have something in the hind legs that make them stamp their feet a great deal and it appears to be very itchy as when I rub or scratch it they bite the stand. It is over a year since I first noticed the trouble. I have tried about all the scratches cures and nothing appears to help them, and I have come to think it is not scratches. It must be something

My sheep have sore eyes and get so blind that they run up against anything before they can see it. Could you inform me what is the cause and cure?

The itching condition in horses' legs is often remedied by giving a purgative of about one ounce of Barbadoes Aloes, of reliable quality, for a horse twelve or fourteen hundred pounds; Ginger, half an ounce and Glycerine, sufficient to form a ball. Feed only about a gallon of wheat bran mash for eight hours bedrams of Nitrate of Potash, in feed, fore and twenty-four hours after giving the physic. Then give two twice a day, for a week and afterwards give an ounce Fowlers Solution of Arsenic, once a day, and four drams of Nitrate of Potash in soft food. On Wednesday and Saturday nights dissolve one ounce of Sugar of Lead in one pint of water and rub gently into the itchy parts, once in twenty-four hours, preferably at night. Give exercise every day and keep stable clean and well ventilated. Feed oats, bran, hay and some roots such as turnips, carrots, mangels or sugar beets. Do not feed corn, peas or barley.

For the sheep's eyes take four drams of Sulphate of Zinc, one ounce of Laudanum and one pint of water, mix and apply around the eye lids putting a small quantity in the eye once a day after bathing with warm water. There are several diseases of the eye that causes blindness but as granular inflammation of the eyes is most common in Eastern Canada I assume it is the disease in your sheep.

J. STANDISH, V. S.

Enlarged Stifles.

E. B.:—I have a colt which has large bunches on his stifles and is quite lame. These bunches appeared when he was about three months old. He is now about two years old and is no better. Would you please tell me in the columns of your paper what I can do to cure him?

The disease existing so long maves recovery doubtful. Repeated blisters may improve it and it may be advisable to place the animal in slings if the parts are very painful or are injured when the colt is raising. For a blister take Mercury Binodide, two drams; Cantharadies, four drams, and vaseleine, two ounces; mix well and apply one half to each stifle, rubbing well in all over and around the lumps. Twenty-four hours after applying, grease with lard or vaseline. In another twenty-four hours wash off and grease then leave alone until the scab heals off and repeat the blister. Only one stifle should be blistered at a time, allowing three days to intervene between applying to first and second stifle. Feed lightly and keep quiet. Trim the feet to keep the toes short and repeat the blistering three or four times allowing twelve or fifteen days between each application or long enough for the scab to heal off.

J. STANDISH, V. S.

Feeding Weanlings.

West St. John, N. B.—I would like a little information in regard to the diet and feeding of weanlings. What food or kinds of grain and in what quantities would you advise feeding? I have really had no experience in raising colts, but am now trying to do a little breeding. I have thought that a small quantity of oats, say one quart a day, with bran moist would not be too much grain, but would like to have your advise on the matter.

Answer—Weanling colts are more often under fed than given too much to eat. If you want yout colts to thrive you must give them the requisite amount of good nutritious food, Commence by feeding them a pint of ground oats and a quart of bran three times a day, with a fair amount of hay, gradually increasing the quantity from week to week as they grow. It is a matter of great jddgment on your part. The better they are fed and cared for the stronger they will be. Watch them closely and feed as liberally as they can digest it.

If you have a weanling colt that you expect to be a prize-winner at the fair next year, let him have a box stall all by himself. Many colts are injured by being fed and stabled with old horses.

The Arab and His Horse.

Although the Arabs consider the education of a colt should begin at 18 months old, it begins in realty at an earlier age. No sooner is a foal born than it is made to swallow two or three eggs. A by-stander then takes it in his arms and walks it up and down in the midst of an almost inconceivable din, which is supposed to accustom it to terrible sounds so that ever after it will be impervious to fright, no matter how terrifying the noises that assail its ears. To teach it to suck, a fig or date soaked in milk slightly salted is put into its mouth, and, when possible, it is given camel's or cow's or ewe's milk, which is supposed to make the coat more soft and sleek. At 18 months old the colt is mounted by a child, who takes it to water and pasture, guiding it with a soft mule's bit, but it is not saddled until it is quite accostumed to the bridle. Careful owners, before allowing a colt to be mounted by a grown man, have it led up and down for a fortnight with a pack saddle on its back, carrying two baskets filled with sand. A most important part of a horse's education is to teach it not to break loose when its rider dismounts. For this purpose, a slave stands beside it ready to put his foot on the bridle whenever it attempts to steal off, which gives an unpleasant shock to its mouth. After a few months of this training, the horse will stand still and wait any time for its master. An Arab arrives at market, dismounts in the midst of a score of horses and mares, passes the bridle over his horses head and lets it fall to the ground, then, placing a stone upon it, goes off to transact his business, returning at the end of several hours, finds his horse in the same spot. The first thing an Arab does after killing his enemy, if he covets his horse is to pass the bridle quickly over its head.

Horse Notes.

Every farmer should have a horse that the wife and daughter can ride and drive, as well as the boys.

If the feed and care are what they should be, then look at his teeth. See that the grinders come together evenly, and smooth off the sharp points.

Half the pleasure of a country life lies in the ownership of a good horse.

HORSEMEN ATTENTION!

Dr. J. Woodbury's Horse Liniment and Dr. J. Woodbury's Condition Powders will save and preserve the life of your horses. They cure Cough, Cold, Distemper, Colic, Glanders, Spavin, Pink eye and all diseases of the Horse.

TRURO, N. S.

Dear Sirs,—One of my horses had a bad cough, and I made a complete cure with three bottles of Dr. J. Woodbury's Horse liniment. The cough was of twelve months standing. In my large expeience with horses, I consider this liniment to be the best made for all diseases of the horse, and I recommend it to my friends.

E. J. ANDERSON.

BEAR RIVER, N. S.

DEAR SIRS,—

We do not hesitate in recommending your Dr. J. Woodbury's Horse Liniment. We have used it in the woods for coughs, colds, distemper and cuts, and would say that no lumberman should be without it.

Yours truly,

CLARKE BROS.

Kendall's Spavin Cure

The cure that saves horsemen and farmers millions of dollars every year.

It is known the world over as the one certain, reliable remedy for Spavin, Curb, Splint, Ringbone, Bony Growths and any Lameness.

Cases just developing and old, stubborn sores and swellings readily yield to the wonderful curative powers of this famous remedy.

Orangeville, Ont., Dec. 21, '08

"We had a horse which was getting very lame on account of a Spavin. I was anxious about him as we could not work the beast when we most needed him.

Our teamster saw Kendall's Spavin Cure in the store and tried it.

I am pleased to say he had success as the horse has stopped limping and is doing his day's work."

W. A. NICHOLSON.

Don't worry about Spavins, Growths, Swellings or Lameness, but use Kendall's Spavin Cure. It cures every time. The world's best liniment for man and beast.

$1. a bottle—6 for $5. Get our book "A Treatise On The Horse," free at dealers or from us.

Dr. B. J. KENDALL CO.
Enosburg Falls, Vt. 52

The Nova Scotia "Lumber King" says:

"I consider MINARD'S LINIMENT the BEST liniment in use.

I got my foot badly jammed lately. I bathed it well with MINARD'S LINIMENT and it was as well as ever next day.

Yours very truly,

T. G. McMULLEN.

ABSORBINE

Will reduce inflamed, strained, swollen Tendons, Ligaments, Muscles or Bruises, Cure the Lameness and Stop pain from a Splint, Side Bone or Bone Spavin No blister, no hair gone. Horse can be used. Horse Book 2 D free. $2.00 a bottle at dealers or delivered.

ABSORBINE, JR., for mankind, $1. Reduces Strained Torn Ligaments, Enlarged glands, veins or muscles—Heals ulcers—allays pain. Book Free.

Winter Injury to Fruit Trees.

On this important subject the Ottawa "Citizen" makes the following observations:

During the past twenty years much experience has been had at the experimental farm here in winter injury to fruit trees, and the observations which have been made during that time and the conclusions drawn and recommendations made are now summarized, in the hope that much injury will be prevented by adopting the best methods. It would appear that there are at least ten distinct forms of winter injury.

If one could make an accurate estimate of the number of fruit trees which have been winter killed in the colder parts of Ontario, the province of Quebec and in New Brunswick, the figures would be astounding they would be so large. Trees that were killed the year after planting, trees that were killed just when they were beginning to bear fruit, and trees which were in their prime and bearing bountiful crops, all have suffered. This terrible destruction from winter has caused great discouragement among the people and has been one of the chief causes of the slow development of the fruit industry in the colder parts of Canada.

Much of this loss could have been avoided if the hardiest trees only had been planted, but how few there are who know the details connected with the establishment and maintenance of an orchard and who know there is almost or quite as much difference in the hardiness of varieties of fruits as there is between the hardiness of the tenderer and hardier kinds of vegetables. All farmers have learned by observation that with a very slight frost potato tops will be killed, but that it will take a much lower temperature to kill a cabbage. But the cause of death in fruit trees still continues to be a very mysterious thing to most farmers who, for instance, see it leaf out and bloom, but eventually wilt under his very eyes during the summer without any apparent reason. Unfortunately this lack of knowledge on the part of the farmer has been taken advantage of by unscrupulous men and farmers have been urged to buy the varieties of fruits which appeal to them most strongly in the colored plate or from the glowing description given by the agent. Of late years our best nurserymen seem to be impressing upon their agents the importance of offering only those varieties suited to the district in which they are sold. These agents often call at the experimental farm to get information on the fruits suited for the districts they are working in. For a long time it was not known what varieties of fruit were hardy in the different parts of the province of Quebec, but experience has taught which will succeed, and the results of this experience have been recorded. With the literature now available and the information which may be obtained by applying to the proper authorities there is no reason why anyone should plant varieties which will not succeed with him, provided he has the proper soil in which to grow them and gets good trees and looks after them properly.

Bark-splitting is an injury which usaally occurs on young trees. It is due to the expansion caused by frost when the trees are in a very succulent condition. It occurs when trees have grown late in the fall and there is a sudden low drop in temperature. It will occur when trees have grown late and there is a heavy fall of snow before the ground freezes. The soft snow appears to soften the bark of the tree, and when the temperature drops suddenly the moisture under or in the bark expands and loosens the bark from the trunk or kills the cambium. In Nova Scotia the Gravenstein and other apples are affected with what is known there as "crown rot," which apparently destroys the bark about the tree near the ground. From what can be learned of this injury, which occurs mostly in well cultivated orchards and in moist ground, the cause is that the Gravenstein grows too late and is subjected to the conditions just referred to, namely, of being too full of sap. Traces of disease have been found at these injured parts, but we believe that the disease is secondary rather than the principal cause, though we have not had the opportunity to study the injury there. Bark-splitting can be prevented to a large extent by having the wood of the trees well ripened when winter sets in, and this can be brought about, usually, by stopping cultivation in good time. When young trees are injured by bark-splitting they may be saved if not too badly hurt by covering the injured parts with grafting wax.

Trunk-splitting, while not a common injury in orchards, is not rare. It was long thought to be due to the expansion of trees which had been "hide-bound." While so far as is known no experiments have been tried to determine the cause of trunk-splitting, yet, several theories have been advanced, the best one being that the splitting is due to a sudden lowering of temperature which cools the outside layers of wood in the trunk, making a considerable difference in temperature between the outer and inner layers causing the former to contract. A clearer example is the cracking of ice when there is a sudden fall of temperature, due to the contraction caused by the upper layers of ice coming in contact with the cold air. It is trees which have made late growth and are well charged with sap that are usually affected, hence thorough ripening of the wood is necessary for the prevention of this injury also.

The injury to apple trees known as sunscald is one of the most serious hindrances to successful apple culture, particularly in the northern and eastern parts of Ontario and in the province of Quebec. Newly planted or young trees are, as a rule more seriously affected by it than older ones. The unhealthy appearance of the bark on the trunk of the trees facing the south and southwest and on the larger branches is the first indication of this injury. Afterwards the bark and wood dry up and fall away. Trees are often so badly affected that they die. Sunscald occurs during the latter part of winter or very early in the spring, when there are warm days and cold nights. The results are apparently the same as happen when many plants are thawed out suddenly—they die. In the case of the apple trees, only a part of the apple trees, only a part of the trunk is thus affected, being that part which is exposed most to the sun. The hardiest varieties are the least affected. The injury may be prevented to a large extent by only planting trees which are headed low, thus exposing but a short trunk to the rays of the sun; also by inclining the young trees somewhat to the southwest when planting, thus preventing the sun's rays from striking the trunk except for a short time each day. When trees have been planted and are liable to become sunscalded the trunks may be protected by using a veneer of wood which encircles the trees, thus preventing the rays of the sun from striking the trunk. The protector is better loose, so that there will be an air space between it and the tree. White building paper tied around the trees is also useful. Boards, acking and many other things may be used to protect the tree from sunscald. Nothing, however, that will be likely to harbor mice should be used.

The effects of the crotch injury have been very serious in the province of Quebec and in some parts of Ontario in recent years. On examination it is found that in the centre of the crotch and on the branches diverging from it, but close to it, the bark is dead. As a result of this killing in the crotch the tree loses its strength there, rot sets in, and eventually the tree is destroyed by the loss of one limb after another at the crotch. This injury is probably due to ice lodging in the crotch. There are several theories as to why the ice whould cause the bark to die. One is that it acts as alens and concentrates the rays of the sun, causing a scalding of the bark. The position of the injured limbs alone would seem to be sufficient to show that this theory is not a good one. It seems more likely that the injury is caused by the softening of the bark by the melted snow or water before freezing the bark, which is, even before this, probably tenderer than at any other part, owing to it being most shaded there in summer, subjected to severe frost, it and the cambium being both destroyed. One of the best means of preventing crotch injury is to grow trees with as little crotch as possible, training with a central leader. When trees of certain varieties are liable to be killed after heavy bearing, thinning of the fruit should be practised in order to prevent the lowering of vitality. The injury to branches of shrubs or herbaceous plants can often be prevented, as is well known, by thawing them out gradually, when the sap, which on being frozen, is withdrawn into the intercellular spaces, will return to the cells, where as if thawed out quickly the cells might break down.

An Absolutely Reliable Roof

is one of the best investments a farmer can possibly make. The trifling additional sum you pay for NEPONSET Roofings is made up many times over in the additional protection to your building, freedom from repair bills, fire risks and all roofing troubles.

NEPONSET
PAROID ROOFING

The United States Government, all the leading railroads, many of the largest manufacturing industries and thousands of planters and farmers have used NEPONSET Paroid Roofing for years. The record of NEPONSET Roofings is the strongest argument for their use.

Talk with a man who has used NEPONSET Paroid Roofing and get the story first hand. Our dealer can give you the name of such a man in your own locality. There are different NEPONSET Roofings for different types of buildings, and NEPONSET Waterproof Building Papers for every purpose.

Write for Book of Plans and Information on Poultry Houses
Be sure to state just what you are building or repairing and give exact dimensions.

NEPONSET Dealers everywhere. If you do not know the one in your locality, ask us.

A Promising New Spray.

For the prevention of apple scab and other fungous diseases of the apple, experiments conducted by the department of agriculture indicate that a new spray known as iron sulphide may be of great value to the orchardists. This new fungicide in the tests conducted in Virginia orchards received practically perfect marks both as to its fungicidal action and to freedom from injury to fruit and foliage.

It has, however, a slight effect on the apple which may be a disadvantage with some varieties. The fruit where this spray was used was slightly greener in appearance than the un-

EWING'S Reliable Seeds

Every seed you sow tries to reproduce its ancestors, in size, shape and flavor. But examine the seed as closely as you will, you cannot tell whether these parent plants were good or bad. You have to trust your seedsman for it.

You'll never go astray if you trust Ewing's Seeds. They

Stand On Ewing's Record

For over forty years we have been selling Field, Flower and Garden Seeds here in Canada, so people have had plenty of chance to prove Ewing's "Reliable" Seeds.

The result is that last year we sold far more than ever before. Could you ask for a better proof of quality?

Don't take chances! Get the seeds you know will turn out right—Ewing's Reliable. Send now for our Illustrated Catalogue, and if your dealer hasn't Ewing's order direct from us.

F. G. JAMES, Blowmanville, Ont.

sprayed fruit, particularly toward the stem end. This was scarcely noticeable on York Imperials, but the fruit of the Ben Davis, although fine looking, was not so brilliant. Allowing the fruit to hang a week or two longer would no doubt give it more color.

The new form of iron sulphide mixture is made by using the self-boiled lime-sulphur as a basis. A barrel of this is prepared and diluted to about 40 gallons. Then three pounds iron sulphate (coperas) is dissolved in six to eight gallons water and added. The lime-sulphur turns inky black when the iron sulphate is stirred into it. Two pounds arsenate of lead are then added and the mixture is ready to apply.

In a barrel holding 50 gallons, place eight pounds of fresh stone lime and pour over it enough water to nearly cover it. As the lime begins to slake, dump in eight pounds powdered sulphur. This should have been previously run through a fine sieve to break up the lumps and mixed with the water to a slush. Stir the sulphur into the lime with a strong paddle and add enough water to keep the lime from boiling and the mixture in a slushy condition.

The stirring should continue occasionally until most of the lime is slaked into a paste, meantime keeping the barrel covered with burlap sacks to retain the heat. In 15 to 20 minutes the lime should be thoroughly slaked and the sulphur partly combined. Then the mixture must be diluted with a small quantity of water and then with enough to fill the barrel.

Thick Necked Onions.

Subscriber, Mt. Carmel, P. E. I.:—Last spring I planted a field with onion seeds. The land was manured the previous fall, but before seeding, I again gave a covering of fresh manure. The field looked beautiful, but when time came to ripen they still seemed to show their vitality in keeping green. At last we decided to pull them, but to my great surprise their necks were so large that I thought I had a field of pine apples.

I would like to know the reason of these big necks with so small a seed. Any information on the subject will be greatly appreciated.

Ans.—This trouble may be caused by use of poor seed, by growing the crop on soil which is too wet or which has just lately been turned over from sod, or by the use of fresh stable manure. The onion is a plant which quickly runs down if the seed stock is not carefully grown and selected. Cheap seed is always to be avoided. Dry soils tend to produce smaller tops as compared with the size of the bulbs than wet soils. It is better to apply the manure for an onion crop the fall before, or if applied the same spring as the seed is sown it should be thoroughly rotted and capable of mixing intimately with the soil.

PERCY J. SHAW.
Horticulturist.

N. S. A. College, Truro, N. S.

Onions become thick-necked from various causes. Unsuitable seed will give thick necks. Seed of the same varieties from one source will give good onions, while from another will be thick necks. A wet season will induce thick necks, and also an excess of nitrogen when there may be thick necks, though the seed was obtained from good bulbs the previous year. Irrigating too late would be likely to induce thick necks. Thick necks cannot be detected in the earliest stages.

W. MACOUN,
Horticulturist.

Ottawa.

Do You Know Why The SHARPLES

Dairy Tubular Cream Separator Is The Only One That Will Satisfy You?

It is because Tubulars are the only modern cream separators. You cannot expect satisfaction unless you have a modern machine.

There are only two known ways of building cream separators—the old way and the modern way. We abandoned the old way over ten years ago, when we discovered and patented the modern way which is now used exclusively in our machines. Other manufacturers still use the old way. The law prevents them from imitating Tubulars.

The old way is wrong. This is clearly proved by the fact that separators built that way have too little skimming force and must have bowls filled with disks or other complicated, hard-to-wash, quick-to-wear parts. The new way is right. This is proved by the fact that Sharples Dairy Tubulars contain no disks or other contraptions, produce twice the skimming force, skim faster and twice as clean as others.

Tubular sales exceed most, if not all, others combined. Tubulars probably replace more common separators than any one maker of such machines sells.

Tubulars wear a lifetime. Guaranteed forever by the oldest separator concern on this continent. One of Canada's leading industries. You can own and use a Tubular for less than any other kind. If you do not know our local dealer, ask us his name and address. Write for catalogue No. 194.

DAIRYING.

C. W. McDougall, Dairy Inspector, staff Contributor.

Winter Dairying.

One of the greatest developments in the field of winter dairying and experimentation has been the silo. It required considerable experiment with various crops to discover which would be the cheapest and the best crop to grow for green winter feed for the dairy. Corn as an ensilage winter feed was acknowledged by experiment stations as being the cheapest to handle and as giving the dairyman a fairly good balanced ration. Some of the earlier experiments with corn ensilage were failures, but each experiment served to bring us closer to a perfect feed, with the result that it was finally found that corn which has just reached the highest point of maturity with fodder yet green and the milk in the grain just in the pasee stage was the very best and cheapest winter feed it was possible to grow.

With the silo properly constructed, being absolutely air-tight on the sides and bottom, and with the corn harvested at the right time and being run through the ensilage cutter into the silo and evenly distributed, so that the settling of the ensilage is the same from the top to the bottom of the silo, you can rest assured you will have a nice, sweet, palatable and succulent feed for your cows through the cold winter months The cost of keeping cows through the winter on this en[illegible] has been brought down to the minimum, and you can expect just as good a flow of milk from cows fed on this class of fodder during the winter months as you can expect from the same cows on pasture in the summer months. With all those facts before us, and the higher prices for dairy products during the winter months, it stands to reason that better profits can be made from winter dairies than can be expected from summer dairies.

In arranging plans for a winter dairy, you of course will not overlook the fact that your cows must freshen either in the fall or early in the winter. A great deal depends upon the attention of the dairyman to his herd. In order that you may derive the full benefit of the feed consumed and the outlay of cash in preparing comfortable quarters for your herd, you must not forget it is absolutely necessary to have a good, free circulation of fresh air through the animals' quarters, and the sanitary conditions of these quarters must be carefully looked after in every detail.

Great care should be exercised in the selection of cows for the winter dairy. See to it that you have good, strong, healthy cows—good milk and butter producers. It does not pay any dairyman to keep a cow that will not show good profit over and above the amount of feed she will consume and the labor required to take proper care of her. There is no excuse for a dairyman's keeping a poor cow, or in other words, having a loafer in his herd, as the scales and the Babcock test have made it possible for him to determine in the beginning whether he can expect the desired profit. After having made this test of his herd and finding a cow that does not show a profit over her keep, he should let her go to the slaughter, and make room for those that will pay their way and will show a profit. Should you find in making the test that you have in your herd a cow that does not come up to your expectation, and in your judgment you believe that she can, with proper care and treatment, be developed to a higher standard, it may be well to give her a chance to prove her capacity as a dairy cow. If you follow these suggestions it will be only a short time until you have a foundation upon which to build a high-class herd with very attractive records. You will always find a handsome deman for offspring of such a special herd, and fancy prices can be realized in this way.

Another great advantage of winter dairying over summer dairying is that when cows come fresh late in the fall and go into comfortable quarters with an abundance of good, palatable fodder judiciously served to each cow, they will, without doubt, come out of their winter quarters in fine condition, and when put out to pasture in the spring will give good returns for the care shown them during the cold and dreary winter. Any cow that has freshened in fall and received good treatment in the winter, can always be depended upon to produce for her owner fully twice as much butter or milk during the calendar year as the cow that has freshened in the springtime.

Making Good Farm Butter.

Churning is one of the most important steps, but a good separator is also a valuable help. The man who keeps eight or more cows should have one. As to the make or machine, all have good points, and will do good work when the milk is separated direct from the cow, and will skim off the cream so closely that there is no need of worrying about what is left in the skim milk.

If the milk is cold and out of condition do not get an idea that a machine will correct the evils. although it will be more desirable than setting it in pans or the so-called gravity separator. It may be possible to make a fine quality butter from the old way of setting, but it is rarely done.

In running the separator do not have the milk too warm, and it is my experience that the separator will give better grain to the butter at 60 degrees than when it is heated up to 80 degrees. Any machine will do it if you decrease the capacity or increase the speed.

Another important point in running the machine is to have thick cream. Set the separator so that the cream will be as thick as it can be churned, or about 35 to 40 per cent. of fat in the cream. Cream churned in this manner will churn more rapidly and leave a smaller amount of butter fat in the buttermilk at 55 degrees than will cream containing 18 or 20 per cent. fat at 60 degrees. The great secret of churning at a low temperature is rich, thick cream.

Another important point is to cool the cream as soon as possible after it is separated to about 55 degrees, and hold it there a few hours until it is churned up to ripen. Carelessness in handling the cream after it is separated is the cause of a lot of poor butter. After we have the cream cooled comes the question of how to ripen it in the proper manner. As a general rule, I would not churn sweet cream, but would allow it to ripen. You will get fine flavored butter from sweet cream, but it requires an expert butter maker to do the work right, and it is a very difficult problem to get an even quality.

Ripening cream means simply holding it at a proper temperature until it sours. Keep the cream well cooled until there is enough to let ripen for a churning, then warm it all up in one vessel to insure its being uniform, and thus avoid loss in churning. Raise to the temperature of 62 to 68 degrees, and keep there until it has ripened and is ready to churn and then cool to 52 to 55 degrees. When right to churn the cream should have a satin gloss or finish, and when poured it will look like silken cloth.—W. Milton Kelly, in Farm and Home.

Some of the Losses in Dairying.

LOSSES IN MILK PRODUCTION.

Cows that require excessive feed for 100 lbs. of milk.

Cows not constructed for milk production.

Unsuitable food; too little food.

High cost of feed; feed not home grown.

Producing milk for too short a season.

Producing milk at wrong season

Breeding or raising mongrel calves.

Poor herd management.

LOSSES THROUGH IMPURE MILK SUPPLY.

Losses in yield from over-ripe milk.

The riper the milk the more casein broken down.

Changes in milk solids.

Fast working.

Rough handling.

Over drying.

LOSSES IN YIELD FROM GRASSY MILK.

Bacterial changes in milk solids.

Extra acid and drying.

Slow working.

Losses in quality from over acid milk.

Losses in quality from grassy milk.

LOSSES TO PATRONS IN COOLING MILK.

100 lbs. of 3 per cent. milk makes 8.10 lbs. of cheese; at 11c per lb., 89c.

100 lbs. of 4 per cent. milk makes 10.40 lbs. of cheese; at 11c per lb., $1.14.

100 lbs. of 5 per cent. milk makes 12.50 lbs. cheese; at 11c., $1.37.

Showing that the man furnishing rich milk is losing money under the cooling system.

LOSSES IN USE OF STARTERS.

Loss in cheese quality from their abuse, bad flavor or too much.

Loss in cheese yield from their abuse.

Waste.

Losses in method of preparation.

Starter does not increase yield of heese to an appreciable extent.

The Cow and the Man.

The North Dakota College sends out the following circular about cows:

"If a cow that gives 175 lbs. of butter in a year is worth $60, how much is a cow worth that gives 350 lbs. of butter in a year? Suppose that butter will average 25 cents the year round, and it will do better, and that the feed is worth $40 for the year. The first cow would give a return of $43.75, less $40 for feed would leave a profit of $3.75, counting that the milk, calf and manure

THE CAPITAL.

MUMFORD BROS.

PRODUCE COMMISSION MERCHANTS

MUMFORD'S BUILDING, ARGYLE ST.,

Halifax, N. S.

Personal attention given to sales of Butter Eggs Hogs Beef, Poultry, Fruit, Vegetables etc., Consignments solicited. Proceeds of sale remitted promptly, Halifax prices sent on application TELEPHONE 1905.

pays for the labor. The second cow would give a return of $87.50 for butter and would give at least 4,000 pounds more of milk, which at 20 cents per 100 pounds (and it is worth more for feed), would bring $8. The calf from the good cow is also worth more, let that go. The return would be $95.50, less $40 for feed, or a profit of $55.50 on the same basis as the other cow made a profit of $3.75. It would take practically 15 175 pound cows to make as much profit as the one 350-pound cow. $3.75 is 6.2 per cent on $60, and $55.50 is 6.2 per cent or $985.16. On the basis of percentage income, when the 175 pound cow is worth $50, the 350 cow is worth $895.16. The keeping of the cow should be looked at from the business standpoint. The poor cow is dear at any price, but the good cow is usually not rated at her full value."

Our answer is that it depends on the man in front of the cow, for the feeding and care is what does it. Put a purebred cow in the hands of a scrub dairyman and a scrub in charge of a good man and we will back the latter. We buy fertilizers and feeds on the strength of their analysis—or at least we ought to—but the real test is the man who uses them. Some farmers will waste plant food or feed. That is why the dairy value of a cow or the farm value of a fertilizer will depend on the man.

The Real Value of a Calf.

The size of a calf when born is not the greatest factor in determining his value. The question is, "Has the calf inherited the qualities which will make it valuable for the purpose for which it is intended when grown to maturity?"

That many farmers lack purpose in breeding and lack faith in pure-bred animals is often due to the fact that they can see no immediate return in cash. In the improvement of a herd by the use of a pure-bred sire, it takes about five years before an increase in the milk production is obtained, due to the influences of the bull. After this period, however, a rapid increase can be expected.—Prof. Fred Rasmussen, N. H. Agricultural College.

Hard Milkers.

A cow or heifer with a nice large, well developed udder with four good sized teats placed squarely upon same seems like a source of pleasure, providing that she is an easy milker, but the same sort of cow or heifer being termed as a hard milker is as a rule a source of annoyance, especially to those who do the milking.

Owing to the fact that a cow or heifer is a nice easy milker, she is usually milked out clean at each milking. In this way she is enabled to keep up her regular flow of milk, while on the other hand if she be a hard milker the milker becomes discouraged and impatient, and fails to draw out the natural quantity. The cow or heifer will then soon show the effects of this by drying up on her milk. In this way many a valuable cow has become practically worthless as a milk producer.

Hard milking in cows or heifers can be positively overcome in a short period of time and in a very economical way, but by the use of the teat plug. The teat should be washed with an antiseptic solution, the teat plug should be dipped in a like solution, then into a little ointment and passed into the points of the teat. Being self-retaining it should be permitted to remain in the teat from one milking to another. In this manner hard milking can be made a thing of the past.

WINDSOR DAIRY SALT

The wise housewife knows the importance of always keeping a good supply of Windsor Dairy Salt on hand.

She knows that Windsor Salt makes the best butter—and she is not satisfied to make any other.

Windsor Dairy Salt is both a money-maker and a money-saver.

It makes money for farmers and dairymen because it makes butter that brings the best prices.

It saves money for them because, being absolutely pure, it requires less to properly salt the butter.

LIVE STOCK

Pigs on Rape.

A "Subscriber," calls for the experience of someone that has raised hogs upon rape pasture. It's a pity that more farmers do not call for just such pointers. I will undertake to answer at least part of the questions.

First—Rape can be grown in any part of the province and upon any land that will retain moisture enough to carry it through our dry season.

Second—Hogs need about an average of 1½ pounds of good middlings each per day. Commence with less and end up with more, as the hog gets larger.

Third—Hogs can be allowed to run on rape by ringing or snipping their noses. The writer snips the hard bunch that turns up on the nose; use a very sharp knife, and never mind if you do not get it way off.

Fourth—It will do well on the same ground for a number of years, and only needs little more than half the fertilizer required at first.

Fifth—It makes good use of phosphoric acid. A fertilizer carrying about 4 nitrogen, 7 phosphoric acid, 6 potash will give excellent results; but perhaps the very best fertilizer for rape is the bottom of the manure pile and the scrapings of the yard and cellar.

So, Mr. Subscriber, get your rape in early. Have two pastures or more, if possible, but one is far better than none. Figure that you can make the rape answer for at least half the ration. I think the following is a good ration: 1-3 milk, 1-3 middlings, 1-3 rape; but as you get used to rape, you will, no doubt, use 1-2 rape. But you will understand that the hogs must be finished off with meal or corn. They will put on flesh faster after being fed rape than they would after being fed upon such high feed as corn, so part of this gain goes to the credit of the rape (or any other rough feed.)

If you were to sell your hogs without finishing off, you would lose the profit there is to be had in the finishing. But watch and even "weigh" to know when you have reached the limit.

Frost in the spring will not kill the young plants unless it is a true freeze, so get it in quite early. Plan to have some all summer, and be sure to have some in the late fall. You can favor the rape a little through the dry spell by feeding weeds, green corn fodder, etc. If at any time you should find that you had not sown ground enough, it will be better to take the hogs off and allow the rape to get a new start.

A good way to feed rape and get all there is in small pastures, is to yard the hogs, except early mornings and before other feed is given. both morning and night. Rape can be used as a catch crop late in the season.—J. F. Bridges, in Maine Farmer.

Substitutes for Skim Milk.

The New York Cornell station conducted experiments with three lots of calves in 1907-8 and with four lots in 1908-9, with a view to finding a satisfactory substitute for skim milk.

The feeds compared were skim milk, skim-milk powder, and three commercial calf meals. The calves were fed all the dry grain they would eat up clean. This grain was a mixture made up as follows:—Six lbs. of corn and oats, ground half and half by weight; three pounds of wheat bran; and one pound of oil meal. The cost of the mixture was $29.55 per ton. A mixed hay, with a good percentage of clover, was kept before the calves at all times.

It was found that a tablespoonful of soluble blood meal mixed with each feed kept the bowels of the calves in good condition at a small expense.

Only one of the commercial calf meals used gave satisfactory results from the standpoint of cost and even that gave an average cost per pound of gain of 8 to 9 cents.

The results for the two years are summarized as follows:—

It is evident from the results of these experiments and those elsewhere that good, strong, healthy calves can be raised without skimmed milk or milk of any kind after the first 30 days.

Skimmedmilk, hay and grain make the best substitutes for whole milk in raising calves. A calf fed on skimmed milk should reach the weight of 300 pounds at five months of age, and the gain should be made at the rate of 1½ pounds per day at a cost of less than 5 cents per pound.

If skimmed milk is not at hand, the best substitute for it seems to be third-grade dried skimmed-milk powder. The average gains made in this experiment were not so large as with the skimmed milv, but were good. A calf fed on this food should reach a weight of 250 to 260 pounds at five months of age, making an average gain of 1.25 pounds per day at a cost of less than 6½ cents per pound.

Feeding Sheep for Breeding.

For more than 40 years I have been in search of the golden hoof. When first I commenced to handle sheep the method was to buy ewes in August, put them on good feed, put bucks with them, painting the bucks before turning them with the ewes, and renewing the paint each evening before turning them loose. All ewes covered were marked. When 10 or 12 were served we put a permanent mark on them and entered in the book the time when they were due to lamb. This was continued until all were served that would breed in season for early lambs. Marking the ewes enabled us to handle a large flock, even though our quarters for lambing ewes in winter were limited.

As soon as one bunch of sheep had dropped their lambs they could be moved to cooler quarters and another bunch take their place. The balance of the flock not bred was fattened for market. Usually about two-thirds would breed. The breeding ewes being generously fed from the time they were bought until the lambs were fit for market, were themselves nearly all good mutton and were sent to market with the lambs. They would usually bring as much or more than they cost the previous fall, leaving the wool and lambs for our trouble and expense.

Managed in this way we found it safe to reckon on a good margin of profit and had time brought no changes we likely would be moving along those lines now. But changes came. First, suitable ewes became so scarce it was almost impossible to procure them. Next the other fellows were getting ewes that would lamb much earlier than the common sheep of the country, and instead of April and May being the top of the market time it shifted to February and March. There seemed to be no other way than to become sheep breeders ourselves. Up to this time we had been speculators depending upon someone else to breed the sheep which we bought and used as feeders.—W. C. Whitman, Maine.

The Gourlay Piano appeals particularly to an Appreciative Class of Buyers. The more discriminating the Buyer, the more easily is the Superiority of the Gourlay apparent.

Gourlay Pianos

are all of One Quality—the Very Best. If we took a commission to make a single Piano for $1,000 it could be of No Better Material or Workmanship than we regularly use in any one of our simpler, more moderately-priced styles. We could spend more money on ornamentation, but nothing to improve quality.

Will you examine a Gourlay?

Gourley, Winter & Leeming,

188 Yonge St., Toronto, Ont.

Growing Young Bulls.

One of the greatest of mistakes made by the growers of pure-bred sires is feeding them too much concentrated food and keeping them too fat during the first year of growth. Particularly true with young bulls of the beef breeds. The object in keeping them so fat is to make them sell at an early age. For this condition the buyer is more responsible than the seller. The latter has learned that the average buyer will select the fattest calf because of his plump appearance.

Fat covers up weakness, a fact which purchasers do not duly consider. The ability to choose a bull in moderate condition does not seem to be cultivated by the many, notwithstanding the great value of such ability. Even buyers of young dairy bulls are likely to give preference to young bulls that carry the most flesh.

When one is growing baby beef, there are good reasons for forcing the feeding. With that class of animals forcing is necessary, but it is not necessary with animals that are to stand at the head of herds. Development more than normally quick will be of no advantage to them. With them that style of development should be followed that will result in fullest and most vigorous growth when matured.

In growing young bulls, fodders that are leguminous are to be preferred. These are such as clover, alfafffa, pea and vetch hay, fed twice daily. For meal there is nothing better than a mixture of bran and oats, with a little oilcake added. Calves of the best breeds may also be given more or less cornmeal to maintain flesh, but usually the proportion of this should be small. Calves reared thus and given ample exercise will seldom fail as breeders.

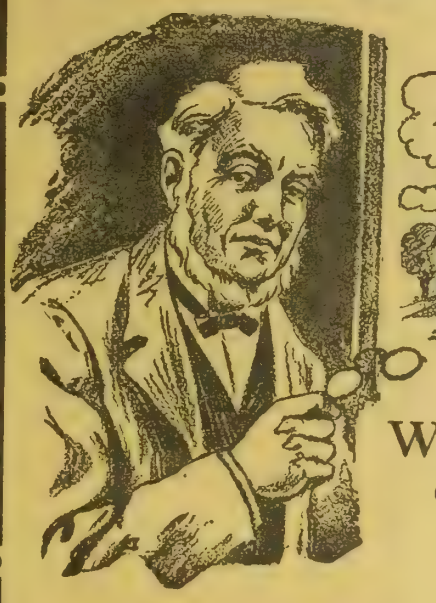
Beeef-Raising.

Mr. President, ladies and gentlemen, when I was asked to say something on beef raising, I acceded to the request with the understanding that what I had to say would be short, and that other members of the Association, better qualified than myself, would take up and discuss this very important matter. I say important because farms on which, a few years ago, there were always to be found good, beefy steers, to-day there are not any, or if any, of a very inferior quality. I am aware that conditions on the majority of farms in Nova Scotia, would not warrant the raising of beef or fattening cattle on a very large scale, but the raising and fattening of a few good steers, such as can be done on a farm where the system followed is that of mixed farming, is one of the most profitable lines. We cannot raise crops without manure, and we cannot get manure if we do not keep the cattle to make it. Therefore, I say that stock raising is the foundation of successful farming. At a present time we are not producing beef enough to supply our local market. Even here in this town of Windsor with a population of less than four thousand and surrounded by fertile farms, one firm alone has sought from the Province of Ontario, one thousand dollars worth of beef per month to supply their customers. This supply cannot be depended upon as the West is fast filling up and a large proportion of the beef produced, will consequently be used

there. Another fact is the preference of our people for home grown beef for which they are willing to pay. And it is for us, the farmers of Nova Scotia, to rise to the occasion, and endeavor to produce beef enough to supply our own demands. It is not necessary to produce large quantities of expensive mill feed, but to raise on our own farms all the mixed grain and roots required. To make a success in this business what is wanted for the purpose of producing good steers is a large growthy cow, one that would weigh from ten to thirteen hundred pounds. Not of the extreme beef type, because this cow must produce milk enough to feed her own calf, and also to give a good return in the shape of butter. Such a cow should be broad behind, with a well-filled smooth loin, ribs well sprung, smoothness of shoulder, and be distinctly feminine in appearance. This cow should be mated with a bull of the extreme beef type, Hereford preferred, short legged, close to the ground, with a good back and loin.. Just as smooth on top as it is possible to be. Never attempt to make beef from calves bred along dairy lines. If you do, you will be doomed to disappointment. Instances are on record where steers of this kind having been fed alongside of beef steers, have made apparently corresponding gains. But it was found on being dresssed that one had made a large amount of rough tallow worth four cents per pound while the other had been making prime beef worth twelve cents per pound. Plan to have the calves come early in the year, and feed the cows liberally. Three feeds of hay a day, what they will eat up clean. Half a bushel of turnips divided into two feeds, four quarts of mixed grain per day. By this system of feeding, the cows should give a liberal supply of milk. Sufficient to keep the calf growing and also make some butter. We let the calves nurse until they are three weeks old, then take them from the cow, and as soon as they learn to drink, gradually substitute skim milk, to which we add a little flax seed jelly, gradually increasing the skim milk and flax seed as the calf grows older. Should the calf show any tendency to scour we add a little wheat flour. Put within the reach of the calf a box containing a few whole oats, which it will soon learn to eat, also some bright clover hay. This system of feed is followed until the calves are about five or six months old, during the summer we prefer to keep them in the barn where they will not be annoyed by flies or suffer from the heat. I might mention here that we always dehorn our calves as soon as possible by applying caustic potash to the horn as soon as it can be felt under the skin. This in my opinion, makes them quieter among themselves when loose in box stalls where we usually keep them until they are eighteen months old. During the winter months the steers can be fed some rough hay and straw, supplemented by pulp turnips and sufficient grain to veep them thriving. If it is deemed advisable to market these steers at twenty months of age they should have good pasture until such time as they are sold, or if it is intended to carry them over another winter they could go into a rough pasture during the summer with a run on the after feed in the autumn and be in good condition to finish off during the next winter. I cannot too forcibly impress upon you the necessity of keeping the steer in comfortable quarters. The stables should be well bedded to induce the cattle to lie down as it is at this time they are making their best gains.

An address by Mr. Wm. O'Brien before the N. S. F. A., Windsor, N. S.

A Straight Talk To Farmers



By a Farmer

Subject:

The actual test or the doubtful guarantee—WHICH?

When it comes to buying shingles, which counts most with you—twenty-five years of actual wear and tear or a leaky guarantee?

The Actual Test—
What It Proves

"Eastlake" Steel Shingles have proven their durability by the actual test of time.

A quarter of a century ago scores of public and private buildings were roofed with "Eastlake" Metallic Shingles.

These roofs are in excellent condition and certified as such by practical building inspectors.

Think of it! For over twenty-five years scores of "Eastlake" shingled roofs have withstood the ravages of all kinds of weather—the lightnings and torrential rains of summer—the hail, snow and sleet of winter, and yet they are in perfect condition to-day.

Isn't that conclusive evidence that "Eastlake" Steel Shingles make a permanent roof?

The "Eastlake" is the ONLY steel shingle that can boast of such a record.

"EASTLAKE" STEEL SHINGLES

Lightningproof, Stormproof and Rustproof

A Paper Guarantee—
What It Stands For

Did you ever stop to figure out one of those so-called metal roofing guarantees?

Did you ever discover really what it guaranteed?

You find that it is merely a claim—and claims alone will never satisfy the shrewd buyer.

He rightfully demands proofs. He wants to know on what grounds the claims are based.

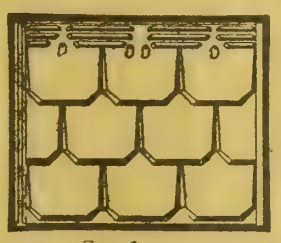
Unless the article has successfully undergone an actual test, a paper guarantee appears a joke.

Many times it is a cloak to hide some weakness of the roofing it guarantees.

Ask your lawyer about it. He will tell you that, stripped of its exceptions and provisions, all high-sounding phrases, little else remains.

It really guarantees nothing.

Kind of risky when the guarantee is as leaky as the roof it guarantees.



You're not asked to buy the "Eastlake" on any paper guarantee—not asked to believe a single claim which the shingles have not proven.

You're only advised to buy the "Eastlake"—if you want a permanent roof, because the durable and weatherproof qualities of "Eastlake" Steel Shingles are positively known. They have been proven by actual wear and tear test.

Some day you intend putting a lightning, fire and stormproof roof on your house or barn. Then you should write to-day for this free booklet, "Eastlake Metallic Shingles." It contains information that will interest you. Send a postcard at once—if you don't you will forget.

—The Philosopher of Metal Town

All kinds of sheet metal building materials—ceilings and walls, siding, cornices, corrugated iron, conductor pipe, etc.—you can have a catalogue simply for the asking. Mention it on your post card.

The Metallic Roofing Co Limited

TORONTO & WINNIPEG

Nova Scotia Farmers in Annual Convention at Windsor, Nova Scotia.

(Continued from last issue.)

The Exhibition Commissioners' Report created an animated discussion. Its adoption was moved by W. R. Barss and seconded by A. E. McMahon who considered the prvincial exhibition one of the province's best assets in its days of upbuilding and development.

MR. PETER INNIS thought that the ordinary farmer did not get much benefit from the Halifax exhibition. He thought it was a mistake to hold it at Halifax and suggested that it should be held in county towns in the centre of our most populous agricultural districts.

MR. BLANCHARD, Truro, thought the prize list should be made more favorable to the average farmer.

MR. SHAW, Shubenacadie, was of the opinion that the show was continued too long.

MR. BARSS, Lunenburg, would advocate a provincial exhibition every third year.

MANNING ELLS, Port Williams, favored the upholding of the provincial exhibition at Halifax.

MR. A. S. McMILLAN, Warden of Antigonish Co., blamed the Halifax citizens for not being more patriotic towards the exhibition. He would not like to see our provincial fair degenerate to the status of a moving circus.

MR. HUGH FRASER, Elmsdale, thought breeders of grade stock did not get a fair show. Several classes of grades were pitted against each other in show ring and consequently farmers did not show so much interest as they otherwise would show.

MR. JUSTICE LONGLEY, president of the Halifax Exhibition was present and on the chairman's invitation spoke on the exhibition question in his usual clear and comprehensive style.

He rehearsed the steps which led up to the starting of the Nova Scotia Agricultural and Industrial Exhibition in 1875, and said at that time Halifax was looked upon as the only suitable place to hold the Exhibition, and the farmers thought so too. Then the understanding was that if held at Halifax, in case of any decifit, the city should bear one half and the Government the other. This has been done. From 1896 up to the present, he (Longley) had devoted unremitting toil to the work without receiving one cent of remuneration, and if any farmer present thought he could do better, let him take his place and the abuse as well, and he would willingly and cheerfully step down and out.

When he was appointed Judge, he retired from the Commission, and quietly renounced the world, the flesh and the devil.

But the Commission again sought his services. They had done as well as any twelve men could have done, and it was no use to snarl at them and stand by and find fault, but to join hands with the Commission and see what is best to be done. The $110,000 first grant did not begin to do the trick, and $30,000 additional was secured. The Exhibition plant had cost $180,000, and excepting Toronto, was the finest in the Dominion. The buildings and grounds at St. John and Charlottetown were not to be compared with ours, either in extent or value.

As matters progressed the women asked for a building in which they could exhibit their handiwork in various lines, and the Commission yielded, and the farmers know very well that the women cannot be ignored. Then the mining interests asked for a permanent building in which to exhibit the products of various industrial companies. This also was provided. Then came the Fisheries Building, but he frankly confessed that in this department there had not been the success desired, and the Commission had to go out into the highways and byways to secure anything like a satisfying exhibit in this most valuable industry.

Farmers in Attendance at the Setting of the Illustration Orchard on Farm of Ed. Robinson, Little Shemogue, Westmorland County N. B.

It took $30,000 to run theShow on anything like representative lines. Out of this $2000 insurance which the city would not assume, the buildings had to be cared for, a watchman ever on the grounds, and he did not know where a dollar could be cut off.

St. John had been quoted as able to run its exhibition without a deficit, but where we had a grant of $5000 they had $10,000 from the city and government. If up to this hour the exhibition had from the start such a grant instead of a deficit there would today be a surplus of $11,000, and there would have been a surplus year after year. The present deficit looked bad, but there was the same fuss and fret when it was smaller, and those who should have been friends go about groaning and moaning as if all had gone to the bad. What, with one thing and another, the Commission had up to the present been between the devil and the deep sea. Some complained about the prizes given for pure bred stock but was not this encouragement given to bring up our grade stock to an equality with the stock in other sections of the Dominion, and the good done was shown that when exhibitors came to our exhibition from Quebec and Ontario, with their high grade stock, we were able to take dollar for dollar with them.

It might perhaps be a little narrow minded, but henceforth the prizes for grade stock would be confined solely to Nova Scotia.

One of the reasons perhaps, why there has been a falling off in the attendance may be attributed to the fact that while the government formerly granted $4000 every three years to aid county exhibitions, special grants are now given every year. These annual county shows act as a kind of damper, militating against the success of the Provincial Exhibition.

Regarding the date he had always contended for as late a date as possible in order to induce as good an exhibit as possible of our fruits, vegetables, etc., but as a fruit show is held annually somewhere in Annapolis Valley, an earlier date has been arranged. In Toronto and other places the date was still earlier.

Reference had at this gathering been made to the Halifax exhibition. Let it be distinctly understood that it is the Nova Scotia Agricultural and Industrial Exhibition, in which all the farmers have an interest and a financial interest too, for they had carried off fully three quarters of the prizes offered.

The 1st year 90,000 paid admission. 60,000 paid admissions would keep deficit within decent bounds, but when the figure drops to 40,000 or a little over there must of necessity be a deficit unless a larger grant is secured as in St. John. We cannot get along with present grant, with less than 60,000 paid admissions.

Experience has shown that no matter how good a show is, people must have special sources of amusement. Such attractions had not been on the programme for the last two years—the result, decreased attendance. This year there would be a change, amusements would be provided, and he hoped good would result.

A meeting is to be held at Truro to say whether we are to live or die. He would gladly have attended had an invitation been extended.

"The Exhibition is in your hands—it is your affair," said the Judge. And if this meeting can furnish some heaven-born men who can straighten out the tangle and solve the problem he would cheerfully resign in his favor.

Every man in St. John and Charlottetown stands by their exhibition managements most loyally, and he thought the commission had a right to expect and demand the loyal and hearty support of every Nova Scotian

Had this support been given we would now be in a different position financially. Said Justice Longley, "You have $180,000 expended in the finest exhibition grounds and buildings in the Dominion, with one exception only, and what are you going to do with it?"

MR. CLAYTON, of Halifax, made a brief address, stating this was the first time he had attended a meeting of the Farmers' Association, and it was an inspiration to see such a large gathering of representative men to discuss matters affecting the great agricultural industry. Mr. Clayton said he had been on the exhibition commission eight years, his work being in connection with the industrial department. President Longley had given much of his time and talent to bring success to the exhibition. The deficits and dwindling attendance caused the commission much solicitude. The abandonment of the amusement feature he considered a mistake. Two years ago there was bad weather, hardly one whole fine day and many who came to the city did not go to the exhibition at all. The railways acted unfairly. They added the admission to the railway ticket, and when the people did not attend the Commissioners could not produce the tickets and they did not get what the people had paid.

One gentleman had spoken of the admission of Halifax people to the exhibition. The Commission had privilege of granting passes to a few friends. For his part his ticket included himself and wife, others of the family paid. Very little leakage from this, Halifax certainly benefited by the exhibition both in the retail and wholesale trade, but they cheerfully bore their share of the deficit. The population of Nova Scotia was small compared with other provinces, but if all worked harmoniously in this matter he believed we should soon be in a better position.

DEFICIT NOT A SERIOUS MATTER.—Mr. Elderkin said it devolved upon him to say very little as President Longley had so clearly and so fully explained the whole matter. He did not consider the deficit a very serious matter, but we should try and bring it withing reasonable limits. Every loyal agriculturist should say to the government—this is our affair and you must not lay hands on it and destroy it. The exhibition stands as representing the agricultural and industrial interests of the Province. About the deficit of $14,000, half was borne by the city of Halifax, and half by the government, and not a word had been said by either party. So we need not worry over it. The Commission was doing all in its power to make it a success and to encourage emulation in all departments and the helping hand should be extended from all sections.

THE FREE PASSES.—There were several other speakers, among them M. McF. Hall, the exhibition manager, who showed to whom free passes were given, only 120 in number, these include the newspapermen of the province. The Commission are given strips of ten tickets, and it is only fair to say that of these not one has been used by them for the past two years.

MR. ANSLOW, of the Hants Journal, asked permission to ask Mr. Hall, if in return for the free passes, the newspapermen gave free advertising to cover the amount and more.

Mr. Hall replied that they certainly did so, and he was greatly indebted to them for help so willingly and so cheerfully given.

Messrs. L. D. Robinson, M. Griffin, Col. Spurr, H. W. Corning, S. A. Cook, Gordon Freeman and R. Robertson spoke in favor of upholding the Halifax exhibition and stop discussing a deficit that was well spent.

There were cries of "Question! question!" and when the president put the motion for adopting the report it was carried without a dissenting voice.

WEDNESDAY AFTERNOON

When the meeting was called to order Wednesday afternoon, Messrs. A. S. McMillan, Howard W. Corning, R. J. Messenger, R. M. Jackson and C. H. Black were appointed a committee on resolutions.

THE REPORT OF THE SUPERINTENDENT OF AGRICULTURAL ASSOCIATION

was given by Mr. Fuller. His report on County Farmers' Association showed that eleven counties are organized and in good working order.

Following is a summary of their operations during the past year and their standing compared with 1909:

County.	No. of Members.	No. of Meetings.	Total Attendance.	Average Attendance.	Total Receipts.	Total Expenditure.	Balance.
Annapolis	277 *100	46 *13	2924 *1803	63 *29	$164.45	$121.73	$ 42.72
Antigonish	181 *71	10 *3	280 —91	28 —17	1765.14	1601.92	163.22
Cape Breton	254 —46	16 —9	530 —460	33 —6	6522.89	4602.85	1920.04
Cumberland	188 —50	25 —7	885 —163	35 *5	119.10	101.35	17.75
Digby	76 —30	13 *9	300 *202	23 —10	153.50	70.30	83.20
Inverness	100 —17	19 —3	665 —170	35 —3	104.00	60.75	43.25
Kings	436 *47	48 —14	2773 *1308	57 *14	372.02	319.22	52.80

Pictou	223 —17	16 —9	589 —318	36	165.82	66.40	99.42
Queens	51 —16	6 —3	396 —157	66 —5	79.72	47.00	32.92
Yarmouth	226 —236	17 —1	1311 —536	77 —25	202.27	162.05	40.22
Total	2141 —77	227 *24	11110 *1994	45			
Un-organized Counties		42 *19	2620	62			
Grand Total		269	13730	51			

* indicates a gain. —indicates a loss.

Superintendent Fuller said: "We have met with the difficulty that a majority of the associations wanted meetings at the same time. I would recommended that the representatives of the different County Associations meet and arrive at some definite policy regarding the matter. The total membership of the eleven counties is 2141, a loss of 77. The number of meeting held was 227, a gain of 24, and the total attendance was 11,110, a gain of 1,994. The average attendance was 45.

"The number of meetings held in unorganized counties, and not reported in the following statement, was 42, a gain of 19 over the previous year. These meetings had a total attendance of 2620 and an average attendance of 62. This makes a total of 269 meetings, total attendance of 13,730 and an average attendance of 51. In addition to this, large assemblages were addressed at the fall exhibitions and at College Farm excursions.

"The meetings in unorganized counties were addressed by Dr. C. Gordon Hewitt, Dominion Entomologist, G. H. Vroom, Fruit Inspector for the Maritime Provinces; Harvey Mitchell Supt. of Cow Testing Associations, Fredericton; W. A. McKay, manager of Scotsburn Creamery, and members of the College Staff."

COUNTY EXHIBITIONS.

Following is a report of the exhibitions held during 1910:

EXHIBITIONS.

County	Gate Receipts.	No. of Exhibits.	Prize Money Paid	* Total Receipts.	Total Expenditure.	Balance.
Antigonsish	395.21	1300	610.45	1765.14	1601.92	164.14

COUNTY DELEGATES REPORTS.

ANNAPOLIS COUNTY conditions were reported by Mr. R. W. Elliott, as follows:—

We have pleasure in reporting that the past year has been the most successful in the seven years of the history of our association.

We secured a membership of 277—being a gain of 100 members over 1909. Forty Institute meetings have been held beside six local gatherings. Through the efficient management of Prof. Cumming and Mr. Fuller we have had the pleasure of hearing Dr. C. Gordon Hewitt, Dominion Entomologist; Mr. Drummond, of the Dairy Department at Ottawa; Dr. McRae, Veterinary Surgeon, who have all been well received.

Mr. W. H. Woodworth and Mr. L. D. Robinson, who are always in demand, have addressed many meetings on practical subjects, besides several other local men. Mr. J. N. Chute spoke at our meeting on "Co-operation" and Capt. C. O. Allen on "Spraying."

The grand Annual Farmers' Picnic, held at Lawrencetown, on the 18th of August, was an unqualified success. Principal Cumming and Dr. Standish were the drawing cards for an attendance of probably 1500.

Our crops have been abundant with the exception of fruit and the excellent prices received for apples help us to counteract the small crops. We realize that union in effort is very essential for success. The results of our work are satisfactory. We believe that farmers as a body are resolved to raise more hay, more grain, more roots; then with better farming and orcharding we hope for a prosperous 1911.

ANTIGONISH COUNTY. — Mr. Geo. Vinten reported for Antigonish County. We held a seed fair, with 160 entries on March 1st, when we

Was So Bad With Heart and Nerves Could Not Sleep At Night.

Many men and women toss night after night upon a sleepless bed. Some constitutional disturbance, worry or disease has so debilitated and irritated the heart and nervous system that they cannot enjoy the refreshing sleep which comes to those whose heart and nerves are right.

Mrs. John Gray, Lime Lake, Ont., writes:—"Last summer I was so bad with my heart and nerves that I couldn't sleep at night. There was such a pain and heavy feeling in my chest that I could not stoop, and at at times I would become dizzy and have to grasp something to keep from falling. I tried different things but never got anything to do me any good until I tried Milburn's Heart and Nerve Pills and I can now recommend them to all troubled as I was."

Milburn's Heart & Nerve Pills are 50 cents per box, or three boxes for $1.25, at all dealers, or mailed direct by The T. Milburn Co., Limited, Toronto, Ont.

MR. FARMER!

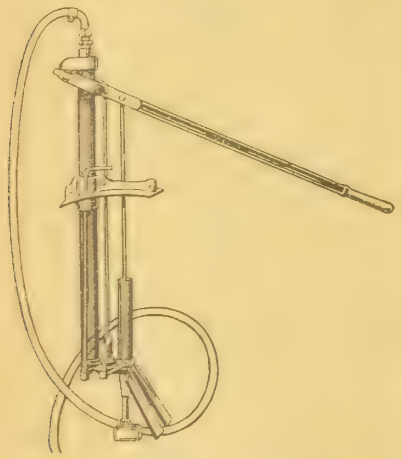
That boy you are going to keep at home on the farm, is entitled to a business training such as can be had at

FREDERICTON The Business COLLEGE

W. J. OSBORNE PRINCIPAL.

He has little chance of securing a knowledge of business in any other way. Send for free catalogue. Address,

W. J. OSBORNE, Principal.
Fredericton, N. B.



Why are Our Spray Pumps

'PERFECT' ?

Because we know how to make them. The other fellow showed how NOT to make them. Buy a "Perfect" and get the best pump on the market, from

Dealer in Meat, Poultry, Produce, etc. All consignments carefully attended to and returns are promptly made as soon as goods are sold.

paid out about $130.00 in cash prizes. In April, we held meetings at 10 different sections of the county. These meetings were addressed by Mr. C. F. Alward, of New Brunswick. In May we held a successful horse fair on the exhibition grounds. On October 6th and 7th we held a fall fair, when the entries numbered 1300. We have organized a Farmers' Mutual Fire Insurance Co., which is now in a fair way to become one of our most useful institutions.

CAPE BRETON COUNTY. — R. M. Jackson's report for Cape Breton County was as follows:—

"In reporting for our county I have to report another year of progress. With the aid of the Department of Agriculture we have been able to hold quite a few Institute meetings, but in a majority of cases the weather seemed against us, and our attendance did not come up to our expectations. Our membership, also, is a little below last year, on account of the smaller number of meetings and smaller attendance, but the prospects look bright for this year. At our annual meetings other years we have almost had to beg those present to join our association while this year most every one present was eager to join which goes to show that our association is doing something.

In addition to our regular work, we held our second exhibition which was a grand success, both as to the number and quality of the exhibits and also financially.

The County has had a very successful year. All crops were good, and hay exceptionally good, especially on the better cultivated farms, what we need is more agricultural education among our farmers. Demonstration Farms would be a great benefit to our County and other Counties as well because it is only by seeing things done right that we can really get them done better.

We are sorry to see so many vacant farms throughout the country, due in a great measure to the lack of interest taken by the fathers to interest their sons or give them any encouragement in the working of the farm and hence they lose interest and drift away to the towns and mining districts where they can get ready money and more social enjoyment. If our fathers would take more interest in their sons and give them some interest in the farm and its workings and not make a slave of him, there would not be as many vacant, or run-out farms in our country today.

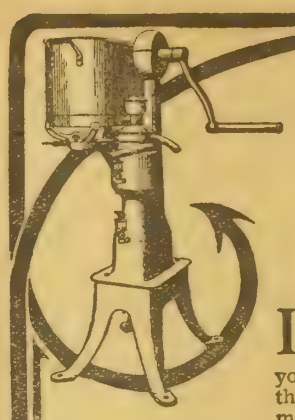
CUMBERLAND COUNTY. — Mr. C. H. Black reported that 1910 was the best year in the history of the Cumberland County Association. Their membership had increased owing to the encouraging work done in their county by Mr. L. D. Robinson. The attendance at their meetings had been satisfactory and much interest was being taken in agricultural education.

DIGBY COUNTY.—Mr. D. J. McKay, who reported for Digby County could not report as much progress as he would like but prospects were bright for advancement during 1911.

INVERNESS COUNTY.— Mr. McDonell reported good progress in Inverness County although their association is still in its infancy.

KINGS COUNTY.—W. H. Woodworth reported for Kings County as follows:—

"Representing as I do, one of the finest and most progressive counties in Nova Scotia, it will be expected of us to report to you something along the line of progress. This year has been one of steady growth. Meetings have been held in almost every section of our County; 48 including the annual meeting with an average of about 50. Our membership num-



OWNERS KNOW THE REASONS WHY IHC CREAM HARVESTERS PAY BEST

LET I H C owners tell you about I H C Cream Harvesters. They know I H C superiority by actual experience. The local dealer will give you the names of some owners near you. Learn from them why I H C Cream Harvesters skim closest, are most durable, easiest to clean, and easiest running. Let them tell you about the many profit-advantages of

I H C Cream Harvesters

Look over the I H C separators they are using every day. Then consider these facts:

The wearing out of parts and many other cream separator troubles are largely due to dust and milk getting into the gears. I H C Cream Harvesters are the only separators with dust and milk proof gears which are easily accessible. A glance at an I H C will show you this great feature. I H C Cream Harvesters are protected against wear at all points by phospher bronze bushings—not cast iron or brass bushings. I H C Cream Harvesters are constructed with larger spindles, shafts and bearings than any other separator. The I H C bowl is free from slots or minute crevices, which make it remarkably easy to clean. There are many other advantages which any I H C owner or the local dealer will point out and prove to you. I H C Cream Harvesters are made in two styles—Dairymaid—a chain drive machine, and Bluebell—a gear drive separator—each in four sizes. In justice to yourself, see an I H C owner or the local dealer before you decide on any separator. If you prefer, write for catalogues and all information to nearest branch house.

bers 436, entitling us to 9 delegates.

"A Seed Fair was held at Berwick with an afternoon attendance of 400, $85.00 was paid out in prizes. Addresses were delivered by Dr. Standish, E. S. Archibald and others. A grand excursion was made to Truro Agricultural College Farm on June 24th, which took 725 people. Everybody seemed pleased with the cheap rates and the warm welcome extended by the President and Staff of the College.

"Our Farmers' Association is very highly appreciated by all. We know of no better way of promoting agriculture than by having the subject discussed in a public meeting where questions are asked and answered and where the leading farmers of a county can give their views and relate their success or failures. Farmers meetings are very popular and we are asked to repeat our meetings in the best farming districts."

LUNENBURG COUNTY was reported for by Mr. F. W. Grant, as follows:—

"During the year we have held eleven meetings with an attendance of 457. These meetings were held at Bridgewater, Conquerall Mills, Maplewood, Barss Corner, Blockhouse, Rose Bay and Lunenburg, and they were addressed by Prof. Cumming, Prof. Archibald, Dr. Standish, W. H. Woodworth and a few of our local men.

"Subjects were: W. H. Woodworth, "Merits of An Agricultural College" "Rotation of Crops," "Orcharding," "Fertilizing" aad "Marketing of Produce." Dr. Standish, "Breeding and Raising of Horses and Cattle, how to feed them and treat them when they are sick." Prof. Archibald, "Dairying", "Soil Cultivation" and "Rotation of Crops". Prof. Cumming, "Agriculture in General." These meetings have been very helpful to our farmers and we extend our hearty thanks to the Department of Agriculture for sending us such able men in answer to our requests. It is an undisputed fact that the Farmers' Association is slowly but surely making itself felt in our county and we are getting some of the best men in our country interested in the work. You can plainly see better crops.

cultivation which insures better

"Many of us are interested in the growing of Alfalfa but we realize the fact that we must have thorough drainage first. Alfalfa cannot stand wet feet."

PICTOU AND YARMOUTH COUNTIES were reported for by A. C. Bell and John C. Corning respectively. The Farmers' Association was doing good work in both counties and its influence is being appreciated.

There was no report from Queens County.

THE FUTURE POLICY OF THE NOVA SCOTIA FARMERS' ASSOCIATION

was the subject of an interesting paper by Secretary Bryan. After some discussion on this subject the paper was handed over to a committee consisting of Messrs. J. R. Starr, Manning Ells, Miles Chipman, W. H. Woodworth and Secretary Bryan, to report at a future meeting.

THE BROWN TAIL MOTH CAMPAIGN.

Mr. Payne, one of the Brown Tail Moth Inspectors, reported the progress that is being done in the line of stamping this dreaded pest out of Nova Scotia and bespoke the hearty co-operation of all present.

HORSE RAISING IN NOVA SCOTIA

was the title of an instructive address by Dr. J. Standish, V. S., of the N. S. A. College, Truro. Questions were cheerfully answered by the doctor and an interesting afternoon was enjoyed by all present.

THE WEST INDIA LIVE STOCK TRADE.

Mr. E. B. Elderkin gave an account of his work during the past season in interesting West India stock breeders in Maritime live stock. The purpose of his address

Before. After.

THE FARM HOME

This Department is now being edited by a very competent lady, who will be pleased to answer all inquiries. She solicits the aid of all who are interested in home making. This aid may be given in the form of short articles dealing with your experiences, questions or timely suggestions. Ladies, this department is yours. Use it to the best advantage.

Let Us Be Kind.

Let us be kind;
The way is long and lonely,
And human hearts are asking for this blessing only—
That we be kind.

We cannot know the grief that men may borrow,
We can not see the souls storm-swept by sorrow,
But love can shine upon the way to-day, to-morrow—
Let us be kind.

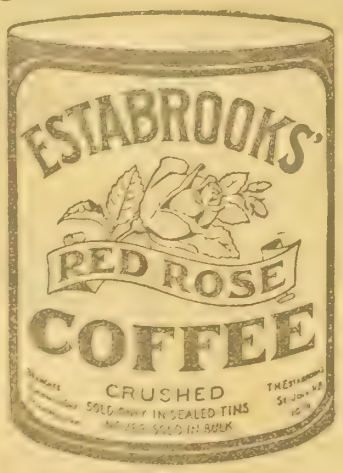
A tender word, a smile of love in meeting,
A song of hope and victory to those entreating,
A glimpse of God and brotherhood while life is fleeting—
Let us be kind.

To age and youth let gracious words be spoken,
Upon the wheel of pain so many weary lives are broken,
We live in vain who give no tender token—
Let us be kind.

Let us be kind;
The sunset tints will soon be in the west,
Too late the flowers are laid then on the quiet breast—
Let us be kind.

And when the angel guides have sought and found us,
Their hands shall link the broken ties of earth that bound us,
And heaven and home shall brighten all around us—
Let us be kind.

The flavor of Estabrooks' Coffee is always the same, because its quality never varies. If you picked one tin out of a hundred the coffee inside would be the same as in the other ninety-nine—rich, fragrant, temptingly good.



Sold only in 1 and ½ lb. tins.

Try it for breakfast to-morrow

In Time of War.

(Continued from last issue.)

"O yes; that was easily done, for on the back of the locket was inscribed, 'Austin Annesley to Clara Dermont.' Mr. Annesley wasn't at home, but his housekeeper expressed great joy at my having found it."

" 'You can see what makes it so valuable,' said she, handing it to me, after pressing a spring which caused it to open."

"A bright young face looked up to mine, so nearly what yours is now that you might readily be taken for the original. I didn't then know that Mr. Annesley was a bachelor, and supposed it might be a miniature of his wife, taken before marriage. Mrs. Ford, the housekeeper, told me that he was engaged to the lady whose name was engraved on the locket, but that she died suddenly on the very day which had been appointed for the bridal."

Miss Palmer spoke these last few words hurriedly, and Olive saw that the color suddenly left her cheeks.

"You are unwell," said Olive.

"I'm a little faint—that's all. It will soon pass off."

It did, and Olive was satisfied. She did not know, as she afterwards did, that the disappointment of Mr. Annesley was in many respects identical with one which had cast its shadow over her aunt's youthful days.

It haunted her still, that cry of mortal agony, which rang through the air as she stood watching for the approach of one who had long been absent. Sometimes it came upon her suddenly when her heart was full of sweet and sunny thoughts like the dash of a raven's wing across a nest of flowers.

The storm of the prec?eding day and night had ushered in one of the brightest and balmiest of May mornings. Miss Palmer and Olive hardly waited for the western breeze to dry the grass, ere they were out on the green sunny slope in front of the house, carefully raising up the peonies, tulips, daffodils and other early flowers bordering the paths, which had been beaten down by the wind and rain.

"I love old-fashioned flowers," said Miss Palmer, as she emptied the cup of a large red tulip, half filled with water, which must have been broken, to the ground, and perhaps broken, had not a tuft of pansies modestly lent the support of their gold and purple leaves.

"Do you love them better than the new-fashioned ones?" asked Olive.

"Yes, and such as these above all others, except lilacs, and the white and damask roses you will see, if you stay with me till June."

"Why do you love them better?"

"My mother loved them—so did my father. I never heard him say so but I have seen him looking at them in a way which made me know that he did."

"Oh, I understand now," said Olive, a shade of sadness stealing over her face, and her voice dropping almost to a whisper.

"It may be," resumed Miss Palmer "that that is why I think others must love them, and which made me place them here, for the sake of the passers-by."

"For me, among others, you will permit me to think," said a pleasant voice.

"Certainly," replied Miss Palmer.

At the sound of a strange voice, Olive started a little, and from beneath the shade of her little white sunbonnet, saw a gentleman standing close to the sweetbrier hedge which protected the flowers and the shubbery. Taking hold of her niece's arm, Miss Palmer led her towards the hedge.

"Mr. Annesley," she said, "this is Olive Palmer, my niece."

Her voice trembled a little as she spoke, and Olive felt the hand tremble which clasped her arm. Somehow—she could not realize why— the gratification, almost joy, she had looked forward to, in witnessing the first meeting between Olive and Mr. Annesley, had given place to a sad pitying veneration, never felt before, for one who as she knew, while he had never ceased to cherish the sorrow as too sacred to be forgotten, which had crushed the sweetest hope of his earlier years, was ever cheerfull in the presence of others, ever kindly considerate of whatever might be conducive to their happiness.

Unconsciously, she was viewing him through the lens, which needed only to be introverted, to give a reflection of her own experience and her own moral and emotional nature, allowing only for those physiological shades of difference which form the traits peculiar to the character of either sex.

The natural ruddiness of Mr. Annesley's complexion grew a shade deeper the moment Olive's face was turned towards him, and then as instantaneously changed to may shades paler. A feeling of remorse smote the heart of Miss Palmer, as she watched these changes. She had been too abrupt; it was as if, by the power of some necromancer, Clara Dermont had been placed visible before him. How easily, keeping Olive in the background, she might have thrown out a few preparatory hints. But ere the fervor of her self-reproach had time to abate Mr. Annesley, to all appearance, had recovered his equanimity.

Gently, even tenderly taking Olive's hand in his, he said a few words to her which she never afterwards could fully recall to mind, though she felt at the same time, and never lost the impression, that there was something in them very kind, even paternal; such as a man of delicacy and refinement might with equal propriety address to a daughter or a young girl, whether friendless, or, like her, under the protection of one of his best and most highly valued friends.

After speaking to Olive, he remained several minutes chatting pleasantly with Miss Palmer, giving her niece good opportunity to note his general appearance. She paid little heed to his dress, and yet she was aware that it was in perfect keeping with a certain air such as she had often in day-dreams, to which she was somewhat addicted, pictured to herself as belonging to a prince or an emperor. It differed, however, in one respect; being entirely free from that hauteur which, according to some hypothesis of her own, she supposed to be one of the peculiar and infallible attributes of royalty.

If she had particularly observed his dress, she would have seen that it was not in accordance with the fashion of the day. On the contrary, it was the exact counterpart of what he wore at the age of twenty-five, full twenty years previous, and at the commencement of the ninteenth century. Thus, as Miss Palmer had told Olive, though he did not look a day over thirty-five, he was ten years older than that;

"Rumor, through a pipe,
Blown by surmises, jealousies, conjectures,"

having for once told the truth.

"I shall call soon," said he as he turned to go, "and you may expect to see a young friend with me I qm looking for to-morrow."

As he said this, his eyes glanced towgrds Olive witn a pleasant, though rather sad smile.

"Well, Olive," said Miss Palmer as soon as he was beyond the reach of her voice, "do you like Mr. Annesley?"

"Yes, Aunt Lois, I do."

"Better than you expected."

"A great deal better."

"I thought so by your looks."

"And judging from his looks I think he likes me."

"He does, no doubt— he could not help it; but then it is in a sort of mournful way—that I could plainly see, for all he spoke and smiled so pleasantly, and not in the least like what I thought of, when I first mentioned him to you."

"That is why I like him so well."

"I was wrong, and you and he are right; I can realize it now."

"Yes, he likes me, and will, I am sure, should we often meet, soon come to look on me almost the same as if I were his daughter."

"Not quite, you think?"

"No. if his affection were gauged by the tender, watchful and disinterested love of my father. You know, aunt, without my telling you, that he, your only brother, is the best and dearest father that girl ever had—so willing to overlook my foibles—so ready to give me full credit when ever I do right."

OPERATION HER ONLY CHANCE

Was Cured by Lydia E. Pinkham's Vegetable Compound

Lindsay, Ont.—"I think it is no more than right for me to thank Mrs. Pinkham for what her kind advice and Lydia E. Pinkham's Vegetable Compound has done for me. When I wrote to her some time ago I was a very sick woman, suffering from female troubles. I had inflammation of the female organs, and could not stand or walk any distance. At last I was confined to my bed, and the doctor said I would have to go through an operation, but this I refused to do. A friend advised Lydia E. Pinkham's Vegetable Compound, and now, after using three bottles of it, I feel like a new woman. I most heartily recommend this medicine to all women who suffer with female troubles. I have also taken Lydia E. Pinkham's Liver Pills and think they are fine."—Mrs. Frank Emsley, Lindsay, Ontario.

We cannot understand why women will take chances with an operation or drag out a sickly half-hearted existence, missing three-fourths of the joy of living, without first trying Lydia E. Pinkham's Vegetable Compound.

For thirty years it has been the standard remedy for female ills, and has cured thousands of women who have been troubled with such ailments as displacements, inflammation, ulceration, fibroid tumors, irregularities, periodic pains, backache, indigestion and nervous prostration.

HE WANTS THEM ALL TO KNOW

ABOUT GIN PILLS

They Cured Him and He Knows They will Cure Others

DAVISVILLE, ONT.

"I want to let you know what GIN PILLS have done for me. I had trouble with my Kidneys and Bladder so I got a sample of GIN PILLS and followed directions. I felt better after the first dose and I kept taking them for a month.

One day, Mr. Simpson of this town, told me about the trouble he had with his kidneys and I recommended him to try GIN PILLS, and gave him one to take. The next day he bought some for himself and both he and his wife have received great benefit from them. I have also induced many others to try them.

I am trying to get my sister-in-law to try them. I wish you would send me a sample box to give her."

HERBERT H. BAUER.

If you have a friend who is suffering from Kidney or Bladder Trouble or Rheumatism, send name and address, and we will gladly mail a free sample box of GIN PILLS. At dealers, 50c. a box, 6 for $2.50, or sent on receipt of price. Remember — GIN PILLS are guaranteed to give relief or money refunded. National Drug and Chemical Co. Dept. M. F. Toronto.

National Lazy Liver Pills regulate liver and bowels, and cure Constipation. 25c. a box.

THE ORIGINAL AND ONLY GENUINE

BEWARE OF IMITATIONS SOLD ON THE MERITS OF MINARD'S LINIMENT

Minard's Liniment Co., Limited

"Yes, I know, and how could he help it, when his only child is motherless."

"I have been trying to think," said Miss Palmer, after remaining silent a short time, "who that young friend he is expecting can be."

"Whoever he is, I should rather that Mr. Annesley would call alone," said Olive, "as it would give me a better opportunity to become acquainted with him."

A sound from the brass knocker. Though brass, it was polished to such a mellow brightness that, so far from having anything about it that looked in the least brazen, it seemed to be a kind of visible sign of the warm and genial hospitality which was always certain to be found within.

"That is Mr. Annesley's knock," said Miss Palmer; "I can always tell his from all others."

A sudden crimson brightened Olive's cheeks as she said, in a low voice, "I am glad he has come; I was afraid he would forget."

For the moment she did not remember that he had said he should bring some one with him. A single rapid glance sufficed to show that, as much as she wished to cultivate Mr. Annesley's acquaintance, the presence of his young friend could hardly prove unwelcome. There was something in his appearance so superior, so far removed from anything which she had seen in those few young men she had hitherto met with in the vicinity of her own home, that while it made a favorable impression, it produced a certain elevation and buoyancy of the mind, which were very pleasant.

His name was Lucian Clive, and his mother was Mr. Annesley's sister Soon after her marriage, she accompanied her husband to the West Indies, where he owned a plantation and where they still resided. Although thus connected by ties of kindred, he did not in the least resemble his uncle, either in form or feature; there was, however, in his carriage, the same easy, unstudied grace and what was far better, the same air of openness and candor; yet, so entirely removed was it from that blunt abrupt manner and freedom of speech which some, as a plea for their own rudeness and unconciliatory temper, dignify by the name of frankness, that it could not fail to win the confidence and good-will of others.

Taking it all in all, there was something to Olive extremely charming and attractive in Lucian Clive's appearance, and yet, after he was gone, she could not have given such a description of his person, much more of what she thought of his intellectual endowments, as would have been at all satisfactory to herself, although a perfect, even vivid consciousness of each existed in her mind. She could not have told how the least tinge of red—just enough to indicate the free and healthful flow of life's warm currents—breaking through the olive of his cheeks, heightened by contrast, the almost dazzling whiteness of his broad forehead; nor that clustering round it were innumerable rings of soft, night black hair. Neither was she aware that his finely curved lips, his nose slightly aquiline, with the thin, flexible nostrils which old patrician families, of other lands were wont to consider a distinctive mark of good blood, gave to his countenance, expressive of much intellectual power, its peculiar look of refinement. It might have been that she was under the influence of "love's young dream" at any rate, what she saw of him during his first call, and several afterwards, was like catching the ripple and sparke of a stream without comprehending or even caring to fathom its depts.

Lucian Clive, the three last years of whose life had been devoted to travelling in America and other lands, had necessarily been brought in contact with numerous and diversified classes of society, each of these, as well as the individuals composing them, being, of course, subject to various modifications, in many instances sufficiently palpable, in others, running into shades of difference so nice and subtle as to be hardly distinguishable. Hence, during his absence, he had imperceptinly acquired that habit of ready yet delicate and accurate observation from which naturally spring the power and aptitude for analysis. He thus had the advantage of Olive, being capable of seizing at once upon, not only the more vivid and piquant traits, or what might be termed the salient points of her character, but of discerning, if not in every instance the actual presence, the cheering promise of those many elevating and genial qualities which prevaded and harmonized the whole, and which are the unfailing dower of every true and loveable woman.

(To be continued.)

Feel Young for Ever.

Let Me Put Vitality Into Your Blood, Nerves and Body. Follow Me to Health and Manhood. I Can Show You What Others Have Done to Change Debility, Weakness and Despondency Into Health, Strength, Vigor.

Vitality is the measure of the man in this day of big deeds and monster achievement. He who has great vital strength cannot grow old. Years count for nothing if you have the vitality in your blood and nerves. My Health Belt with suspensory attachment is the FOUNTAIN OF PERPETUAL YOUTH; It pours quantities of electro-vital force into your weakened system. It works quietly, mildly, continually hour after hour while you are sleeping. It is your opportunity as it has been the opportunity of tens of thousands before you; it supplies you with that vitality upon which health and courage depend. It is a power and strength giver of the highest order. No drugs, nothing to take internally, no dieting, no hardships of any kind. Simply use the Health Belt nights until you are restored to vigor. It never ceases until you have as much courage and self-reliance as the biggest, fullest blooded man you know. Your eyes will have the sparkle of full health, you will have the vigor of a strong, healthy man. Henry Eggman, Norwich, Ont., writes: "Thanks to the use of your Health Belt I am young again. It restored me after all else failed. Use my testimonial as you see fit." This is but one of thousands. Get the free books and read of others.

Special rheumatism attachments to my Health Belt carry the Electro Vitality to any part of the body, neck, back, arms, legs, feet. It finds and drives away all pains and aches; it has often completely cured a weak back in one night so that it never returned again. It is a wonder remedy for chronic ailments of the nerves, blood and muscles.

FREE UNTIL CURED.

Call or write to me and I will at once arrange to let you have the Belt on trial, not to be paid for until cured. No deposit or advance payment Send it back if it doesn't do the work. Liberal discount for cash if you prefer to deal that way.

These Books Sent Free

Let me send you these books. They contain much valuable Health information, are fully illustrated, describe my Health Belt. Fill in coupon or send your name and address on a post card, or if possible call at office and see Belt. Office hours: 9 to 6, Saturday until 9 p. m.

DR. M. F. SANDEN CO.

Dear Sirs—Please forward me your book, as advertised.
NAME.....
ADDRESS.....

The Mother Who Was Not Patient.

There was once a mother who was not patient. She was a good mother too. Yes, actually. She wanted the very best of everything for her children, and she had such high ideals for them and was so anxious to have them reach those ideals that she couldn't wait to see the completed article turned out. It was as if she had expected her own delicious tea biscuit to be all fluffy and brown the minute she put them into the oven; and because they weren't, she kept opening the oven door every minute or two and letting the cold air in, really spoiling the biscuit at last because of her anxiety and her impatience.

She scolded the big boy because he often forgot at the table that his chair was a quadruped and tried to make it a biped instead. She scolded because his wits went wool-gathering when he ought to have been studying. She scolded the little girl because her nose was always in a book when she ought to have been putting away her clothes or wiping the dishes She scolded the big girl because she wanted to be hammering brass when she ought to be practicing her music lesson.

And when the big girl said, 'Please don't put an egg in my lunch unless it's peeled and stuffed;' and the big boy said, 'If you put an egg in my lunch, put it in whole so I can have the fun of cracking it on Billy Thompson's forehead'; and the little girl said, 'You needn't needn't put any eggs at all in my lunch—I don't like them'—how she scolded! You see, she didn't want them to grow up to be fussy and finiky about their eating. It would never do at all.

And when the big girl said, 'Mommie, dear, if you put any meat in my lunch, I'd rather have it in the sandwiches, so I can handle it better; and I'd rather not have any oranges —they-re so mussy to eat'; and the big boy said: 'If you put any meat in mine, please put it in by itself so I can taste it better. And if you put in any oranges, please cut 'em up and sugar 'em'; and the little girl said; 'I don't care about any meat at all in mine. I'd rather have just bread and butter and an apple or an orange; and if it's an orange, I want it whole so I can play with it first; and please don't put my lunch in a basket, but in a paper bag, so I can throw it way afterwards'—when all these requests came, this mother who was not patient drove them all out of the kitchen and said in most emphatic terms that she didn't want them around. She would put up their lunches to suit herself.

And yet you know as well as I do, that the big girl always found her meat in her sandwiches, her eggs peeled and stuffed, and no oranges; the big boy found his egg whole, his meat wrapped by itself in an oiled paper, and his orange cut up and sugared;and the little girl always had a paper bag with just bread and butter and an apple or orange in it.

'Mother's awful cross today,' said the little girl one afternoon to the big one. 'She scolded like everything when I tore my dress and got skate-grease on my apron, and she said I was selfish 'cause I wanted to cut paper dolls out o' the new magazine 'stead o' taking it to old Mrs. Brown.'

'We do give her a lot of trouble,' said the big girl. You see, this biscuit was browner and neater done than the anxious kneader gave her credit for. 'See here,' she continued, as the big boy came up, 'I've just thought of something. We all think mother's pretty fussy and particular about us. Now, who's it all for? Ain't it for us instead of her? Why couldn't we try to be one day just what we think she'd like to have us? S'posen we try it?'

'All right,' said the big boy. 'I'll clean my nails and get the kindling and quadruped my chair and shut the door still and'—

'Kiss her 'fore you go to school,' suggested the little girl; 'I think she was a little cross about that, this morning.'

'Oh, you mustn't say "cross" any more, said the big girl, 'taint—tain't —loyal.'

'And you mustn't say "tain't" if you don't want to make her cr—un—patient.'

'That's so,' with a sigh. There's a lot to remember.'

Next morning the big girl made an announcement at the breakfast table. 'I've got the lunch things all

RELIANCE FENCING

2000 MILES

Think of it! Over 2,000 miles of this fencing is already in use on the farms and along the highways of Canada and in Foreign Countries, and every foot of it is giving good service. All the good points in every kind of Fence are incorporated in the manufacture of

"ELECTRICITY IS LIFE"

If you want to get up in the world and make your mark; if you want to be pointed at as a successful man; if you want to be a Man among men, you must be full of electricity — magnetism.

Brooding over your troubles—spending hours and hours regretting your past follies and mistakes — despairing of help will not add to your capital of nerve power—will not help you down the shadows and get you into the sunlight of happiness and success.

You aren't the only fellow after the plums—the high places. Thousands are in the strife, and the prizes go to the wide-awake—the men of courage and energy.

Life is made of hurry and worry, hard knocks and excitement.

You Have Heard it Said that Opportunity Knocks But Once in a Lifetime

The fact is, she makes several calls, but she doesn't come with a brass band to wake you up.

Nature carved you in the image of a man, a man you can be, as we can show you the way.

If you have fallen by the wayside, if you have succumbed to temptation and folly, if you have exhausted your vitality through excesses, overwork or worry, use your God-given brains and judgment for a few moments.

Take an inventory of yourself. Seek the truth. Study your weakness. Don't further wreck your nervous system and befuddle your brain with drugs, stimulants, but use that great wondrous power, **Electricity** as we apply it with

Dr. McLaughlin's Electric Belt

I can point to hundreds of men to-day who came to me broken in health and spirit — absolute physical wrecks, hopeless, despondent, who followed my advice, used my Belt, regained their strength and vitality, and are now getting on in the world. Many of them say that my Belt saved their lives.

WM. S. CARTER, Box No. 14, Mapleton, Ont. says: "I have worn one of your Electric Belts for three months as directed, and am very much pleased with it. It has done more for me than I expected, and I feel that I am perfectly cured. I cannot speak too highly of it, and hope that it will do as much for others as it has done for me. I will strongly recommend it to all people suffering from aches and pains."

J. HARRY DENTON Trenton, Ont., says: "I used your Belt for nervous debility and rheumatism in 1903, and it cured me. I wrote at that time to this effect, and what I said then I can verify now. I am enjoying better health at the present time than I have done for many years. I would recommend the Belt to any one suffering from rheumatism, or from any form of nervousness.'

J. LARGESS, Box 53, Vankleek Hill Ont. reports: "The lameness in my back is all gone, the Varicocele is better, and I am getting better health generally, and have gained a good deal in weight."

JAS. HATT, Beach Hill, N. S. says: "The pains in my chest and back are all gone, and I have gained fifteen pounds in weight. It is a pleasure to say that I have at last found a remedy that would cure me of my aches and pains."

A DOCTOR'S GIFT TO THE SICK AND WEAK

To the people who want to be strong, who want to feel like they did when young, I offer a book which will show them the road to happiness—a book of 80 pages, which is brimful of the things they like to read, which will give them courage and enlighten them as to the cause and cure of their troubles. It will point out the pitfalls and guide them safely to a future of strength and vitality. It is beautifully illustrated. It tells what other people have suffered and how they have cured themselves. It is free. I will send it, closely sealed, without marks, if you will mail me this coupon. If you are not what you ought to be, send for it to-day.

FREE BOOK FOR WOMEN. BOOK FOR MEN.

Get my 80-page book describing my treatment, and with illustrations of fully developed men and women showing how it is applied.

This book tells in plain language many things you want to know, and gives you a lot of good, wholesome advice for men. I'll send the book, in plain wrapper, prepaid, free, if you will inclose this coupon.

I want to convince every sufferer that he can get benefit from my treatment. Nobody should be without it, for it is cheap enough, far cheaper than a course of doctoring, and I want everybody to try it. Let every sufferer who can do so call at my office and make a full test of my battery free of any charge.

If you can't call, send this coupon for my book.

Office hours: 9 a.m. to 6 p.m. Wednesday and Saturday till 8.30 p.m.

M. K McLAUGHLIN,

214 St. James Street, Montreal, Canada

Please send me your Book free.

ADDRESS.....

ready,' she said. 'I've made sandwiches with meat in, and sandwiches without any meat. I've boiled two eggs, and peeled and stuffed one of them. I've got a whole orange and a cut-up-and-sugared orange. And I've marked slips of paper meaning each one of these things, and Mommie's going to hold 'em and we'll all draw, and we're going to take just what we draw.'

They drew. The big girl got the whole orange, the whole egg and the bread and butter sandwiches. The big boy didn't get any egg or any orange, and had to take the sandwiches with the meat inside; while the little girl drew the stuffed egg, the sandwiches with the meat separate and the cut-up orange, which meant that she would have to carry a basket that day to hold the glass. 'Never mind,' she said, cheerfully, 'I guess I can stand it just for one day.

It was easy, too, to remember just for one day the things that would please mother, and when the family gathered at the table that evening, it was with a hapuy side glance over a day unclouded by a single scolding.

'Say, mother,' said the big boy, 'I got the worst of it in the draw this morning, but I guess after this you'd better put up my lunch any way that's easiest. I'd enjoy it better that way.'

'Me, too,' chimed in the big girl and the little girl.

Not heeding the interruption, the boy continued, 'this has been a pretty good sort of a day, after all, and after this when you see me doing things you'd rather I wouldn't, if you'll just give me the wink—'

'Or a knowing smile,' put in the big girl.

'Why, I'll try to make it unnecessary for you to say anything at all.'

'Me, too,' chimed in the big girl and the little girl.

Which proves that they were all browner and nearer done than the anxious kneader gave them credit for.

And the best of it all was, that when once they had gotten the idea of attending to their own baking, the anxious kneader soon learned to leave the oven door shut long enough to let them brown.—Congregationalist and Christian World.

A $5 00 Seed Prize.

We will give $5.00 in gold to the person who finds the word "seed" or "seeds" the most times in ads. in this issue. It doesn't cost you one penny to try for this $5.00 but in looking for the word "seeds" note which seed ads. interest you moet, and write those advertisers, sending an order or asking for free catalogue. In your letter to us telling how many times you find the words "seed" or "seeds" you must give us the names of all seed or nursery advertisers in this issue to whom you have written mentioning The Maritime Farmer. This is an easy condition, and the catalogues or seeds you buy will be worth much more than you pay. Go to work. How many times do you find "seed" or "seeds," in the advertisements in this issue? The $5.00 will be mailed promptly to one finding them the most times. Tell how many times you find them on each page. In case of tie the prize will be divided. Don't delay. Don't cost a cent to enter. You might as well have the $5.00 and you are going to write for catalogues, so do it now. Lists must be mailed by April 20th.

The disc drill that can't stall

ANY disc drill economizes seed, time and labor as compared with other ways of seeding. But a FROST & WOOD CHAMPION excels all in accurate sowing, money-saving and the certainty of bigger crop-production. It sows right under hardest conditions.

Built with more strength than it will probably ever need. Continuous steel axle from wheel to wheel, with frame and seed-box solidly attached. Seed-box down low and easy to fill. Tested indexes tell just how much you are sowing. Champion does not compel you to fit the shift-lever precisely into such-and-such a notch. Vary the seed-feed to suit yourself—do it in a second. Champion disc hubs are really dustproof, and are fitted with ball-bearings same as a good automobile. Direct down-pressure on EVERY disc-hub avoids side-strain. No neck-weight on team.

Macdonald Agricultural College praises its CHAMPION DRILL. So do the Experimental Farms throughout Canada Profit by their experience

FLORICULTURE.

C. M. E., Chatham, writes:—Can you tell me what ails the Maiden Hair fern from which enclosed leaves were taken? The leaves turn black, blight and wither, although it has grown luxuriantly all winter.

Ans:—Judging from the leaves something has choked the drainage. Turn the plant out of the pot and see if there are not some angle worms in it; these are apt to cause this trouble. If pot bound, repot in pot a size larger, using charcoal for drainage filter. Do not sprinkle these plants when new growth is making, especially on cloudy days. In this case, if not requiring repotting, a rearrangement of the drainage will probably check the trouble. Maidenhair ferns, like most all ferns, are better grown in pans than pots.

Genista, St. John, writes:—Please tell me what I can do for my Genista plant? It is covered with cobweb and at the joints where the branches come out there are little cottony lumps. My plant has been a beauty all summer and just now, when I began to look for buds it is so shabby.

Ans.—Your Genista is infested with red spider, the cobweb, and mealy bug, the codlin like stuff. A thorough washing with good Castile soap, once a week, will rid you of these pests. If very bad, you can of course, use it twice a week, but once is usually sufficient.

Inquirer, St. John, writes:— I noticed in the Boston flower stores, plants called Parnseltias. They are pretty and I am told are easily grown. Is this true and are they good house plants?

Ans.—The Parnseltias are very bright and pretty, but they are of no value as a house plant. They should be bought as you would buy a bouquet, with little more expectations of durability in the average house.

H. L. R., St. John, writes:— I have to close my house for about a week and am anxious to know what to do with two palms that I have. We have a small room in the cellar that never freezes but it is absolutely dark. Would it hurt the palms if left in this for that time, provided they were watered occasionally?

Ans.—Your palms would probably be all right in the room described for a period of ten days, if they are watered occasionally and given a little fresh air, always provided that the temperature does not go below 78 degrees.

"I wish to send some friends plants for presents," writes A. H., St. John. "What plants would you advise?"

Ans.—Boston Ferns and Palms are especially valuable when one wants hardy plants—all the types of Boston Ferns are hardy and good. The Rentia is admittedly the best and easiest palm to grow. There are many other plants that are at their best at this season, but above all the prettiest and easiest grown and therefore the most liable to give satisfaction to the recipient.

H. A. W., writes:—Tell me what care to give my Dutch Hyacinths to have them bloom well?

Ans.—Examine the bulbs and do not let them get dry. If you find on examination that the pots are well filled with roots bring them to the light but not otherwise. It is well to keep those bulbs in the dark until you are sure that they are well rooted.

Inquirer, St. George, N. B., writes:—I have a number of Geraniums that I brought in from the garden last fall. They lost their leaves shortly after they were brought into the house and the foliage that is now coming on them is of a light green color, with long stems. They grow quickly and do not look healthy. Brown spots come on them in places. The room they are in is well heated with a furnace radiator and they get plenty of sunlight, when there is any. I also have a fine, large Silk Oak. It grew finely all summer when in the room alone, but as soon as the Geraniums were brought in, the leaves began to grow rusty and fall off. Beginning at the bottom of the tree there seems to be a dried up appearance to the wood of the stems but it gets plenty of water and is never allowed to become dry.

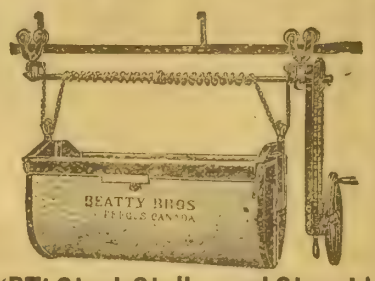
The Geraniums are probably all right. They are evidentally forced by the heat of the room and the dry atmosphere. As soon as the spring comes, and they get the fresh air and a cooler temperature you will find they will come all right.

The Silk Oak is affected by that tiny insect, the red spider, caused by the heat and dry air. The presence of the Geraniums would have nothing to do with it whatever. In order to get rid of these pests, it would be necessary to spray the under side of the foliage of this plant with clean water, at least once a day, for eight or ten days. This is the easiest and best remedy I know As soon as the leaves are clean, spray, about twice a week, while the room is artificially heated. This plant is very liable to red spider in a dry air like Roses and Carnations, Fuchsias and Smilax, if not sprayed quite often.

P. E. G., St. John, writes:— My Sword Fern is beginning to lose its leaves. The little fronds are dropping and leaving bare stalks. It is quite a large plant and is in a large pot. A great number of runners—like stems, are coming out around the pot. Should they be removed?

Ans.—This fern needs to be repotted at once and the runners cut off close to the pot. Use light, rich oil. Do not disturb the top of the ball of roots, but the dead roots and old drainage material should be removed from the bottom. Use harcoal for a drainage filter.

Buy a "BT" Litter Carrier



and save yourself the dirtiest and most disagreeable job about the farm. With a litter carrier four barrow loads of manure can be removed from the stable at one time—no heavy wheeling, no climbing through snow or mud. If desired the manure can be dumped directly into a wagon or sleigh and save reloading. The "BT" Litter Carrier has splendid features of advantage over other makes, which we would like to tell you about.

'BT' Steel Stalls and Stanchions Should be in Every Stable

Because
They will make it easier for you to keep your stables clean
Having Sanitary stables means more profits.
Every cow should be kept clean and comfortable. With "BT" Stalls and Stanchions this is made possible.
Be up-to-date and equip your new stable with modern fittings.
They cost no more than the old style and with cement floors Steel Stalls and Stanchions will practically last a life time.

We have just gotten out our new catalogues on both the above lines. If you are interested send us your name and address and we will mail you copies of same. In writing let us know how many feet of track you expect to require and how many cows you intend stabling.

A few minutes delay in treating some cases of croup, even the length of time it takes to go for a doctor often proves dangerous. The safest way is to keep Chamberlain's Cough Remedy in the house, and at the first indication of croup give the child a dose. Pleasant to take and always cures. Sold by all dealers.

Nova Scotia Farmers' Annual Convention.

(Continued from page 313.)

was to the effect that there is a good market in the West Indies for Maritime live stock and it is to the advantage of our breeders to do their best to supply the demand.

WEDNESDAY EVENING.

One of the most interesting and instructive addresses delivered at the convention was the illustrated lecture on "Drainage" by Prof. W. H. Day, of the Ontario Agricultural College, Guelph, Ont. He went into the why's and wherefore's of the drainage question in a thoroughly practical manner and as "Drainage" is a live question with Nova Scotia farmers he was followed through the various phases of his discourse with keen interest. The various slides furnished object lessons of the utmost importance to farmers who purpose draining their farms.

F. L. FULLER'S REMARKS.

Mr. F. L. FULLER, followed, giving some details showing that the arguments used in favor of underdrainage in Ontario apply with even greater force in Nova Scotia, but that owing to conditions we would need closer drainage than in Ontario. Also showed the advantage of using the Government drainage machine as it does the work more quickly and better, and at less cost.

Prof. E. Archibald emphasized the fact that at the Agricultural College they not only taught students the great need of underdraining, but also the modern methods of ditching. He spoke of two students who had graduated from our Agricultural College and during their holidays between third and fourth years at Guelph were employed on Prof. Day's Drainage Survey Staff, both being reported as having done excellent work They are B. H. Landels and E. H. Potter.

A. C. BELL, ex-M. P. P., of New Glasgow, followed giving some particulars of how he drained some very wet land with encouraging and beneficial results. His practice was to drain from 3½ to 4 feet deep and 50 feet apart. The need of underdraining was very great in this Province and would enable the farmer to get in his crop so much earlier, and thus get better crops, instead of lots of straw and less grain. In this Province we must have our seeds in early to make farming profitable, and he would not attempt to farm without underdrainage, as it was only wasting time. With the machine, the work of making drains, was only one half the cost as compared with hand labor. The live and practical question for this association is, to endeavor to get such a machine in every county, and to seek government aid in carrying out such a splendid idea. If the purpose of the government is to make people prosperous and happy surely they could do much in this direction by helping the farmers in this matter. There is another aspect of such drainage, in lessening such diseases as arise from lands covered with stagnant water. Surely the government can do nothing better than to lend its aid in furthering a project to have underdrainage thoroughly undertaken throughout the Province.

PROF. CUMMING spoke very briefly concerning the great value of underdrainage, and said that in their report for 1909 there was a section bearing on this most important subject, giving information of great value to every farmer, and which could be had by writing to the College at Truro.

DELEGATES ENTERTAINED.

It was now ten o'clock, an hour later than the time appointed for the entertainment provided by the Town Council and Board of Trade and Pidgeon Fertilizer Company.

The programme was as follows:—

Music by Citizens' Band Orchesrta.

Solo, "Forget Me Not." H. S. Mitchell, and to an encore, "Since we Parted."

Recitation by Judge C. E. DeWolfe "The Relief of Lucknow," and another in response to a well deserved encore.

Music by orchestra.

Recitation by Rev. G. R. Martell—"The Revenge" by Tennyson, describing Sir Richard Grenville's terrible yet heroic fight single handed against the Spanish fleet.

And responded to an encore by giving a most humorous address which called forth great laughter.

INTERNATIONAL STOCK FOOD CO., LTD., Toronto, Can.
CASH CAPITAL $2,000,000 LARGEST IN THE WORLD

INTERNATIONAL STOCK FOOD
THE GREAT ANIMAL TONIC

Is sold by over 100,000 dealers on a spot cash guarantee that the use of one ton will make you a net profit of $360 over its cost, or that 100 pounds will make you $18 net profit. If it ever fails your money will be promptly refunded. International Stock Food is a strongly concentrated medicinal preparation composed of roots, herbs, seeds, barks, etc., and is equally good for horses, colts, cows, calves, hogs, pigs, sheep, goats, etc. It is fed in small amounts mixed with grain and purifies the blood, tones up and strengthens the system and greatly aids digestion and assimilation, so that each animal obtains more nutrition from all food taken. It is not the amount of grain fed but the amount assimilated or taken into the system that fattens or keeps your stock in good condition, and as International Stock Food increases assimilation it will save you money. It will make you more money than you can possibly make without its use. It also cures and prevents many forms of disease, and is absolutely harmless, even if taken into the human system. International Stock Food is endorsed by over two million farmers who have used it for years. The editor of your farm paper will tell you that we do exactly as we agree, and as reference we give you the Traders Bank of Canada.

M. W. Savage, sole owner of "International Stock Food," and also of "International Stock Food Farm," positively Guarantees that His World Famous Champion Stallions, Dan Patch 1:55, Cresceus 2:02¼, Minor Heir and Arion 2:07¼ and his brood mares and colts eat it every day. You are specially invited to visit this Great Harness Horse Breeding Farm ten miles from Minneapolis, and see the practical results of the every day use of the greatest purely vegetable animal tonic ever used on a farm. It is constantly used and strongly endorsed by over Two Million of the most up-to-date Stockmen and Horse Breeders of the world.

KEHO, ALTA, 10-10-10.

PROVED ITS INVALUABLE WORTH.

The International Stock Food Co., Toronto, Ont.—Gentlemen: I feel in honor bound to offer you my testimonial in favor of your Stock Food. I have used it faithfully this summer and proved its invaluable worth. It made my pigs grow, the results were simply marvelous. I would not be without it for anything. My horses got a very nasty distemper cough in the spring, but the food cleaned it completely out of their system and they went through the Spring work fine and came out of it rolling fat. Please duplicate my last order. Mrs. Coe requests me to tell you that your Poultry Food is excellent, that feeding your Poultry Food doubles the quantity of eggs, in fact, it could not be better for egg production and keeping the fowl healthy.—Yours sincerely (sgd.) ALF. R. COE.

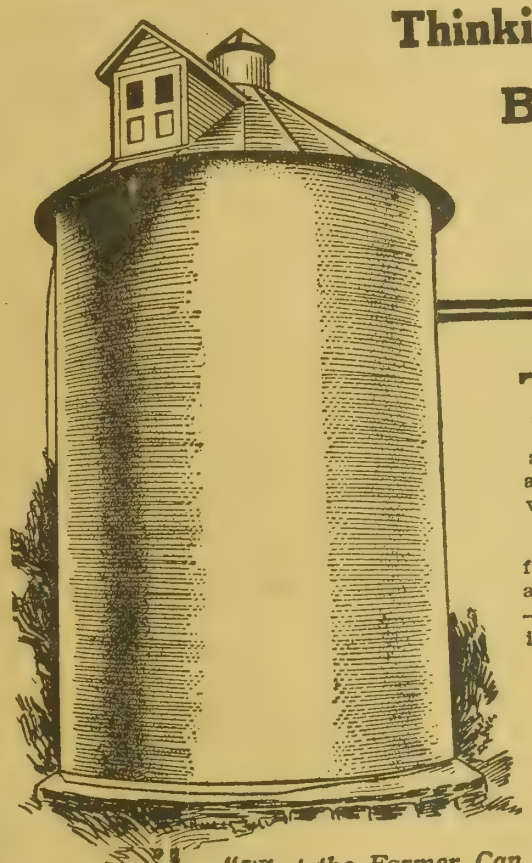
Thinking of Building a Silo ?

Better Build it

of Concrete



THE construction of a Silo affords an excellent example of what the farmer can do with Concrete—and of the superiority of Concrete over all other material for various structural work about the farm.

The usual wooden silo, besides being expensive, is far from satisfactory. In the first place, it does not endure; and, more important still—being far from weather-proof—its contents become water-logged—producing an unsanitary condition.

A Silo built of Concrete, on the other hand, is practically everlasting—it is proof against heat, cold and moisture—and it has the merit of comparative economy.

This economy feature is further explained in our free book—"*What the Farmer Can Do With Concrete.*"—which tells how to mix and use Concrete for the making of silos and other buildings on the farm.

"What the Farmer Can Do With Concrete."

Tells you how to use Concrete in constructing

Barns, Cisterns, Dairies, Dipping Tanks, Foundations, Fence Posts, Feeding Floors, Gutters, Hens' Nests, Hitching Posts, Horse Blocks, Houses, Poultry Houses, Root Cellars, Silos, Shelter Walls, Stables, Stairs, Stalls, Steps, Tanks, Troughs, Walks, Well Curbs, Etc., etc., etc.

Fill out the coupon and send for the book to-day.

You may send me a copy of book entitled "*What the Farmer Can Do With Concrete.*"

E. A. STROUT, Kent's Hill, Maine.

A BAD COLD

Developed Into BRONCHITIS.

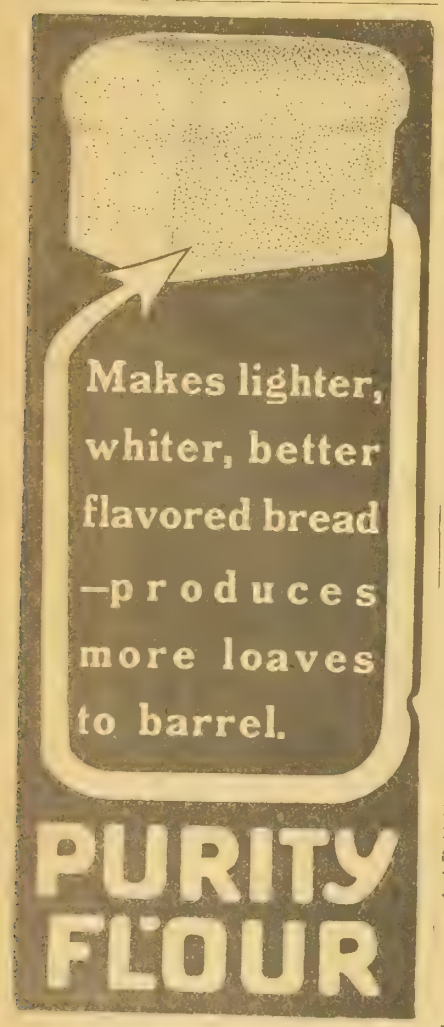
Neglected Bronchitis is very often the direct cause of Consumption, and on the first symptom appearing Dr. Wood's Norway Pine Syrup should be used and the Bronchitis cured.

The symptoms are, tightness across the chest, sharp pains and a difficulty in breathing, a secretion of thick phlegm, at first white, and later of a greenish or yellowish color, coming from the bronchial tubes when coughing, especially the first thing in the morning.

Mrs. Dan. J. McCormack, Cleveland, N.S., writes: "My little boy two years old caught a bad cold which developed into Bronchitis. He was so choked up he could hardly breathe. Reading about your wonderful medicine, Dr. Wood's Norway Pine Syrup, I decided to try a bottle and with such good result I got another which completely cured him, without having a doctor. I cannot say too much in its praise; I would not be without it in the house as I consider it a sure cure for Colds and Bronchitis."

The price of "Dr. Wood's" Norway Pine Syrup is 25c. It is put up in a yellow wrapper. Three pine trees is the trade mark. Be sure and accept no substitute for Dr. Wood's.

Manufactured only by The T. Milburn Co., Limited, Toronto, Ont.



In answering advertisements you are sure of a prompt reply if you say: "I saw your advertisement in the Maritime Farmer."

Solo, "Love's Old Sweet Song", J. W. Donald.

Encore, "Asleep in the Deep."

Orchestra.

Recitation by Cooper Willis, "Dying Embers." To an encore sang "The Rosary."

Comedian Burns, from the Lyric Theatre, sang and acted, and the audience enjoyed his fun-making.

Orchestra.

Refreshments were served and the entertainment lasted two hours.

The selections by the orchestra were rendered in good style under direction of leader Ed. Croft.

C. P. Blanchard moved a vote of thanks to the town of Windsor, Board of Trade and Pidgeon Fertilizer Co. for the splendid entertainment they had all so greatly enjoyed. This was seconded by R. J. Messenger, A. C. Bell, ex-M. P. P., also spoke to the motion in very happy terms.

Prof. Cumming spoke most kindly of the instructive address delivered by Prof. Day, and moved a vote of thanks which was seconded by Wm. O'Brien, carried unanimously.

Votes of thanks were also passed to Mayor Curry, who presided and the Citizens' Band, which had furnished such delightful music.

"God Save the King" brought the entertainment to a close at midnight.

THURSDAY MORNING.

The Credential Committee Report showed that the following delegation was present: 51, representing Agricultural Societies; 2, representing The Nova Scotia Fruit Growers' Association; 2, representing The Maritime Stock Breeders' Association and 38 representing County Farmers' Associations, making a total of 92 to which may be added several credentials, which were handed in after the committee had made up its report. This would bring the representation up to at least 100.

THE ELECTION OF OFFICERS

resulted as follows:—

President—W. H. Woodworth, Berwick, N. S.

1st Vice-President—R. M. Jackson, Jacksonville, N. S.

2nd Vice-President—H. W. Corning, Chegoggin, N. S.

Directors—A. S. McMillan, Lower South River, N. S.; Fred W. Bishop, Paradise, N. S.; Samuel Freeman, Amherst, N. S.; Wm. O'Brien, Windsor Forks, N. S.; H. W. Kennedy, Alma, N. S.

Auditors.—J. P. Landry and E. S. Archibald, Truro, N. S.

Exhibition Commissioners— R. S. Starr, Port Williams, N. S.; C. R. B. Bryan, Durham, N. S.

REPORT OF COMMITTEE RE ERECTING DORMITORY AT AGRICULTURAL COLLEGE TRURO.

We, your committee, beg leave to report as follows:—

On January 11th, 1911, we interviewed the Premier, and laid before him the necessity of erecting a Dormitory for our young men attending the college at Truro.

Premier Murray informed us that he and his government had gone into the matter thoroughly and were in full sympathy with the propositions put before them and that as soon as the finances of this province would admit of the expenditure, the work would be taken in hand.

Signed

W. H. WOODWORTH,
WM. O'BRIEN.
C. H. BLACK.

While the report was encouraging, it was decided to re-appoint the same committee to follow the matter to a successful culmination. They are also to act as a legislative committee for all matters which the Nova Scotia Farmers' Association wishes

are receiving hundreds of inquiries for their 1911 Seed Annual, and shall be pleased to mail one to every reader of the Maritime Farmer, if they will send in their name and address.

166 GRANVILLE ST.,
HALIFAX, N. S.

to bring before the government during the ensuing year.

REPORT OF COMMITTEE ON AGRICULTURE IN THE COMMON SCHOOLS.

We, the undersigned, part of your committee on Agricultural education in our Common Schools report as follows:—

Being in Halifax on January 10th, 1911, at a time when a meeting of the School Inspectors of Nova Scotia was in session, in company with Premier Murray, Superintendent of Education, and the Principal of the Normal School, Prof. Shaw of Truro, we had a grand opportunity to discuss the above question. We found these gentlemen in the most hearty sympathy with our ideas. The Premier took up the matter in detail and was much pleased with the facts brought out during the discussion. The Superintendent of Education at once took up the matter and proceeded to make recommendations to the Council of Public Instruction, whereby nature lessons and agricultural teaching will have a much more prominent place in our common school course.

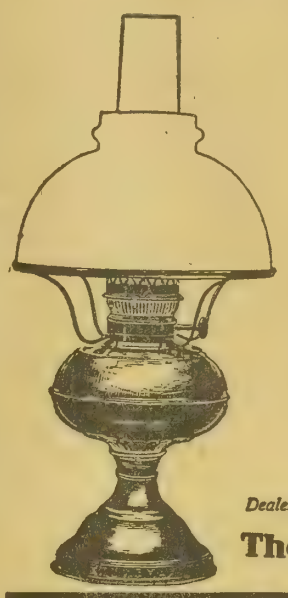
Signed,
W. H. WOODWORTH.
M. CUMMING.

RESOLUTIONS.

The Resolution Committe brought in its report and as a large amount of business was on the docket the speakers were limited to three minute speeches.

Mr. F. M. Chipman had a lengthy paper on Tariff Reform, which was read on the relay system in order to keep within the President's ruling re time allottment. The paper contained some important features and it was referred to the incoming board of directors for their consideration, and for introduction to County Associations.

The Famous Rayo



Gives the Best Light at Any Price

When you pay more than the Rayo price for a lamp, you are paying for extra decorations that cannot add to the quality of the light. You can't pay for a better light, because there is none. An oil light has the least effect on the human eye, and the Rayo Lamp is the best oil lamp made, though low in price. You can pay $5, $10, or $20 for some other lamp, and although you get a more costly lamp, you can't get a better light than the white, mellow, diffused, unflickering light of the low-priced Rayo.

Has a strong, durable shade-holder. This season's burner adds to the strength and appearance. Made of solid brass, nickeled, and easily polished.

Once a Rayo User, Always One

Dealers Everywhere. If not at yours, write for descriptive circular to the nearest agency of the

The Imperial Oil Company
Limited.

MOLASSINE MEAL

Wonderfully increases the flow and quality of the milk, and makes Rich-flavored Butter and Cheese. Dairy experts know its value and feed it to their cows.

While There is Life There is Hope

Let No One Despair Even Though The Doctor Has Sentenced Him To Die

Millions are living and enjoying life today who at some period in their lives have been given up by their doctors.

Many millions die premature deaths because of their stupid reliance upon doctors and drugs when another and more reliable method of treatment is at hand, a treatment which does not depend upon frail human nature, which does not require a diagnosis (which is wrong oftener than it is right), a treatment which is at once pleasant, safe, and sure, and which will with absolute certainty, **cure any curable disease,** be it **acute or chronic,** with no other effort on the part of the patient than to attach the instrument to the person at stated times, as per the printed instructions accompanying it. **The instrument will do the rest.**

Eighty-five per cent of all persons declared incurable or given up to die by physicians, can be cured, or their lives greatly prolonged by the beneficient action of the

PERFECTED OXYGENOR KING

This startling assertion is susceptible of proof. We have hundreds of letters, unsolicited, showing that the "P. O. K." has the most marvelous curative powers of anything known to the world today.

What a Trained Nurse has to say About the Oxygenor for the Cure of Paralysis.

Fredericton, N, B., Jan. 30th, 1911.

The Oxygenor Co.,
A. R. Mosher, Mgr.
Halifax, N. S.

Dear Sir,—Having personally used your "Perfected Oxygenor King" I take great pleasure in advising you of the splendid results I have obtained.

The greater part of my life has been devoted to my chosen profession as trained nurse and you will at once appreciate the fact that it was only after the methods used by medical profession had failed, that I would consent to try anything else.

While living in Dorchester, Mass., in July, 1910, I was stricken with paralysis which rendered me practically helpless. I was under the care of a specialist in this disease until September, but getting little or no benefit I came to Fredericton to live with my sister.

In December, being still in a helpless condition, I was persuaded by your agent here to try the Oxygenor.

The improvement since using the instrument had been marvelous, so much so that my friends could see the difference from day to day. I never thought for one moment that a person could improve so rapidly under any treatment for such diseases. My whole system has been built up and I actually feel like a new woman. I am now able to take long walks without any assistance and for the past few days I have been doing the housework, my sister being indisposed.

The Oxygenor is certainly a wonderful invention, and I will be glad to tell my friends about it as I can honestly recommend it to any sufferer.

Yours truly,
(Signed) MRS. M. THOMPSON.

The instrument is not electric; it simply uses OZONE or the oxygen in the air and forces the disease out by replenishing the diseased tissues. It's a wonder. It is the only known cure for paralysis and chronic rheumatism. There is nothing else on earth but the "P. O. K." to break typhoid fever and bring the patient back to life without any set back. It is the greatest nerve tonic and every woman in the country should use the "P. O. K."

Hundreds of cured patients gratefully acknowledge its astonishing potency in curing all classes of disease. Doctors no longer needed. Nasty medicines and poisonous drugs done away with. The "P. O. K." treatment is pleasant, safe and sure. Nothing ever placed before the public has given such universal satisfaction as the "P. O K."; nothing has ever achieved such phenomenal success.

It cures in many instances in less time than it takes to get a doctor. It will last a lifetime, and is capable of keeping a whole family in health if all do not fall sick at the same time. **It is the cheapest and best doctor on earth,** and is always ready for any emergency.

We will gladly send you our descriptive book, which tells you how to get cured without drugs and doctors, by simply using **oxygen** which is free. This book is illustrated with several drawings, some in colors, and will be sent **free** for the asking. We don't ask you to buy nor do you place yourself under any obligation by sending for the book. It's worth having anyway.

All you have to do is to send us you name and address on a postal card and the book will be sent you postpaid.

BEWARE.—There are imitations of our machines. Especially a cheap imitation of our first type Oxygenor which is discarded for the "Perfected Oxygenor King." This imitation is called the Oxygen ATor, thus imitating both the name and the instrument.

Look for our Patent Mark and beware of its imitations.—See that you get the instrument stamped P. O. K.

Do not put off, but send for our free illustrated book by sending to

THE OXYGENOR CO.

W. A. TAYLOR, Mgr. for New Brunswick,

A FLOOD OF LIGHT FROM KEROSENE COAL OIL

THE ALADDIN MANTLE LAMP generates, with Coal oil (Kerosene), a light far more brilliant than gas or electricity. It is simple, durable, portable odorless and safe. Satisfaction guaranteed.

AGENTS MAKE BIG MONEY by showing the lamp, the light makes the sale. It revolutionizes rural lighting; needed in every home. The SUNBEAM burners fit all ordinary lamps. Ask for Agency proposition or how you can obtain a lamp FREE to introduce it.

The MANTLE LAMP CO. of America, Chicago. Winnipeg and Dept. | H MONTREAL.

A number of important resolutions were carried unanimously.

ON THURSDAY AFTERNOON

Secretary Bryan read a paper on "The Future Policy of Agricultural Societies" which was followed by an interesting discussion by F. L. Fuller, S. J. Moore and Hugh Fraser.

BEEF RAISING

was the subject of an address by Mr. Wm. O'Brien, Messrs. R. Robertson, C. H. Black and L. D. Robinson led the discussions. Mr. O'Brien's paper appears on another page of this issue.

"THE VITAL POINTS IN DAIRY HUSBANDRY IN NOVA SCOTIA."

were discussed by Prof. E. S. Archibald. He emphasized better feeding and breeding. Mr. Harvey Mitchell, of the Dairy Division, Ottawa, spoke on the value of cow testing and thus emphasized the third important point in dairying, viz.: weeding. He had charts showing the gains that had been accomplished by cow testing in the various parts of Canada. We feel confident that, at least, a few of the farmers present will follow the plans outlined by Messrs. Archibald and Mitchell.

THURSDAY EVENING

The installation of officers took place on Thursday evening. The new president, Mr. Woodworth, occupied the chair and a hearty vote of thanks was tendered to the retiring president.

Addresses on "Rural Education" by Prof. P. J. Shaw, Truro, N. S., and Rev. George Bryant, Berwick, N. S., were listened to by an appreciative audience after which Mr. Woodworth, the president, spoke on "Some Important Factors in Fruit Growing". After the conclusion of Mr. Woodworth's address the usual votes of thanks were tendered to the town and to the speakers, after which the delegates dispersed, feeling that they had enjoyed the discussions and hoping to meet again in 1912.

RESOLUTIONS.

Whereas, it is reported that the Halifax Exhibition Commission has decided to double the entry fee on exhibits and;

Whereas, the expense to small exhibitors is now so great that the prizes won cannot possibly pay expenses, owing to the length of time over which the exhibition extends, and;

Whereas, this extra tax will be exacted from these small exhibitors and all who fail to win prizes and in many cases help to prejudice and keep intending exhibitors from entering their stock.

Therefore, this Association wishes to express its disapproval of this increased fee.

Moved by Wm. O'Brien.
Seconded by J. R. Starr.

We, the members of the N. S. Farmers' Association here assembled, wish to express our appreciation of the efforts of the local government and the city of Halifax in connection with the Provincial Exhibition held in that city for the encouragement of stock raising and advertising the resources of Nova Scotia and respectfully ask that the same may be continued as an annual Provincial Exhibition.

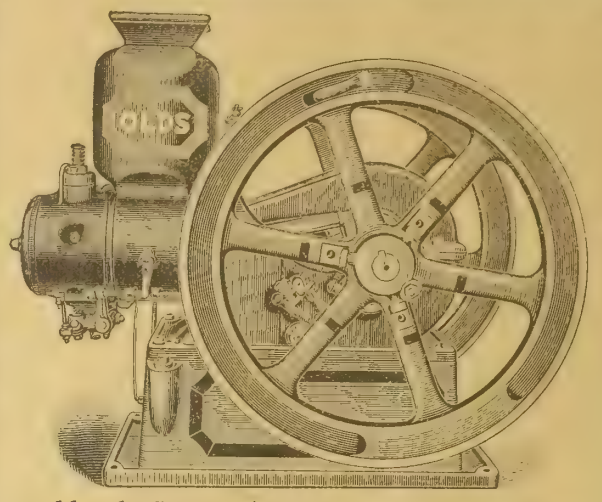
Moved by Wm. O'Brien.
Seconded by J. R. Starr.

Resolved, that the Government of Nova Scotia be advised by the resolution of the Provincial Farmers' Association that in the opinion of the Association, it is of the highest importance that assistance should be given to any persons or associations in importing Ditching Machines for use in the several counties of the Province, so that the benefits of draining be secured for the farmers of the Province at the earliest possible moment.

A. C. BELL,
H. S. KENNEDY.

Whereas—The present prizes available for live stock in Eastern Canada are not sufficient to encourage

Important Announcement



We are pleased to announce that we have completed arrangements whereby we become the sole Sales Representatives for the well-known OLDS GASOLINE ENGINES throughout the Dominion. These engines are manufactured by the Seager Engine Works—which Company, under the name of the Olds Gas Power Company, was one of the pioneers in the manufacture of Gasoline Engines, and the Olds Engines have come to be recognized as the standard of efficiency among the large number of Gasoline Engines now on the market.

The uses to which a Gasoline Engine can be put are many, and it has come to be recognized as a very necessary item in the equipment of an up-to-date farm. This latest addition to the Massey-Harris Line is in accordance with our policy of supplying the very best of everything needed by the farmer. More information will be given later—but in the meantime if interested in the Gasoline Engine subject we shall be pleased to hear from you.

MASSEY - HARRIS CO., LIMITED,
MONCTON, N. B.

You owe it to your own best judgment to try Psychine (pronounced Si-keen). We'll gladly buy a 50-cent bottle from your druggist and give it to you free to try.

You know the "know-it-alls." Suspicious of everybody and everything.

They promised well at one time in their career, then they seemed to come to a full stop.

Just because of that unhappy distrust, that suspicion that won for them the same attitude in return, that made every one distrust and dislike them.

Now you're not a "know-it-all." Only about one per cent. of the people are.

We feel sure that you have an open receptive mind—one that is anxious to learn more, to advance.

And to you we say that you owe it to your own best judgment to try Psychine.

* * *

Every now and then we come to a certain epoch in medicine when we think advance or improvement impossible.

Then some one comes along and the whole school of medicine is overturned, new and apparently indisputable theories, all good, all progressive.

In the progress of medicine we sometimes discover new values in old things.

One of these is in the efficacy of certain herbs to cure disease.

And the reason they cure is that they increase and strengthen the white corpuscles of the blood—the Phagocytes—the scavengers of the body, devouring every germ of disease that gains entrance to the body.

A third of a century ago, Psychine was compounded of certain herbs.

Since that time it has cured hundreds of thousands.

And all because it contained those herbs that science now knows builds up and strengthens the white corpuscles of the blood—the Phagocytes.

* * *

If you have any of these ailments don't be a "know-it-all," it won't pay you.

Learn something at our expense, fill out the Coupon and mail to us.

La Grippe	Bronchial Coughs
Bronchitis	Weak Lungs
Hemorrhages	Weak Voice
Sore Throat	Spring Weakness
Anaemia	Early Decline
Female Weakness	Catarrhal Affections
Indigestion	Catarrh of Stomach
Poor Appetite	Night Sweats
Chills and Fevers	Obstinate Coughs
Sleeplessness and	Laryngitis and
Nervous Troubles	Dyspepsia

After-effects of Pleurisy, Pneumonia and La Grippe.

Now, we don't ask you to take our word for the tremendously beneficial effect of Psychine. Fill out the coupon below, mail it to us and we'll give your druggist an order (for which we pay him the regular retail price) for a 50-cent bottle of Psychine to be given you free of cost.

We will undoubtedly buy and distribute in this manner, hundreds of thousands of these 50-cent bottles of Psychine.

And we do that to show our entire confidence in this wonderful preparation.

A confidence that has been based on our thirty years' experience with this splendid preparation, with a full knowledge of the hundreds of thousands of cures it has made.

COUPON No. 77

To the Dr. T. A. SLOCUM, Ltd.
193-195 Spadina Ave., Toronto

I accept your offer to try a 50c. bottle of Psychine (pronounced Si-keen) at your expense. I have not had a 50c. bottle of Psychine under this plan. Kindly advise my druggist to deliver this bottle to me.

My Name.....

Town .....

Street and Number.....

My Druggist's Name.....

Street and Number.....

This coupon is not good for a 50c. bottle of Psychine if presented to the druggist—it must be sent us—we will then buy the 50c. bottle of Psychine from your druggist and direct him to deliver it to you. This offer may be withdrawn at any time without notice. Send coupon to-day.

Consumption Book FREE

This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Consumption Remedy Co., 1641 Rose Street, Kalamazoo, Mich., and they will send you from their Canadian Depot the book and a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful cure before it is too late. Don't wait — write today. It may mean the saving of your life.

An attack of grippe is often followed by a persistent cough, which to many proves a great annoyance. Chamberlain's Cough Remedy has been extensively used and with good success for the relief and cure of this cough. Many cases have been cured after all other remedies had failed. Sold by all dealers.

extensive breeding of same;

And whereas, we believe that a trade with the West Indies would bring great benefit to the breeders of Eastern Canada;

Therefore Resolved, that this Nova Scotia Farmers' Association ask the Hon. Minister of Agriculture of Canada to give this matter his early consideration and develop, if possible, the West Indian market in the interests of the farmers of Eastern Canada.

H. W. CORNING.

To the Premier and Government of Nova Scotia:—

Recognizing the great benefit the Agricultural Societies have been to the agricultural interests of our province and appreciating the generous support of the Government in the grants to these Societies;

And whereas, this grant has remained fixed for some years while the number of Agricultural Societies has greatly increased thus, reducing the amount received by each society;

We would respectfully request your Honor that the amount of the grant for agricultural societies be increased in proportion to this growth.

Respectfully submitted,
S. SPURR,
S. A. COOK,
F. W. FOSTER,
C. A. MUNN,
F. W. BISHOP.

To the Premier and Government of Nova Scotia:—

Whereas, the practice of disposing for beef of the pure bred sires owned by the Agricultural Societies at the age of about three years, at which age their usefulness should just begin, and is proving deterimental, etc., we would deem it advisable that some exchange system should be inaugurated, whereby desirable sires could be centrally located for a few weeks after the annual meeting of Agricultural Societies and if not purchased in that time could be disposed of for beef.

Respectfully submitted,
S. SPURR.
S. A. COOK.
F. W. FOSTER.
F. W. BISHOP.
C. A. MUNN.

Whereas—The present policy of the Dominion Department of Agriculture re the annual grant to the Dominion brings to the Maritime Provinces about $60,000.00 once in four years,

And whereas, we believe that greater good would come to agriculturists of the Maritime Provinces, by a more even expenditure of this grant;

Therefore Resolved, that this Nova Scotia Farmers' Association make application to the Hon. Minister of Agriculture of Canada—that the $60,000.00 might be divided to the Maritime Provinces in an annual grant of $3,000 to Prince Edward Island, $6,000 to New Brunswick and $6,000 to Nova Scotia; and further resolved, that a copy of this resolution be forwarded to the Provincial Farmers' Associations of New Brunswick and Prince Edward Island for their consideration.

HOWARD W. CORNING

Whereas, the eastern part of Nova Scotia has become increasingly overrun with Ragwort and,

Whereas, this weed is gradually spreading into other parts of the Province, and,

Whereas, the weed is greatly retarding the development of agriculture in those parts of the Province into which it has come;

Therefore be it resolved, that we, the Nova Scotia Farmers' Association approach the Government to appoint a Commission to inquire into the best means for the destruction of this weed;

Further be it resolved, that we recommend as provisional methods subject to the report of this Commission, the following measures;

That all property owners be, by law, required to destroy the Ragwort growing on their property; that in the case of unoccupied lands, the Government shall appoint officials, who shall destroy the weeds on these lands and collect the charges for this work as a tax against that property and that the Municipal

Council of each Municipality be required to take in charge the destruction of this weed on the roadsides.

Whereas, Halifax is the principal market for the farm products of this Province;

And whereas there are no regular published reports from the farm produce markets of that city;

And whereas, there are two dailies published in Halifax, largely subscribed to and in circulation among the farmers of this Province, which keep us posted in practically everything but the farmers' market;

Therefore resolved, that this Association ask the proprietor of the "Morning Chronicle" and "Halifax Herald" to publish a wholesale market report of farm products in their papers at least twice a week.

F. W. BISHOP.

The resolution favoring the establishing a sheep experimental station in Eastern Nova Scotia, which was passed last year, was again reaffirmed.

It was unanimously resolved that the bye-law dealing with membership fees and delegates' expenses be revised so that in future delegates will pay a membership fee of $1.00, and that their expense allowance per diam be $1.50.

It was also resolved that in future a roll call of delegates be held at each session.

An Incubator Free.

The Maritime Farmer believes there should be an incubator on every farm. It means chickens for eating, more eggs and a money maker. To help encourage this we are going to give an incubator absolutely free to the person making the best hatch.

Here are the only conditions. You must buy the incubator this season of some advertiser in The Maritime Farmer. Keep a careful record of the hatch which you can acknowledge before a notary if necessary, write us before May 30th, giving the number of eggs started with, and number of chicks hatched, and to the person making the largest per cent of hatch we will refund every dollar they paid for their incubator. This is simple and easy. Remember, the incubator must be bought this season of an advertiser in The Maritime Farmer. When writing to firm mention The Maritime Farmer. Take this copy and write every incubator advertiser in it or at least send for catalogue so as to get all the information possible, pick out your machine, get it and then be careful with your hatch, if you make best hatch we will repay you every dollar you paid for the machine.

It does not matter whether you start 50, 100 or 200 or any number of eggs. Test at the end of the 10th day, taking out infertile eggs, keeping a record of those so taken out Then keep a record of eggs hatched from the rest.

Don't fail to take advantage of this. You want an incubator anyway, and by buying it of our advertisers you stand every chance in the world of getting your money all back. We positively guarantee every advertiser in our columns to do as they agree. Write us if you intend to compete and be sure to get your record of hatch in by May 30th. You can make two or three hatches by that time. Address all letters in regard to this to Poultry Department, The Maritime Farmer, Sussex, N. B.

Do you know that Croup can be prevented? Give Chamberlain's Cough Remedy as soon as the child becomes hoarse or even after the croupy cough appears and it will prevent the attack. It is also a certain cure for croup and has never been known to fail. Sold by all dealers.

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Extension to Breakwater at Richibucto, N. B., Will be received at this office until 4.00 P. M., on Wednesday, March 15th, 1911 for the construction of an Extension to the North Breakwater at Richibucto Kent County, N. B.

Plans, specification and form of contract can be seen and forms of tender obtained at this Department, at the offices of E. T. P. Shewen, Esq., District Engineer, St John, N. B., Geoffrey Stead, Esq., District Engineer, Chatham, N. B. and on application to the Postmaster at Richibucto, N. B.

Pesons tendering are notified that tenders will not be considered unless made on the printed forms supplied, and signed with their actual signatures, stating their occupations and places of residence. In the case of firms, the actual signature, the nature of the occupation, the place of residence of each member of the firm must be given.

Each tender must be accompanied by an accepted cheque on a chartered bank, payable to the order of the Honourable the Minister of Public Works, equal to 10 p. c. of the amount of the tender, which will be forfeited if the person tendering decline to enter into a contract when called upon to do so, or fail to complete the work contracted for. If the tender be not accepted the cheque will be returned.

The Department does not bind itself to accept the lowest or any tender.

By order,
R C. DESROCHERS,
Secretary.

Department of Public Works,

FRIEND SOAP CO., Dept. 808, Boston, Mass.

A few minutes delay in treating some cases of croup, even the length of time it takes to go for a doctor often proves dangerous. The safest way is to keep Chamberlain's Cough Remedy in the house, and at the first indication of croup give the child a dose. Pleasant to take and always **cures. Sold by all dealers.**

Maritime Empress a Popular Train.

There are many reasons why the Intercolonial Railway route is the most comfortable and convenient between Halifax and Montreal. Going West the train leaves Halifax at 3.10 p. m., an hour agreeable to business men, who thus can finish a day's work before leaving, and be well on their journey before night falls. The sleeping accommodation on the Maritime Express is all that can be desired, being quite equal to that of the finest through trains in America. In its Dining Car Service the Intercolonial excels, for splendid meals are served, table h'hote at a price far below the "a-la carte" rates prevailing on the company's owned lines The general excellence of the road bed ensures smooth and easy travel, and on the through journey a passenger seldom finds it dull for the "Maritime" is popular with a class of travellers who are generally found to be the acme of "good company." Even during the winter there is much scenic interest in the day's ride through Quebec, and Montreal is reached at a very convenient hour at 6.30 p. m., allowing ample time for travellers who desire to make connections for points further west. It should be remembered also that via the Intercolonial is the only "All Canadian Route" between the Maritime Provinces and Montreal.

MARKETS.

St. John Prices.

There is a demand for all kinds of farm produce as the market has been very poorly supplied during the past week.

GRAIN AND FEEDSTUFFS.—Oats, 45c to 48c per bushel; peas, $1.75 to $2 10; barley $1.25 to $1 50; buckwheat, $2 25 to $2 75; bran, $24 00 per ton; shorts, $25.00 per ton; middlings, $26 00 per ton; cottonseed meal $39.00 per ton; corn meal, $25.00 per ton.

SEEDS.—Timothy, $6.00 to $7.50 per bushel; common red clover, $17.00 to $19.00 per cwt.; mammoth red clover, $19.00 per cwt.

LIVE STOCK—Milch cows, $40.00 to $50.00; sheep, $4.00 to $5 00; lambs, $4 00

MEATS—Beef is in good demand at prices ranging from 9½c to 11c by the carcass and from 10c to 20c reteil. Mutton is required for the Winter Port steamers at prices ranging from 8c to 10c per pound. Lamb, 9c to 10c per pound; veal, 10c to 11c per pound. Pork has an upward tendency, prices ranging from 9½c to 10c per pound. There is a fair demand for bacon hogs

HORSES.—Drafters, $200 to $225; roadsters, $175 to $200; carriage horses, $175 to $190.

DAIRY AND POULTRY PRODUCE—Good butter is in active demand as there is no trouble to realize from 2c to 3c per pound over the ordinary market price of 26c to 28c for creamery and 25c to 27c for dairy. Farmers would do well to cater to this trade. Eggs, 28c to 35c per dozen; fowl, $1 50 to $1.75 per pair; chickens, $1 50 to $1.75; ducks, $1.50 to $2 00; geese, $1.50 to $1 75; turkeys, 28c per pound.

FRUIT AND VEGETABLES—Apples, $3.25 to $4.00 per barrel; cranberries, $8.00 to $10 00 per barrel. Potatoes have an upward tendency with prices ranging from $1.75 to $2 00 per barrel; turnips, 90c per barrel; beets, $1.25 per bbl.

MISCELLANEOUS.—Hay, $10 00 to $12 00 per ton; straw, $8.00 per ton; beef hides, 9c per lb; calfskins, 15c per lb.; sheep skins, 25c to 90c each; lamb skins, 25c to 90c each; wool, washed, 25c per lb.; wool, unwashed, 18c per lb.

Charlottetown Prices.

GRAIN.—Oats, whole, 35c; black, 36c.

FEEDSTUFFS.—Bran, retail, $1.25; shorts, retail, $1.40 to $1.45; middliugs, $1.40 to $1 50; oilcake, $2.25 to $2.50; corn meal, $1 60 to $1.70.

LIVE STOCK.—Butcher's cattle, 4½c to 5½c; stockers, $18 00 to $28.00; milch cows, $30.00 to $60 00; sheep, $3.75 to $5.00; hogs, 6c to 6¾c.

DRESSED MEATS—Beef (carcass), 6¾c to 8c; beef (retail), 8c to 14c; mutton (carcass), 8c to 9c; lamb, 9c to 10c; pork, 7½c to 8½c.

HORSES.—Drafters, $150 to $225; roadsters, $150 to $225; carriage, $150 to $225

DAIRY PRODUCTS—Creamery butter, solids, 23c to 24c; prints, 24c to 25c; dairy butter, 19c to 21c

POULTRY AND POULTRY PRODUCTS.—Eggs, 18c to 19c for shipping; fowl, 9c to 10c; chickens, 0c to 13c.

FRUIT—Apples, $2.50 to $4 00,

VEGETABLES—Potatoes, 45c to 50c.

MISCELLANEOUS—Hay, pressed, $7 00 to $8 00; straw, pressed, $5.00 to $6 00; beef hides, 8c to 8½c; sheep skins, 56c to 65c; lamb skins, 40c to 60c.

There is little new to report and prices are about as per last report, with a few slight changes. Dressed hogs, after touching 9½c, have dropped back and to-day 8½c is the best price obtainable for selects and prices range down from that to 7½c, according to quality and size Black oats are also a cent lower 36c being best price obtainable at present. There is a lot of ice in the straits and boats are delayed, consequently it is rather uncertain buying dressed meats for export at this time and prices are consequently a little easier on that account than they would otherwise be Trade is quiet but steady and about as usual at this season of the year.

ANOTHER BARON'S PRIDE SOLD.—Messrs. Jarvis T. and James Good, of Monticello, Me., lately purchased the handsome pure bred Clydesdale stallion, "Bubbie C C pyright," 8395, grandson of the celebrated "Baron's Pride," 9122. This handsome young stallion was bred by William H Tweedie, Middle Greenfield Carleton Co., N. B. Our enterprising cousins across the border know a good horse when they see one.

"It's Never Too Late to Learn."

Perhaps you have used paints and varnishes that have not been satisfactory and you wonder why. If you bought them because the price was low, that's probably the reason. The man who buys "cheap goods" to save money does not save it when buying paints. Paints, varnishes, stains and enamels which are cheap in price usually lack something—durability or spreading and covering qualities. can't make good paint without putting good raw m als into it—and they cost money. It is wiser to bu that has quality back of it; you will get twice of it that you would from a cheap paint. G dealer in your town to get paint satisfaction.

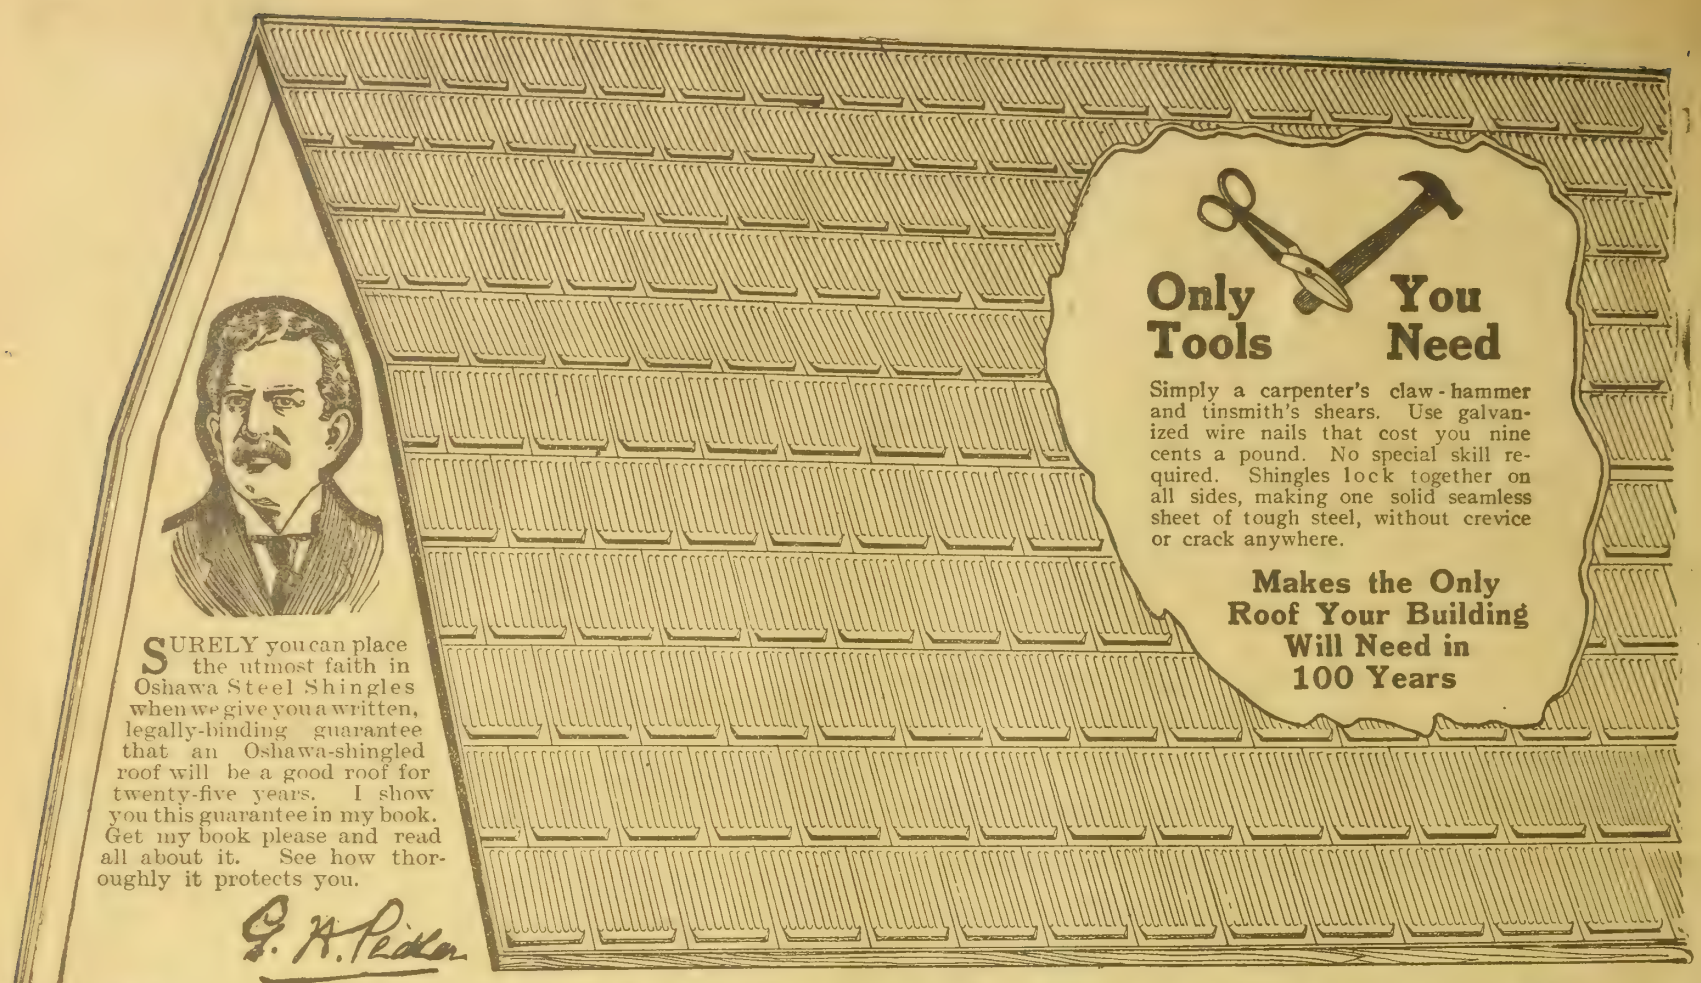
Ontario Wind Engine and Pump Co., Ltd., Toronto, Ont.

G. J. Barrett { Sales Agent } 32 Dock St. St. John, N. B. Branch at Fredericton, N. B.



SURELY you can place the utmost faith in Oshawa Steel Shingles when we give you a written, legally-binding guarantee that an Oshawa-shingled roof will be a good roof for twenty-five years. I show you this guarantee in my book. Get my book please and read all about it. See how thoroughly it protects you.

G. A. Pedlar

Only Tools You Need

Simply a carpenter's claw-hammer and tinsmith's shears. Use galvanized wire nails that cost you nine cents a pound. No special skill required. Shingles lock together on all sides, making one solid seamless sheet of tough steel, without crevice or crack anywhere.

Makes the Only Roof Your Building Will Need in 100 Years

Here's the ONLY Right Roof for You

I REFER to my Oshawa Steel Shingles. Reckon it all up and see if you don't agree with me. A roof that is one big seamless sheet of 28 gauge steel, smoothly and thickly galvanized by the Pedlar process of rust-proofing. A roof that cannot rust, will not gather moisture on underside, stay a good roof for a hundred years at a cost of less than five cents a year. A roof that makes your building safe against both fire and lightning. A roof that makes your building warmer in winter, cooler in summer. A roof that costs no more than common wood shingles to **put** on, and much less to **keep** on. A roof that needs no painting, no patching, no tinkering or repairs for at least twenty-five years—or you get a new roof free. The **only** roof that is guaranteed in writing. Certainly a roof like this is the only right roof for you. You cannot be sure of as much down-right roof value from any other kind of roof you can buy. The question is: Can you afford to risk your money in any other kind of roof.

The ONLY Roof that is Guaranteed in Writing

I claim a good deal for an Oshawa-shingled roof. Almost too much to be true, some folks think. So do makers of other roofs. But note this difference. I give you **a written guarantee** that's good for a new roof any time within twenty-five years if any Oshawa-shingled roof fails to make good everything I promise. That means that its cost when you put it on is the **only cost** for the next twenty-five years. Will the "other fellow" give you such a guarantee? I don't know any one who will. They want **you** to take the risk. They talk very confidently—and promise, yes indeed. But can you get their promises down in writing and signed—like mine are. That's the only way you can be positively sure of a roof that will be

Good for 25 years or an Entirely New Roof Free

My guarantee, remember, is a **written** one, in proper legal form, and is backed by 50 years of honorable dealing, and over $365,000 of invested capital, the biggest business of its kind in the British Empire. It is your roof-insurance for twenty-five years. When you consider that no other roofing is guaranteed at all, even though you pay as much for it as you pay for my Oshawa Steel Shingles, there's no doubt about which roof you should buy.

PEDLARIZE All Your Buildings--Inside and Out

BY "Pedlarizing" I mean doing for the whole building what Oshawa Steel Shingles do for the roof. I make other kinds of sheet metal building materials—for ceilings, side walls, outside—that make your whole building more fire-proof, more sanitary, more beautiful, more substantial. You should know about them. May I send you a booklet and pictures that tell the whole story? It's free. Just ask me to tell you about "Pedlarizing."

First Cost no More than Roofs You Think Cheap

Of course you don't want to pay any more than you have to for a good roof. But for the amount you **have to** pay you ought to get the roof that will cost the least to **keep** on. And Oshawa Steel Shingles make the **only** roof you can **be sure** will end your roof expense once you get it on. My written guarantee settles that. Figure it out any way you like. You'll find an Oshawa-shingled roof as cheap to begin with, and far cheaper in the long run, than **any other** roof you can buy.

Best Protection against Both Fire and Lightning

This fact alone is reason enough for putting my Oshawa Shingles on the next building you roof. Lightning causes over 40% of all fire-damage on farms. Destroys about 7,000 farm buildings each year on this continent. In one year killed 623 human beings and 4,500 head of cattle—most of them housed in wood-shingled buildings. My Oshawa Steel Shingles would save all this terrible loss. Because they make a lightning-proof roof. They are better protection than any number of lightning rods—better than the best and cheapest lightning insurance policy. Best fire-protection, too. The saving in fire-insurance premiums alone pays the whole cost of an Oshawa-shingled roof in a very little while. Your insurance agent will tell you.

Send for My Free Book "Roofing Right"

Then you'll have **all** the facts about this weather-proof, rust-proof, rot-proof, fire-proof, lightning-proof roof, which needs no painting or patching for the biggest part of your lifetime. By reading my book you may save yourself considerable money and a lot of bother. It is free. Do write for it—right away.

Write to Address Nearest You. **Ask for "Roofing Right" Booklet No. 17**

YOU Can Furnish Your Home FREE!

ANY housewife buying goods at the stores mentioned below may have their cash purchases apply on Asepto Soap Premiums. Every cent you spend counts toward a premium. A sure and mighty convenient way to save without increasing living expenses. Over 300 premiums of honest value to select from. The list will be increased every few weeks. Furniture will be offered next. The old way was to allow premiums to apply on Soap Wrappers only. Now at any of these stores—no matter what you buy—everything has its equivalent in Soap Wrappers. That is every five cents spent counts the same as one wrapper, while purchases of our goods as here advertised entitles you to two coupons—the one the merchant allows and the ones found in or on our goods themselves.

Dr. White's Honey Balm.—A cough syrup that is safe and sure. We are positive that no other cough syrup equals it. Price 25c. Equal to 5 soap wrappers.

Pendleton's Panacea.—The best hot medicine, in use nearly 100 years. Every person knows it is good. Price 25. Equal to 5 soap wrappers.

Brown's Cutilive.—A witch-azel cream for chapped hands, sunburn, etc. Price 25c. Equals 5 soap wrappers.

Scott's.—Salts, Senna, Sulphur, Saltpetre, Borax and Alum in 5c packages. Equal to 1 soap wrapper.

Brown's Spearmint Tooth Paste—Sweetens the breath, prevents decay, hardens the gums and whitens the teeth. Price 25c. Equals 5 soap wrappers.

Napatho Soap.—A pure laundry soap, containing naptha and incorporated by a process that prevents it from hurting the hands, as other Napatho Soaps do. The wrappers count for Premiums.

Sapid Tea.—A blend selling at 40c, in 1 lb. packages only. Blended by J. Harvey Brown, one of the most competent tea men in Canada. Each package carries a coupon equal to 8 soap wrappers.

Dr. Scott's White Liniment.—The largest bottle and best liniment. Price 25c. Equal to 5 soap wrappers.

Banner Flavoring Extracts.—All flavors and from 10c to $1.25 per bottle. Coupon on each bottle.

Herner's Dyspepsia Cure.—The only kind that tells you to eat what you like while taking it. Money back if not good. Price 35c. Equal to 7 soap wrappers. Price $1.00. Equal to 20 soap wrappers.

Brown's Stomach and Liver Pills.—A good family pill. Price 25c. Equals 5 soap wrappers.

Scott's Furniture Polish.—Renews the life of old furniture. Price 25c. Equals 5 soap wrappers.

Asepto Soap.—Is equal to the best and contains the same anti septic features that Asepto Soap Powder does. The wrappers count for premiums.

Scott's.—Nitre, Glycerine, Iodine, Iron, Squills, Friar's Balsam, Carbolated Oil, Camphorated Oil, Castor Oil, Sweet Oil, Oil of Tar, Sewing Machine Oil, Spirits of Camphor. Price 10c per bottle. Equal to 2 soap wrappers.

Scott's Fruit Syrups and Lime Juice.—Pure and excellent flavor. 10c, 15c and 25c. Coupon on the bottle.

Ebony Polishes—None better, both paste and lustre. Coupon on each box. Try them.

Banner Spices.—In packages only. Absolutely pure. ¼ lb. packages carry coupon equal to 2 soap wrappers.

Venus Floating Soap.—Made from pure vegetable oils and unexcelled for the toilet and bath. Price 25c. Coupon counts for premiums.

Asepto Soap Powder.—Has been the greatest success of any soap or powder ever put on the market. This is the best evidence of its quality. It is antiseptic as well. It absolutely sterilizes every article washed. Think what this means to a family. Price 5c, and the trade mark counts for premiums.

The following stores are now in a position to explain to you what this offer means :—McLeod & Spence, Port Elgin, N. B.; F. L. Rayworth, Bayfield, N. B.; W. H. Provincial Dairy School,

SUSSEX, New Brunswick.

Creamery & Dairy Course, Mar. 21-31

Practical and theoretical instruction in the making of first class creamery or dairy butter. Our students are prize winners.

A thorough treatment of churning difficulties. Gain a knowledge of the conditions that count for high class butter with the least amount of labor.

Milk testing work covers determination of fat and casein contents of milk and the extent of adulteration. Every rural school teacher should be familiar with these tests so that pupils may be able to test the milk from the individual cows on the farms.

During this course soft cheese making will be taught the farm dairy class.

Five or more Hand Separators will be used for demonstrative purposes. A knowledge of the conditions governing cream separation enables an operator to do better work with any separator, and it will very materially help in the skilful operation of machines that are getting out of condition.

Cheese Making Course, April 4-14.

This course is formed to suit the needs of chedder cheese makers. A modern outfit is provided for the making of this type of cheese. The milk testing work of the previous course is repeated.

General Dairy Lectures include a treatise of the many factors which enter into the production of clean milk as cheaply as possible. Special Lectures will be given in Field and Animal Husbandry, Veterinary Science, Poultry and Horticulture.

Instruction at Short Course is FREE. Board rates are reasonable. Make application by letter.

Students attending should purchase a Single Ticket at nearest I. C. R. station, getting also a Standard Certificate.

C. W. McDOUGALL, - Superintendent, - SUSSEX, N. B.

FLORICULTURE

Fuchsia writes'—I purchased some fuchsia bulbs last fall and planted them as directed, but am sorry to say that they have wilted down almost flat on the soil. They look healthy and the buds are appearing all right; can I do anything to save them?

This is the natural habit of growth of these bulbs and I hardly think there is anything the matter with them. If you do not like the appearance, you can tie them to stakes; but you will find that they will bloom all right as they are.

A Reader, St. John, writes:— I have a large Heather plant which grew well until last month when the tips of the branches grew brown and the foliage soon began to drop. It is budded but they do not look right. What is the matter? Will the buds open? Is the plant likely to die? What treatment should it receive?

You have probably kept your plant too wet and cool during the cold weather. This would produce the effect mentioned. The buds will probably open all right but will not develop to perfect flowers. I hardly think you will lose your plant if you correct your treatment; however, it is never safe to predict. Be sure not to err on the dry side as the old saying "a dry heath is a dead health" is wonderfully accurate. Use moderation in watering and see that the drainage is good.

A Correspondent, writes:— I have an Easter Lily plant, about one and one-half feet high. It has four small buds, just appearing, about the size of a bean. The leaves are beginning to curl and have streaks of yellow through them. Will it bloom too early for Easter? How should I treat it to make it bloom then? I am very anxious to have it bloom for Easter Sunday.

You certainly have your plant quite well advanced for Easter bloom, it must be in a warm sunny place. I would imagine it should be kept as cool as possible, that is, a temperature of say sixty degrees to hold it back. However, you can tell better a month from now, how to treat it. Let me hear from you then. As we usually say it is six weeks from the bud showing until it blooms, in a high temperature. The curling yellow streaked leaves is not a good sign. It sounds very much like the Bermuda Lily disease that is almost impossible to do anything with. However, it does not always kill the plant but a bud affected with it seldom produces a perfect flower.

A Subscriber to the Maritime Farmer wants to know how to make Geraniums bloom. Turn your Geraniums out of the pot or box and examine the ball of roots. If roots are in good condition the probable cause of failure to bloom results either from too large a pot or too much root room, over watering or else keeping the plant in a shady situation. All of these conditions are more favorable for production of the foliage than the bloom. For production of bloom keep your plants moderately pot bound, water only when needed, which is when the top soil shows slightly dry, then water. Give them all the sun you can. If strongly pot-bound an occasional dose of weak manure water. Treated in this manner Geraniums should give an abundance of bloom.

Roses, Mount Pleasant, St. John, N. B., writes'—Could you give me the name of that monster pink rose that blooms in June. I have seen flowers that were very large and cabbage-like in appearance, with very sweet perfume. How late can hardy roses be safely planted out of doors? Is it better to take them up each fall or let them stay in the ground? We have a very warm cellar and I would be afraid that roses would not do well in it.

The rose mentioned is probably the Paul Weyron. It answers the description quite well and is a very satisfactory plant. Hardy roses are

LYMANS Ltd., Montreal, Canadian Agents.

difficult to transplant, with safety after the 20th of May. They would require very careful handling and watering after that date. Under the cellar conditions mentioned, it would be much better to have the roses in the ground and protect them well with mulch and brush.

As soon as you are sure how much of your shrub is alive cut out the dead wood and remove and burn it. If shrubs are very thick prune out the centres so that the sunshine and air can get in to them.

Hardy plants can safely be transplanted as late as June.

A. H. P., St. John, writes: Please give me the names of a few hardy plants that will grow in a partial shade near trees. I want plants that will remain in the ground all winter and that will not give me very much trouble. Will a climbing honeysuckle do well on the north side of a house if protected during the winter. I have some Tulips in a bed that have bloomed every spring for three years, without being transplanted, this year quite a number are only sending up one leaf. I am told that they will not bloom. Is it so?

Very few hardy plants will do well in a shady place. The Auriculas, the Primrose family, Violets, Columbine and Campanulas are probably the best. I would be afraid that the Climbing Honeysuckle would not be very satisfactory on the north exposure. They must have a few hours of sun. Tulips showing only a single leaf will not bloom this spring they are the young bulbs and should bloom next summer. Tulips should be planted once every three years and their sizes sorted out. The small ones may be planted in an out of the way corner to grow on until they reach a blooming size.

Dahlias, from seed, are only in the infancy of their possibilities, so far as the average grower of flowers is concerned, although the single ones will flower in ten weeks from time that the seeds are planted if the conditions are ideal. The advantages of April sowing are obvious. The single type which is admirable for cutting is the most reliable as to results. The Peony flowered type, which is semi-double is excellent, however, and it is interesting to test by actual experience the potentiality of the double types.

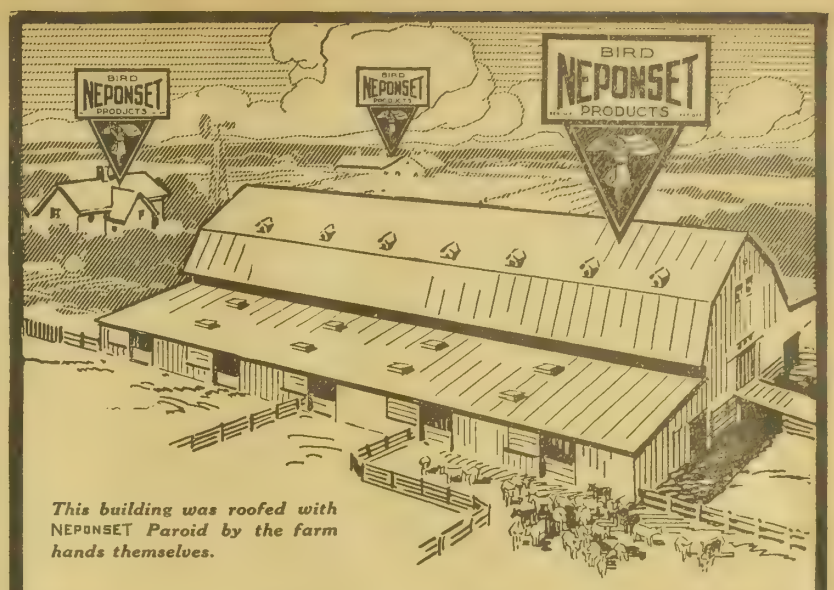
A $5.00 Prize

We will give a prize of $5.00 to the person making the largest purchase from one or more of the firms advertising in the February, March and April issues of The Maritime Farmer. Send for catalogue and information to each advertiser and see if they have something that you want. The only condition attached to this offer is that you mention The Maritime Farmer when writing and that you send us a list of those to whom you have written and the amount purchased from each advertiser. We believe our advertisers can offer you better value than can be obtained elsewhere and see no reason why you should not patronize and secure this prize. All lists must be mailed us by April 30th. Address Advertising Manager, Maritime Farmer, Sussex, N. B.

Dehorning Calves.

Referring to the work of dehorning cattle the Arizona Stockman says:

"Dehorning calves is such a simple operation that it is difficult to explain why it is ever postponed until the horns are fully grown and the necessity arises for sawing them off. To dehorn, secure a pencil of caustic potash at a drug store. When the calf is three or four days old locate the little knot which indicates the young horn, wet it and rub with the pencil, held in a gloved hand. This is all there is to the operation. It constitutes but a few minutes' work and causes no pain to the animal."



This building was roofed with NEPONSET *Paroid by the farm hands themselves.*

No Saving in First Cost Can Pay a Fractional Part of the Cost of the First Leak

When it comes to roofing, you need *the best*—the kind that has *proved* it will not leak—proved it in all climates, through many years of service to thousands of farmers and manufacturers throughout the country, to Governments and all leading railways.

NEPONSET
PAROID ROOFING

For Barns, Stables, Poultry-Houses and Other Farm Buildings

Farmers of Quality

Stationary and Mounted, in 1 1-2 to 30 Horse Power

Want Quality!

Readers of THE MARITIME FARMER are of the quality stamp; we realize their discerning ability to pick an article of machinery that is correct in every mechanical detail. That is the reason why such care is taken to see that the **Ideal Gas and Gasoline Engines** are what we claim for them.

Every part of the **"Ideal"** is interchangeable—a mighty strong feature The cylinder, instead of being cast with the base, is cast separate and bolts on the base. The valves, instead of sealing directly on the cylinder head are enclosed in a valve cage, and the valve cage is inserted in the cylinder head, so that when the valves become worn, the valve cage and valve can be taken out and ground without removing the cylinder head.

The idea of casting the cylinder separate from the base is a good one, for when the walls of the cylinder become worn you don't have to buy a complete new engine, you only require a new cylinder that can be bolted on the base. Another good feature is an extremely long piston with double rings instead of using three rings. We use three sets of two rings each on the Ideal.

Another thing, there is a speed regulator on this engine which enables you to run the engine at any speed, and, of course, when you reduce the speed of the engine, you also reduce the fuel consumption. For instance, if a man had a 6 H. P. engine and wanted to run a cream separator with it, he could reduce the speed and thereby cut down his fuel consumption to suit the work.

All these are points to consider when looking for a gasoline engine of quality—one that stands without a peer.

"Ideal" Gas and Gasoline Engines are built on honor and built to give their operators satisfaction, and they do it. We do not build a cheap or low grade engine, but do cater to that class of buyers who wish a first class article at a reasonable price.

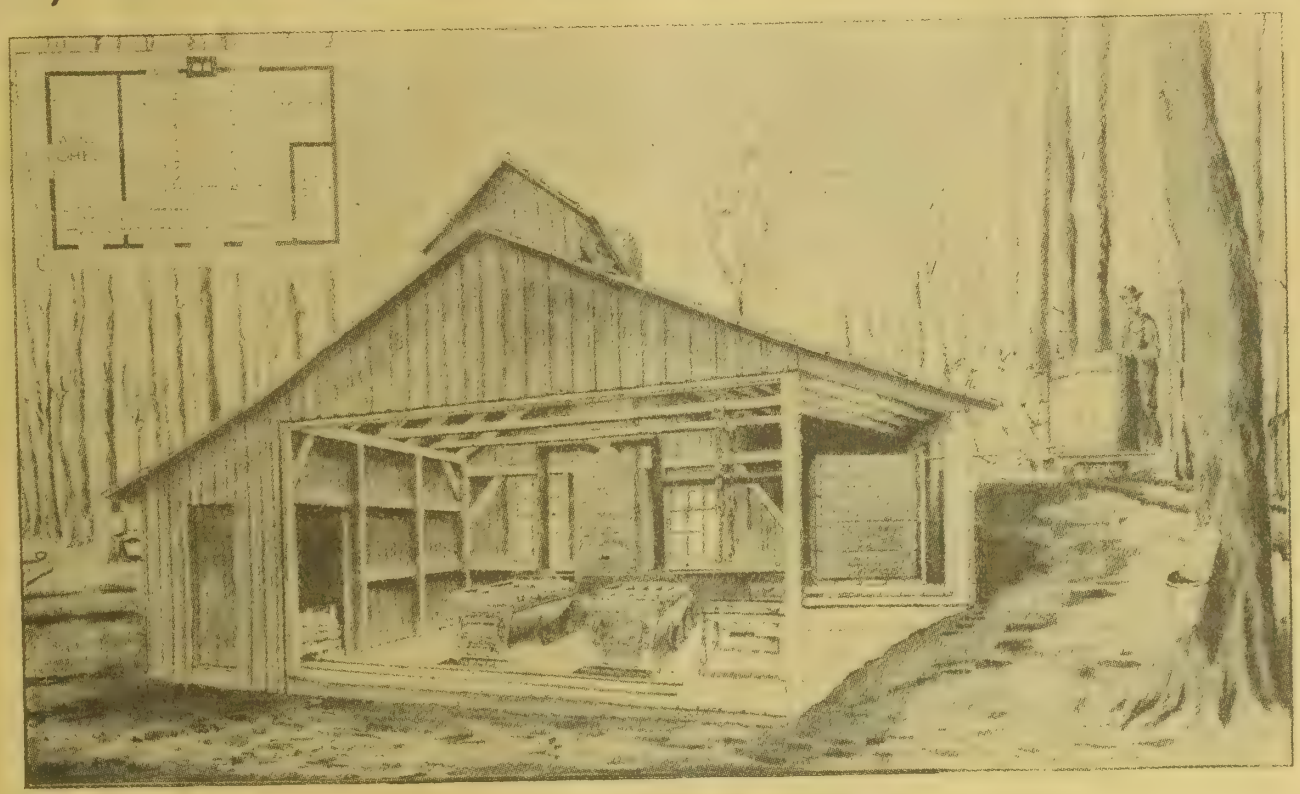
THE ART OF MAPLE SUGAR MAKING

By B. N. Hubley, Albert Co., New Brunswick.

I HAVE been engaged in the maple sugar business every season since I was big enough to walk to my father's sugar camp and be of no use only to make sugar scarce and be, generally in the way.

That was a great many years ago and the old sugar sugar making methods were practiced. The old methods ought not to be despised as very good sugar was made in the olden times. It was rare sport for me to be around to help. The sap was boiled in pots hung over an open fire of logs. Sometimes sparks, bits of moss, leaves and bark fell into the sap but it was nevertheless, wholesome.



Interior of a Model Sugar House.

When care was exercised and the sap was strained, just as good a product was turned out then as now. The sap was caught in birch bark receptacles; new wooden spiles were used and consequently they were clean and free from rust and there was no metallic flavor or color imparted to the sap.

When I visit warehouses, where much maple sugar is handled, I often see quantities of so-called maple sugar that is black, of savory appearance, bitter to the taste and not worthy of the name "Maple Sugar." I can only ascribe the cause for such conditions to the use of rusty and unclean vessels, spiles and other utensils used in the manufacture. Rain, snow and drippings from the trees boiled with the sap will have the same effect.

In these days tin buckets are substituted for the birch bark dishes in which the sap is collected. Care is necessary to keep them from rusting and be fit receptacles for sap. It pays sugar makers well to provide covers for their sap buckets as they keep out the snow and rain but also bits of dirt, and the suns rays and helps to keep the sap cool so that it does not spoil so quickly and in turn affect the quality of the syrup or sugar. This is a very important matter when there is a heavy run of sap. Wooden covers are all right, providing they are placed on the bucket in a slanting position and are large enough to project well over the side of the can so that snow and rain will drop outside. If the copers are placed flat on the top of the cans, water will soak under and drop into the can.

The Grimm No. 2. spouts are fitted so a hinge can be placed in it, which will hold the cover in the right position—they also supply the hinge. The spout is under the cover and the sap running in a rain or sleet storm will be saved. The extra trouble will be well repaid by the afforded advantages.

TAPPING.

The time and method of tapping is of vital importance. Tapping does not mean the haphazard boring andruining of a tree by an unexperienced boy or hired man. Observation, practice and experience are necessary in order to tell, quickly, where a tree will run the most sap and not strike dead wood or red colored sap will be the result.

It is well to observe which way the tree leans and on which side most thrifty branches and sound wood are to be found. We never tap the tree in a mossy place, and very seldom on the high side of the lean. Sap will settle on the under part of the lean of a tree. We use a seven-sixteenth inch bit for tapping and bore from inch to one and one-eighth ins. deep, slanting our bit upwards so that the sap will run out freely and so that water will not remain in it to rot the tree. We usually tap from three to five feet from the ground. It is not a good plan to tap too low as the tree does not thaw out and get warm as quickly low down. Our sugar bush is on mountain lime stone soil, quite smooth and slanting towards the Northeast. The trees are from ten to forty inches in diameter at the butt and are of soft bushy growth—just right for sap. One warm, sunny day does not make a sugar making season, so we do not tap our trees until we are sure the season is on. If we tap too soon the sap is very apt to freeze in the buckets and cause a lot of trouble. The frost will also injure the new tap so that it will not run so well. We usually tap our trees from the 20th to the 30th of March, according to the temperature of the season. We think the Grimm No. 2 spout cannot be beaten. We have everything clean and in readiness to receive the sap. When there is a good run, we commence to tap and keep on tapping away until there are signs of the run abating. If the dishes get full we gather and store the sap and tap again, so as to get as much of the first run as possible.

When the first run is over, we gather and boil whatever sap we have on hand, as quickly as possible. We gather with horses and a four barrel gathering tank to haul the sap to the sugar camp.

We cut our wood and store it in the fall.

SYRUP MAKING.

We use a Grimm evaporator, which is a very efficient machine. The sap is placed in storage vessels, which feed the evaporator automatically. First the sap enters the front pan of the evaporator. There are four pans in all and the sap is syphoned from one to pass to another. The sap gets sweeter and sweeter as it evaporates and passes from one compartment to another until it reaches the last compartment where it becomes a thin syrup. When starting the evaporator we flush it with sap but when the last compartment arrives at the syrupy stage we shut it off and let it boil until it is thick enough to weigh 13 lbs. 2 oz per imperial gallon. We do not use a tester as we can tell at a glance when

New Brunswick Farmers and Dairymen in Annual Convention

Col H Montgomery Campbell,
the newly elected President of the New Brunswick Farmers' and Dairymen's Association.

The Thirty-Fifth Annual Convention of the New Brunswick Farmers' and Dairymen's Association was held in the Opera House, Fredericton, N. B., on February 28th and March 1st, 2nd and 3rd. There was a record attendance at all the meetings, the largest for some years. Possibly the 35th convention will go on record as having the largest paid up membership in the history of the association.

S. B. Hatheway, president of the Association, occupied the chair and read the following address:

PRESIDENT'S ADDRESS.

Gentlemen'—Again we are privileged to meet in this, the thirty-fifth annual convention of this association, and it is with pleasure I note the large and representative attendance at this opening session. Those of us fortunate in having dry land have had good harvests, while wet land has not paid expenses and a large acreage was abandoned completely.

The outstanding feature of the season has been the great benefit of underdraining, the basis of good farming. I am glad to note that "tile draining" occupies a prominent place in our programme, and I believe it will be a popular subject.

The number of vacant and partially worked farms still increases and in many sections with restricted markets and indifferent transportation there seems little inducement for farmers to increase production.

Lack of theoretical knowledge and technical training is seriously handicapping farmers and the agricultural development of our province, and it is high time a more practical system of education was adopted in our rural schools. Even our superintendent of education acknowledged befor the technical commission that our educational system was designed to meet the requirements of the arts course.

The general agricultural condition of our province is far from what it should be. Our imports are increasing disproportionately to our exports, until now we buy in foreign markets the greater part of our food supplies. And yet New Brunswick must always depend on agriculture for the greater part of her revenue.

With our farmers lacking in knowledge of the soil, rotations and systems, lacking in adequate transportation and with an educational system tending towards other professions, than farming, how can we expect to depelop our latent natural resources, or what inducements have the rising generations to stay by the land?

Government policies, both past and present, have never given agriculture serious consideration. Our agricultural department is inadequate, and, as has been repeatedly evidenced, seems non-desirous of promoting agriculture beyond what public sentiment forces it to do.

Our officials are capable and intelligent men, but have not, or ever will have a free hand in shaping our agricultural policy so long as we lack a sufficient number of capable and intelligent farmers in our legislature who will take an aggresive stand in framing our laws and promoting policies most advantageous to the great mass of our people. Our stock industry is in a wretched condition. Our shops are filled with Western beef for the local trade; our contractors are forced to buy all their supplies in large quantities in Upper Canadian markets and our government is making little effort to either import stock or improve stock breeding conditions in the province.

Fruit growing is receiving more attention yearly and our energetic horticulturist is inspiring confidence in apple culture in the favored districts of our privince. Yet I feel that with the splendid advantages and opportunities, we have for commercial apple growing, particularly in the St. John valley, both farmers and business men should give the development of this branch of agriculture serious consideration and our government should provide a more extensive horticultural department than we have at present.

In any reference to government support I express myself with no political sentiment, but as a farmer, who has his all invested in New Brunswick, who intends to live and get his living here and who speaks only for the welfare of the country.

In December last I had the honor and pleasure of representing this association and along with another New Brunswicker, W. B, Fawcett, of Sackville, the farmers of the province, at the noted Farmers' Convention at Ottawa. I unhesitatingly, both at the convention and before the Premier, Sir Wilfrid Laurier, advocated the free interchange of farm products with the United States and endorsed strongly the other resolutions proposed.

I was not influenced by personal views in this matter, but by the overwhelming evidence I secured from prominent farmers and shippers throughout the province, men with a thorough knowledge of our possibilities and advantages who realized the seriousness of a restricted market and who believed that in advocating such a course New Brunswick would become "the land of opportunity, men who were broad-minded enough not to consider for a moment that improved trade conditions with the United States would influence or taint odr Imperial sentiment or our love for King and Empire.

If this tariff reform becomes a reality, both in Canada and the United States, it will stand as the greatest achievement and to the everlasting credit of Canadian farmers and the marked ability of Canadian statesmen.

The past year New Brunswick held her first Dominion exhibition. As an exhibitor I wish to say that from an agricultural standpoint the show with the exception of stock, considering its magnitude and government grant, lacked in educational features.

Stock was seen at a great advantage, but the products of the farm came in for only a passing notice.

This suggests the question as to whether in making grants of local government money to exhibitions we are adopting the most practical plan of assisting agriculture. It would seem that the farmer and small breeder under present conditions has little chance of improving much from increased prize money.

Exhibiting is being professionalized and trades and manufactures are bestimulated at the expense of agriculture.

In closing, let me commend to you the programme of this convention. It embodies subjects both interesting and important. Let each one present take an active part in the discussion and make this the most instructive meeting ever held by the association.

His Worship Mayor C. H. Thomas of Fredericton was present and expressed his city's good wishes towards the N. B. F. & D. A. and extended a hearty welcome to the delegates. He enumerated some of the advantages and characteristics possessed by Fredericton. He advocated more harmony between urban and rural populations, a greater reciprocal feeling. Boards of Trade should recognize the fact that whatever benefits the farm directly benefits the city and vice versa. He urged for more boosting and less knocking—more talk about the advantages of the East and less about those af the West. Make the East a busy East. In conclusion he intimated that the delegates' badges were presented to the Association by the Fredericton Exhibition, which will be held on September 16th to 23rd, when a building will be in readiness where there will be ample accommodations for all classes of stock and stock demonstrations.

THE COMMISSIONER'S ADDRESS

The Mayor's address was followed by an optimistic address by Dr. Landry, Commissioner for Agriculture, who expressed his pleasure at attending the 35th annual convention of the Farmers' and Dairymen's Association, it having been the fourth occasion on which he had had the privilege of addressing such a gathering, and it was a source of gratification to him, and must be to all who had the interests of the province at heart, to see the increased interest being taken in the conventions as it showed an increased interest in agricultural matters in New Brunswick.

He believed the farmers were adopting the right plan in attending in large numbers such gatherings as the annual convention of the Farmers' and Dairymen's Association conventions. The mayor had welcomed the members of the Farmers' and Dairymen's Association to the city, and in the name of the provincial government, Hon. Dr. Landry said he congratulated the association upon what they had done, and if they continued to advance there must be good results therefrom.

It was true that agriculture had not been assisted in this province in the past to the extent that it should have been. The reasons were that there were so many industries at which a living could be made in the province that agriculture had been somewhat neglected, and it was taking all the revenue for the upkeep of the roads and bridges, the educational system and other services; and the farmers had not banded together as they should have done to make their wants felt. But agriculture was now receiving greater aid than in the past, as the increase of the grant for agricultural societies from $8,000 to $13,000 was made last year, and the amount would be still greater in 1911.

Continuing, Hon. Dr. Landry, stated that he did not believe that the convention was the proper place to introduce politics and he did not think it would be productive of good to embark too strongly on the various political questions. The future for agriculture in this province was bright, and the present provincial government was prepared to give all the assistance in its power. The government had already increased the grant to agriculture and the number of agricultural societies had been almost doubled and would be twice as large within a year as when this government came into power.

The increasing of interest in the work of the agricultural societies was one of the best things that could be done in assisting agriculture and it would be only a couule of years before the government would have a superintendent of agricultural societies to go about the province from one society to another, keeping them in touch with one another and finding out what the different ones are doing so that they can work together in the importation and improvement of the stock and for their general welfare.

During his administration of the department of agriculture importations of cattle, sheep and horses had been made and it was purposed to continue the policy.

During the last year the importations had been made at a clear loss to the department of $3,000. If the full benefits were to be derived from these importations the farmers must band themselves together so as to take concerted action and show what was needed.

A horticulturist had been appointed and he had been doing good work with every evidence of there being good results therefrom in the course of a reasonable amount of time.

There was a great future for New Brunswick in fruit growing and the St. John River Valley was the equal of any portion of the province of Nova Scotia for successful apple growing. Evidence of the excellence of the fruit grown in New Brunswick orchards was the fine list of prizes won at the last two Colonial fruit shows in London, when New Brunswick carried off a fair share of the prizes in competition, will all the colonies of the British Empire.

The St. John winter port afforded a market for poultry and eggs which would be taken advantage of and for that reason a poultry inspector had been appointed, a capable man having been selected to encourage the poultry industry, showing to the people the possibilities of the business and the proper methods of taking

advantage of it so that in a short time it was hoped that the farmers of New Brunswick would be furnishing the entire supply of poultry for the winter port, much of which now came from the upper provinces. Every farmer had a chance to make a few hundred dollars extra money annually from poultry as a side line without interfering with his general farming and the opportunity should be taken advantage of.

This government had given increased assistance to the Farmers' and Dairymen's Association, which as the mayor of the city stated, was a farmers' parliament and as such was a fine institution. He believed than any government was bound to carry out the recommendations of the Farmers' and Dairymen's Association and he asked that every encouragement be given to the different farmers' institutes to send delegates to the meeting of the association, who would take an active interest in the work and attend the sessions.

The government had given grants to encourage poultry exhibitions in the various centres and in this way it was felt additional encouragement would be given to the poultry industry. Hon. Dr. Landry explained a profitable system of handling eggs for the market.

Referring to the remarks of the president of the association as to the lack of agricultural education in the schools of the province, Hon. Dr. Landry said that the right note had been struck and the suggested changes might well be made. By this Hon. Dr. Landry said he did not wish to detract in any way from the excellence of New Brunswick's educational system it was only a few years ago that the South African commission after travelling throughout Canada came to the conclusion that this province had the best educational system and took Principal Mullin of the Normal School to South Africa to establish a similar system there. But the advisability of changes in the educational system of the province was seen when the technical education commission visited New Brunswick and others in charge of the educational work in the province had expressed themselves as favorable to as much agricultural education as possible in the rural schools.

It took time to make these changes but they were coming. At the Normal School for instance, he believed that the students should be given instructions as to testing milk so as to be able to carry on that kind of work in their schools.

Hon. Dr. Landry said that it would be by paying attention to such matters that New Brunswick would rise up to the plane where she should be, but in so doing the province must depend upon its agricultural progress.

"Our lumber lands are being grad ually depleted, and our fisheries will be gobbled up if this—No, I said I would not discuss political questions here," said Dr. Landry, amid laughter and applause.

Continuing, Hon. Dr. Landry urged the young men of New Brunswick to fit themselves to meet all competition. If it did not come from without it would come from within, it was impossible for a farmer to be successful without proper study of scientific methods. He needed to study his profession just the same as a lawyer or doctor must study for his profession. New Brunswick had as rich a soil and as bright a sun as any country in the world, but the farmers just simply have not got the expert knowledge to take advantage of the opportunities before them.

The old government had introduced a good policy which was now being vigorously carried out of assisting young men in taking short courses at the Truro agricultural college and long courses at Guelph and St. Anne de Bellevue, colleges which had no superiors in the whole world, and he would like to see hundreds of young men of the province taking advantage of this assistance.

He concluded his interesting address by strongly urging the farmers of New Brunswick to show willingness to make the necessary sacrifices to allow their sons to get the expert knowledge they so badly needed from the agricdltural colleges so that New Brunswick might come to its own and have its resources developed.

COUNTY VICE-PRESIDENT'S REPORTS.

The present system of County Vice-President's reports is far from being satisfactory; perhaps it is the best that can be accomplished under the existing conditions. It is almost impossible for any man, who does not travel extensively, or who does not strive to learn, to give a proper report of the agricultural conditions in his county. The system or nominating County Vice-President's may also be at fault and we would advise that members give this question their earnest consideration and plan ways and means whereby intelligent reports of the true conditions in each county may come before the meeting. The reports from some counties were conspicuoas by their absence.

Following is a synopsis of the submitted county reports:

GLOUCESTER COUNTY.— John Moody of Bathurst Village, reported that hay and fruit conditions were good in his county. He advised that more attention should be given to poultry raising, which pays well when properly handled. The fall fairs held in the county had been very successful.

CHARLOTTE COUNTY conditions were reported by Mr. J. R. Oastler, St. Andrews. He referred to the fact that their Farmers' Institute had resolved itself into a Farmers' Association, which is an off-shoot of the society started in 1819, the oldest society in the province. Crops during the year were generally good. Visits by Messrs. Jones and Turney, Superintendents of Poultry and Harticulture respectively, had resulted in an awakened interest along these lines.

RESTIGOUCHE COUNTY. — Hon. C. H. LaBillois, who reported for this North Shore county, stated that agriculture was generally in a fair state and that this year fruit had been grown with success. Poultry raising was claiming a more pronounced attention. Widening of new roads, free grants of land and the expenditure of more of their funds, by agricultural societies for the betterment of live stock were strongly recommended.

SUNBURY COUNTY conditions were reported by Mr. Henry Wilmot. The hay crop was good, the root crop below the average, but the oat and wheat crops were also good. The report suggested that more attention should be given to the care of beef and dairy stock and regretted that dogs prevented the raising of sheep in any great numbers. The fruit growers of Sunbury County were quite successful in winning coveted prizes both at the St. John and London exhibitions.

CARLETON COUNTY.— Mr. J. E. Long, vice-president for Carleton Co., reported that during the past year spring rains had somewhat retarded the crops, but hay gave a bountiful yield. The market price for hay was low, only averaging about $6.00 per ton. Potatoes were not as good as in 1908, but the market prices of from 80 cents to $1.40 per barrel were better. There was a great opportunity for sheep raising but the dog nuisance was deterimental to the industry. Conditions for pig raising were good. Large number of pure bred horses were being raised in the county. The preparation of stock for market was receiving more attention than in former years. The production of cheese and butter was much lower than in former years. Mr. Geo. Ransom, who took over the Woodstock creamery two years ago, deserved much commendation as he had, by his untiring energy, more than doubled his output during the last year.

MADAWASKA COUNTY. — Mr. Violette, of Madawaska County, said they were receiving good prices for their produce. Hay was selling at the barns for $10.00 per ton. The pulp wood industry was receiving a great deal of attention from the farmers, much to the neglect of the farms. The report asked for better fire protection along the railway.

QUEENS COUNTY.— Mr. Isaac Baird, of Queens County read his report, which was heard with interest, as it showed a clear knowledge of the situation in his county. Queens County had good land, good climate and a good market, but the people devote too much attention to wage earning and consequently the young men do not settle down on the farms. Those who have stuck to their farms are meeting with success and it was a well known fact that they were more independent than those who had neglected their farms for a time and devoted their energies along the line of wage earning. The Chipman Agricultural Society, although still in its infancy, was doing good work. Conditions in Queens County were better suited for dairying than beef raising. He put forth a strong plea for more attention to the raising of our own feeds rather than depending on the Ontario mills for supplies.

YORK COUNTY.—Mr. William Moore, vice-president for York County, showed a map of New Brunswick, with a large patch showing what York County looked like on the map. He spoke of the city of Fredericton, being the market for miles. He showed the different kinds the country for a radius of thirty of farming carried on in York County and stated that the potato crop had not been as good last year as in the past. Some localities, he said, advocated mixed farming and others specialized in one way and another. There were something like 1,400 farms in the county. There is no doubt that with greater care the crops could be doubled and better cultivation of the soil might be mentioned as one thing which could be worked out. In Queensbury this year competition in standing fields of grain was to be taken among the members of the agricultural society. Better stock was being brought in by the Department of Agriculture. Another room for improvement was in the matter of seed. Garden seed could be raised here instead of being imported from the upper provinces. There was also a chance to do business in poultry and swine in this county, and there was room for improvement in the quality of sheep raising.

Mr. Moore would like to see plowing matches. He thought the institute meetings should be better attended and more faith put in the men who addressed the meetings. He also suggested more book-keeping, a better water system and a grain growing experimental union. He was sorry to say that under present conditions York County could not raise sufficient produce to feed itself.

VICTORIA COUNTY.— Mr. S. B. Wright, vice-president for Victoria County, presented the report for this county. It stated that conditions were generally discouraging owing to wet weather, early frost and other conditions which existed last year. Though the price of farm products in this county brought as good prices as in other counties.

REPORT OF SECRETARY FAWCETT.

Mr. Bliss M. Fawcett, recording secretary, made his report. He said the Farmers' and Dairymen's Society was organized 35 years ago and had made good progress since that time. He hoped that the representatives from all counties in the province would get together and, forgetting party politics, strive for the best interest of the farming profession. He had just returned from a trip to the West and he advised all present to remain in New Brunswick and to work and be contented, as we have a better country here than in Manitoba and other Western Provinces which he had visited. We have a better climate and soil, and all we have to do is to roll up our sleeves and settle down to work.

FINANCE COMMITTEE.

Messrs. Walter Limerick, George Baxter and George Trueman were appointed a Finance Committee after which the Tuesday evening meeting adjourned.

WEDNESDAY MORNING.

On Wednesday morning a large audience greeted Prof. Cumming in the Market Hall where he gave an interesting talk and demonstration on judging dairy cattle.

There were two Holstein cows furnished by Mr. S. B. Hatheway and a Guernsey cow and bull furnished by Mr. Neill, of Fredericton. The professor pointed out the various desirable points of conformation looked for in the dairy cow and gave facts and figures re her care and feeding in order that she produce profitably. He quoted experiments that had been conducted to show the cost in milk production in herds of a cow of strictly dairy conformation of a dual purpose conformation and herds of a strictly beef conformation. In every case it was found that the caw of strictly dairy conformation produced milk more economically than that of any other conformation He put forth a strong plea for keeping records of each cow in the herd, and when governed by such records, the weeding out of the poorer specimens. Score cards were passed around. After the audience had scored one of the animals, the Professor called on Mr. D. J. Barrett, of St. John, the winner of the first prize for judging dairy cattle at the last Winter Fair to place the animals, which he did, giving intelligent reason showing why one cow excelled the other.

WEDNRSDAY AFTERNOON.

When the farmers assembled on Wednesday afternoon, Prof. Cumming gave an interesting talk on beef raising using a Shorthorn steer to demonstrate the various points which he wished to emphasize. By a series of questions he got the audience to figure for themselves the relative profitableness of the beef and dairy industries.

Mr. B. M. Fawcett threw out some suggestions re the desirability of encouraging the breeding of dairy Shorthorns a subject on which there seemed to be decided conflicting opinions. After the animals in the ring were scored the judging demonstrations were completed.

(Continued on page 362.)

THE MARITIME FARMER

And Co-operative Dairyman.

Semi-Monthly Journal devoted to the interests of the farmers of the Maritime Provinces.

Official Organ of The Farmers, and Dairymen's Association of New Brunswick; The Nova Scotia Farmers' Association The Nova Scotia and P. E. Island Fruit Growers' Associations The New Brunswick Fruit Growers' Association; The Maritime Stock Breeders' Association; The Maritime Bee-Keepers Association, and The New Brunswick Poultry Aassociation.

Subscription Price **$1.00** per year. **When paid in advance 80 cts.** Persons taking advantage of the 80 cent rate when subscribing are only entitled to it by paying in advance each year. When subscription gets in arrears, $1.00 per year will be charged. Subscribers are requested to bear this in mind. This paper is sent to subscribers unless a definite order for dis. continuance is given.

The date after your name on the little green label on front Page is, in every case, the time to which your subscription is paid.

OUR GUARANTEE.—With each subscriber to the MARITIME FARMER, we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within one week from the date of any unsatisfactory transaction, with proof of the swindle and loss, and within one month from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser be said :—**"I saw" your adv. in the MARITIME FARMER.**

Photographs of farm life, when accepted, will be paid for at the rate of 50 cents each. Communications on all subjects connected with farming and stock-breeding are invited. The publishers will pay a reasonable rate for matter of practical value and for agricultural news. Photos and matter not accepted will be returned on receipt of postage.

RATES FOR CASUAL ADVERTISEMENTS.

GIVE THE BOY A PLACE.

We are heartily in accord with the sentiments expressed in the following article, which appeared in a recent issue of Successful Farming :

"Are you going to have your farm worked on shares this year? If you are not you ought to. That boy of yours ought to be one of the shareholders in everything that your place produces this year. Not equal with yourself, of course, but in fair proportion considering his age, strength and skill.

"You have never thought of doing that, perhaps, You have always taken his labor as your due, and thought him paid sufficiently by good board and plenty of clothes, together with the care that his earlier childhood demanded. Strange how some people persist in looking upon their children as their debtors. That item ought surely to be left out of the reckoning. If your boy was a care in his baby days, he was also a delight—you know that. From the moment he could hold up his hands and lisp "daddy," he paid for his keeping in the sweetness he brought into your hungry heart and life. So the account against his first years may be regarded as settled in full.

"And now about his board and clothes for this coming year. They would probably be sufficient in money value to pay for his work, unless he is about grown to manhood. But the trouble is, you give them to him ; they are not counted as a definite amount of work. And charity, even of the parental variety, is bitter bread for a proud spirit, such as every growing boy ought to have inside him. The same thing, given as a payment fairly earned, takes on an altogether different character.

CO-OPERATIVE BUYING AND MARKETING.

What efforts at co-operative buying of supplies or marketing of farm products have been attempted in your locality? What results were achieved? We would like to get short articles from our readers dealing with this subject. Let us hear from you.

"When you are making your plans for this season, take the boy into consideration as an embryo man, not as a lackey. Put him on his own responsibility, Let him know that you consider a certain amount of labor worthy a fair return. Give him as a payment; something to call his own, that he can count on and enjoy in anticipation all summer. Let it be a certain share of the corn crop, an acre or two, rent free and seed furnished, to work for himself—and the time to do it—that pretty yearling colt he has taken so much interest in—something, anything, that shall be his in fee simple, "to have and to hold," with no restrictions and no "strings tied on." Out of it may come his clothes and his spending money ; indeed he should feel that he must depend upon himself for such things. Even though they should not be either so expensive or plentiful as what you yourself would have provided, yet they should be worth ten times more to him, for they will represent the beginnings of a responsible manhood.

"And first last and all the time, remember this—the boy who leaves the farm is the boy who fails to find there the ideals which his developing manhood demands. He will build to his own plans on the farm, if you give him a chance, and be contented to stay there. Your boy is worth infinitely more than your farm, no matter how valuable the latter may be. Do not make the mistake of sacrificing the greater interest to the lesser. The farm is for the boy, not the boy for the farm. Let him realize it before it is too late to keep him there.

A MILK PROBLEM.

A milkman had eight gallons of milk. One of his customers desired four gallons, but the milkman had forgotten his measure and had nothing to measure out four gallons. The lady could find only two jugs, one holding three gallons and one five gallons Using only these two jugs and the milkman's eight gallon can, he measured her out four gallons How did he do it ?

The FARMER would be pleased to have its readers figure this out, and to the one who pours from one can to another the fewest number of times and pours the smallest total number of gallons altogether we will send a very handsome art picture. Get your reply in at once. Tell just which can or jug you pour from each time and how many gallons.

If you wish us to advise as to the winner of our art picture, enclose a two-cent stamp with your reply.

THE FARMER'S SCRAP BOOK.

Every farmer should keep a scrap book and cultivate the habit of clipping out of the farm journals and other papers the things which he reads and desires to remember or call to mind again. It is a poor plan to destroy your farm paper as soon as you have read it through. Instead, go carefully over it and clip out anything you find that interests you, tables of vlauable information, recipes, plans or illustrations that you think you might need for future reference. Cut out these articles and paste them in a scrap book under some system of classification that will be a good index of titles.

Any suitable sized book may be used if substantially bound with stiff cover. If you have more than one book suitable for the purpose, of course use them and this will aid in classification. A division may be made as follows : Farm Crops, Horticulture, Live Stock, Stock Diseases, Recipes, etc., so as to make the classification as distinct as possible. This book may be made as complete as possible by indexing pages for certain things; thus corn, wheat and all grains may be kept separate ; same with all grasses, vegetables, etc.

Most persons read an article over a time or two and depend on remembering it, but later when they want to use the information find that it has slipped their memory and the paper containing it cannot be found. Often they send back to the publishers for the paper that contained the article, hoping to get it in this way, but quite frequently it cannot be found. The one good plan is to cut it out when you read it and paste it in the scrap book in its proper classification, then it is safe.

A well kept scrap book will prove to be the most valuable reference book in any farm library. As a matter of fact it will be a whole library in itself. The memory will never do to depend on and clippings cut out and not pasted in a book in their proper order will be more or less disappointing.

DANGER IN CHANGING BREEDS.

The principal reason for the lack of uniformity in breeding is a failure on the part of the farmer to carefelly consider and stick to the breed which is best adapted to his conditions, taking into consideration the general condition of his farm and his market for dairy products. The following is the experience of one farmer visited a short time ago.

Fifteen years ago he started to raise Jerseys. For several years he had bad luck with his cows so he decided to change to Ayrshires. A pure-bred bull was purchased. Since several of his neighbors has had no bulls and the bulls in the community were grades of inferior quality, this farmer thought that his neighbors would patronize his bull, but when he asked $1.00 a cow, the farmers would rather take their cows to the grade bulls and save 50 cents.

Later this man bought a Holstein bull, as he was told Holsteins were better milk producers. At the present time the man keeps no bull and takes his cows to the nearest and cheapest bull, for, as he stated, "I can't see much difference in the calves from the grades and the purebred bulls when born."

THE INSPECTION OF MEATS.

The inspection of meats and the dressing of hogs in particular, so as to conform to inspection laws, which are being enforced in Quebec and Ontario, is of great interest to the hog raisers of the Maritime Provinces.

Some ten days ago we were in conversation with a traveller, who represented a Western Packing house, and in speaking about the decline in the price of meats in the United States recently, he said that the Maritime Province farmers were terribly handicapped in the raising of pork, and to prove this stated farmers in America were being paid the same price for live hogs that the Maritime Provinces farmer were receiving for dressed ones, notwithstanding the fact that the dressing of hogs represented about one-third shrinkage in weight, and that if pork in this country was dressed so as to comply with the inspection act enforced in the middle provinces, these hogs could have been shipped profitably to the packers in both Hamilton and Toronto.

BENEFITS FROM PARCEL POST.

If the people generally could realize how parcel post as operated in other countries would help to equalize the unreasonable discrepancy between what the consumer pays and the producer gets, such a popular awakening and interest would be given the subject as would result in the speedy establishment of this much needed branch of the government service. Parcel post will not cure all the evils of the present system of transportation, but will be a long step in the right direction.

It will not mean a cent of tax or injury to anyone, unless it could be the living, as well as the small profit to the producer.

Parcel post is no experiment, as some whose interests might be adversely affected would have us believe, but has been established for many years in Germany, England and other countries, where it is considered as much a part of the postal service as the transportation of letters and newspapers.

How Can Alfalfa Growing Receive a Boost in the Maritime Provinces ?

How to Sow, Cut, Cure and Feed Alfalfa.

Success with this plant depends on soil and care given it in the very start. Once established on good soil its limit of usefulness extends over many years. Unlike most plants it benefits the soils year by year instead of decreasing their fertility.

Clay soils, unless well drained both on surface and bottom, are not suited to its growth. This is due, we think, to the acid generated in such wet soils. If clay soils are to be used they should be well enriched with manures. Have lime in some of its forms freely used to offset the acidity and should be brought up to equal a good garden soil before sowing alfalfa. Rich black lands are best suited for its growtn. These should also be kept dry by proper drainage. Clayloam, gravelly or sandy soils do fairly well.

Our farm consists of first river bottom, second bottom and upland. The first river bottom is a deep soil ten to fifteeen feet in depth, resting on slate bottom and has good river drainage. This soil consists of drift deposits, sand and river washings and is very rich. Alfalfa on this land does exceedingly well—only drawback is floods.

The second bottom is a black soil of a firmer nature. This is our best land for it. The uplands are heavy clay loam and some gravelly soils. On all these lands our experience with alfalfa has been considerable.

Sowing. The first requirement is to get the land in prime condition. It comes as near resembling a garden soil as one can make it. This is necessary to insure germination, to keep the young plant alive after germination, and to maintain or retain mosisture to hasten its growth. The better the condition the greater the results.

When ready for sowing we broadcast, using a seed sower, ten to twelve pounds one way, and then sow crossways this amount. This double sowing pays double by insuring a better and more uniform stand. If we want the field for hay and seed purposes we sow with drill one-half this amount.

After the seed has had ample time to germinate we go over the field to find any missing places where the seed failed to grow, and these spots are resown. This is done the second time and it results in a good stand. This "patching" must be promptly attended to lest the weeds get the start and choke out the alfalfa. This method is used where the alfalfa is sown without a nurse crop, and is done is August or early September.

If sown with oats or rye in the spring its chances are problematical, or if sown on very rich soils in the spring its chances with weeds are not such as to warrant success. Our success in both these cases has not warranted following the practice. We have sown it in June after a crop of peas was harvested but generally the danger of hot dry weather makes it risky.

If oats are to be grown it is better to defer the alfalfa sowing until after the oats are harvested and then put the ground in fine condition and sow in August. August sowings have always done the best for us. The plant has ample time, more favorable weather and less danger from weeds than at any other season.

Cutting.—About the first of June or when the plant is first blooming we begin our cutting for hay. The stem is not so coarse then and is very juicy and when cured makes fine feed. We use the mower for cutting for hay. If we cut for seed later on we use the binder, as less seed is wasted than when a mower is used. Cutting in the after part of the day and letting the alfalfa lay over the next day is advisable when weather conditions will warrant it. Alfalfa is more easily cured than either timothy or clover. We have cut and taken it in the same day, but weather forced this.

Feeding.—Cutting for feeding green begins with us in late May—from fields sown purposely for green feed. It is cut daily in quantities needed for hogs, sheep and cows. Milch cows are fed 20 to 30 pounds daily with bran or mill feeds. For brood sows, pigs and lambs it makes a valuable feed. No nitrogenous feeds except this are required, so rich is the green food in nitrogen; but little grain is required when using alfalfa.

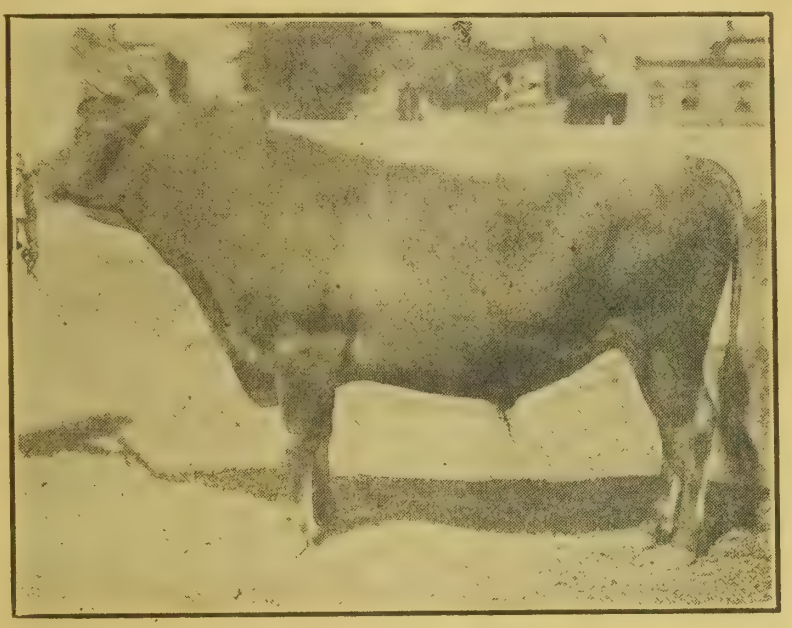
No cholera will trouble the drove as long as this is used. We have had no trouble with this disease for many years. Poultry kept confined relish the green alfalfa. A field properly managed will furnish green feed from May until October. We begin at one end of the field, cut out a section at a time as large as required and by the time we have cut over the field once we can strat in again where we begun first. We get four cuttings in this way, and then give the field a rest to recuperate. This field is top dressed with manure annually.

We seldom pasture our alfalfa, believing the cutting process the more economical.

Feeding alfalfa hay permits no loss. All the coarser stalks refused by the other stock is eaten readily by the sheep. The leaves and broken stems, if steamed and mixed with grain meals, makes an extra fine poultry food.

For reclaiming fertility to the soil alfalfa has no equal in the legumes. It draws large stores of nitrogen from the soil through its intricate root system, running deep into the soil and from the air it derives other stores through its leaves all of which is stored away in the plant for future use, either through the manures coming from the feeding or in the humus if turned under.

Our summary is that if good soils, care in seeding, time of cutting and curing, and proper methods of feeding, are given attention, alfalfa is one of the most paying crops of all the legumes for the farmer.—J. H. Haynes, Carroll Co., Ind., in Successful Farming.



Brampton Eminent Raleigh.

Senior and Grand Champion Jersey Bull at the 1910 Dominion Fair, St. John, also head of first prize herd. His sire, Mabel's Raleigh, has proved himself most prepotent as the head of an outstanding butter family, including some of the highest testers in the Jersey world. On his dam's side Brampton Eminent Raleigh is a b other of the first p ize cow in the open class, Brampton Nestor's Blossom. The get of this bull are of the type which not only win show ring honors, but are the favorites of the practical breeder

Imported, owned and exhibited by B. H. Bull & Son, Brampton, Ont.

Alfalfa Sure to Come.

It looks very much as if New England is to see in the near future a great alfalfa propaganda. Dozens of farmers have been trying it the past few years in the different New England states and the results are gratifying. A few days ago A. J. Stapleton of Hampden County, Mass. came in to see the editor and could find no words strong enough to express his belief in alfalfa. It will be recalled that Mr. Stapleton is the man who gave up a good paying job in the city and went out on a sandy farm to make a living, largely by raising hogs. The story of his success was printed in these columns a few weeks ago.

His alfalfa experience began about nine years ago and now Mr. Stapleton says he has conquered the crop and this is what leads him to say that New England is as natural to alfalfa as are the middle west and north where it thrives so luxuriantly. He declares if farmers will just treat the soil with some lime to sweeten it up, select a site which has no subsoil within 4 or 5 feet, sow good seed and sow in the fall instead of the spring, and inoculate properly, success is sure.

CAN USE TOO MUCH LIME.

His first cardinal principle of success is to get the land sweet. He used nearly two tons lime to the acre. This was applied directly on the furrow or soon after harrowing and worked thoroughly into the soil with the disc harrow. He believes that too much lime is as bad as none at all. "Seldom, if ever, is land so sour that four tons of lime are required."

The next imuortant matter is soil. It is useless to sow alfalfa on land where the hardpan is only 2 or 3 feet from the surface of the ground. A hardpan 4 feet below the surface will allow the crop to live perhaps four years, but it will soon die out after that. Mr. Stapleton is not so particular about the land being fertile provided there is good drainage and the roots are able to bore into the soil several feet. He has made alfalfa grow amazingly on sandy land so light that many farmers would consider it worthless.

The matter of seed and seeding is important. Mr. Stapleton prefers northern grown seed and buys all of his in Wisconsin. He states he has never had any difficulty in getting good, clean seed provided he asks for the very best in the market and is willing to pay for it. For a long time he made the mistake of sowing the seed in the spring. As a result weeds came in and killed the alfalfa. Now he always sows between August 1 and August 15. Never use a nurse crop with alfalfa is the advice of Mr. Stapleton.

SOIL INOCULATION BEST.

Another requisite is inoculation. Mr. Stapleton had poor luck with so-called cultures. Now he always depends upon soil inoculation. He simply goes over to one of the old fields which has had alfalfa on it for five years and takes 100 to 150 lbs. for each acre. This is put in a bag and sown by hand just as grass seed would be sown. Apply this in the morning and preferably on a cloudy day and immediately harrow it in. Mr. Stapleton uses only 15 pounds seed to the acre. He was reminded that some farmers, notably Mr. Jarvis of Connecticut, who has 40 acres is having good success by sowing alfalfa in the spring as well as in the fall. Mr. Stapleton declares that others may be successful, but it does not work with him. He now has 10 acres in alfalfa, some of which he cut three times last season. Within a year he hopes to have 40 acres.

This alfalfa is an important item of food for the swine on the Stapleton farm. So far it has been cut green and carried to the hogs. They eat it like so much corn. Asked if it could not be ground or chopped up and placed in feed Mr. Stapleton said perhaps. He had never found it necessary to go that far. The leaves and shatterings are fed to poultry with excellent results.—New England Homestead.

Alfalfa Feast in Colorado.

To show our readers the importance that the farmers of Colorado are placing on the growing of alfalfa and its manufacture into concentrated forms we publish the following paragraph taken from a recent issue of one of our exchanges:

"A menu which might have made "the mouth of Nebuchadnezzar water "in the latter days of that Biblical "personage's life, has been prepared "for a banquet to be given at Rifle, Col., in celebration of the "opening of an alfalfa mill. The "succulent green plant will appear "in every dish on the board. Biscuits "will be made of alfalfa meal, the "turkey will be stuffed with alfalfa, "mashed" alfalfa will take the place of potatoes, and alfalfa leaves will "counterfeit spinach. Alfalfa salad "will be served, and for beverage "there will be alfalfa tea and alfalfa "cider. At the end of the repast "toothpicks made of alfalfa straw "will be distributed."

Alfalfa Growing.

Editor Maritime Farmer:

I notice some interesting letters in recent issues of the Maritime Farmer on alfalfa growing in the Maritime Provinces. I believe I promised you persnally some time ago to write my experience in connection with alfalfa growing.

It was about five years ago that I first sowed alfalfa. On one half of the field I sowed inoculated seed, on the other half the seed was not treated. I sowed a cover crop of wheat at the rate of one and one-quarter bushels per acre in the autumn. I had a stand of clover eighteen inches high with a root growth of thirteen inches. In the spring I found only four or five plants had withstood the winter, these are still growing to perfection. I have tried it every year since with varying success. About one mile from where I live a farmer bought and sowed what he thought was ordinary red clover seed, one-half of which was alfalfa, it grew and flourished and is doing so yet. Two years ago I went to this field, dug up quite a few plants getting as much soil with the plants as possible, this I brought home and scattered over a part of a field sown the previous week to alfalfa, with a cover crop of wheat as before, about one-half of the alfalfa survived the winter and is growing yet.

There is no doubt that alfalfa can be made to grow in the Maritime Provinces, but the farmers who wish to make a success of it, must not let one or two years failure deter them, they must keep at it year after year and finally success will crown their efforts. As regards inoculation, a great deal of nitro-culture that has been used was not good, or not what it should have been. Farmers should see to it that they get the very best that can be procured. The only object in using nitro-culture is to help the growth of nodules, without these it will not grow in any soil.

Before we go into alfalfa growing to any extent are we growing as much red clover as we might? Red clover will grow and flourish in any soil rich enough to grow any other crop, it draws enough nitrogen from the air to sustain itself and deposits some in the soil for future crops. Nitrogen today, is the most expensive element of plant food we have to purchase. Why then is there not more clover grown? As some one remarked not long ago, "in sowing clover you sow prosperity." As a nitrogen gatherer, alfalfa is perhaps ahead of red clover, as a means of keeping down weeds it cannot be beaten, except in hoed crops which necessarily costs considerable in hoeing and cultivating. In seeding down a weed-infested field with grass, many of our worst weeds have a chance to ripen their seed before it is time for the hay to be cut. The earlier and more frequent cutting of alfalfa makes it more preferable from this standpoint than any of the grasses.

The ideal conditions of soil would be to take ground upon which potatoes or some other hoed crop has been previously grown and prepare the ground by discing or harrowing or both.

The seed should be inoculated with nitro-culture, or better, scatter on the field, some soil from an old alfalfa field. This can be easily incorporated into the soil of the field while the seed bed is being prepared, ten hundred pounds should be sufficient.

The best quality of seed should always be used, from fifteen to twenty pounds per acre. There is a difference of opinion as to sowing alone or with a nurse crop. If sown alone it

PEDLAR NESTABLE CORRUGATED GALVANIZED CULVERT

THESE culverts of mine are a great thing for the farming world. They not only make good roads possible, but they serve the farmer in many other ways. And they are so simply laid. They come nested like this:

This compactness saves freight and makes it easy to handle them. You put the sections together like this:

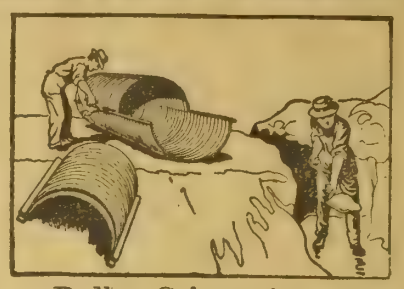
Then you clamp the flanges together like this:

And you've got a piping that will outlast anything of the kind there is. Better get the book and sample and study it.

G. H. Pedlar

Saves Farmers' Money
Betters Roads—Lowers Taxes

JUST give me the chance to prove to you that my Culvert is so far ahead of any other in everything that makes a culvert good, that you won't be satisfied until your township authorities have read my book—sent free—and are also convinced of its superiority. You will benefit through better roads, lower taxes and prevention of washouts. My Culvert actually costs less than even the cheapest and most unreliable wooden culverts. Outlasts and excels wood in durability and reliability, and all other materials in economy, strength and genuine utility. Write for my Free Book and read the facts—then do what you can to have Pedlar Culvert used in your township



Pedlar Culvert is put together and in place in one-third the time required for any other culvert. No special skill needed; no bolts, no rivets. Easiest to install, and by far the most economical and most durable.

Pedlar Nestable Culvert also has

A Score of Uses On YOUR FARM

Makes the best possible well curbing or cistern lining, and keeps your water supply pure. Makes it easier to water your stock. Use Pedlar Culvert to drain any swampy spots or for irrigation ditches and under-drains. Or to instal a permanent sanitary sewage system. Or to pipe water from springs or windmill tanks. Get my book and read how it "fills the bill" and saves your money.

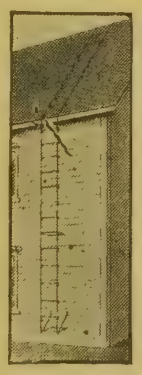
Agents Wanted !

We want farmer agents in all parts of the Maritime Provinces to sell the Acme Stee Ladder.



It is one of the best propositions ever offered to a farmer who wants to make money during his spare moments.

Write to-day for particulars as to territory, etc.

The Acme Steel Ladder Co.,
Sussex, N. B.

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Extension to Breakwater at Richibucto, N. B., Will be received at this office until 4.00 P. M., on Wednesday, March 15th, 1911 for the construction of an Extension to the North Breakwater at Richibucto, Kent County, N. B.

Plans, specification and form of contract can be seen and forms of tender obtained at this Department, at the offices of F. T. P. Shewen, Esq., District Engineer, St John, N. B., Geoffrey Stead, Esq., District Engineer, Chatham, N. B. and on application to the Postmaster at Richibucto, N. B.

Pesons tendering are notified that tenders will not be considered unless made on the printed forms supplied, and signed with their actual signatures, stating their occupations and places of residence. In the case of firms, the actual signature, the nature of the occupation, the place of residence of each member of the firm must be given.

Each tender must be accompanied by an accepted cheque on a chartered bank, payable to the order of the Honourable the Minister of Public Works, equal to 10 p. c. of the amount of the tender, which will be forfeited if the person tendering decline to enter into a contract when called upon to do so, or fail to complete the work contracted for. If the tender be not accepted the cheque will be returned.

The Department does not bind itself to accept the lowest or any tender.

By order,
R C. DESROCHERS,
Secretary.

Department of Public Works,
Ottawa, February 13th, 1911.

Newspapers will not be paid for this advertisement if they insert it without authority from the Department.

must be clipped back two or three times in order to stop weeds which are sure to come, from going to seed, and tends to grow a more stock plant and develop the root growth. The best time to clip is wnen the plants are about six or eight inches high, and the last clipping in the Maritime Provinces would probably be best the later part of August. This would give time for a good mash to form to protect the roots through our winter, which owing to the frequent changes, freezing and thawing, makes it difficult for clover to withstand our winter. The trouble comes as regards red clover, and no doubt the same applies to alfalfa—in the spring of the year it thaws an inch or more on top, then freezes and so on, each thaw lifts or heaves the ground. The stem of the clover plant being deep rooted, stretches with each thaw until it breaks and is thrown out of the ground and dies. The heavier the mat of clover there is on the ground, therefore, when winter sets in, the better the plants will be protected agaiost the spring, when to my mind the whole trouble arises. If I am not correct in this, I will be pleased if some one will put me right in some later issue.

It is claimed by some that the "Lurkestan" is a very hardy strain. I do not think, the farmers as a rule, so far have inquired as to what variety they were buying or whether there is more than one variety. The Grimm alfalfa is said to be the best seed to sow in our Western Provinces where winter conditions are somewhat similar to ours.

It is needless to repeat what has been already written in your columns as to the time to cut, how to care for, and harvest. We all know that it is essential to cure it in such a manner as to preserve the leaves which are so readily lost, as they contain three times as much protein as the stems and three times as much protein as bran. The protein decreases rapidly when subject to wetting and after the full bloom period passes. This will be the greatest drawback in our Maritime climate. The danger of rain before it can be properly cured, with an average rainfall of 42 inches—in 1910 it was over 55 inches—it can be readily understood that we have not the ideal conditions that our neighbors to the south of us and our middle and western provinces enjoy.

A. HECTOR CUTTEN,
Inglewood Farm.
Lower Truro, N. S.

Alfalfa as a Wool Producer.

During 1908-09 the sheep at the Ontario Agricultural College were wintered on timothy and clover, and in 1909-10 on alfalfa. In the spring, when the clipping was done, the wool was weighed both years. A comparison shows that with all the breeds there was a greater yield of wool when alfalfa was fed than in the preious winter.

	Average Weight Wool.		
	When fed timothy and clover.	When fed alfalfa	Per cent. increase with alfalfa.

Chamberlain's Stomach and Liver Tablets are safe, sure and reliable, and have been praised by thousands of women who have been restored to health through their gentle aid and curative properties. Sold by all dealers.

AN IHC MANURE SPREADER MEANS NEW LAND ON THE OLD FARM

THOUSANDS of people during the past year paid fabulous prices for new land—gave up their savings and their homes and moved into unknown country just for the sake of securing more productive property.

Hundreds of farmers found a better plan. They stayed at home and invested in an I H C Manure Spreader a small part of what it would have cost them to move to the new country.

Now in leisure time during the winter they are returning to the soil the rich fertility that has been drained from it—making new land out of old—putting it into condition to yield bumper crops.

With an I H C Spreader the manure can be distributed in the proper amount required by the condition of the soil. A light coat, where land is good, a heavy coat where it is most needed.

I H C Manure Spreaders have many exclusive features which you ought to know about. Years of successful service has shown their superiority. In buying an I H C machine you are assured satisfaction, for they are backed by a company that cannot afford to risk its reputation by offering you anything but the best.

I H C Spreaders are made in two styles—

Corn King—Clover Leaf

in varying sizes suitable for any size farm.

The Corn King is of the return apron type—Cloverleaf Spreaders have endless aprons. Lime hoods for spreading lime and drilling attachments for distributing manure in rows are furnished on special order.

Let the I H C local dealer tell you all about I H C Spreaders and how you, too, can turn your manure pile into money with one of these simple, efficient machines. Catalogues can be secured from him, or, by writing nearest branch house for them.

CANADIAN BRANCHES—International Harvester Company of America at Brandon, Calgary, Edmonton, Hamilton, Lethbridge, London, Montreal, North Battleford, Ottawa, Regina, Saskatoon, St. John, Weyburn, Winnipeg, Yorkton.

MANUFACTURERS.

"Our Seeds Grow"

The farmer who is wise, is the one who places his "seed order" early. There is a reason for this, and we advise all to get the habit. Later in the season, when everything is rush and tumble, it is a great satisfaction to know that you have all your seed "right at hand," and not somewhere on the road. We make a point to have our orders executed promptly, and we ask at least a trial order.

A Fortune in Three Years.

Fifteen years ago Charles Hewett, of Aroostook county was working out on a farm for $22 per month and board. Today he owns free of debt a place worth $3000, has a new house with all modern conveniences, sends two boys to school, and enjoys most of the good things of life. When you ask Mr. Hewett to tell how he accomplished so much in so short a time he sums it up in three words: "Brains, work and strawberries."

Strawberries are not especially popular as a farm crop, but its so happened that the man to whom Mr. Hewitt hired out in 1885 always raised about an acre. The hired man took no particular interest in this crop beyond carrying out his employer's instructions until it came time to market them the first year. Sudden illness of the proprietor sent the young man to town with the load of prime fruit, and when he swapped the crates for the money of the expectant customers he began to do some deep thinking.

MISS OPPORTUNITY CAME A-VISITING.

From that day on Mr. Hewett was a changed man. He had seen a great light and had recognized opportunity as she fairly hammered at his door. For the next two years he devoted all his energies to doing two things —studying the strawberry business and saving every possible cent of his wages. His employer was so pleased to note his growing zeal and interest that he answered every question and volunteered the reply to many unasked. At the end of the year a raise to $28 per month came almost as a matter of course.

By the end of his third year working out Mr. Hewitt had accumulated nearly $1000. Then a neighbor, who had lived alone for years, died, and the little farm, with its ramshackle house, was offered for sale. It went begging for several months, and when Mr. Hewett finally offered $800 for it the administrator took him up with a snap. When he hired out the following year it was with the understanding that he should have some little time off to work on his own farm.

GETTING READY A YEAR AHEAD

As soon as the first rush of the spring work was over Mr. Hewett took his employer's team and disk harrow over to his new farm and cut up the sod on the best acre of land. The next week he went over it again. Then he plowed it, and just before haying harrowed it some more and sowed it to buckwheat, putting on 500 pounds commercial fertilizer. The buckwheat grew famously, and by the last of August was almost too tall to plow down. But the job was finally finished and the land seeded with rye the first day of September.

When harvest was over Mr. Hewett began hauling cord wood to town for his employer, and when he asked for the privilege of hauling some stable manure back to his own farm they were not long in coming to terms. Then every day added to the coat of dressing spread over the growing rye, and when spring came the contrast between that one acre and the rest of the worn-out farm was really remarkable.

By April Mr. Hewett had saved up $400 in addition to his place, but meanwhile he had begun to think of something else besides strawberries and money. Sunday evenings, especially, he was apt to be late in getting home, and after talking it over with his sensible sweetheart, they decided that if their ancestors could rough it for a decade they could stand it for one year or longer, so a quiet trip to the parsonage followed soon after.

FIXING UP THE OLD PLACE.

Repairs to the old house, with such things as had to be bought, made quite a hole in that $400, but Mr. Hewett wasn't groping in the dark. He plowed down that acre of rye, bought a ton of high-grade fertilizer, and put it on. Then he set half of the plot with the best strawberry plants he could buy. The other half acre was used for a garden.

Most of the cultivation was done with a wheel hoe about daybreak, for Mr. Hewett kept on working out every day he could spare. Another acre was started with buckwheat and seeded with rye in the fall, but the strawberries were the main thing.

GREAT BIG LUSCIOUS BERRIES.

Mr. Hewett had learned that people who buy strawberries like great big ones, and that those great big ones were mostly water. What little plant food they needed was easy to provide, but most of the growers depended on luck for the water. Here is where he won out. The buckwheat and rye that had been turned under had made the soil like a sponge. Rain or shine made no apparent difference, and lots of those strawberry plants grew to be nearly 2 feet across before they felt their first frost.

When the ground froze the berries were given a covering of swale hay. Lots of cultivation, with some cutting of runners, had kept them in arrow rows. When the warm days ame the next spring a manure fork vas used to remove the hay just over he rows, and the plants came up hrough with a rush. Another heavy pplication of fertilizer along both ides of the rows pushed them along, nd by the time the field blossomed t was really a great sight.

THE FIRST CROP A MONEY MAKER.

Another half acre of berries was et that suring. Mr. Hewett took early his last dollar to buy a horse, elivery wagon and some indispensble tools. A sharp frost meant all the difference between success and failure, but Mr. Hewett wasted little nergy worrying.

Picking time finally came and 5000 uarts of great luscious berries from hat half acre closed the pioneer tage of Mr. Hewett's farming. Twelve cents per basket was the lowest price realized, and the proceeds put the happy couple right on easy street.

Since that time there have been the berries from a full acre every year. Mr. Hewett has not cared to increase that part of his business, but rather has devoted his available resources to developing a diversified system of farming that makes it necessary to buy little beyond clothing and luxuries.

There are a couple of cows, pigs and some chickens that keep something coming all the while, and a model garden, with nearly every kind of small fruit. But the strawberries bring in money that runs into four figures on all but the poorest years, and make the rest of the year just comfortably busy.

Four years ago Mr. Hewett got out the timbers from his own wood lot for a new house, and built most of their present home with his own hands. Now that he has this done, each year finds some addition or improvement that makes it possible to get the same revenue out of the little farm with less hard labor than the year before. But it was all made possible by his knowing how to take an old, worn-out field and make it bring in big money the third year.—Farm and Home.

Plant Potatoes of Best Type.

As the time of year approaches or active farm operations to commence most farmers begin to think about their supply of seed potatoes, and wonder where to obtain it. The

Whitewashes 20 Times Quicker Than by Hand.

The **Spramotor** whitewashes as much surface in three minutes as can be done by hand in one hour. It **saves its cost** in one day's work.

And the **Spramotor** applies this whitewash more evenly and more thoroughly than any other method known. Its disinfecting spray goes into all cracks and crevices, **impossible with hard work.**

The **Spramotor** is easily handled. Swivel castors on strong wheels, permit it to be turned in any direction.

Simple in construction. Nothing to get out of order. No mechanic necessary to operate the **Spramotor Junior.**

10,000 sold in the last 5 years. 90,000 lbs (45 tons) paint applied by N. Y. C. Ry. at Buffalo, N. Y. It's worth while to find out about it

We are anxious to prove this to you. So write today for interesting **free** booklet. Paint formula and directions with Machine.

Fresh Dug Nursery Stock!

A large assortment of HARDY NORTH GROWN Fruit and Ornamental Trees Strawberry and other small fruit plants. Lowest prices. Satisfaction guaranteed. Also Bees and Bee-Keepers' Supplies. Price Lists free.

E. L. Colpitts, Dept. F. **PETITCODIAC, N. B.**

proper time to consider this question was, says the American Agriculturist, last fall at digging time. Then each farmer who intended raising potatoes this year should have selected his seed and stored it with great care during the winter. By selecting seed potatoes directly from the field it is possible not only to secure the most desirable individual tubers, but also to select from the best type of hills. One hill will bear perhaps only four or five potatoes of indifferent quality, while another may have 15 or more smooth and well-developed tubers. The selection of the best individual tubers from the most productive hills in the field is the ideal method of selecting potato seed.

A $5.00 Seed Prize

We will give $5.00 in gold to the person who finds the word "seed" or "seeds" the most times in ads. in this and succeeding issues up to April 30th. It doesn't cost you one penny to try for this $5.00 but in looking for the word "seeds" note which seed ads. interest you most, and write those advertisers, sending an order or asking for free catalogue. In your letter to us telling how many times you find the words "seed" or "seeds" you must give us the names of all seed or nursery advertisers in this and succeeding issues up to April 30th to whom you have written mentioning The Maritime Farmer. This is an easy condition, and the catalogues or seeds you buy will be worth much more than you pay. Go to work.

The $5.00 will be mailed promptly to one finding them the most times. Tell how many times you find them on each page. In case of tie the prize will be divided. Don't delay. Doesn't cost a cent to enter. You might as well have the $5.00 and you are going to write for catalogues, so do it now. Lists must be mailed by April 30th.

The Apple Scab and Its Control

Editor Maritime Farmer:

The address, in your issue of 7th February, delivered by Merret Wallace, of Cornell University, before the N. S. F. G. A., marks an era in the history of fruit growing in Nova Scotia. It means that although in the past 99 and perhaps 99 and 9-10 per cent. of spraying for funguous diseases has been done with Bordeaux, in the coming year Bordeaux will be practically a thing of the past and 90 per cent. of the orchardists will use lime-sulphur. Mr. Wallace is not entirely responsible for this revolution the feeling was wide spread that something was comong that was more reliable and safer than Bordeaux, and the clear, explicit address at the Fruit Growers' Association by Mr. Wallace dispelled the last vestige of doubt from the most conservative. The discussion following the address will be published later in the Maritime Farmer, and should be read by every fruit grower. The slogan of the progressive fruit grower is "better apples," and Mr. Wallace has proved from careful tests that lime sulphur means better apples and more of them.

Mr. Wallace is a Nova Scotian and was born in Hants County, but a few miles from Windsor where this epoch making address was given. For some years past he has been carrying on special investigation on funguous diseases and their control at the great New York University, and now comes to his native land to give us at first hand information of untold value to horticulturists.—S.C.P.

2 IN 1 "Knocks Spots off Everything."

Niagara Lime-Sulphur and Swift's Arsenate of Lead.

NIAGARA LIME-SULPHUR a summer and winter spray 1 to 10 kills Oyster Shell Bark Louse, Aphis and sucking insects, 1 to 40 controls spot better than Bordeaux.

Will not russet apples or injure the foliage like Bordeaux.

Every barrel of **NIAGARA LIME-SULPHUR** has a guarantee on the head **32 BAUME.**

Cornell N. Y., carried on their experiments last year with **NIAGARA LIME-SULPHUR.** Under every test it beat Bordeaux.

Extract from Bulletin 289 says :—

'Russeting of apples by Lime-Sulphur is at least, rare and of minor importance compared with that caused by Bordeaux. Considerable natural russeting occurred the past season (1910) on unsprayed trees, especially on Baldwins, caused by certain weather conditions In our experiments there was in both seasons even less russeting on the Lime-Sulphur sprayed than on the unsprayed trees (tables 1 and 5). We have not yet seen a clear case of russeting from Lime-Sulphur but such have been reported and we cannot dispute the possibility. Aside from the russeting, apples spraved with Lime Sulphur have invariably been more highly colored and had a finer, more waxy finish than those sprayed with Bordeaux.'

Special feature of our Hand Pumps and Power Sprayers, attached to 1½ and 2½ Engines is the porcelain lined cylinder guaranteed for 10 years to withstand **LIME-SULPHUR SPRAY.** No stuffing box or waste of spray liquid.

DAIRYING.

C. W. McDougall, Dairy Inspector, staff Contributor.

A New Frozen Dairy Product.

A new frozen dairy product, has just been brought out by the Dairy Section of the experiment station at Ames. This product, which has been named lacto, is made of loppered whole or skim milk, with the addition of eggs, sugar, lemons and flavoring materials. Lacto has a more pleasing flavor than sherbets and ices, and contains considerably more nutriment. It contains as much protein as ice cream, less fat and more acid.

In an experiment in which 179 persons sampled lacto, 128 pronounced it very good, 37 good, 6 fair, and 8 poor. Comparing it with common vanilla ice cream, 111 reported that they preferred lacto, 9 considered it equal to ice cream, and 59 prererred the ice cream. Comparing lacto to sherbet, 123 preferred lacto, 30 preferred sherbet, and 26 considered the lacto equal to sherbet.

Scientists have found that there are large numbers of putrefactive bacteria in the intestines, which are very injurious and may even shorten life. Metchnikoff, the famous Russian scientist, claims that old age is the result of a slow poisoning caused by these bacteria. He recommends the drinking of sour milk, so as to replace the harmful putrefactive bacteria by lactic acid bacteria, which are harmless. The trouble with this remedy is that few people like sour milk. To provide these lactic acid bacteria in a more palatable form was one of the reasons for introducing lacto. The lactic acid bacteria are not killed by freezing, and if lacto is eaten frequently enough there is every reason to believe that these bacteria will replace the more harmful ones in the intestines. This will result in improving the health and prolonging life.

The milk to be used in the manufacture of lacto is prepared in a similar manner to the starter which is used for cream ripening. A commercial lactic acid culture is used. This is added to a pint of skimmed milk which has been pasteurized at a temperature of 85 degrees C. (185 F.) for 20 minutes, and after pasteurization cooled to from 20 to 22 degrees C. (68-71 F.) The lactic acid culture is thoroughly mixed with the milk and left at 20 degrees C. (68 F.) until the milk has coagulated. Then another bottle of skimmed milk is pasteurized and cooled in the same manner, but instead of the commercial culture, a part of the coagulated milk is added to insure the souring of the milk inside of eighteen hours. This operation is repeated until the final batch of soured milk obtained has lost the flavor due to the substance in which the commercial culture was preserved. After this point has been reached, which requires from four to six days, the last sample of soured milk obtained is added to a larger amount of pasteurized skimmed milk. This is then treated the same way as the former lots. In this way an amount of milk sufficient to work with is obtained.

Lacto can be made in the household on a small scale without having a commercial starter. Take a bottle of good clean fresh milk which has not been heated, and set it away at a temperature of from 68 to 70 degrees F. until it coagulates. If it coagulates as a smooth solid curd without pinholes, if the aroma is clean and pleasant, and the flavor nice and creamy, it can be used as a starter for a larger amount of whole or skimmed milk.

The milk when ready to be used for lacto has a mild clean acid flavor The curd must be thoroughly broken up. This is accomplished by pouring it from one pail to another until it is as smooth and velverty as rich cream. From this "lacto milk" the various lactos are prepared.

One of the most popular kinds of lacto is cherry lacto. This is prepared from the following formula, which is sufficient for 5 gallons of the finished product:

3 gallons lacto milk.
9 pounds sugar.
12 eggs.
1 quart of cherry juice or concentrated cherry syrup.
1½ pints lemon juice.

The sugar is first dissolved in the lacto milv. The eggs are then prepared. The whites and yolks are kept in separate containers and each lot is beaten with an egg beater. Both of the yolks and whites are then added to the milk. The mixture is thoroughly stirred and strained through a fine wire gauze. The fruit juices are added last. If there is any indication of the juices precipitating the casein, they should be left out until the mixture has begun to freeze. The freezer is run until it turns with difficulty, when the paddle is removed. The brine is removed and the freezer repacked with ice and salt and left for an hour before the contents are served.

Additional details regarding lacto, and other receipts for its manufacture, are given in Bulletin 118 of the Iowa Experiment Station, which may be obtained free by writing to the Director at Ames.

The Influence of Cow Testing on Profitable Dairying.

The sale price of a good cow is often independent of the law of supply and demand; it is analagous to the cash value of a good horse that has something more than appearance, that something may be speed or power or action; something, be it noted, that is actual, tangible performance.

Similarly with good cows, no matter how excellent the dainty fashion-plate appearance, the everyday dairyman needs that same 'something', a tangible product, a yield of milk and butter fat that will bring more cash than the raw roots or the load of hay.

Breeders of pure bred stock appreciate the value of a certified record of performance, for the factory patron who is seeking real dairy herd improvement demands records of the dam when he purchases the pure bred sire.

Who are the men in the dairy world who are making money today? Dairy papers all over the continent contain frequent letters from farmers detailing their successes, giving facts and figures to substantiate their statements of solid increases; and, to a man, their letters state "look at our records." This is more than mere chance, they have found that cow testing is the initial step in the march of herd improvement. Is it not the most reasonable action to take, to institute some simple method of ascertaining beyond doubt the actual financial basis that each cow is on? Suppose there is no available record of yield of milk, no definite knowledge as to what each cow has given, what is the state of affairs? There is merely the knowledge that so much cash has been received for so much milk delivered at the factory. Is that knowledge sufficient? Nineteen out of twenty patrons will candidly admit, "Oh, I guess some of my cows don't pay," and will thereby tacitly acknowledge their willingness to continue in ignorance of the respective merits of the most economical producer and the individual that steadily consumes profit. Fortunately the remaining one of the twenty seizes the vital point and jumps at the opportunity of applying an elementary business principle to his own everyday business.

If some cows "don't pay", why keep them in the herd? Which are those that produce milk and butterfat at the least cost for feed? Dairy records supply the answer.

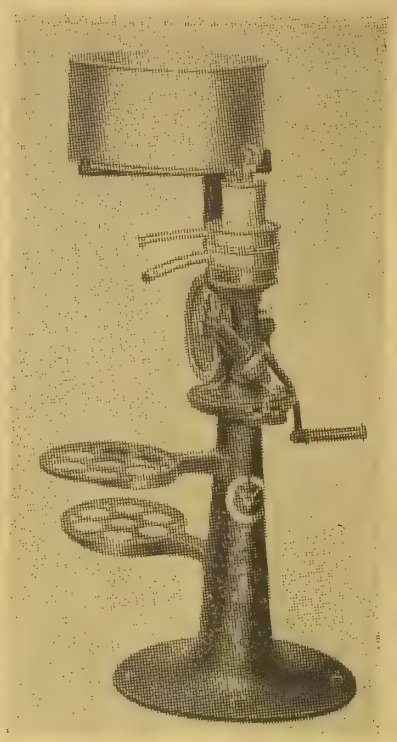
For instance, one man ststes "in 1907 my 13 cows averaged 4,500 lbs. milk. I commenced to weigh each cow's milk separately and soon found a big difference in the yield. I began to weed out the poor cows. I built a silo and fed little more grain because I found it paid me. In 1909 my cows averaged 5,520 lbs. milk." What this man has accomplished can be duplicated on hundreds of farms. But consider the importance of those figures; the increase in the yield is actually 22 per cent.

Is it possible to increase the output of the average dairy herd in the Maritime Provinces by 22 per cent? It should not be difficult. But suppose that only a ten per cent. increase were obtained, would not an additional value of dairy products, from the same number of cows, to the extent of nine hundred thousand dollars be well worth having? Cow testing, a calculation of each individual's merit, is the first necessity.

Cultivation as a basis of good farming has been necessary since our first parents were assured that the thorns and briars would be a natural growth for all mankind to contend with. The average dairy herd has its weeds, and requires cultivation as much as the field.

It should be unnecessary to point to the Dane, the Dutchman and the Swede as being men the quickest to appreciate the influence of cow testing on profitable dairying. The cold fact remains that farmers of those nationalities have blazed the trail for real dairymen the world over, they have proved the immense value

WE SAVE YEARS WITH OUR GEARS



The question of GEARS is an important one. The gears in the CAPITOL Separator are not heavy and clumsy as in some separators but they are built in accordance with the work they have to do—this work is to furnish power, or speed, to the bowl—in the CAPITAL, the bowl with a capacity of 500 pounds of milk per hour, weighing less than four pounds is the smallest and lightest bowl of any separator of equal capacity on the market—hence it is not necessary to have the numerous and heavy gears other separators have; **numerous,** because their particular type necessitates many reductions of gear to produce the required speed; **heavy,** because the bowl in other separators is so much heavier than in the CAPITOL, the gears must necessarily be heavier.

The LIGHT BOWL and the SIMPLE yet STRONG GEARS in the CAPITAL make it the EASIEST separator on the market to TURN.

And again; by the use of an ingenious clutch devise—found in the CAPITAL ONLY—the gears stop running instantly when you drop the handle. NOT A SINGLE GEAR IN MOTION after you STOP TURNING. We SAVE all the running down WEAR without resorting to a brake. These POINTS of SUPERIORITY are making the CAPITAL SEPARATOR more popular every day; these points of superiority, together with the separator's ability to SKIM CLOSE and the ease with which it can be THOROUGHLY CLEANED are responsible for the steady increase in sales each year.

We are willing for YOU to be the JUDGE. A Postal will bring you full particulars of our FREE TRIAL OFFER. Address nearest branch.

of dairy records. Are we to lag behind?

CHAS. F. WHITLEY.
Ottawa.

Editor's Note.—The Dairy Division Ottawa, supplies blank forms for recording weights of milk, and weight of feed, entirely free of cost.

Testing of samples of milk from individual cows at local factories will also be free to members of cow testing associations, being paid for by the Dairy Division, Ottawa.

Trouble in Churning

Trouble is very often met in churning but in such cases any one of the following causes can generally be blamed.

1. Cream too cold at time of the churning. Heat cream to 72 degrees to 74 degrees F. and the butter will usually come in reasonable time. Better to heat for an hour or hour or two before commencing to churn in order to obtain the fat globules.

2. Cream may be too thin, i. e., have too much skim milk in it. If setting milk in can or pan be careful to take as little skim milk as possible and allow to stand 24 to 36 hours before skimming, so as to get a complete separation of cream. If using a separator turn the cream screw in one-quarter or one-half a turn, so as to deliver richer cream.

3. Some abnormal fermentation may be at work. Remedy—Pasteurize the cream, i. e., heat it to 160 degrees F. for 10 or 15 minutes, then cool to 65 degrees to 70 degrees and add a pint of good-flavored sour skim milk or buttermilk for each gallon of cream, stir well, cover and leave in a moderately warm place for 20 hours, when the cream should be ready to churn, and butter should come in 20 or 30 minutes.

Mill Feed For Dairy Cows.

What is the best kind of mill-feed for dairy cows to supplement hay and turnips?

How can I get my land analyzed so that I will know what kinds of fertilizers to use for the different kinds of ordinary farm crops ?

Ans.—As a supplement to hay and turnips, I would suggest the feeding of dairy cows daily about one pound of the following mixture to each four pounds milk produced.

Crushed oats ... .100 lbs.
Bran ....200 lbs.
Oil cake meal ... ...100 lbs.
Corn meal ....100 lbs.

I would suggest the following of a short rotation and the growing of clover and hoed crops at frequent intervals on each field, using all the barnyard manure procurable, as the best way to make land fertile, rather than the use of commercial fertilizers for any crop whatsoever.

Analyses of soil are made at the Chemical Laboratories, Experimental Farm, Ottawa.

Write Mr. F. T, Shutt, Dominion Chemist, asking for directions for taking samples.

J. H. GRISDALE,
Agriculturist.
Ottawa.

Dairy Notes.

Good care of the cream separator will add materially to the length of its service.

Scalding water is a splendid thing with which to disinfect the dairy utensils. But be sure to use luke warm water first. With this wash the separator bowl and milk vessels. Then use the scalding water after the cleaning has been done.

MASSEY-HARRIS LINE

CONSISTS OF

Disc Harrows,
Binders,
Mowers,
Drag Harrows,
Cultivators,
Reapers,
Hay Loaders,
Harrow Forecarriages,
Broadcast Sowers,
Fertilizer Sowers,
Disc Furrow Openers,
Straw and Ensilage Cutters,
Land Rollers,
Bain Wagons,
Manure Spreaders,
Cream Separators,
Horse Rakes,

LIVE STOCK

Oil Meal Splendid Stock Food.

Oil cake or oil meal in proper quantities is considered by our most stockmen to be one of the most healthful foods that is on the market. Its value is that it keeps the animal in the most healthy condition, no other feeding having such a beneficial effect on the digestive tract.

The price of the feed is considered prohibitive by many farmers, but considering the fact that it contains nearly 30 per cent digestible protein, the stockman can well afford to pay the market price in order to have at least a small quantity of this feed available.

Old process rather than new process oil meal should be secured, so far as possible, for the reason that 94 p. c. of the protein in the old process oil meal is digestible as compared with only 84 p. c. of the new process meal.

Oil meal may be fed to all the classes of farm stock. Fattening steers will use to great advantage

An Outstanding Winner.

The Oxford Down Ewe, shown in the above photo, is four years old, weighs 260 lbs, and has won sixteen first prizes at the various Maritime Exhibitions and Fairs At the 1909 Maritime Winter Fair she was declared the grand champion over all breeds As a shepherd, there is no better in the Maritime Provinces than Mr, Barry Baker, who is holding the ewe in the above photo.

Owned by J E. Baker & Sons, Barronsfield N. S.

from two to three pounds of oil meal daily in connection with other feeds. Larger amounts can be used profitably when prices are not too nigh. Feeding oil meal in the form of nut-sized cakes is considered preferable to the loose meal by most of our steer feeders.

Dairy cows will consume one or two pounds of oil meal daily with their grain rations, and during the winter feeding period more or less oil meal is almost indispensable in order to keep the cows in the best condition for produring milk and butter fat. For growing calves, and sheep and hogs, oil meal can constitute about one-tenth of the grain ration fed, and prove very beneficial. Horses may be fed small quantities, although its general use for horses is not recommended.—Prof. G. C. Humphrey.

The Dairy Heifer.

Just where the breeding ground for cattle and sheep is to be in the future does not seem very clear, as every one either from choic? or force of circumstances seems to turn the breeding proposition down. I believe some fatuous people even proposed to make a closed season for calves—to make a 90-day period in which it should be illegal to market them. Why they should choose one 90-day period any more than another in relation to dairy calves which are dropped all the year round, does not seem to have been set forth. In fact, the self-evident point is that we need an open season for exterminating cranks rather than a closed season for calves.

In most countries that have settled down to steady gait there are breeding, rearing and feeding districts as well as those in which all three processes are combined. In Britain it is true that dairy cattle are not so highly specialized as here and that if a really good beef bull is used on the dairy Shorthorn very satisfactory steer calves are the result. These are shipped to outlying districts or to the Scotch farmer who in the north-eastern districts never has taken kindly to milking cows. With the aid of specially prepared calf meats or home-made jellies these calves are raised and grown into good thrifty feeding cattle or finished as young beef.

It is doubtful if the steer calves from a high-producing dairy herd are worth saving, but how about the heifers which go at a sacrifice and glut the market with inferior veal? In the bad old days from 1892 to 1895 there was still money in rearing these heifers and they now command two or three times the price of the unfortunate era. There is nothing so cheaply fed as heifers of a milking strain. They are satisfied and grow well with just a little bit of grain and roots or oilmeal, just so you keep their digestive tracts in good condition and their bodies free from lice.

In regard to these vermin it is just as well to asume that all cattle and colts in stocker condition have them, and not to wait until you see them all over their hair on some sunny day. If they are not on the long haired cattle they will be some time, so take steps accordingly. Heavy beef or full-fed cattle are comparatively free from them, but are much easier kept comfortable if in close quarters by having the clippers run up their back in November, after which there is less lodgment of dirt and chaff in the hair where it is most difficult for the cattle to pick themselves.

Such heifers as we have been considering are very easily kept and will devour almost any by products of the farm if presented in a condition in which they can handle them. The grower need feel no concern at little irregulatities along their backs—humps and hollows that would ruin the appearance of a beef animal. If such milk animals are of the larger breeds it will pay to develop them well, as the dairyman he has his mind fixed on the cow's ultimate value as a beef carcass much more than he used to, and he does not in many situations seems to begrudge the extra maintenance. There are no doubt some districts where such development is carried on but the constant demand for good cows would seem to point to even greater needs and a wide field for such work.

Formulas For Mixing Rations For Ewes in Lamb.

The Minnesota University Farm, which has made extended experiments in feeding sheep and mixing rations, has the following to say on this subject:—

Breeding ewes, if in fair condition when put into winter quarters in the fall, are sufficiently prepared for their work by a gain of from 15 to 25 pounds per head. This gain allows for the development of the unborn lamb and the wool crop but rations to make the ewe gain slightly and yet keep her thrifty, must be carefully made. Some rough feeds contain considerable fibre. With them it is necessary to feed succulent or oily feeds. For example, with oat straw, timothy, or oat hay, roots or oil-cake should be fed. With clover, which is naturally laxative in effect, such a supplement is not needed. Exercise for the ewes, regularity in feeding, watering and salting are factors that count in sheep-raising.

Rations for Ewes in Lamb: A few rations that have been fed to ewes in lamb, with good results, follow. They are the dairly feed per 100 pounds live weight:

1. Secood crop cloper hay alone, 3.5 to 3.7 pounds.
2. Corn fodder, in which are nubbins, 3.7 pounds.
3. Second crop clover hay, 1.5 lbs.; corn fodder, 1 lb.; oats and corn, 3 lbs.
4. Second crop clover hay, 1.8 lbs.; roots, 1.5 lbs.; shelled corn, .3 lb.
5. Second crop clover, 2.5 lbs.; barley, .55 lb.
6. Corn fodder, 2.6 lbs.; roots, 1.5 lbs.; oats and corn, .3 lb.
7. Oat hay, 1.5 lbs.; and .7 of a pounds of grain composed of barley, 98 parts; flaxseed, 2 parts.
8. Oat straw 2 lbs.; roots, 1.6 lbs.; and .6 of a pound of grain composed of oats and bran, equal parts.

Feeding the Boar.

The boar's condition should always be that of thrift and vigorous health not too fat, nor yet so lean that as a barrow he would be considered unfit for pork. If too fat he will be clumsy, slow, and in no wise sure. Discretion must be used in the feeding of the boar, for carelessness in this respect may disqualify him for the season or even make him permanently impotent. It is possible to so poorly feed a boar that his progeny will be exactly the kind his owner does not want. His feed should be nourishing and cooling, and if chopped oats are given they should be tempered with feeds which are somewhat laxative, and be used in moderation. When service is severe his exercise may be greatly lessened, and his proper feeding is the means of balancing this inequality.

The 'T' in the Ear.

A subscriber asks us the meaning of the big T shaped punch mark in the ears of imported cattle. This mark is placed there by the Federal government's veterinary inspectors at the quarantine stations and means that cattle carrying the mark have failed to pass (reacted to) the tuberculin test. The stockman knowing that will be able to arrange his cattle accordingly so as to avoid the possibility of infecting his sound cattle with contagion introduced by the newcomer.

The Fattening of Sheep.

Cool weather is preferable to warm for sheep fattening, for the reason that it usually whets the appetite, as well as makes it possible for the sheep to be confined in small quarters and still be comfortable. While exercise is highly essential for all breeding stock, fattening stock will be found to make more rapid gains when confined to a small place where little energy is expended in moving

INVESTIGATION OF ALL SEPARATORS EMPHASIZES IHC SUPERIORITY

You cannot afford to buy any separator before comparing it with others. You should not take chances. The closer you investigate all separators, the more you will be impressed with I H C superiority. You will then know how much closer the I H C skims, how much longer it lasts, how much easier it is to clean, and how much easier it is to turn. There are no weak spots in an I H C Cream Harvester.

I H C Cream Harvesters are the only separators with dust-proof and milk-proof gears, which are at the same time easily accessible. The frame of an I H C Cream Harvester is entirely protected from wear by phosphor bronze bushings. The I H C has large shafts. bushings, and bearings; it has a perfect oiling system; the flexible top-bearing of

I H C Cream Harvesters

is the strongest and most effective found in any separator; it has only one spring. I H C Cream Harvesters always run steady—without vibration. I H C Cream Harvesters are equipped with a patented dirt-arrester which removes the finest particles of dirt from the milk before the milk is separated. The crank is at the right height for easy turning, and the tank is at an easy height to fill.

The I H C local dealer will be glad to point out the above features and many others. Made in two styles—Dairymaid and Bluebell—in four sizes. Write direct for catalogue, or nearest branch house.

IHC Service Bureau

The Bureau is a clearing house of agricultural data. It aims to learn the best ways of doing things on the farm, and then distribute the information. Your individual experience may help others. Send your problems to the I H C Service Bureau.

about. In case of warm weather, however, sheep are so uncomfortable when crowded together that their appetite is considerably retarded. Cool weather is quite an essential feature of economic fattening.

Fattening sheep should be given a ration that appeals to their appetites. It should consist or good roughage, such as second crop clover which gives bulk and some nutrients; grain, such as corn and barley, screenings, which supply the fattening elements; roots which are succulent and serve as an appetizer; and lastly, oil cake, or some such material, which furnishes nitrogen to build up and repair body tissue. In addition, plenty of both salt and water should be given.

Of roughage, the sheep should be given about all they will eat. This is something which keeps them busy and satisfies them, yet is not likely to oversupply them with nutriments. The rack in which the roughage is fed should be cleaned out every day and the stems, stalks, or other coarse stuffs which the sheep have rejected should be given either to the horses or cattle.

Of the grain, only a little should be given at first, and this amount be gradually increased from day to day until at the end of two or three weeks the lamb of average size is receiving from one and a half to two pounds of grain daily. If put at once onto full feed the sheep are likely to become foundered and are often permanently injured; in any event, they are given more than their stomachs, when unaccustomed to it, can handle, and the food is voided from their bodies without being of any benefit to them. When accustomed to it, a sheep can handle a goodly amount of grain to real advantage, and to such an amount of ration should gradually be worked.

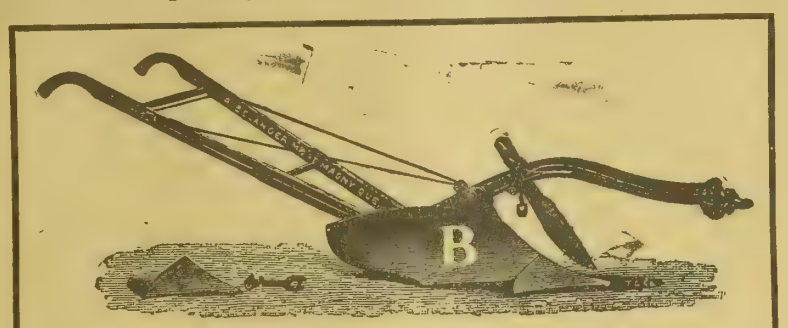
The oil cake should constitute about one-tenth of the grain ration. The roots should be fed at the rate of a pound and a half or two pounds per sheep per day.

Regularity of feeding is one of the first requisites to success in sheep fattening. No one ever did produce uniform or economic gains by feeding only when the spirit moved him or when he "could get to it." There should be a regular hour for feeding and this should be strictly observed. The reasons for this are obvious. One is that the sheep is in a much more calm and peaceful state of mind when it gets its feed on time than when it has to wait for it; energy, is therefore, not expended in anxious moving about nor in fretfulness. When overhungry digestive juices flow all along the tract, as when we say the mouth waters, and, there being no food to digest they are wasted. Also when the hours for feeding are regular, the system has time to digest the food and rid itself of the refuse, before more is taken into the body; whereas, if the meals come too close together there is no opportunity for evacuation nor for a brief period of rest. The system, both more easily and more thoroughly digests food regularly received.

It should not be necessary to say that comfortable quarters should be provided for the sheep, where they will be protected from chilling rains and biting blasts. They must be kept free from colds and snotty nose if they are to gain rapidly. A tight barn is not necessary nor desirable for them, as they have warm coats, but a dry barn free from draughts is. No detail that looks to the increased comfort or improved health of the fattening sheep, no matter how trivial it may seem, is neglected by the careful shepherd, and he is the one who makes money on mutton.

This Plow Is Specially Made For Quebec And The Maritime Provinces

THIS is a plow which we build specially for use in the Maritime Provinces and the Province of Quebec,—is equipped with a mouldboard especially adapted to the soil. We have made a marked improvement in the turn of this mouldboard which makes it much easier for the plowman to hold. For general use in these provinces, except for new, unbroken hard ground, we strongly recommend it. The mouldboard, like on all "B" Plows, is made from special soft-centre steel, and the construction throughout is the very best. Look for the "B" on the mouldboard when you buy; it is your guarantee of quality. This plow will scour in the most difficult scouring soils and, if fitted with our wheel attachment to go under the beam, can be handled with ease by a boy. **If your dealer cannot supply you, write us and we will tell you who can. Tell us the type of soil on your farm and we will see that you get the exact style of mouldboard your land requires.** We send our Catalog free on request.



This is the Plow for Quebec and the Maritime Provinces. Our "B" No. 6.

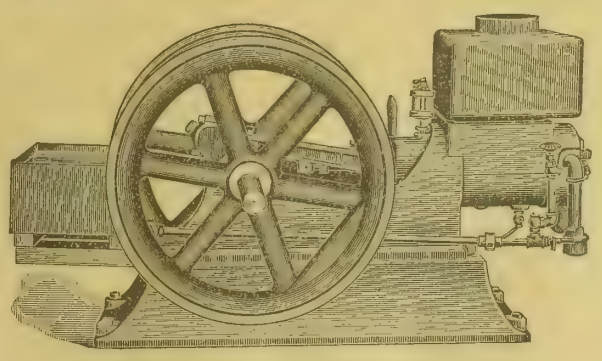
Don't Wait for a Gasoline Engine Agent



to come to your house if you are thinking of buying. Write to the different makers or their representatives and get catalogues. Investigate the different makes thoroughly before you buy. You will have to pay good money and do not want to be disappointed. Remember, that if you make a mistake in purchasing it will worry you as long as the engine lasts. You cannot afford to take chances. These are the things that confronted us when we went into the markets of the world to select an engine that would give you satisfaction. Our experts went not to the factory where they were made, but out in the fields, the workshops and other places where they were being used, and found out just how each make of machine was doing. Every working part was thoroughly inspected. Not one dollar of expense was saved in order that we might get the best. We could not afford to take chances. Our organization is too big, our interests too great, our reputation too dear to us to allow even the slightest defect to creep in. We went at the Gasoline Engine business thoroughly and we believe you should do the same. We want you to find out for yourself just how good our Gasoline Engine is. We have 200 agents in the Maritime Provinces. Every county is represented. We can have a man call on you any day, but before we have him call we would like you to write us for our catalogue. It explains the things you should know about Gasoline Engines. Other information regarding our selling plan will be given you by our representative.

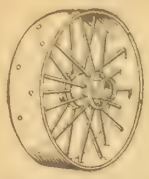
The Worth of a Wagon Lies in Its Tires.



Wheel and tire troubles are over for the man who equips his farm wagons with T-K Wide-Tire Steel Wheels. They will carry 25 to 50 per cent. heavier loads in deep mud or over the roughest roads without delay or danger of accidents. They make farm work lighter; stand any strain; and are proof against breakage.

TK Wide Tire Steel Wheels and Handy Farm Wagons

This is the sort of wagon you want for doing all kinds of work around the farm. It is handy for loading and unloading, will carry as great a load as any team can haul, and because it never needs repairs it is the most economical wagon on the market.

THE HORSE.

The Foal.

CARE AT BIRTH.

The colt experiences its first difficulty in life in getting its first breath. If respiration does not seem to begin as soon as the navel cord is broken, the body should be briskly rubbed and the attendant should blow into the nostril and mouth. A little cold water dashed on the nose and face in such a way that it will not run down the nostrils will help. If breathing seems slow and irregular during the first few minutes of life some stimulant such as several teaspoonfuls of brandy or whisky mixed in water and placed back into the mouth will help to invigorate respiration.

COMMON TROUBLES.

Nine-tenths of the deaths of colts at an early age result from one or other of the following three troubles; navel ill, constipation and scours.

Navel Ill.—The time to begin the prevention of navel ill, for prevention is the only safe cure, is before the colt is dropped. Give the stall in which the mare is kept a thorough cleaning, disinfect it with a solution of carbolic acid or some coal tar dip, and keep the floor well bedded with clean straw. ...

As to the nature of this disease nothing more need be said than that it seems to be caused by filth germs that get into the body through the open navel cord at birth. These germs set up inflammation and puss forms, which is quickly absorbed into the general circulation, and abscesses form in various parts of the body. These abscesses appear first as swellings in the joints of the limbs. The disease is frequently deceptive at first because if only one joint swells and the colt seems to go lame on it one is apt to think the trouble is due to a slight injury, then as swellings appear in other joints the truth of the real trouble first becomes evident. By the time the disease has advanced so far as to show swellings in several joints it is seldom that anything can be done to save the life of the colt.

As a preventive besides cleaning the stall, the navel cord should be cut off about two inches from the body if it has not already been broken that close or closer, a string dipped in a mild disinfectant solution tied about the end of the cord and the navel washed with the same mild disinfectant. The washing should be continued once or twice a day until the cord dries off. It is well to rinse off the udder of the mare before allowing the colt to suck.

Constipation.—Usually the first milk or colostrum of the mare will prove sufficiently laxative in nature to cause the colt to clean the digestive tract of its contents within six to eight hours after birth Sometimes due to any one of a number of causes the colt experiences difficulty in ridding the digestive tract of the first fecal matter. It is essential to notice whether or not this material is excreted. If it is not passed off within eighteen to twenty-four hours the little fellow will likely take on a dull listless appearance, allowing the head to drop, eyes to partially close, and ears to lop over. When this condition exists something must be done to assist him. A laxative such as about two ounces of castor oil should be given him and a couple of ounces of warm water with a little glycerine injected into the rectum. The castor oil will help the intestines to move the material in them, and the injection will cause the colt to attempt to excrete their contents. If the first dose of physic is ineffectual it should be repeated in about six hours, while the injection may be made once every hour.

Scours.—The third disease, scours or diarrhoea, is not quite so prevalent in very young foals but may attack the colt at any time until it is two or three months old. It frequently causes death. It is hard to determine just what causes scours in each individual case, but common causes are changes in the composition of the mare's milk due to nervousness, overwork, or changes of feed, allowing the colt to gorge itself with milk from the full udder of a mare that has become quite warm from work, and filth in the food. The disease can best be prevented by proper handling and feeding of the mare so as to keep her milk of a uniform composition.

After the disease appears in the foal the most successful way of treating it is to begin with a dose of good physic, preferably castor oil. This is necessary to remove the material that is causing the trouble from the digestive tract. Then it is time to give some astringent such as a little flour or starch in warm water or milk. Here again the simple precautions necessary for prevention are the best cure.

CARE AND FEEDING.

As with all other young animals on the farm the newly born foal requires close attention for the first three or four days of his life after which he will nearly always begin to kick his heels into the air and take care of himself very well. The ideal condition for raising the best colts possible is probably to allow the mare and foal to run together in a good grass pasture. This on the other hand is not always the most profitable method financially. The average farmer cannot afford to allow his mares to run idle through the summer producing nothing more than the ordinary farm colt. There is no reason on earth why mares cannot be worked while rearing foals and mare and foal come through the season in practically as good shape as if running in the pasture.

There is much difference of opinion as to the proper methods of handling the young foal while the mare is working. The question arises as to whether he should be kept in the stable or allowed to follow in the field. While both mare and foal will be somewhat restless at first a little patience with them will in the end make it most advisable with the majority of men to close the colt up. If convenient, work the mares in the field nearest the barn so that the colt may be allowed to nurse in the middle of the forenoon and afternoon as well as being with the mare at noon, until they are two months old, after which they will not require to be with the mares except at noon and during the night. If inconvenient to allow the colt to nurse in the middle of the forenoon and afternoon it will be found advantageous to teach him to drink cow's milk. From one to two quarts of milk, depending on the age and size at the above mentioned times, will be sufficient. Whole milk should be used, but the lower in fat content it is the better it will suit the colt. Cow's milk when fed to colts, should be sweetened with one teaspoonful of sugar to a quart of milk.

If allowed to be with the mare at meal times and her grain box be low enough so that he can get his nose into it, the average colt will begin feeding with his mother by the time he is four or five weeks old. No effort should be made to teach him to eat grain before one month old as his digestive system will not be strong enough to stand it. When he is about a month old a small box should be arranged in the opposite side of the stall and the colt taught to eat his grain from this. The best feed for the colt of this age is whole oats or oats one part by weight and bran one part. Ordinarily, little difficulty or evil effect will be noticed in weaning the colt at anywhere from four and one half to five and one half months old, particularly if the colt has been receiving some grain before hand. In weaning it is best to take the colt from the mare entirely rather than to allow it to nurse once or twice a day. This only keep both mare and foal in a nervous, excited condition that much longer, and will cause both to lose more flesh than if the separation is made abruptly.

In conclusion no more profitable advice can be given than to say "Take care of that colt." Under present conditions he is the surest money maker on the farm.—Manitoba Agricultural College Bulletin.

Brood Mares on the Farm.

It is probable that at no time in the memory of the present generation of farmers have draft horses sold at a more consistently good price throughout the year than they have since January 1st, 1910. It has also been a significant fact that there never was as much difference between the selling price of horses with size and finish, and those of poor quality, as during the past year. I am also safe in saying that there is no class of live stock upon which the average armer could realize a good profit more easily than on a few good draft colts at the present time.

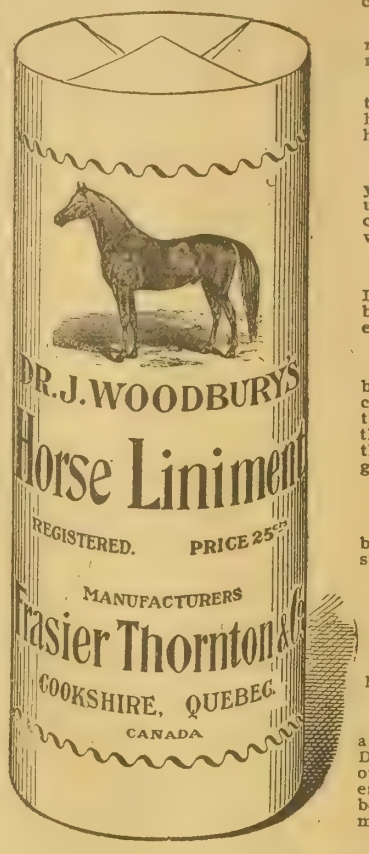
If we study into conditions of our farming business as closely as the managers of any commercial enterprise do their business, we will find that there are many horses on farms that are not paying for their keep. Statistics compiled by the Minnesota Experiment Station on a number of Mimmesota larms from 1904 to 1907 indicate that it costs on an average of approximately $84 per year to maintain the average farm horse and that in return that horse is doing about three hours work per day. Many will say at first thought, the average farm horse is doing more than three hours work but when you consider idle days, the averabe comes down rapidly. This makes the farm work cost the business about 77½ cents per hour for each horse, which is altogether more than the horse is earning. The question then arises as

DR. J. WOODBURY'S Horse Liniment.

INFALLIBLY THE REMEDY.

For the removal of Splints, Bog Spavins, Enlargements of any and every description it has no equal. Given internally, it will promptly relieve and remove any and every character of Cough, Enlargements of the Glands Affections of the Kidneys For Distemper, Strangles and Colic it is infallibly the remedy

All horses that are stabled should have an applicatiou of Dr. J. Woodbury's Horse Liniment to the hoofs of the fore feet to prevent their becoming feverish, dry, brittle, hard, contracted or otherwise injured.



Insist on having Dr. J. Woodbury's Horse Liniment. We warrant it to effect that for which it is recommended when used according to directions.

Its beneficial effects are so prompt and decided that it has excited the admiration of the leading horsemen of the Dominion and secured their highest confidence.

Bear River, N. S.

Dear Sirs :—We do not hesitate in recommending your Dr. J. Woodbury's Horse Liniment. We have used it in the woods for coughs, colds, distemper and cuts, and would say that no lumberman should be without it. Yours truly, CLARKE BROS.

Hubbard's Cove, N. S.

Dear Sirs :—I have used Dr. J. Woodbury's Horse Liniment in my stable for years and consider it the best liniment on the market for both internal and external use. Yours truly, C. C McLEAN.

Truro, N. S.

This is to certify that I have used Dr. J. Woodbury's Horse Liniment with the very best results for colds, coughs, distemper and all lung diseases. It is the best thing to give horses in the spring to keep them in condition. It purifies the blood, cleanses the lungs from impurities, which may exist, and gives the system healthy action.

NEWTON LEE, Owner "All Right" 5817.

Elmsdale, N. S.

Dear Sirs :—Kindly send me 6 dozen Dr J Woodbury's Horse Liniment. I have not a bottle in the store and it is the only kind my customers will take.

Yours truly,
ELMSDALE MERCANTILE CO.,
Elmsdale, N S.

Dear Sirs :—I cured my horse with Dr J. Woodbury's Liniment. It was a bad case of distemper. always recommend this liniment to my friends as he best for all diseases of the horse Yours truly,
H. R. WHITEHEAD.

Dear Sirs :—One of my horses had a bad cough, and I made a complete cure with three bottles of Dr. J. Woodbury's Horse Liniment. The cough was of twelve months' standing. In my large experience with horses I consider this liniment to be the best made for all diseases in the horse and I recommend it to my friends.

GUELPH, ONTARIO.

Our New Term will begin Tuesday, January 3rd.

We wish to thank the people of the Maritime Provinces for the patronage enjoyed during 1910—the most generous in all our history of 43 years.

We will show our appreciation by striving to prove ourselves worthy of the confidence of our patrons.

S. KERR

Principal.

to how we can either increase the production of the farm horse or else reduce the cost of keeping him, and the solution seems to be to increase the production.

How this may be brought about is a question of as much importance to the average farmer as any one problem that confronts him and yet the farmers are carrying on their their team work with geldings and barren mares, which are producing nothing except the labor which they perform. In place of these horses every farmer should habe some good thrifty brood mares with which to carry on his farming operations. The market will take care of all the geldings for years to come and brood matrons should be doing faithful service on the farm.

Any mare that is not doing more than five hours work per day on the average should with reasonable care be able to produce a foal each year without overtaxing her. The selection of mares for farm use is a subject worthy of some study and a few suggestions may be of value. It should be kept in mind that size is in demand and that the open market pays well for it. Weight between 1600 and 2000 pounds is worth 25 cents per pound on the Chicago market. This shows that it pays to breed the big ones. It costs very little more to grow an 1800 pound colt than a 1000 pound one. The labor is about the same and the feed is not a great deal more, but the 1800 pound colt will sell at three years of age for $300.00 or more where the 1000 to 1200 pound colt will sell for $75.00 to $150.00. The light horse with plenty of style and quality or with a little speed will sometimes bring good money, but this is only for fancy trade and it is usually the man who fits and trains the light horse who makes the profit. The farmer who produces him gets little of the profits and as a rule does well to get returns for the actual cost of production. It is not so material what breed of draft horses a farmer breeds. All of them are good and he will have no trouble in disposing of colts from any of them at a good figure. It is true that certain breeds are best adapted for certain conditions while others are best adapted to other conditions. It is, however, largely a matter of preference. The Scotchman loves his Clydesdales while the Englishman cannot see the proper amount of substance in anything but a Shire, and the average American farmer leans strongly towards the Percheron. The breeds all have their virtues and it is not so much a matter of choosing a breed as of choosing good individuals, either pure breds or high grades of the breed and continuing with that one breed. Too many farmers switch from one breed to the other and are usually successful in combining all of the undesirable characteristics of both breeds.

The farmer should select good pure bred mares if possible; if not, he should select some high grades. In selecting them the buyer should keep in mind that fat covers a multitude of sins and should avoid the overfitted ones.

The old saying of "No foot, no horse" is a worthy one, and still better is the one of "Foot and ankle, bone and feather, top may come but bottom never." Both may well be kept in mind. After having selected well bred mares with special reference to securing size together with good bone and feet, the question of the sort of stallion to which to breed at once arises. It should be remembered first, that it is always advisable to stick to one breed; second, that it is entirely out of reason to expect a stallion to transmit qualities which he does not have, and that if we would produce the best we must breed to the very best; and third, that $5 intelligently invested in service fees may add $50 to the value of a colt at one year of age. The farmer should remember in

The True Test of Fertilizer is the Crop Test

Crops often double their yield when they have the nitrogen they need.

NITRATE of SODA

Cheap, Clean,
Easy to Apply.

We recommend Nitrate of Soda because its nitrogen is all available, that is 100% of it, and at once. You don't buy filler and it acts instantly. See us for prices.

CHEMICAL LABORATORIES, Ltd.,
148 Van Horn Street, Toronto, Canada.

selecting a stallion that it is a very poor policy to breed to anything other than a pure bred one. The grade may look good and his fee may be cheaper than that of a pure bred,but his good looks while it is a credit to his pure bred sire, is only representative of about 50 percent of his blood and he cannot be expected to transmit it strongly and surely. The pure bred on the other hand, has been bred for a certain type for generations and he has 100 percent of blood representing that type. He will therefore transmit his characteristics strongly and surely, even to the extent of over-coming some undesirable characteristics that his dam may have.

Regarding the best time of year to have farm mares foal, it depends largely on the system of farming. In general farming where the work is well distributed, spring foaling should always be advised, but in some systems of specialized farmings where the bulk of the work comes in the spring, I would recommend summer or fall foaling. The principal objections to this are the flies, mosquitoes and other insect pests, and the lack of succulent feeds. These objections can be overcome to a large extent by a little care and management. Succulent fall pasture can always be provided and when this is supplemented with a carefully selected grain ration, consisting largely of oats and bran, the fall colt can be quite successfully reared.

The essential point in using draft brood mares on the farm is intelligent management. The man who cannot give this cannot be successful in raising colts, neither will he be successful at any other farming operation. The man who will get a pair of pure bred draft brood mares and use them intelligently and carefully cannot afford to be without them for they are the only animals which can do our farm work in the most profitable way. It is to be hoped that more of our Maritime farmers will soon come to realize that there is an excellent chance to realize some good profits by stocking their farms with some good draft mares and producing a few first class foals each year.—J. S. Montgomery.

To Please a Horse.

Not many people know how to pet a horse, from the horse's standpoint, at any rate, said a trainer. Every nice looking horse comes in for a good deal of petting. Hitch a fine horse close to the curb and you will find that half the men, women and children who go by will stop for a minute, say "Nice horsey," and give him an affectionate pat or two.

The trouble is they don't pat him in the right place. If you want to make a horse think he is going straight to Heaven hitched to a New York cab or delivery wagon, rub over his eyes. Next to that form of endearment, a horse likes to be rubbed right up between the ears. In petting horses, most people slight those nerve centres. While a well-behaved horse will accept the nasal caress complacently, he would much prefer that nice, soothing touch applied to the eyelids. Once in a while a person comes along who really does know how to pet a horse. Nine times out of ten, that man was brought up in the country among horses and learned, when a boy, their peculiar ways.

It Works While They Work

If horses go lame, you don't have to lay them off to cure them. Kendall's Spavin Cure works while they work—and cures them while they earn their keep. For Spavin, Curb, Ringbone, Splint, Sprain, Swollen Joints, Lameness

Kendall's Spavin Cure

"Completely Cured Him"

Moose Jaw, Sask., Oct. 13th

"Two years ago, I bought a colt that was badly spavined, and completely cured him with only two bottles of your Spavin Cure. Worked him steady all the time and sold him last winter for a top price."
Howard Brock.

Also famous as the standard family liniment $1. a bottle—6 for $5. Ask your dealer for free copy of our book "A Treatise On The Horse," or write us. 53

Marketing Eggs.

The marketing of eggs is the subject to a bulletin from the Kansas experiment station which discusses the problem from the farmers' stand point. A few extracts from this bulletin will be read with interest by our farm folks.

Selling eggs is one of the handiest ways for the farmer to get a cash or trade return for his produce, during all parts of the year, and if he can increase the emiciency of the machinery which produces and handles these eggs he is putting into his pocket good hard cash. The question is, how can this be done?

If any person should go into the average hotel or restaurant in this country and call for a soft-boiled egg, providing, of course, that he knew an absolutely fresh egg, he would be somewhat in doubt as to the freshness of any of the eggs put before him, Such a thing as this gives rise to wonder as to the cause of it and suggests a possible remedy.

Almost every housewife who is compelled to buy eggs constantly clamors for some method which she may pursue in order to always get fresh eggs. There is no housewife who has not some time or other had the great displeasure of handling spoiled or rotten eggs. This almost constant occurrence, with the possible exception of the winter months, practically compels those who lecture and carry on experiment station work to plead with the farmers who produce the eggs to put on the market better produce. It is firmly believed that care in the handling of anything with a view to improving its quality or appearance for the market will be a financial profit to the one who does the work.

HOW TO OBTAIN EGGS.— Eggs are produced by fowls only after their bodies have been supplied with a maintenance ration. The production of an egg is the hen's only means of reproduction, and this she cannot do until she has enough food to first maintain life. So it must be remembered in feeding a hen for laying that she needs a great quantity of feed. Some hens lay large, some small, and more medium-sized eggs. A large egg is desirable on all markets, and if the farmer wishes his hens to be largely egg producers he should keep on the farm those breeds of fowls which will lay the large eggs. Such breeds as the Plymouth Rock, Rhode Island Red, Wyandotte and some Leghorns, are the most popular farmer's fowl for producing good, marketable eggs.

There is oft times much objection to the Leghorn on account of the inclination to lay small eggs, and yet it is not the least bit of trouble to produce hens of this breed which will easily lay eggs that weigh 1½ pounds to the dozen. If the strain of Leghorns kept do not do this, it will do no good to cross them with some other breed and expect to improve the size of the egg or yield of the flock. One year may show improvement, but the following ones are questionable. So it will pay any poultryman who cares to produce the best market fowl or the best eggs to breed pure and for a purpose.

HOW TO HANDLE EGGS.— When the hens on the farm are producing enough eggs to warrant the farmer's taking them to town, arrangements should be made to handle them properly. A convenient and clean place should be provided wherein the hens can lay. They should be compelled to lay here in a clean nest. The natural tendency of a hen is to go off in the weeds and make her nest. This should never be tolerated, and any eggs found in such places should be marked and kept at home.

It makes no difference how many hens are kept, a house suitable for them should be erected in which they should be compelled to roost and lay. Then if the nests are placed where the hens will not roost on them they can be kept clean. Straw that is dry makes the best nesting material, and if the nest could have a bottom made of one-inch mesh wire it would be self-cleaning. If not, the nesting material should be changed often.

If the weather is bad and the hens' feet become muddy, the eggs should be gathered at least twice daily. This will keep the eggs cleaner. If the weather is hot they should be collected at least twice each day, and oftener if the temperature is very high. This prevents eggs from commencing to decompose, or the germ, in case there is any, to start development. If eggs are laid in barns, sheds, etc., a careful search should be made often, in order to be sure that none are gathered when stale.

As soon as the breeding season is over, the male birds should be separated from the hens. A male bird is not necessary for the production of eggs, but is useful only to fertilize the egg, which will be laid in spite of his presence. A fertile egg will commence development, consequently deteriorate, more quickly than a sterile egg. A fertile egg when fresh laid is supposed to be already started in its development, and if a hen is allowed to stay on it any length of time it will soon be in condition not to be classed as a fresh egg.

KEEPING THE EGGS.—When the clean, fresh eggs are gathered they should be put in a clean, dry, cool place until marketed. Even though the place is clean and cool, if it is not dry, molds, etc., will commence development and the eggs will soon spoil. If the eggs become damp and they happen to be in contact with any colored material they will immediately become stained. Good egg cases in a cool, dry, clean place, kept up off the floor, make an excellent receptacle in which to keep eggs previous to marketing.

Before these eggs are set aside for market, they should be gone over by the farmer as he collects them, and all small, stained, dirty, doubtful, incubator and rotten eggs should be removed. Small and dirty eggs, if used immediately, are just as good as clean ones, but they will not sell well on the market, and if sent in with good eggs will spoil the trade. Therefore, they should be kept and used at home. No eggs should be washed, for the packers claim they will not keep well. All eggs from stolen nests, whose freshness is doubtful, and all incubator eggs, should either be thrown away, boiled for the little chicks or used at home. They should never be sent to market. Rotten eggs need not be discussed. Any person who will send one to market deserves all the penalty possible from the pure food law.

MARKETING THE EGGS.— When eggs have been properly gathered, handled and kept previous to taking to market, the question of the number of trips to town should be considered. In hot weather the eggs should be marketed two or three times per week, and oftener if possible. If that number of trips cannot be made, co-operate with a neighbor and have him alternate days in the trips which must be made.

In the fall and spring eggs should be marketed at least once a week. Many buyers have had trouble in October and November with eggs classed as "held eggs." These are common because most farmers believe that after frost eggs will not rot so quickly, but nevertheless they do evaporate and the air cells in them show the candler that they are stale.

Therefore, the more often eggs are marketed the greater are the chances that they will be good. If the sun beats down hot on the wagon, place a cover of some kind over the cases in order to keep out the unnecessary heat.

The Gospel of Cleanliness.

The maxims of Dr. George B. Morse of the United States bureau of animal industry are as follows: 1 clean out, 2, clean up, 3, clean water supply, 4, clean food, 5, clean eggs, 6, clean incubators and brooders, 7, clean breeding.

Clean out the birds by means of Epsom salts administered in the evening mash, estimating ½ teaspoonful to each adult bird or a teaspoonful to six half-grown chickens, or 10 to 15 chicks.

Sharp, Stiff Discs and Sure-Cleaning Scrapers

When you require a Disc Harrow, be sure and examine the "Lion." It is one of those famous Frost & Wood machines that work so satisfactory. The sharp, stiff discs will pulverize and loosen the surface of the land just exactly right. Even if the soil is sticky the "Lion" works O.K., because it has sure-cleaning Scrapers that absolutely prohibit the discs from getting clogged. Two horses handle the "Lion" comfortably and there is no side draft. It is built of the very best materials throughout, as is all Frost & Wood farm machinery.

Please send for catalogue B 42 and get complete particulars about Frost & Wood in-throw and out-throw harrows.

ORANGE MAIZE

Consumption Book FREE

This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Consumption Remedy Co., 1641 Rose Street, Kalamazoo, Mich., and they will send you from their Canadian Depot the book and a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful cure before it is too late. Don't wait — write today. It may mean the saving of your life.

Clean up by spreading air-slaked lime over the runs, dropping boards and floors of the houses.

Clean water supply to be obtained by adding permanganate of potash to the water to give it a claret-red color.

Clean food can be secured by the application of heat if contamination has occurred.

Clean eggs by dipping them just prior to incubation in 90 per cent alcohol.

Clean incubators and brooders by thoroughly scrubbing them with boiling water and good, old-fashioned kitchen soap.

Clean breeding may be accomplished by breeding from the youngest females consistent with good breeding.

Fumigating a House.

When the poultry house is found to contain vermin, a thorough fumigating with sulphur is of great benefit. The house must be closed tightly, otherwise the fumigating will do little good as all the fumes will escape through cracks or openings.

Put a red hot stone in a pail and set it on the floor. If the latter is of wood set the pail on some tin cans or on top of another pail so as to avoid danger of fire. Pour the sulphur on the hot stone, get out at once and close the door tight. Leave the house closed for five or six hours and then air out thoroughly. If properly done no vermin should escape.

Sprouted Oats for Chicks.

There seems to be a great deal of interest being shown by chicken raisers just now in sprouted oats for feed, and as it is seasonable I will give the readers of this paper afew suggestions regarding these.

One advantage of sprouted oats added to the ration is that they provide the fowls with a supply of green feed, slight as this may seem.

The idea seems to have come to us from foreign countries, where sprouted oats have been used as a feed for many years. To produce them, place the grain in a tub or some watertight vessel and just aboutcover it with lukewarm water leaving the oats in this water for about 24 hours. The water should then be drawn off and the grain placed where it can drain freely.

Every morning and evening they should be sprinkled with hot water, in about a week and a half they will have sprouted and be ready for feeding.

Some poultry keepers make racks in which the grain can be kept after removing from the tub. This is a convenient way of handling it, as it will not only drain better but space will be saved.—J. R. Cote.

An Incubator Free.

The Maritime Farmer believes there should be an incubator on every farm. It means chickens for eating, more eggs and a money maker. To help encourage this we are going to give an incubator absolutely free to the person making the best hatch.

Here are the only conditions. You must buy the incubator this season of some advertiser in The Maritime Farmer. Keep a careful record of the hatch which you can acknowledge before a notary if necessary, write us before May 30th, giving the number of eggs started with, and number of chicks hatched, and to the person making the largest per cent of hatch we will refund every dollar they paid for their incubator. This is simple and easy. Remember, the incubator must be bought this season of an advertiser in The Maritime Farmer. When writing to firm mention The Maritime Farmer. Take this copy and write every incubator advertiser in it or at least send for catalogue o as to get all the information possible, pick out your machine, get it and then be careful with your hatch, if you make best hatch we will repay you every dollar you paid for the machine.

It does not matter whether you start 50, 100 or 200 or any number of eggs. Test at the end of the 10th day, taking out infertile eggs, keeping a record of those so taken out. Then keep a record of eggs hatched from the rest.

Don't fail to take advantage of this. You want an incubator anyway, and by buying it of our advertisers you stand every chance in the world of getting your money all back. We positively guarantee every advertiser in our columns to do as they agree. Write us if you intend to compete and be sure to get your record of hatch in by May 30th. You can make two or three hatches by that time. Address all letters in regard to this to Poultry Department, The Maritime Farmer, Sussex, N. B.

Regulate the brooders at 100 before putting the chickens in. Remember that they are taken from an incubator where it probably registers 105. Use covered baskets 'with cushions in' to transfer them and they will not get a chill. Give them warm water, dry rolled oats, and sharp sand alone for the first three days, and avoid future trouble.

GUNNS "Prairie State" Incubators

Get the Most Chix

because they come closer than any other incubator to matching Nature's own conditions. The hen sitting on the ground is still, on a small scale, the most successful hatcher. But she **can't hatch** 20 or 30 dozen eggs at a time, and she **won't hatch** them at the right season to make winter layers or cockerels that are ready for market at off seasons, when prices are highest.

The most successful Canadian poultry raisers therefore use the "Prairie State" Incubator because it practically equals, on a great big scale, the hen's success with her little setting.

Gunns Prairie State Incubators are built not so much to sell, as to hatch chicks. Note that. We are making incubators and marketing them at rock-bottom prices simply because they will help in our campaign for "More and better eggs and poultry"—not because we want to make profits out of incubators.

Gunns Prairie State Incubators are **honestly made** in our own factory at Ste. Therese, P.Q.—the finest wood-working factory in the Dominion. No poor material or flimsy construction is tolerated, for we have a reputation for 40 years of square dealing at stake.

They are designed so that the **heat is distributed evenly** to every egg in the tray. There are no cold or hot spots.

The **correct temperature is maintained,** within a fraction of a degree, whether the temperature outside the incubator be zero or 80 degrees.

The moistened sand tray gives an absolutely **even and easily regulated supply of moisture** to every egg. This prevents drying up the eggs, and brings out big, strong, healthy chicks.

An even **supply of fresh air,** free from lamp fumes, is provided, greatly increasing both the hatch and the vitality of the chicks.

Thus Gunns Prairie State Incubator supplies so perfectly the conditions of natural hatching that it not only brings out a very high proportion of chicks, but **the chicks live.** When

GUNNS UNIVERSAL HOVERS

are used for brooding, results are even better than those secured by natural methods. These Hovers enable you to raise chicks successfully at any season and in any numbers. Gunns Combination Colony House Brooders make the most convenient, practical equipment known.

Write for our book on Practical Poultry Raising. It tells all about the "Prairie State" line, and how to raise poultry for profit by common sense methods that have proved successful. Meantime, note these prices:

"Gunns Prairie State Incubator Gets Chix." 11

Hamilton Incubator
Hatches Big, Healthy Chicks

You never find the Hamilton guilty of hatching deformed chicks, or allowing chicks to die in the shell. That is because the heating and ventilating systems introduce the correct amount of life-giving oxygen and moisture into the egg-chamber—because the heat-regulating system is accurate to a fraction of a degree—because the directions are so simple and correct. The Hamilton Incubator hatches every fertile egg. The chicks are so plump, healthy and lively they make the old hen jealous of the Hamilton. You can make a success of hatching chicks with the Hamilton Incubator, and just as big a success of raising them with the Hamilton Brooder. Send for our **free booklet** and get complete information about the always successful Hamilton Incubators and Brooders.

THE FARM HOME

This Department is now being edited by a very competent lady, who will be pleased to answer all inquiries. She solicits the aid of all who are interested in home making. This aid may be given in the form of short articles dealing with your experiences, questions or timely suggestions. Ladies, this department is yours. Use it to the best advantage.

Settling down for Winter.

With holidays all over and the winter settled down,
The old farm is as purty as a mansion in the town
Instead of fret-work trimmings and the fancy furbelow
Fair winter decorates the house with quaint designs of snow.
Bring on the big dance and the fun, let fiddles get in line,
No work or worry for a spell; the loafin' days are fine.

Got socks enough for nigh a year,
Got presents that'll keep—
Come on, Old Winter, nary fear
With break my comfort-sleep!

A peep out yonder in the barn will make you satisfied
That crops have done their duty, with prosperity astride;
The smokehouse bulges with its stores, the ham is mighty sweet
The sausage links our hearts to grub that you could never beat.
Oh! stacked up grain and gold, as one, this winter loaf is great
I'll settle back and grin a bit and let the plawin' wait.

Got handkerchiefs and all 'o that,
Got new gloves an' er tie
Come on, Old Winter, we stand 'pat'
When flakes dance in the sky!

There's time to pay some visits and to sit around and read,
With nary crow to pester ot a furrow or a weed,
One season's work has endeh, now it's up to us to rest.
And live on all the blessings that the good Lord knows is best.
Out yonder, in the meadow, banks of snowy white are spread,
But it's not for cultivation—it's for children and a sled.

Gat gifts from relatives galore,
Enough to last a year,
Come on, Old Winter, snow some more
I've not a thing to fear.

W. Livingston.

Estabrooks' Coffee
is quality coffee from top to bottom of the double sealed air tight tin. It is as easy to brew as Red Rose Tea with an equal result in goodness.

Match-Making.

(Continued from last issue)

"Look at it, if you would like to,' said Mr. Annesley to Lucian Olive, seeing him reach out his hand to take a miniature lying on the library table, and then immediately checking himself.

He gladly availed himself of the permission.

"How beautiful, how lifelike, and how expressive of her real character! he thought, as his eye rested on the beaming, animated countenance.

Something, however, not far removed from a frown, the next moment, cast a shadow over his brow. It was, as he imagined, the miniature of Olive Palmer which he held in his hand; and the question, "Why should my uncle have her likeness?" passed like a flash through his mind.

"I think you've seen it before?" said Mr. Annesley, interrogatively, and wholly unconscious of his nephew's suspicion.

"Never."

"I have the impression that I showed it to you years ago."

Lucian eyed his uncle keenly, in consequence of what to him appeared this strange remark, as he again assured him that he never saw it before.

"What do you think of it?" inquired Mr. Annesley.

"That it is a most excellent likeness."

"Nothing could be truer to life than it was."

"And is still, I should say," remarked Lucian, a little curtly.

His uncle, apparently lost in his own thoughts, paid no heed to this remark.

"It might be mistaken for Olive Palmer's likeness," said Mr. Annesley, arousing himself from his reverie.

"And isn't it hers?"

"No; she for whom it was taken died twenty years ago. Her name was Clara Dermont. Is the aame new to you?"

"Entirely so."

"I thought that your mother might have told you about her. They would have been sisters-in-laws had Clara lived. Tell me, now, how you like the miniature." And, as he spoke he brushed back the brown hair from his forehead, as if by doing so he could rid himself of the painful memories which had been called up.

"I don't know how I could help liking it," replied Lucian, a little ashamed that he had for a moment supposed that in his uncle, who could not be less than twenty-five years older than Olive, he had found a rival.

"You like it for Olive's sake; I am glad of it."

Lucian did not deny the truth of this assertion, and the subject was dropped.

"I don't see that there will be any use in waiting," said Mr. Annesley, taking the chair which Miss Palmer had placed for him near the fire, for, though the last of May the morning was chilly.

"Nor I," said Miss Palmer.

"I think her father will have no objection to receive Lucian as a son-in-law."

"None in the world."

"To remove even the shadow of doubt on the subject, it may be as well for you to write to him before there's any communication on the part of my nephew."

"I have already written. I know little of the so-called art of letter-writing, but I know how to put my thought down on paper, and so I wrote to my brother all about it. I told him of Lucian's good qualities, and, as for his failings, he has so few that I thought they were hardly worth mentioning."

At this moment, the door opened, and Olive, with a little wicker basket on her arm, piled high with wild flowers, such as violets, and those white-leaved flowers which fringe meadow brooks, entered the room. Nothing could be more fresh and radiant than the young face surrounded by its luxuriant tresses of golden brown, now in slight disarray from her long walk. The smile which hovered on her red lips, broke in gleams of light from beneath the shade of her dark, rich eyelashes, lost none of its warmth and sparkle at sight of Mr. Annesley.

"Where did you find your flowers?" said he. "I went out yesterday for the express purpose of hunting some large purple violets like those; but not one could I find."

"The sunshine knows where to find them," she replied.

"And May" (May was a pet name he had given her) "knows where to find the sunshine; and, what is better still, she finds a place in her heart to keep it in."

"If she didn't," replied Olive gayly, "the flowers she keeps there would droop and die."

"I suspect," said Miss Palmer, "that Olive has found out what I've heard called bottling the sunshine. At any rate, she has a place for it where it keeps well, and seems always ready for use."

"And let me tell you, Lucian," said Mr. Annesley to his nephew, who just then made his appearance at the unclosed door, "that it is the best investment man or woman ever made, inasmuch as it will prove to be a better fund for a family to draw upon for happiness than all the gold or silver that was ever coined, provided"—and he dropped his voice a note or two below its usual key—"provided there's always a well-furnished larder at the disposal of a willing and competent cook."

"I would not undertake to cavil at an assertion," replied Lucian, smiling, "which you have guarded with so much ingenuity, even were I inclined to doubt its being tenable, which I am not." And, as he spoke, spoke, he looked at the bright face of Olive, as she stood at a table arranging her flowers, in a way which showed that she had her full share of influence in silencing his doubts. Soon afterward, he joined her, and helped her place the flowers in vases, which gave Mr. Annesley an opportunity to inquire of Miss Palmer if she had received an answer to the letter which she sent her brother.

"I have," she replied.

"And is it favorable?"

"Yes. He was kind enough to say that he could place full confidence in my judgment, and should therefore raise no onjections, though he had hoped to keep his only daughter with him a little longer. He has two boys, younger than Olive, who are as bright, cheerful and good as she is, in their way; but then you can readily imagine that the place of an only daughter like her can never be exactly filled. He has one of the best of housekeepers, however, a little precise, perhaps, but none the worse for that; so that everything will go on the same as it always has since he had the misfortune to lose his wife."

There was a smile in Mr. Annesley's eyes rather than on his lips, as he cast a furtive glance towards Lucian and Olive. "It will be a match—there can be no doubt of it," said he; "and 'twill be one of my own making."

"How so?"

"Before answering your question, permit me to inquire if you understand the true philosophy of match-making?"

"No. I confess that I must plead ignorance as to the philosophy, if there is any."

"I think there is, and believe it to be simply this; give any two young persons, who, you think, possess the requisite qualities for mutual attraction, well-timed opportunities of meeting each other, and then let them alone; if you tell them in so many words, that you have brought them together for the express purpose of bringing about a match between them, in nine cases out of ten their antagonism will be excited, causing them to be on the lookout for faults rather than per-

AFTER SUFFERING YEARS

Cured by Lydia E. Pinkham's Vegetable Compound

Fox Creek, N.B.—"I have always had pains in the loins and a weakness there, and often after my meals my food would distress me and cause soreness. Lydia E. Pinkham's Vegetable Compound has done me much good. I am stronger, digestion is better, and I can walk with ambition. I have encouraged many mothers of families to take it, as it is the best remedy in the world. You can publish this in the papers." — Mrs. WILLIAM BOURQUE, Fox Creek, N.B., Canada.

The above is only one of the thousands of grateful letters which are constantly being received by the Pinkham Medicine Company of Lynn, Mass., which prove beyond a doubt that Lydia E. Pinkham's Vegetable Compound, made from roots and herbs, actually does cure these obstinate diseases of women after all other means have failed, and that every such suffering woman owes it to herself to at least give Lydia E. Pinkham's Vegetable Compound a trial before submitting to an operation, or giving up hope of recovery.

Mrs. Pinkham, of Lynn, Mass., invites all sick women to write her for advice. She has guided thousands to health and her advice is free.

It Is Miserable To Be Dyspeptic.

Dyspepsia is one of the most prevalent troubles of civilized life, and thousands suffer untold agony after every meal.

Nearly everything that enters a weak dyspeptic stomach, acts as an irritant; hence the great difficulty of effecting a cure.

The long train of distressing symptoms, which render life a burden to the victim of dyspepsia, may be promptly relieved by the use of Burdock Blood Bitters.

Mrs. John Sherrett, Fortier, Man., writes:—"I was troubled with dyspepsia for years. A friend of mine told me about Burdock Blood Bitters, so I got a bottle to try, and before I was half finished I could eat anything without suffering, and when I had used two bottles I was sound and well. Now I feel just fine; indeed I can't say too much in favor of your medicine."

Burdock Blood Bitters is manufactured only by The T. Milburn Co., Limited, Toronto, Ont.

fections, and thus, instead of promoting, you will defeat your object."

"And that is the way you have done?"

"Yes, I contrived to bring them together and then just let them alone."

June had come over the green and breezy hills, from the sunny vales of the south. With her crown of roses were twined a few of the still fresh and delicate flowers, dropped from the hand of May, as she lingered to hear the clear sweet bird-notes swelling into full and delicious tides of song to welcome the advent of her more brilliant sister."

The day was near its close, when Mr. Palmer drove up to his sister's door. He had come for the purpose of taking Olive home with him.

Not being expected, his arrival was a pleasant surprise both to his sister and daughter. As may be imagined, they had many things to say to each other. The short summer twilight deepened into night; the stars shone forth one by one, and finally the waning moon came up from behind the eastern hills, warning them of the near approach of midnight, ere they separated for the night.

It has been said that between the simple and noble persons there is always a perfect understanding. The little party assembled in Miss Palmer's parlor, the ensuing evening, proved that there was truth in this assertion, slight as had been the opportunity for Mr. Palmer, Mr. Aanesley, and Lucian Clive to become acquainted. Attracted by the sincerity common to each—that golden alembic in the moral world which throws off the dross, and assimilates the purer elements of humanity—they felt that they were already friends.

At an early hour the following morning, Olive was ready to return home with her father. As they were about to step into the chaise, Mr. Annesley, a little flushed from his hasty walk, arrived to take leave of them. There was no need for Lucian Clive to hurry, for, having been seized with an unusual desire to examine Miss Palmer's flowers, he had arrived in season to commence his inspection at sunrise, which left him time for a very pleasant chat with Mr. Palmer.

"I am sorry to have you go so soon," said Mr. Annesley, "but there is comfort in knowing—nothing in Providence preventing—that we shall have your daughter back again the first of October. For my part, I think September should be the time of the wedding."

"October will be full as soon as I shall wish to part with her," replied Mr. Palmer.

"And full as soon as she can get ready," said his sister. "You men haven't the least idea how much preparation is required when a young girl like Olive expects to go to house keeping."

"I suppose not," replied Mr. Annesley. "And, come to think about it, I too shall have something to attend to. The old mansion must be fitted up in a manner suitable for the reception of a young bride."

Lucian, during this brief colloquy, approached Olive, who had taken her seat in the chaise, and placed in her hand a moss rosebud, saying as he did so, "Expect to see me soon."

Nothing more need be said, except that Olive, with the assistance of her Aunt Lois, who passed two weeks at her brother's for the express purpose, as she said, of "cutting out, and making the napery in a fit and proper manner," found no difficulty in completing all necessary preparations at the time appointed for the marriage, which was celebrated according to the simple and solemn rite which custom had sanctioned.

THE END.

THE ORIGINAL AND ONLY GENUINE

BEWARE OF IMITATIONS SOLD ON THE MERITS OF MINARD'S LINIMENT

Minard's Liniment Co., Limited

Toilet Needs and Helps.

It is a good plan to keep a mixture of cornmeal and vinegar on the washstand and rub the hands with this mixture after having washed them at any time during the day, and it is especially good to use after keeping the hands in soapy water for any length of time. To clean much-soiled hands, first rub them well with sweet oil or lard, then wipe off this grease with a soft cloth and wash the hands with warm water and good soap.

When the face is dusty, after a long ride in the dust or after cleaning house, rub the face, throat and ears with olive oil, and this must be rubbed on lightly so as to loosen the dust, but not to be rubbed into the pores of the skin then wipe this off immediately with a soft piece of linen, then wash the face with warm not hot water, and good toilet soap.

A good remedy for pimples is made by pouring spirits of camphor over

You simply paint it on those parts of the stove that become red and it will make them absolutely **BLACK**. One application lasts a month. Absolutely non-explosive.

25 Cents the Bottle. Postage 5c Extra.

T. McAVITY & SONS, LIMITED,
ST. JOHN, N. B.

sliced fresh horseradish and this should stand tightly covered for twelve hours, then the liquid must be strained and applied night and morning.

An excellent cream to use for chapped skin is made with 10 cents' worth of glycerine, the juice of two lemons, and one tablespoonful of powdered boric. Stir the boric powder in a little hot water until all is dissolved, then put in a bottle and shave until the ingredients are well mixed. A boric solution is excellent to use as a toilet article and this is easily prepared by dissolving a heaping teaspoonful of the powder in a pint of boiling water and then keeping in a bottle ready for use. A little of this solution used in the water when bathing the face and hands is fine for the skin, and the best way to treat clammy, moist feet is to bathe them with this solution and allow it to dry on the skin, or dust them with the dry boric powder. This prevents odor and is excellent to use on any part of the body where perspiration is troublesome.

A good way to clean the hair and give it a nice lustre is to rub dry salt well into the roots of the hair at night and pin a cloth closely around the head and then brush out the salt in the morning. Salt water rubbed well into the hair every night will keep the hair from falling out. A good fluid to keep the hair in curl or waves is made by beating the white of an egg slightly and then stirring in a half cup of cold tea that has been strained.

A Prize of $5.00.

We will give $5.00 to the school boy or girl who makes the most number of words from the letters contained in the words "The Maritime Farmer". No letter is to be used in one word oftener than it appears in the words "The Maritime Farmer." The only condition is that each person competing must send in at least one paid in advance new or renewal subscriber to "The Maritime Farmer." Make up your lists boys and girls, show them to your friends, get them to help you win the prize subscribing to The Maritime Farmer. Contest closes March 15th. Address Circulation Manager, Maritime Farmer.

A Pest of Ants

Editor Farm Home Department:—

So far I have noticed no letters for this department.

I think all we need is a start and many valuable hints and suggestions might be exchanged.

I would like to ask the housekeepers if they know anything that will keep black ants out of the house. Some one has said go to the beds with a boiling tea kettle and scald them; others say put a drop of carbolic acid in each bed.

Now, when you take in the fact that the whole ground around the house is honey-combed with them you will see that that plan would not work. It would take gallons of carbolic acid and barrels of water, and then there are numbers from every bed that escape and go right to work next day.

Then we have been told of different ways to kill them when they get in, but that is no help. If we kill ten thousand one night there are just as many in the next day until we are almost tempted to pity Pharaoh.

What we cannot find out is where they get in, and what we need to know is what to use to make it so unpleasant for them they will stay out. We tried sulphur, red pepper, alum and a number of such things on which they throve. The only thing that did any good and that a very little was Blackjack Tobacco.

We have had the plague for five summers.

Can any of the readers of this depart ment help me any, if so come on with your suggestions?

Sincerely yours,

B. McL.

Woodstock, N. B.

Editor's Note.—Can any of our readers suggest a remedy?

In The Kitchen.

The shell of an egg often breaks if plunged directly into boiling water. It is a good plan to pour a little warm water over them first before putting them into hot water.

If the fingers get badly stained in peeling fruit or vegetables and the druggist is too far off to get oxalic acid, try rubbing the stains with sorrel leaves or rhubarb, both of which contain the same acid. Spots in linen may be removed by the same agency.

In arranging good china on the shelves soft mats should be placed between the plates to avoid scratches and chips. The cups are best hung by their handles from hooks. This is much safer than piling them on the shelves. Dishes and large plates should rest in a groove at the back of the shelf.

When muslin or liner articles are scorched and are not actually burned by too close contact with the fire or by too hot an iron, soak the brown stains with some of the following mixture:—Slice six large onions and

Maritime Wire Fence Stands the Strain

of unexpected accidents, without a flinch. It holds under the most trying conditions. Maritime Wire Fence makes good because Maritime material is first quality, and Maritime workmen excel in their calling.

All Maritime Fence is made from extra heavy smooth No. 9 wire, so thoroughly galvanized that it won't peel. The Maritime lock holds the joints so rigidly that they can't give or pull out of shape. Maritime Fence is rust-proof, accident-proof, and as near wear-proof as man can make it.

8 Maritime Fence is your kind of fence—made as you would make it yourself—if you could. Maritime Fence is true economy for you. It is made and sold upon honor. Costs no more than inferior fence. Send now for our free fence booklet. Tells you everything you want to know about fences. Write while you are thinking of it. It will pay you,—pay you well.

CONSTIPATION

CURED BY THE USE OF

MILBURN'S

LAXA-LIVER PILLS

Constipation is one of the most frequent, and at the same time, one of the most serious of the minor ailments to which mankind is subject, and should never be allowed to continue.

A free motion of the bowels daily should be the rule with every one who aspires to perfect health.

Mrs. Fred. Hall, 299 Hibernia Road, Montreal, Que., writes:—"Having been troubled for years with constipation and trying everything I knew of, a friend advised me to use Milburn's Laxa-Liver Pills. I used four and a half vials and I am completely cured. I can gladly recommend them to all who suffer from constipation.

Milburn's Laxa-Liver Pills are 25 cents per vial, or 5 vials for $1.00, at all dealers, or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

COBALT GOLD PEN CO., Dept. 319 Toronto, Ont.

The I C. R. Boston Office Has New Address.

The Boston Ticket Office of the Intercolonial Railway will no longer be found at No. 306 Washington St. Mr. R. W. Chipman, who represents the I. C. R. and its passenger interests in the "HUB" having removed to No. 294 Washington St., to be more precise at room 427 in the old South Building, where he will just as cheerfully as ever discuss travel with tourists and supply them with reliable information concerning the territory served by the I. C. R.

squeeze out all the juice. Add to this one pint of vinegar and one ounce of pearl-ash. Boil until the mixture thickens and apply liberally while still hot.

The difference between a fresh and a stale egg can be detected the moment they are put in the water for boiling. The fresh egg immediately sinks to the bottom and lies flat on its side, whereas the stale egg will be seen to rise on end. If it rises slightly it may only be a trifle bad, but according to the angle at which it inclines with the bottom of the saucepan its staleness can be told. If it rises to the top, then take it out to the dustbin, but be careful not to break it.

Sponges are great germ collectors, and should be scalded thoroughly very frequently.

A light broom is best for easy work and with care it will last as long as a heavier one.

Old hair brushes which have become soft can be made quite hard and firm by dipping them in a strong solution of alum.

If the color has been taken from silk by acids, it may be restored by applying to the spots a little hartshorn or sal-volatile.

When removing buttons from old garments have a needle and thread at hand, and thread each kind separately and tie in a bunch before putting into the button box. This saves time and trouble of hunting through all the buttons to select the ones required again.

A $5 00 Wire Fence Prize.

We will give $5.00 in gold to the person who finds the word "fence" or "fences" the most times in ads. in this and succeeding issues between now and May the 31st. It doesn't cost you one penny to try for this $5.00 but in looking for the word "fence" note which fence ads. interest you most, and write those advertisers, sending an order or asking for free catalogue. In your letter to us telling how many times you find the words "fence" or "fences" you must give us the names of all fence advertisers in this and succeeding issues up to May 31st, to whom you have written mentioning The Maritime Farmer. This is an easy condition, and the catalogues or fences you buy will be worth much more than you pay. Go to work. The $5.00 will be mailed promptly to one finding them most times. Tell how many times you find them on each page. In case of tie the prize will be divided. Don't delay. Don't cost a cent to enter. You might as well have the $5.00 as you are going to write for catalogues, so do it now. Lists must be mailed by May 31st, 1911.

Children of Large Families Healthier.

Doctor Friedjung of Vienna has been studying the comparative health of children who are the sole offspring of their parents and children who are members of large families. He finds that of "only children" but one in eight is thoroughly healthy. Of the children of large families, on the other hand, two-thirds are healthy.

The difference is attributed to overmuch care, petting and solicitude bestowed on the "only children."

Fully nine out of every ten cases of rheumatism of the muscles is simply due to cold or damp, or chronic rheumatism, neither of which require any internal treatment. All that is needed to afford relief is the free application of Chamberlain's Liniment. Give it a trial. You are certain to be pleased with the quick relief which it affords. Sold by all dealers.

The Safest Fence to Buy

Safe because it will stand shocks and ill usage.
Safe because it is a complete barrier against all kinds of stock.
Safe because its tough, springy steel wire will give real service.

PEERLESS The Fence that Saves Expense

is built of No. 9 galvanized wire of guaranteed quality. To this best of wire add the Peerless method of construction and Peerless lock and you have a fence without a rival.

We've built Peerless fence twice as good and twice as strong as is necessary under ordinary circumstances so that neither accidents nor extraordinary wear can affect it. It saves you money because it is long lived and never requires repairs. We know there is no fence made that will give you more lasting satisfaction. Write for particulars.

We also make poultry and ornamental fencing and gates—all of it of a quality that our customers appreciate and we are proud of. Agents wanted in all unoccupied territory.

Things That Hold a Man.

Last week I had something to say about the father who is proud to carry his baby in public, and willing to help with the care of it at home. One day since then I chanced to be talking with a grandmother about the different ways parents have with their little ones. Although much more experienced than I, she was not so intimately acquainted with various young families, and plied me with many questions; whether it was the father or mother in such-and-such cases who put the children to bed, or heard their prayers, etc. "I do so love," she said, "to hear how other people bring up their children. I have always thought that the mother ought to give the father a lot of little things to do for the children when he is at home in the evenings. She should induce him to carry the baby to bed, help to undress the others, or anything that is needful. These are the things that hold a man. He will find no outside pleasure quite so attractive, and none so good for his own character." I thoroughly agree with her.

Hints From Each Other.

A Good Cement.—Try mending the broken dishes and wooden ware with liquid court plaster.

To Wash the Hair Brush use soda instead of soap. Soap softens the bristles while soda does not, but cleans the brush very quickly.

Chocolate Stains.—All good housekeepers dread the bad stains left in table linen by chocolate or cocoa. If the stain is first washed in cold water without soap it will entirely disappear.

In Sprinkling Table Linen use a large salt shaker and in the water put a little cold starch, about a tablespoonful to a quart of water. The linen will iron with about the same stiffness as when new.

To Strain Hot Liquids through a cloth into a vessel fasten the cloth to the edge of the vessel with spring clothes-pins. You will then have both hands free to work with without danger of scalds or burns.

If You Contemplate Building save all illustrations of dwellings, both interior and exterior, that interest you and paste them in a book. When you are ready to build these will be of great value to you as regards decorations and conveniences.

To Cleanse and Brighten Cut Glass wash it in lukewarm water to which has been added a little bluing. Use soft tissue paper instead of a cloth when the glass has been dried carefully. Yod will be greeted with a brilliant polish.

For Pillows.—Take regular cotton batting, pull into pieces two inches square, lay the pieces in a pan, put in the oven and brown on both sides, then staff the pillow. The cotton remains light and and airy but if it should ever feel lumpy hang it in the sun.

A Rubber Bag is a great convenience in a family where there are several children. This can be made of a square piece of material on which are stitched the number of pockets required. Let each child know its own pocket anh you will soon discover the necessity of a bag for rubbers.

Building a Chara cter

Thoreau says: "You cannot dream yourself into a character; you must hammer and forge yourself into one." There is a world of meaning in that sentence. I have seen boys and girls just sit around and use their wish bone instead of using their back-bone, in trying to form themselves a character. You must be up and doing. to get a strong, forceful, magnetic character, one that will win for you the respect and admiration of your fellow. It takes a lot of close application to make a character, but by steady, persistent effort, any person can have one above reproach. The shortest and best receipt that I can give for the formation of a good character is contained in the following five words: "Think right, then act right." For, "As a man thinketh in his heart, so is he;" and thoughts, if persisted in, will crystalize into actions, and the resultant actions will be good ones. Then, the good thought combined with the good actions, will in time form a character.

The best way to get into the trend of thought necessary, is by the use of auto-suggestion. The way to use auto-suggestion is to pick out some one fault in your makeup, that you wish to correct, then write out a series of words; like, for instance, you want to develop more will power, to overcome the vacillating nature that a great many people have. The following is a form that may be used successfully: "I am determined. I am the soul of determination in every thing I do. I am determined, I will not be swerved, once I make up my mind that I am right. I radiate determination everywhere. Success and sunshine of determination are one with me. I am determined." Now in the privacy of your own room, just before you retire for the night, dismiss every other subject from your mind, concentrate your whole mind, and bend every energy to thinking of the will power, then slowly and surely say over the above form, out loud for five minutes. Do this every time you will increase your will might, and in an incredible short power to a marked degree.

To prove to you that this will work, you all know that if at any time you wish to get up at a certain hour in the morning, if you will set the time at the time of retiring, you will wake promptly at that time. This strengthening of the positive qualities by suggestion is just the same as waking up at a pre-determined time in the morning. The subconscious mind, or the one that does the dreaming will absorb what you say, and during your sleeping hours, will impress upon your conscious mind, the fact that it must obey the suggestion and if persisted in, it will do so. Now after you have corrected your weak vacillating will power, jump right on another weak spot, and treat it in the same manner. It may take some time to correct all of your weak spots, but you must remember that a great oak tree is not grown in a day. So with your suggested character, each day it will get a little bigger and a little stronger, and almost before you know it, you will have a magnificent character, that will cause you to have a very great influence upon everyone that you may meet. Read good magazines, family papers, and read biographies of great men. All truly great men had characters that will be of great benefit for you to take some of the good points from this one and that one. When you are older, and have children to look after and love, if you have builded for yourself a character, it will be a great pleasure to see them trying to imitate your actions and speech. I will repeat again, "As a man thinketh in his heart, so is he."—J. C. A.

Household Hints.

Home-Made Soap Suggestions. — When making cold soap, instead of pouring into a mould, out of which it often difficult to cut the soap, pour into a pasteboard box or boxes. When cold, tear off pasteboard, and you will have the soap in a cake, ready to be cut into bars of convenient size.

To Clean Tarnished Silver.—Apply kerosene with either a brush or soft cloth, then rinse the silver in scalding water. The most tarnished pieces thus easily take oo a beautiful ldstre. There is no white powder to emain in the creases. Moreover, I have never known of any preparation

Do You Realize the Advantages of Concrete?

THE rising price of lumber has compelled the farmer to look for a suitable substitute.

Concrete, because of its cheapness, durability and the readiness with which it can be used for every farm purpose, has proven itself to be cheaper than lumber and far more durable. Our Free Book—

"What the Farmer Can Do With Concrete"

shows the farmer how he can do his own work without the aid of skilled mechanics. It demonstrates the economy of Concrete construction as compared with lumber, brick or stone.

This Book Tells How Concrete Aids Farmers.

It shows how Concrete can be used to advantage on the farm in the construction of almost every practical utility.

Send for this book to-day. You'll find it intensely interesting, even if you don't intend to build for a while. It contains much useful information that will put you in the way of saving money. Among the subjects treated are: Barns, Dairies, Fence Posts, Feeding Floors, Hitching Posts, Root Cellars, Silos, Stables, Stairs, Stalls, Troughs, Walks, Well Curbs, and so forth.

REMEMBER.—This book is yours—a postal will bring it promptly. Write now.

You may send me a copy of "*What the Farmer Can Do With Concrete.*"

CANADA CEMENT CO., Limited
22-32 National Bank Building, Montreal

THE "B T" LITTER CARRIER HAS FEATURES THAT YOU WILL APPRECIATE.

Its construction is simpler than any other—fewer parts to wear out.

Its parts are heavier and more strongly built.

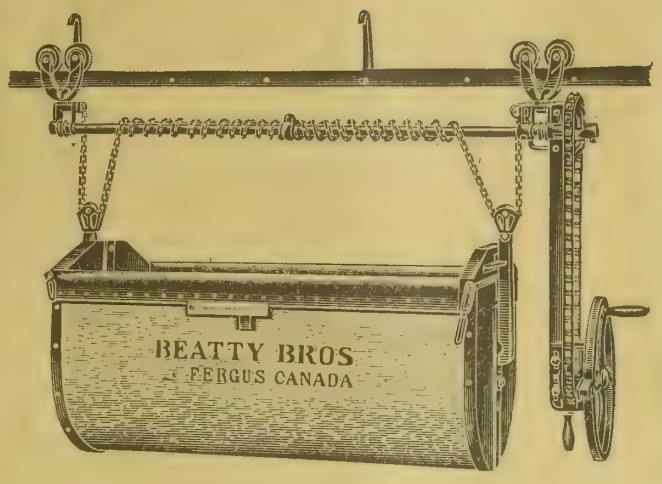
Only the very best of materials are allowed to enter into the construction of the "BT" Carrier.

These features together with the following points of advantage have made the "BT" Litter Carrier famous.

1st. In lifting we use double purchase. This is an exclusive feature of merit on our carriers.

2nd. The bucket on the "BT" Carrier can be tipped either way to discharge—most buckets will tip only one way.

3rd. It is made of 18 gauge galvanized steel, being some four gauges heavier than the material used by the other firms.



4th. The bucket can be elevated higher than any other. The bottom of the box is within three feet of the track when wound up.

5th. The "BT" Litter Carrier Track is heavier per foot and stronger than any other on the market. It is made of the toughest and stiffest high-carbon steel.

If you are thinking of buying a Litter Carrier, let us send you our new catlogue on the "BT" Litter Carrier. It is just off the press and it is free.

Write to-day for catalogue and information.

BEATTY BROS., Fergus, Ont. - - -

We also manufacture Steel Stalls, Stanchions and Hay Tools.

which gave such a lasting lustre to all kinds of silverware.

To Fix Your Rugs which are not reversible when they wear thin and have ugly edges, purchase a bolt of cotton tape, an inch wide or wider, as near the color of the rug as possible. Turn your rug with the wrong side up, and glue the tape evenly along the edge. Then cut off all the ravelings and frayed portions. This will make a splendid edge and wear well.

Kitchen Aprons.—I have found ?hat the best material for kitchen aprons is the dark blue or brown denim of which men's overalls are made. I make the aprons gored without gathers or pleats. On wash day I wash it and haog it out on the line without starching, and it blows smooth and is ready to put on without ironing. It is less trouble than any kind of an apron I have ever had.

A Sick Room Hint.

One of the most useful hints for sick room attendance is very seldom known outside of a hospital ward, and not even there in many cases; the hint is how to obtain a cold cloth without the use of ice. Everyone knows that in feversa cold cloth on the forehead or face, or base of brain, is one of the most comfortable things in the world. In the tropical hospitals, and where ice is scarce all that is necessary is to wet a linen cloth, wave it to and fro in the air, fold it, then place on the patient. Have another cloth ready, waving it to and fro, just before applying it; these cloths have a more grateful an lasting co,dness than those made so by the intense cold produced by ice.

Healthful Sleep.

There is more truth than poetry in the old idea that "beauty sleep" should be taken before midnight. The object of sleep is rest and refreshment. It is not enough merely to sleep. In the first place, sleep should be made a habit. Slumber at any time is practically wasted if the muscles are taut and the brain active. Work while you work, play while you play, as energetically as you will, but, also, rest while you rest. Give yourself completely up to it, if you don't know how—learn. Then form the habit and never lose it.

Open the windows wide, winter or summer; throw aside the pillow, and let the muscles go, every single one of them—they are like rubber bands that have been stretched all day. Relax. Don't cling to the bed as though you were afraid it would get away from you. It is strong enough to hold you—drop your cares and worries, shut out all plansad conjectures and schemes, breathe deeply and regularly—meaning to inhale and exhale rhythmically—and, before you know it you have slipped away.

RUBEROID ROOFING

Trade Mark Registered. Pronounce it RUE-BER-OID.

Costs Least Per Year Of Service.

Reckoned by first cost only, there are many cheaper roofings than RUBEROID.

Reckoned on the logical basis—the cost per year of service—RUBEROID is cheaper than any other roofing, be it shingles, metal, slate, tile, tar or any other prepared roofing.

RUBEROID'S COST per roll is moderate. The cost of laying is very small, as skilled labor is not required. Repairs, while easily made, are very seldom needed if the Roofing is properly laid. The only attention necessary is a coat of Ruberine Cement once about every three years.

RUBEROID'S DURABILITY is due to the Ruberoid Gum with which the wool felt base is saturated and coated on both sides. This gum is a compound of our own, tasteless, odorless, not affected by gases or acids, or by extreme heat or cold. Ruberoid contains no rubber, no oil, no tar, no asbestos.

RUBEROID'S PROTECTION is complete. Fire Underwriters' Associations rate Ruberoid "First class" as a fire-resisting roofing, and in actual service for 19 years it has proved its superiority as a weather-proof roofing.

We have some interesting Booklets, full of information on all kinds of roofing—Booklets that will put you in the way of saving money. Write for Booklet G, or better still call at the nearest store where the "Ruberoid Man" is at home and ask the dealer for it.

"SOVEREIGN" SHEATHING FELT is a light-weight Ruberoid that makes the best inter-lining you can get to keep your house or stable warm and dry. Clean, odorless, practically indestructible. Ask for Booklet about it.

Farm Values and Wages in Canada.

The Census Monthly for January says that values and wages in Canada make a good record for 1910. The total value of live stock on the farms is $593,768,00, which is $34,979,000 more than in 1909. The price per head of horses is $132.50 as against $130.72 in 1909, or milch cows $42.60 against $36.36, of other cattle $30.90 against $28.81, and of sheep $6 against $5.89. Swine alone show a drop in average price, being $11.30 per head against $11.80. The total value of horses is $293,398,000 for last year against $278,789,000 for 1909, of milch cows $121,613,000 as against $103,601,000, of other cattle $131,781,000 against $126,326,000 and of sheep $15,819,000 against $15,735,000. The value of swine however, fell from $34,368,000 in 1909 to $31,157,000 in 1910.

The highest average price of horses was in Saskatchewan, of milch cows, other horned cattle and sheep in Ontario, and of swine in Quebec.

Horses, three years old and over, reached the highest price in British Columbia, where the average was $225. Swine per 100 lb. weight ranged from $6.50 in Manitoba to $9.62 in Quebec. The price of unwashed wool was 18 cents in 1910 and 17 cents in 1909, and of washed wool 24 cents for each year.

The average value of occupied farm land in the Dominion was $38.45 per acre or 15 cents less than for the previous year. It was highest in British Columbia, where the cost of clearing is heavy and the land is largely occupied for fruit growing—the average being $74 per acre, or 56 cents more per acre than in the previous year. Ontario comes next with $48 per acre, which is $2.22 less than in 1909.

Farmhelp for the summer season shows an average of $35.15 per month for males and $20.70 for females, counting board, as compared with $33.69 and $19.08 respectipely in the previous year. Males have an average of $347.10 and females $209.69 per year counting board, as against $336.29 and $206.08 respectively for 1909. The highest prices per month in summer are paid in Saskatchewan, Alberta and British Columbia, where they are $40 and over for males and $25 and over for females, counting board. The average rate of board per month ranges from $8 for males and $6 for females in Prince Edward Island to $20 and $17 respectively per month in British Columbia.

The rates of wages and board are quoted for the farm, where males are employed on the land and females in the house. They are averages computed from a large number of farmers to the the Census Officer.

ARCHIBALD BLUE, Chief Officer.

Large or Small Potato Seed.

Commenting on the results of crop contests in England where it appeared that there was no gain from the use of large seed pieces, a writer in the Rural New Yorker points out that the conclusion is misleading.

Large seed pieces are not necessary to large yields. But it should be remembered that small seed pieces are not contributing factors to large yields, while large seed pieces may be and usually are such. The Englishmen obtained very large yields from very small seed pieces, but it was not because of but in spite of the small seed pieces. We are told that in another contest, with slightly larger seed pieces, lower yields were obtained. We are not told however, that these results were obtained side by side on the same ground or even by the same men, and commonsense assures us they were not.

The great majority of experiments

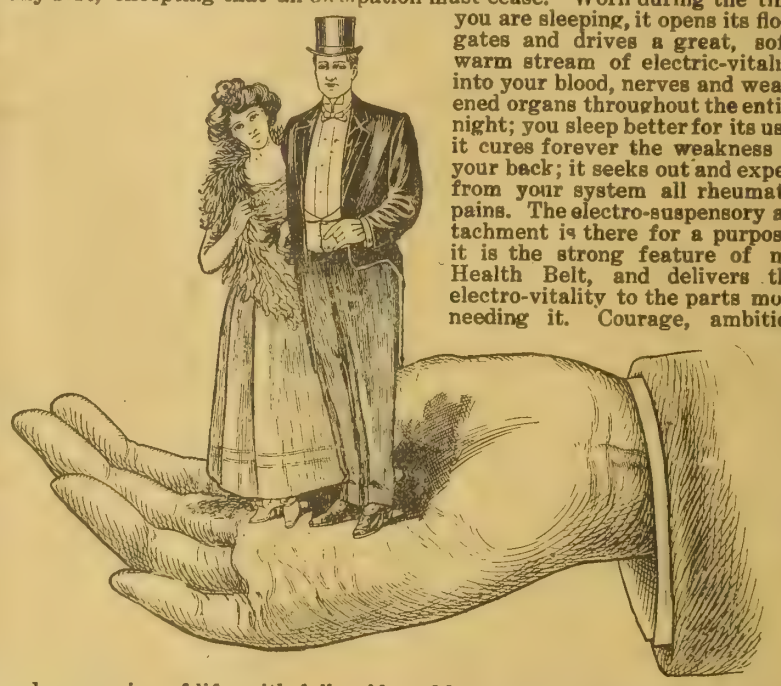
"I Present to You a "Health Belt Man."

He is 55 Years "Young."

Yes, 55 years young; not 55 old for my Health Belt poured vitality into his blood, nerves and tissues until

HIS VIGOR WAS RESTORED

My marvelous HEALTH BELT is a Wizard Worker, a mechanical self-treatment of the highest therapeutic value. It stands by you and never abandons its task until you are brought back to a state of vigorous Manhood, without an ache, pain or weakness. No drugs, no dieting, no restrictions of any sort, excepting that all dissipation must cease. Worn during the time you are sleeping, it opens its flood gates and drives a great, soft, warm stream of electric-vitality into your blood, nerves and weakened organs throughout the entire night; you sleep better for its use; it cures forever the weakness in your back; it seeks out and expels from your system all rheumatic pains. The electro-suspensory attachment is there for a purpose; it is the strong feature of my Health Belt, and delivers the electro-vitality to the parts most needing it. Courage, ambition



and a new view of life, with full, self-confidence, surely result. It makes you young and keeps you young, with the fire and vigor of the biggest, fullest blooded man you ever saw. The "HEALTH BELT MAN" cannot grow old, for he knows the secret of perpetual youth. It will place you in the "feeling fine class." "I am a man again, thanks to your wonder-working Health Belt. Use my name as you see fit." So writes C. L. Snell, of Middleport, N. Y. So have said thousands before him.

YOU CAN PAY WHEN CURED.

If you're sceptical I'll prove it first. I'll take all risk by letting you have the Belt on Free Trial, not to be paid for until cured. Send it back if it doesn't do the work.

These Wonder Books are

FREE

Call or write for them to-day

Fill in the coupon and let me get these wonder Health Books into your hands. They are sent free, sealed, by mail, and give certain health and nature facts which every man (young, middle aged or old) should have. They fully describe my Health Belt, and are beautifully illustrated. I have known 100,000 men who sought my aid—I should know you.

DR. M. F. SANDEN CO., 140 Yonge Street, TORONTO, Ont.

Dear Sirs—Please forward me your books, as advertised, free.

NAME.....

ADDRESS.....

conducted by trained men at agricultural experiment stations, have shown that the larger the seed piece the larger the yield per acre, other things being equal. The question is one of economy. At what point will the cost of heavier seeding equal the value of increase in yield? That is the danger line we should not pass, and its place is fixed by several factors, such as the price of seed and probable value of crop, fertility of soil, etc. We read much of late about raising calves without milk. It can certainly be done. But for ordinary, can art improve upon nature, as to economy and effectiveness? It is about the same with this potato question. There are soils and conditions where the use of finely cut seed is advisable but for ordinary, a larger seed piece supplying nature's own prepared food for the young, growing potato sprout will prove better.

The potato sprout very quickly sends out rootlets into the soil, and when this is very fertile and well adapted to the crop the sprout will little miss the cutting off of its natural food supply by the division of the parent tuber into many small pieces. But on less favorable soil this robbing may so stunt the early growth as to preclude the possibility of a maximum yield. There are cases wherein the planting of whole large tubers gave less marketable yield side by side with rows planted with cut seed, but on inquiry found the whole large seed had been planted the same distance apart in the rows as the cut seed, which was planted closely. Of course the experiment resulted misleading. The result should have been expected. The larger the seed pieces the farther apart in the rows should they be planted. On his own farm this writer is confident, from rather close observation for many years and from a carefully conducted comparative experiment, that extended through a period of 11 years, that he obtained better results by planting whole large tubers in hills three feet apart each way, cultivating both ways and selecting seed at digging time from best hills.

Your neighbor has had a 50-cent bottle of Psychine (pronounced Si-keen) for which we paid his druggist. Send us this coupon filled in to-day and obtain your bottle from your druggist.

We are receiving many thousands of requests from every part of Canada for the 50-cent bottle of Psychine, which we buy from the druggist and give away.

Unprecedented interest is being taken in Psychine.

And it is doing some very remarkable things, making some very extraordinary cures.

* * *

Not more than we anticipated however.

With our third of a century's experience with Psychine.

With our knowledge of the hundreds of thousands it has already cured, in mind.

We have the most absolute confidence in what it can and will do.

* * *

Since scientists know now all about the white corpuscles of the blood, or the phagocytes, the scavengers which devour every germ of disease that enters the body.

Since they also tell us that certain herbs—nature's remedies—help and build up these white corpuscles.

And since these herbs are compounded in Psychine, we know why Psychine is so phenomenally successful in treating disease.

We know why its use is indicated in the following diseases:

La Grippe	Bronchial Coughs
Bronchitis	Weak Lungs
Hemorrhages	Weak Voice
Sore Throat	Spring Weakness
Anaemia	Early Decline
Female Weakness	Catarrhal Affections
Indigestion	Catarrh of Stomach
Poor Appetite	Night Sweats
Chills and Fevers	Obstinate Coughs
Sleeplessness and	Laryngitis and
Nervous Troubles	Dyspepsia

After-effects of Pleurisy, Pneumonia and La Grippe.

Now, we don't ask you to take our word for the tremendously beneficial effect of Psychine. Fill out the coupon below, mail it to us and we'll give your druggist an order (for which we pay him the regular retail price) for a 50-cent bottle of Psychine to be given you free of cost.

We will undoubtedly buy and distribute in this manner, hundreds of thousands of these 50-cent bottles of Psychine.

And we do that to show our entire confidence in this wonderful preparation.

A confidence that has been based on our thirty years' experience with this splendid preparation, with a full knowledge of the hundreds of thousands of cures it has made.

COUPON No. 77

To the Dr. T. A. SLOCUM, Ltd.
193-195 Spadina Ave., Toronto

I accept your offer to try a 50c. bottle of Psychine (pronounced Si-keen) at your expense. I have not had a 50c. bottle of Psychine under this plan. Kindly advise my druggist to deliver this bottle to me.

My Name.....

Town ....

Street and Number.....

My Druggist's Name..... .....

Street and Number.....

This coupon is not good for a 50c. bottle of Psychine if presented to the druggist—it must be sent us—we will then buy the 50c. bottle of Psychine from your druggist and direct him to deliver it to you. This offer may be withdrawn at any time without notice. Send coupon to-day.

While There is Life There is Hope

Let No One Despair Even Though The Doctor Has Sentenced Him To Die

Millions are living and enjoying life today who at some period in their lives have been given up by their doctors.

Many millions die premature deaths because of their stupid reliance upon doctors and drugs when another and more reliable method of treatment is at hand, a treatment which does not depend upon frail human nature, which does not require a diagnosis (which is wrong oftener than it is right), a treatment which is at once pleasant, safe, and sure, and which will with absolute certainty, **cure any curable disease,** be it **acute or chronic,** with no other effort on the part of the patient than to attach the instrument to the person at stated times, as per the printed instructions accompanying it. **The instrument will do the rest.**

Eighty five per cent of all persons declared incurable or given up to die by physicians, can be cured, or their lives greatly prolonged by the beneficient action of the

PERFECTED OXYGENOR KING

This startling assertion is susceptible of proof. We have hundreds of letters, unsolicited, showing that the "P. O. K." has the most marvelous curative powers of anything known to the world today.

What a Trained Nurse has to say About the Oxygenor for the Cure of Paralysis.

Fredericton, N, B., Jan. 30th, 1911.

The Oxygenor Co.,
A. R. Mosher, Mgr.
Halifax, N. S.

Dear Sir,—Having personally used your "Perfected Oxygenor King" I take great pleasure in advising you of the splendid results I have obtained

The greater part of my life has been devoted to my chosen profession as trained nurse and you will at once appreciate the fact that it was only after the methods used by medical profession had failed, that I would consent to try anything else.

While living in Dorchester, Mass., in July, 1910, I was stricken with paralysis which rendered me practically helpless. I was under the care of a specialist in this disease until September, but getting little or no benefit I came to Fredericton to live with my sister.

In December, being still in a helpless condition, I was persuaded by your agent here to try the Oxygenor

The improvement since using the instrument had been marvelous, so much so that my friends could see the difference from day to day I never thought for one moment that a person could improve so rapidly under any treatment for such diseases My whole system has been built up and I actually feel like a new woman I am now able to take long walks without any assistance and for the past few days I have been doing the housework, my sister being indisposed.

The Oxygenor is certainly a wonderful invention, and I will be glad to tell my friends about it as I can honestly recommend it to any sufferer.

Yours truly,
(Signed) MRS. M. THOMPSON.

The instrument is not electric; it simply uses OZONE or the oxygen in the air and forces the disease out by replenishing the diseased tissues, It's a wonder. It is the only known cure for paralysis and chronic rheumatism. There is nothing else on earth but the "P. O. K." to break typhoid fever and bring the patient back to life without any set back. It is the greatest nerve tonic and every woman in the country should use the "P. O. K."

Hundreds of cured patients gratefully acknowledge its astonishing potency in curing all classes of disease. Doctors no longer needed Nasty medicines and poisonous drugs done away with. The "P. O. K." treatment is pleasant safe and sure. Nothing ever placed before the public has given such universal satisfaction as the "P. O K."; nothing has ever achieved such phenomenal success

It cures in many instances in less time than it takes to get a doctor. It will last a lifetime, and is capable of keeping a whole family in health if all do not fall sick at the same time. **It is the cheapest and best doctor on earth,** and is always ready for any emergency

We will gladly send you our descriptive book, which tells you how to get cured without drugs and doctors, by simply using **oxygen** which is free. This book is illustrated with several drawings, some in colors, and will be sent **free** for the asking. We don't ask you to buy nor do you place yourself under any obligation by sending for the book. It's worth having anyway.

All you have to do is to send us you name and address on a postal card and the book will be sent you postpaid.

BEWARE.—There are imitations of our machines. Especially a cheap imitation of our first type Oxygenor which is discarded for the "Perfected Oxygenor King." This imitation is called the OxygenATor, thus imitating both the name and the instrument.

Look for our Patent Mark and beware of its imitations.—See that you get the instrument stamped P. O. K.

Do not put off, but send for our free illustrated book by sending to

THE OXYGENOR CO.

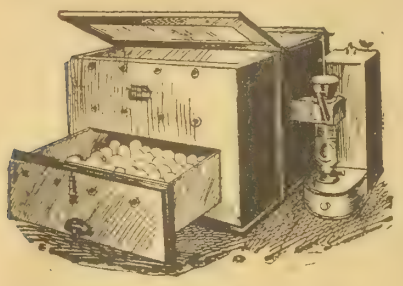
A. R. MOSHER, Mgr. for Nova Scotia,
57 Gerrish St., Halifax, N. S.

The English Incubator, holder of World's Hatching Record, made under Government test, against competitors from all parts of the World . . . . .



NONPAREIL.

3 Gold Medals were awarded by the Gov't.

One for the largest and healthiest hatch, one for the safest and simplest machine to handle, one for the smallest consumption of oil. After the test of 21 days was over the five officials appointed by the Agricultural Department found Tamlin's English Nonpareil Incubator had won all three medals and a special prize was further awarded for the splendid regularity in the working of the machines, not varying ½ a degree in 21 days. The Department officials in their lecture on the test afterwards pointed out the special qualities of the Nonpareil machines, remarking that when all farmers possessed an incubator like the British Nonpareil, that had established a world's hatching record against nearly every make of incubator known (INCLUDING TWO LARGE AMERICAN FIRMS), they could truly say they had overcome the difficulties of artificial incubation. (See page 5 of our catalogue for full particulars and proof of this Government test.)

The Nonpareil at the first cost a little more than the cheaper American or Canadian incubator, but the workmanship and the hatching results are so much in favor of the Nonpareil that after the first season's use the English machine will have saved you the difference in price and will continue to do so many years after the cheaper made incubators are worn completely out. The Canadians who got the Tamlin Nonpareil last year are delighted with results. A letter just to hand from Chas. E Dodds, 58 Mount Pleasant Avenue, Sherbrooke, P. Q., says: "Every fertile egg hatched in the first two hatches in March and April or 100 per cent. and 97 per cent. in the third. I showed six Nonpareil hatched birds at Sherbrooke fall fair, and got 1st, 2nd, 3rd and 4th prizes." CAN YOU BEAT IT? Do you know of any incubator that can do half as well as the Nonpareil? The largest poultry supplies manufacturer in the world ALL HIGH GRADE GOODS. Works, Twickenham, England. Agencies the world over. Send for our beautiful illustrated catalogue, showing illustrations of English and French poultry farms. Enclose 5 cents in postage. This is to avoid our valuable book being sent for by children.

In addition to Incubators, we have one of the largest poultry plants in the world, Exhibition birds only. Three beautiful breeding S. C. White Leghorn Cockerels at $5.00 each; eggs from this stock $3.00 per 14. English Buff Orpingtons, imported, $5.00 for 14.

And Many Other Breeds.

—SOLE CANADIAN AGENT—

Fletcher Bradley,
100 Waverly Street,
Ottawa, - Canada.

64 Bothwell St.,
Glasgow, Scotland.
2 Feb. 1911.

Editor Maritime Farmer:

Mr. Boyd had intended writing you day after day, but his time has been so fully taken up since we landed in this country. We had a splendid voyage between Christmas and New Years Eve, every comfort and calm seas—we left all the storms behind, and escaped the gales that had been blowing on this side.

We are comfortably settled in our new home in Glasgow, at 26 Blythswood Drive, West End, but my husband does his work from this office in the Bothwell Training Institute.

We wish you a very Happy New Year and your excellent paper much success. Please address it to us here in the future. Mr. Boyd is very sorry to have to miss the Farmers' and Dairymen's meeting this year. It wil, be the first time for ten years. We will eagerly look for your report of them. I thrust they may be well attended and indeed the best you have ever had. We note with interest and appreciation the hopeful outlook in New Brunswick; the people do indeed seem to be waking up and shaking themselves. Mr. Seth Jones' visit to Charlotte Co. is so encouraging. I am sure they mean to do better in the future.

With our united best wishes to you and your staff for a prosperous year. I remain,

Yours truly,
(Mrs.) E. L. Hunter Boyd.

Editor's Note.—Many of our readers, as well as ourselves, will remember Rev. Hunter Boyd, for his able articles that have from time to time been published in the Maritime Farmer and elsewhere, and his keen interest in every movement that had an uplifting tendency. We wish him and his every success in their new home.

Improving Wool.

Splendid results have been achieved in Australia by the stud masters, who are mainly responsible for the very productive strains of sheep now representative of the country. During the last twenty years the attention of most breeders has been directed to improving the wool capabilities of large flocks. Some experts are of opinion that the average sheep in the State of New South Wales yield fully one-third more wool than was looked for twenty-five years ago. It is not an uncommon return to get from flock sheep nine to eleven pounds of fine wool per head. A great number of owners raise the exact kind of wool which they find their land is best suited to produce, and climate.

Sheep dipping is an absolute necessity in that country. Not only is the wool improved by the process but the animal is freed from parasites, and thus the general health of the flock is improved. It is only healthy animals which will produce high grade wool. Dipping in an antiseptic wash is the surest way to promote this desirable condition. There is not a wool user in the world worth mentioning who does not very strongly advocate this practice. Most experts think that a good dipping once a year is quite sufficient. As to the cost, the small holder need not go to any expense. A very simple dip can be made without any great outlay and the work will be as effectively done as if an expensive dip were employed. In Austraila the agents for the antiseptics give full information concerning the methods of construction.

Treatment of Bog Spavin.

A round, smooth tumor at the front and on the inside of the hock. It is the resdlt of sprains, brusies, or other injuries. When these injuries occur too much joint oil is secreted, causing a bulging of the ligament. Lameness seldom accompanies a bog spavin. If lameness be present other structures are certain to be affected and some pain and heat will be noticed, together with a stiffness of the joint.

Treatment consists of applications of cold water to the affected parts and a lotion made of two tablespoonfuls acetate of lead in a quart of water. A blister made of one teaspoonful biniodide of mercury and four tablespoonfuls lard, rubbed in a little with the fingers, and repeated in 10 days or two weeks and continued for some months, will correct the trouble. Wash the part having received the blister 24 hours after application. It is also advisable to tie the horse's head while the blister is on, so that he cannot bite the part.

Suffragette *vs.* Aunt Salina

The Canadian housewife is much more interested in lightening household drudgery than in securing the right to vote. That is why the

New Century Washer

is so popular. It takes all the back-breaking labor out of wash day and sweetens the housewife's temper. It also thoroughly cleanses the clothes by forcing the water through them.

Send a post card for "Aunt Salina's Wash Day Philosophy."

CUMMER-DOWSWELL, Limited
HAMILTON, ONT.

It is the beautiful new "Lyra" shape and takes a regular cylinder record.

YOU CAN GET BOTH THE WATCH AND TALKING MACHINE ABSOLUTELY FREE

If you will help us in your spare time to advertise our business. Just send us your name and address and we will send you, postage paid, only 12 boxes of Dr. Burdick's famous New Life Blood Tonic and Nerve Pills to sell for us at only 25c. per box. They are a grand remedy for indigestion, constipation, nervousness, weak and impure blood and a wonderful tonic and life-builder. They are easy to sell, as every customer who buys a box of medicine from you is entitled to receive from us a handsome present of silverware, cuff links or ring. When sold send us the money, only $3.00, and we will promptly send, all charges paid, a **Gents' or Ladies' Watch,** and the **Phonograph** you can get **absolutely without selling any more goods,** but just by helping us extend our business by showing your watch to your friends and getting six of them to act as our agents and sell our goods. **YOU CAN RELY ON THE ABSOLUTE HONESTY OF THIS OFFER.** We are spending thousands of dollars to advertise our business, and when we say we will give away these magnificent watches and phonographs we will do so. **DON'T MISS SUCH A WONDERFUL OPPORTUNITY.** Write to-day and you will soon be the proud owner of both Watch and Phonograph.

Address **THE DR. BURDICK MEDICINE CO.,** Dept., 221 **TORONTO, ONT.**

A Gratifying Change.

For years there was a steady increase in the pasture area of Ontario with a corresponding decrease in the cultivated area. Latterly the movement has been in another direction.

This fact was brought out in one of the addresses delivered by Prof. Zavitz.

Between 1898 and 1908 there had been, he said, an increase of nearly one and one-half million acres in the grass lands of the Province. In the last two years there has been a decrease of nearly a quarter million acres in land devoted to the same purpose.

Prof. Zavitz said further that whereas formerly the tendency had been towards grouping small farms into larger ones, latterly the tendency seems in the other direction.

Dealing with the sort of permanent pastures used, Prof. Zavitz said timothy was more used than any other grass, but it was not a particularly good grass for the purpose.

For a permanent pasture he recommends:

	Per Acre
Orchard Grass	4 lbs.
Meadow Fescue	4 lbs.
Tall Oat Grass	3 lbs.
Meadow Foxtail	2 lbs.
Timothy	2 lbs.
Alsike Clover	2 lbs.
White or Duch Clover	2 lbs.
Alfalfa or Lucerne	5 lbs.
Total	24 lbs.

In Europe, he said, it is a common thing for farmers to use 45 to 48 and even 50 lbs. of mixture for a permanent pasture. In preparing for permanent pastures it will be found well to follow a well cultivated hoe crop, and in sowing seed, to sow it in front, and not behind, the tube drill.

When pasture is required for a year only, Prof. Zavitz recommends, as a result of 17 years' experimenting, the use of 51 lbs. of oats per acre, 30 lbs. of Amber sugar cane, and seven lbs. common red clover. The oats will furnish the first feed, the sugar cane will come on later, and the clover will furnish a pasture for autumn.

When a pasture is required for two years the following mixture was recommended:

	Per Acre.
Red Clover	6 lbs.
Alsike Clover	3 lbs.
Meadow Fescue	3 lbs.
Orchard Grass	3 lbs.
Timothy	3 lbs.
Total	18 lbs.

This mixture can be sown in the spring of the year either with or without the nurse crop.

For a soiling crop, as a supplement to pasture alfalfa comes first, owing to the fact that it will give, two, three or four cuttings a year and can remain in the ground year after year. Where a soiling crop is required for a year only he recommended a combination of Siberian or Banner oats with Prussian Blue peas— two bushels of oats to one of peas. This mixture can be sown at two or three different dates in the spring and thus be made to furnish cuttings at different periods during the dry weather.

Dairy Cow Feeding.

The following suggestions on dairy cow feeding are from Prof. J. H. Frandson, of the dairy department of Idaho:

Maintain early summer conditions as nearly as possible throughout the year. These conditions are described as follows:

An abundance of palatable food.
A balanced ration.
A succulent ration.
Moderate temperature.
Comfortable surroundings.

The following indicates in a general way the amounts to be fed:

1. Feed all the roughness the cow will eat up clean at all times.

2. Feed one pound of grain per day for each pound of butterfat produced per week, or one pound of grain daily for each three pounds of milk,

3. Feed all the cows will take without gaining in weight.

N. M. RUTHSTEIN
The Steel Shoe Man—He has made a million feet happy.

To Dealers—

Get in line with the leading merchants of Canada and supply your customers with my Steel Shoes. Save them the bother and delay of ordering direct—as they do when dealers disappoint them. A man who knows Steel Shoes will have no other kind—he knows their extra-comfort, extra-health and economy features. Write for terms today to Blachford, Davies & Co., Ltd., 60-62 W. Front St., Toronto, Canada's Leading Shoe Jobbers.

Do it *now* and give your customers a square deal on the work shoe question.

Free

Write for my book, "The Sole of Steel." But order your pair now in a hurry.

Join the Great Army of 500,000 Who Wear Ruthstein's Steel Shoes—

For Comfort, Health and a Saving of $10 to $20

HALF a million people have bought my Steel Shoes. Every pair was sent out on Free Examination. Every pair *could* have been returned. But the half million people recognized *at once* what my Steel Shoes meant. Today, not one of them would do without my Steel Shoes. They now know perfect foot comfort in all kinds of work—in all kinds of weather. They know what it means to be free from wet feet, and all resulting sickness, such as colds, rheumatism, neuralgia, sore throat, and even the dreaded pneumonia. They know what it means to be free from corns, bunions, callouses, and sore, aching, tired feet. And they know **real shoe economy.** For the half million Steel Shoe wearers will each save $10 to $20 shoe money on every pair of my shoes. Steel Shoes outlast 5 to 6 pairs of ordinary shoes.

Don't **you** want to join this great army of health-savers and money-savers? Don't **you** want to do **your** work without your feet bothering you? Don't **you** want to save about $10 on **your** shoe money every year? **Then wear Steel Shoes,** like the half million that are now doing it!

No More Wet or Cold Feet

There is nothing in the world like my Steel Shoes. Nothing can even compare with them. The soles are stamped out of a thin, rust-resisting, seamless, special process steel. This steel extends from heel to toe and up around the edges. There are no cracks or seams. The soles are studded with adjustable steel rivets which protect them from wear and give a sure, firm footing. When rivets wear out they can easily be replaced by yourself. Fifty rivets cost 30 cents and they will keep your shoes in good repair for two more years.

The uppers are made of the very best quality of pliable, water-proof leather, fastened forever to the steel bottoms. Water or cold cannot penetrate my Steel Shoes. Thus they keep your feet always dry and comfortable! And Steel Shoes have inner soles of springy hair-cushion which gives elasticity to tread and absorb jar when you walk on frozen ground. But comfort isn't all. You

Save Doctor Bills

Prevent Rheumatism Colds, Neuralgia Corns, Bunions, Etc.

Do you know the real reason why you get so tired standing on your feet all day tramping around? It's a hundred to one that you have broken down the instep of your leather shoes, making you stand flat-footed. There's where the fatigue comes in. Thousands of people have their shoes made to order putting in steel shanks to prevent this.

Every pair of steel shoes that I make prevents it. But that isn't all. Steel Shoes protect your health in many ways. They are easy to wear and dry as powder. Cool in the summer, warm in the winter and dry all the year round.

Outwear 3 to 6 Pairs of the Best All-Leather Shoes

Note the quality of the uppers. See the turned-up steel soles—and how everlastingly they are fastened to the uppers. Note the adjustable rivets which can be replaced at a trifling cost when worn down. Examine every part carefully. Satisfy yourself that Steel Shoes are the only kind of work shoes fit to wear. Nearly every progressive, wide-awake dealer in Canada sells and recommends Ruthstein's Steel Shoes. Go to **your** dealer. If he can't supply you, order direct from me. I'll send you a pair—the size and style you want at these prices—and I'll send them out on free examination. Made in all sizes from 5 to 12, for boys and men. 6-in. high—$3.00. 6-in. high with **extra grade of leather**—$3.50. 9-in. high—$5.00. 12-in. high—$6.00. 16-in. high—$7.00—the best shoe on the market regardless of price. Boys' Steel Shoes—sizes 1 to 4. 6-in. high, Boys' Steel Shoes—$2.50 per pair. 9-in. high, Boys' Steel Shoes, black or tan—$3.50 per pair. In ordering give correct size. Boys' Steel Shoes will **please the boy and save you money** and worry.

Start Wearing Them At Once Ask your dealer, but if he can't supply you, order right from this advertisement if you are in a hurry. Be sure to state **size of shoe you wear.** You take no risk. Money back if not exactly as I say or if you are not satisfied when you see my Steel Shoes. See your dealer at once—or order from this advertisement. Anyway send for my book—"The Sole of Steel," it is free. Address me personally.

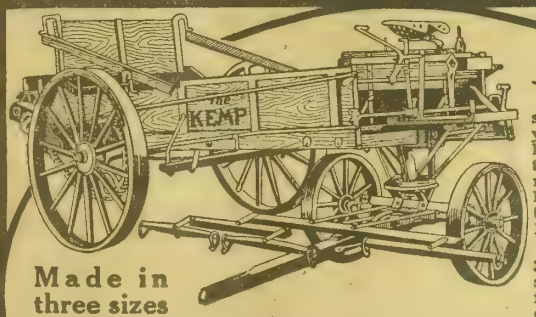
Inside Facts About Kemp Manure Spreaders



Made in three sizes

Strong Where Others are Weak

YOU who continue to spread manure over your land by hand, learn how it is possible to cover three times as much ground with less labor and increase crops 10 to 15 per cent by using the Kemp Manure Spreader.

This spreader is the result of 39 years' experience in building spreaders of all kinds. It is the first one that will handle all sorts of material, thoroughly pulverize and distribute it evenly, and has one-third lighter draft than any other spreader ever built.

The secret of the wonderful success of the Kemp Manure Spreader lies in the Flat Teeth used on the Cylinder Bar. Because these teeth are wide and graded, we need only have one-third as many used on other machines. This does away with the manure backing up and clogging, reduces friction on the cylinder—and correspondingly lightens draft.

The machine is also equiped with the strongest and most practical change of feed ever put on a spreader, while the Apron has a friction return so the operator has it always under control. The Kemp Manure Spreader will economize labor more than any other farm implement and, by increasing the fertility of the land, will pay for itself in no time.

Settle your doubts, once and for all, concerning what kind of a spreader you want on your farm, by writing for our free book B 75 which tells the inside facts about Manure Spreaders. Write today—address,

The Value of Organization.

Editor Maritime Farmer.

There has been of late, a great amount of talk about the delegation of farmers, that went to Ottawa, to meet Sir Wilfred Laurier and his cabinet, to place before the government their views, to a certain ext?nt, as to the way the farmers have to work and save to be able to make a respectable and comfortable living.

As soon as the manufacturers heard of this delegation of farmers and found out the different views of the farmers, regarding prices of farm machinery and all kinds of manufactured goods, which our farmers have to buy, they realized what it would mean to them if the farmers got farm machinery in free of duty from the U. S. A.

Now, I am only a young man of 22 years and have lived on a farm all my life, and, at present, I do not know whether to stick to it or to try my luck at something else.

I think, and am pretty sure, that if we farmers of the Maritime Provinces could only combine as the manufacturers have, and send a good number of delegates to Ottawa once in awhile along with the rest of the farmers of the Dominion, that we could get everything we ask for that would be reasonable.. I think a movement as important to us as getting higher prices for our produce is to have a rap at the manufacturers. There is no doubt but they could be induced to give us all kinds of manufactured goods at a much cheaper rate than at present.

I think, if we farmers could get our machinery at about half the present prices, pernaps that would be too much of a drop, and get a little more for our produce, it would help young farmers a great deal, as to the cost of farming. It would also enable us to pay better wages for the labor, which we have to hire, and which, at present, is very scarce, to a certain extent on account of the long hours they have to work on a good many farms, and to a great extent the wages the manufacturers are able to pay them on account of the handsome profits they make out of the farmers.

When a farmer has to pay $34 for a sulky plow and find material to serve the purpose of whiffletrees before he can use it, and pay from $40.00 to $70.00 for a stove of the usual kitchen type, and on the average pay wages of $25 and $30 per month to ordinary hired labor, and only get 8 and 9 cents on the average for our pork and beef, I think it is pretty near time for farmers to wake up and do a little for themselves.

LAURIE M. ANDERSON.
Westmorland County, N. B.

Why it Pays to Grow Your Own Seed Oats.

1.—It is the only way to get type and variety true to name.

2.—Certain varieties are better adapted to different sections; therefore variety is important.

3.—Acclimatization increases yield of both grain and straw from 10 p. c. to 25 p. c.

4. Acclimatization increases vitality; hence makes oats more rust resistant.

5.—Acclimatization induces earlier ripening, in later varieties; hence better yields and better quality of grain.

6.—Hand selection and fanning mill selection will, in three years, increase the yield of average seed oats from 20 to 30 per cent.; while lack of this proper grading will cause deterioration of seed grain. Fully 45 per cent. of grain from the thresher is not fit for seed grain. Pedigreed seed oats, from a member of Canadian Seed Growers' Association, is the best stock on the market. In 90 per cent. of previous competitions this has led to quality of grain and straw.

7.—Seed grain should be well ripened; hence a special seed plot is advised for each farmer, thus doing away with frosted and immature seed grain imported from the West.

8.—Raising your own seed oats saves the introduction of foreign weeds, smuts, rusts and other pests.

Potatoes Wanted.

Editor Maritime Farmer:

Potatoes were a failure in our district last year and we are anxious to buy. Can you send us the names of parties who have potatoes for sale at reasonable prices?

W. H. SMITH.
East Minas Station, N. S.

Editor's Note.—Will farmers who have an over-supply of potatoes please communicate with Mr. Smith.

You never take a chance when you buy Red Rose Tea. You know the tea will be just as you expect—that fine, rich flavor and refined even strength which never varies and always pleases. 65

Prices: 30c., 35c., 40c., 50c. and 60c.

P. E. I. Central Seed Fair.

Will hold its meeting in Charlottetown on

Tues., Wed., Thur., Mar. 14,15,16,1911

OPEN TO THE WHOLE ISLAND.

The exhibit will consist of all kinds of Farm Seeds, grain in the Sheaf, Domestic Science and Poultry.

The Educational meeting will be a strong feature by a staff of experts.

Excursion tickets from all points on I. C. R. at one way First-Class fare, with the Standard Certificate for return will be issued Certificate good for winter Boats and P. E. I. R. R. Every person must get the Certificate when buying his ticket. The Certificate must be signed by Secy. of Seed Fair and good for week of Fair.

The Prize list is the largest that has been offered in the Maritime Provinces and will consequently bring thousands of bushels of seed grain together. A Copy of prize list can be had by asking the Secretary.

The Art of Maple Sugar Making.

(Continued from page 333.)

it is thick enough. If the syrup becomes too thick it will go to sugar, too much, and if too thin it will not keep very good—it would not be good, anyway. When we are satisfied that it is thick enough we draw it off and strain it. When the syrup has cooled and settled we put it up in cans which are labelled with our name and guarantee. Syrup made in this way is of first quality and I would say to buyers not to hesitate to buy the lightest sugar or syrup on the market, as the lightest colored stuff is not adulterated, as is generally supposed. It is the lack of impurities and the cleanliness of its manufacture that gives it that clean appearance,

SUGARING OFF.

We use a Grimm sugaring arch, which we find is all right. It consists of a sort of stove on which a large oblong pan, sixteen inches deep is fitted. We put some syrup in this pan and start the fire. When the syrup commences to boil it usually bubbles and froths considerably and would froth over. A small quantity of clean butter is sometimes thrown in or it is whipped with a forked stick, which causes the froth to subside. When the syrup becomes thick enough to stay on snow and not run and will break slightly when taken in the hand it is boiled enough for sugar or soft candy, which is the most delightful of all sweets. The pan is then lifted from the fire and placed where it will cool until it becomes candy-like in appearance. The pan is then placed on a board, in a slanting position so the contents can be scraped to one end of the pan and slightly stirred with a ladle and allowed to harden a little. The pan is then placed in a level position and a few pounds at a time are placed on the opposite side of the pan where it is thoroughly stirred. It is then sugar and is placed in moulds. If done in the right way the sugar will have the appearance of whipped cream. Only an expert can do it in this way. This is the way to make creamy sugar that will be fine grained, soft and delicious to the taste, but not soft enough to run. After the sugar has cooled it is ready to take from the moulds. If desired it may be wrapped in parchment paper and is ready for market.

There is another way to sugar off if desired. The old way was to boil until it would crack up like glass, when the fresh candy was taken from the snow. The hot pan was placed on the snow to cool until an inch of candy formed on the bottom, when it was thoroughly stirred and placed in moulds. To my fancy it is not as nice as sugar made the other way.

A Nova Scotian's Experience in Sugar Making.

Editor Maritime Farmer:—

I consider maple sugar making one of the best paying investments for the farmer, as it occupies only a few weeks of the year, and comes when other work is slack. Lumbering is about through with for the winter before the sugar season starts and farming operations do not open till long after the season closes.

We generally start about the middle of March, from the 15th to the 25th, and the same dates in April usually wind up the work.

Of course the first necessity is the woods, and the next the rig. The latter, however, can be purchased at any time and some firms will give almost any terms in reason.

It is argued that rigs cost more than formerly. Well, such may be the case, but the quality of the equipment has also increased. The day of the old flat pan has just about gone and the brick and stone furnaces will soon be a thing of the past.

The new style, corrugated pans, with iron arches are fast superceding the older types of evaporators and with the increased boiling capacity, and better quality of goods turned out, the tendency at present, is towards larger rigs.

But in my opinion, the greatest improvement in equipment, clear of the evaporator, is the introduction of the thermometer and felt strainer.

Without the thermometer it is impossible to get an even temperature on your sugar or syrup. How many times have all sugar makers, who do not use thermometers, had the sugar to rise in the pot when it was partly stirred; this means that it was several degrees hotter than it should be. With a reliable thermometer there is no difficulty to cook it to a half degree and have every batch exactly alike.

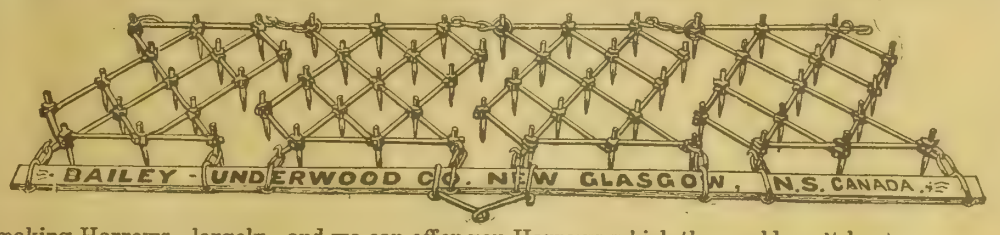
Felt strainers are the filters of the plant. When syrup is put through a good felt strainer, it may set as long as you like and there will be no settlings in the bottom of your syrup tank. Who can say that much for wire or woolen strainers?

It is true they need to be used carefully. I prefer to wash them in cold

(Continued on page 364.)

Harrows ! Harrows ! !

Since last summer we have been busy shipping to far away points – Australia, South America, France and Great Britain. We like this export business because it makes us realize—what we always believed—that our implements are able to stand up against the world for quality We now want to turn our attention again to our home friends as the Spring comes around, because we like to do business just as much at home as abroad.



Our business is making Harrows—largely—and we can offer you Harrows which the world can't beat.

In the next few weeks we will tell you something about them which may interest you.

15,000 Canadian Poultrymen Have Doubled Their Profits By

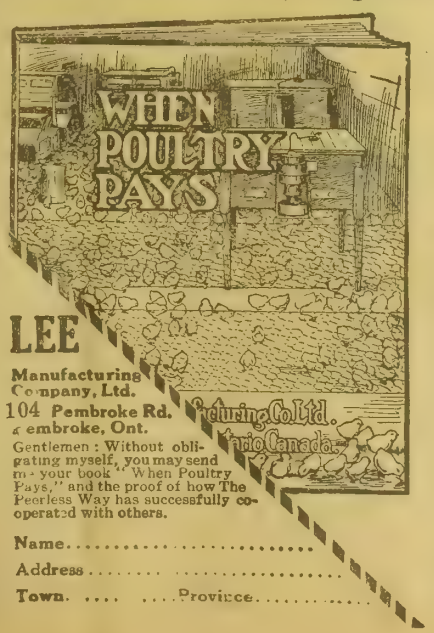
THE PEERLESS WAY

What these poultrymen have done you can do—no matter in what part of Canada you live; you can raise the crop that never fails—the crop that knows no bad years! If you have never kept poultry do not let that deter you; you will have fewer formed habits to overcome and will be ready to let The Peerless Way lead you to success. Or, if you have been keeping poultry in a haphazard way, The Peerless Way will show you how to systematize your enterprise into a real money-maker. Even if you have made a failure of poultry-raising—even though you be discouraged—disinclined ever to consider poultry-raising again—investigate The Peerless Way for yourself and study the guarantee that it has to offer you; for, let us say this, whether you are simply a beginner, whether poultry forms only an incidental part of your farm work, whether you are already in poultry-raising as a business, The Peerless Way affords you a real way to increase the profits. Consider this very carefully. Then read every work of what follows and send for our big FREE book entitled "When Poultry Pays."

FREE This Book With The Complete Story Of The Peerless Way

Simply fill out the coupon and send it to us. Then when you get the book, read it at least twice. You will find it packed full of facts about raising poultry for profit. There is no clever writing nor empty theory about the book, "When Poultry Pays"; but it certainly does clear up a whole host of problems that have long and often puzzled practical poultrymen. Let this book put its plain, terse facts before you—let it tell you why and **how** you can put The Peerless Way to work to make money for you. Do not put it off—there is no time like the present for increasing your knowledge.

Send Us The Coupon



LEE Manufacturing Company, Ltd.
104 Pembroke Rd. Pembroke, Ont.

Gentlemen: Without obligating myself, you may send me your book "When Poultry Pays," and the proof of how The Peerless Way has successfully co-operated with others.

Name.....

Address.....

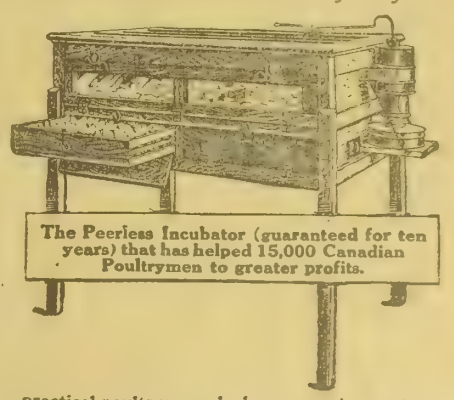
Town..... Province.....

Knowledge Is More Essential Than Money

Very little money will start you right in profitable poultry-raising—if you know how to go about the business. And The Peerless Way will show you exactly what you have to do and how you have to do it to make money. The Peerless Way is more than merely a system for raising poultry; it is a system for raising **at a profit!** The knowledge that The Peerless Way offers you is so explicit that a child could not misunderstand it—it explains everything—and if, beyond that, some unusual problem does arise, our Poultry Advisory Board is at your service without charge to consider your case individually and to write you personally.

Poultry-Raising is the Profitable Branch of Agriculture

Given the same care, time and attention as any other branch of agricultural work, there is no department that can be made to yield such handsome returns on small investment. We know this—15,000 Canadian poultrymen, working with our co-operation, have proven it for us. But it is one thing merely to "keep poultry" and quite another to get every last cent of profit out of the work. The profits are in the knowledge you possess—knowledge of how to proceed, in the first place, and after that, knowledge of **how to market your output.** The Peerless Way will guide you on both these essential points—will show you what to do and how to do it—and then, through our co-operative marketing plan, will take care of all the eggs and poultry you can produce and at highest market prices. When you get our book, read the letters we have printed in it from hundreds of followers of The Peerless Way in every part of the Dominion—letters from practical poultrymen who have never been able to do by any method what they have done by The Peerless Way. Get the book—just send the coupon—that brings it.



The Peerless Incubator (guaranteed for ten years) that has helped 15,000 Canadian Poultrymen to greater profits.

Let Us Show You How To Market—Right

Let us explain what we mean by Co-Operative Marketing—let us tell you about the method that has been proven by 15,000 poultrymen who command higher prices than the old way of selling poultry, and eggs could ever have given them. Let us explain to you how to get all the profits that rightfully belong to you. Write us for further information about this proof of successful poultry-raising; let us tell you how it has been worked out, how it has been tested, and how it has been proven; let us tell you why it is the only way that successfully meets Canadian climatic conditions—why there is no farm in Canada on which poultry would not pay better than any other crop—why our methods are so simple and yet so practical, that a schoolboy could not fail with them—why you could not find a better investment for either part or all of your time. Send for the book.

PEMBROKE ONTARIO CANADA

New Brunswick Farmers and Dairymen in Annual Convention.

(Continued from page 335.)

WEDNESDAY EVENING.

On Wednesday evening, after a talk on the present condition of the dairy industry in New Brunswick, Mr. E. A. Schofield, read the report of the committee appointed at last year's meeting to interview the Minister of Agriculture re Bonusing the Dairy Cow.

Following is the report:—

REPORT OF COMMITTEE ON DAIRY INDUSTRY ENCOURAGEMENT.

We, the committee appointed at your last annual meeting to present the resolutions re the Bonusing of the Dairy Cow, to the Minister of Agriculture, beg leave to report as follows:—

Immediately after the meeting in Fredericton in February last, we called on Hon. Dr. Landry, and were cordially received, and after reading the resolution to him, and explaining the same, he informed us, that he was certainly of the opinion that something must be done for the dairy industry, and that if we would send him a copy of the resolution, and if we would appear with him before his colleagues in the house, he would be only too pleased to stand up and endorse every word we had said.

We consented to do this, if he would advise us when the opportunity would occur.

The matter then drifted along for some time without our hearing anything further, and though one or two dates were afterwards arranged, it seemed impossible to get together.

Later on it was arranged to meet the Minister personally at Amherst, Dec. 7th, which meeting was finally arranged, and we might here, say, that the Minister put himself out considerable to stay over to meet us.

Regrettably, only part of the committee arrived, but we had a full discussion of the matter, the gist of which was, that it would be too late for the Minister to secure any grant for this proposed idea for this year's estimates, and though he himself was strongly in favor of some practical aid to the industry, it was hard indeed for him to get the rest of his colleagues to agree.

He intimated, however, that if this association were willing to go on record as favoring an idea to use the funds at present granted for Institute work, some $3000, that this sum might be applied to some practical work in this nature.

He also stated that if we were prepared to endorse the idea, that the grants to the larger exhibitions, which are more or less of an industrial nature, and do not cater so much to the agricultural part, that if we would advocate these grants being cut off, it would make a further sum of some $10,000 available. This idea, of course, your committee could not recommend.

To sum up the whole matter, we can, therefore, only report that while practically everyone interviewed was agreed that something should be done, yet no one in authority was prepared to attempt to carry out this idea of granting a sum of money sufficient to reimburse the dairymen for the expense of carrying on the all-important work of weighing his product and testing his production. We might add, that Professor Day, of Gueluh, referred to the subject in his address at the annual meeting of the Live Stock Associates, and said that "It might be considered by any Government, and that it was perfectly reasonable." We regret we were unable to attract the attention of our own Government to the idea, but would suggest a new committee to carry on the work, and push the question of assistance to the Dairy Industry forward.

Signed

E. A. SCHOFIELD.
GEORGE E. FISHER.
S. B. HATHEWAY.

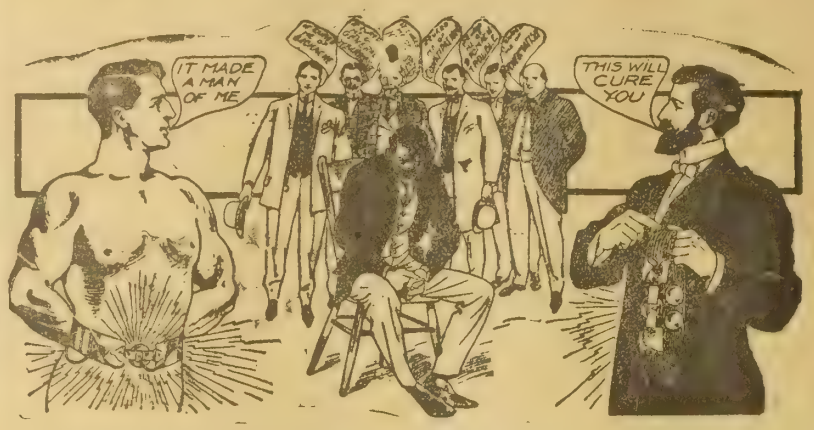
In concluding the report Mr. Schofield strongly advocated for a policy that would encourage the dairy industry. The business man could well afford to help encourage such a movement. Boards of Trade should be mindful of the subject of agriculture as the prosperity of the farmer meant prosperity to the retailer and wholesaler as well. While dairying is a profitable industry when the farmer follows good business methods and eliminates the non-paying factors, yet the industry was not on as fair a footing in New Brunswick as it might be if it received the proper encouragement.

In following the dairy industry, the farmer must consider his market conditions and select his herd accordingly. The main object for starting the agitation re Bonusing the Dairy Cow was to get farmers interested in cow-testing. He had one cow in his own herd that had given 5760 lbs. of milk, yielding a return of $80.00, in 9 months during which time she consumed $24.20 worth of feed and he figured that $15.00 would carry her through until her next lactation period. There were too many cows in the country that did not pay for the food they consume and a policy that would get the farmers to work on the dollars and cents basis was badly needed.

The question of raising more feed was a difficult one as it costs more to do so when the dairies are not profitably conducted. He urged the farmers to test their cows, keep records and keep their boys satisfied and on the farm by paying them for their work.

Referring to the Bonus question, he said the word "bonus" had probably been the bug bear that had killed the movement. Other industries were bonused, but the farmer never. In the farm line every dollar created was a new one that was never here before and in this way money earned on the farm differed from that earned by any other industry. The province of Ontario had organized a system of county officials, whose duty it was to visit the farmers and discuss with them the various prob-

Weak Men Have Courage



If you get up in the morning with a dull brain, tired nerves, an ache in your back, a dread of the toil and hardships of everyday life, these are signs that your vitality is at a low ebb—that some of the organs or functions of your body are in a weakened, morbid condition.

If you are a young man, and free rein for evil habits and passions has exhausted your vital energy, or if on the shady side of forty, you have not the strength and stamina that should be possessed by a man of your years, you can regain your health, strength and energy with Electricity.

"None are so blind as those who will not see," but if you are open to conviction and want to improve your condition, I can convince you that my Belt does all I claim for it, and even more.

You don't need to be taught that restless nights, sleeplessness, despondency, inability to concentrate your thoughts, loss of appetite, weak back, headache, pains here and there in various parts of your body, lack of energy and push, are all signs of nervous breakdown, physical debility; you know that, but what you want is a remedy that will restore the vitality that you have lost.

If you have doctored and drugged and got no benefit, that's no sign that you ought to give up. Drugs can't restore your vitality. Electricity is for men like you. It's the greatest nerve builder and body builder in the world to-day.

To those who are tired of paying without results, and to those who doubt if anything will help them, I make this offer: If you will secure me, my

PAY WHEN YOU ARE CURED

I will let you have my belt without paying me one cent in advance.

THE WORLD HATES A QUITTER.—If you go into a fight, stay with it, no matter how poor your chances look. The other fellow probably wants to quit, and if you hold your head up he will quit first.

The victory to the brave. It takes nerve and energy to win nowadays.

You don't want to be a failure. You are made for better things, but you can't win without courage and energy.

That's the idea behind my Electric Belt, the body battery that pours electric vim into a man's body.

The weak men who wear a Dr. McLaughlin Electric Belt for a few weeks begin to feel the joys of youthful fire and courage in their veins, the strength which they lost in earlier days comes back to them, and those "come and go" pains in their backs are driven out forever. Where it is used there are vigor, youthful ambitions, a light heart and freedom from worry and care. If you have lost your vitality, no matter how, get it back; feel young, look young, act young. Life is beautiful when you have health. Come to me, for I can give you back your strength.

Give me a man broken down from dissipation, hard work or worry, from any cause which has sapped his vitality. Let him follow my advice for three months, and I will make him as vigorous in every respect as any man of his age.

I will not promise to make a Hercules of a man who was never intended by Nature to be strong and sturdy. Even that man I can make better than he is; but the man who has been strong and has lost his strength, I can make as good as he ever was.

I can give back to any man what he has lost by abuse of the law of nature.

A man who is nervous, whose brain and body are weak, who sleeps badly, awakes more tired than when he went to bed, who is easily discouraged, inclined to brood over imaginary troubles, who has lost ambition and energy to tackle the hard problems, lacks the animal electricity which the Dr. McLaughlin Electric Belt supplies.

Dear Sir:—Your Belt has done me a lot of good. I think I have done extra work enough during the time I have worn it to pay for it, besides the comfort of having good health. In fact, I almost feel like a young man.

JOHN V. B. FOSTER,
Wells P.O., King's Co., N.B.

Dear Sir:—As I have not written for a long time, I thought I would do so now. I am feeling fine. When I got my Belt from you my weight was 134 pounds—now I weigh 171. I have been travelling a great deal the last few years out in California, and have just returned. I have praised your Belt wherever I have been.

ISAAC H. ALLEN,
Rainham Centre, Ont.

MY BELT not only cures Weakness, but Rheumatism, Sciatica, Lumbago, Backache, Kidney Trouble, Nervousness, Constipation, Indigestion and Stomach Trouble. I have a beautiful 80-page illustrated book which I will mail, sealed, to any address, Free. This book is full of lots of good, interesting reading for men. Call to-day. If you can't call, send coupon for Free Book.

lems they encountered in their work. Mr. Schofield thought that a system of this kind must be inaugurated in New Brunswick. One county might be organized as a trial test and if the system proved successful other counties might be organized from time to time until the system covered the whole province.

MR. G. E. FISHER thought the dairy indusrty, a waning industry, every effort should be put forward to improve it. He thought the government should give more assistance to the industry in the way of a bonus and that the 35th annual convention should go on record as a "do something" meeting.

A. J. JENSEN, of Salmonhurst, thought the question of bonusing the dairy cow was absurb. He thought it would be better for the delegates to gp home and work and not ask for so much government assistance, and if bonus there must be he thought the word bull should be substituted for the word cow, or in other words "Bonus the Dairy Bull."

A. F. DIXON, of Sackville, thought bonusing or some other good policy should be adopted to get at the men who were careless and would not try to improve their conditions. The principle of bonusing cows was as good as that of bonusing the steel or any other industry. The government in bonusing would only be giving the farmer his own.

MR. O.W. WETMORE, of Kings County was not wholly in favor of bonusing but he would like to see something done that would improve present conditions. Institutes were too scattered to reach all, and consequently the scheme of appointing county officers to bring modern ideas to the attention of farmers on their own farms was excellent.

ISAAC BAIRD, of Queens County, thought that while the fruit and apple raisers could tell what they were making and were hopeful, the dairy people had nothing much to say. He would like to hear from those who were making a success in that line. He was of the opinion that the business was run on a narrow margin generally, at present, but there was profit in the business if proper methods were adopted. He suggested that instead of a bonus the government should ask for an importation of stock.

J. F. RIELLY, of Westmorland County, said that conditions had changed very much in the last ten years so far as the farmer was concerned. He thought the farmers should have a larger representation in the Government. The farmers were the masters of governments and should demand what they wanted.

DAIRY SUPT. McDOUGALL said that from his experience in New Brunswick he found the farming situation weak in many respects. He thought better soil tillage and growing more feed and cheaper feed were economic ways of bettering conditions. A scientific study of the situation was also necessary. The selection and proper feeding of a cow should also be studied. The average cow he considered was underfed, as she barely received enough to keep her body and little soul together. Under those conditions no cow could show her possibilities He believed in the appointment of county officers who could carry practical knowledge to the homes.

R. R. PATCHELL, of St. John, thought that the bonus scheme would not help matters. The idea of having a county instructor would, he thought, be a good one. Such an officer would wake farmers up and teach them practical methods.

J. MORRIS SCOVIL, of Gagetown, believed in the idea that the present dairy inspectors might take up this work in addition to their other duties and if necessary additional inspectors could be appointed for the purpose.

Professor Cumming, on being asked for his opinion, said that in order to place dairying on a paying basis, it was very essential that farmers practice cow testing and keep records. He thought it would be a good plan to organize a ten mile territory for the work suggested in Mr. Schofield's paper and repart next year. If found to give satisfactory results, the whole province might be organized gradually.

Walter Limerick, of St. Mary's, moved the following:—

Resolved, that a committee be appointed by the president to familiarize itself with the present system of district representatives in Ontario and to urge that a similar representative be appointed in each county in this province who shall pay particular attention to the dairy industry and that these representatives be paid by the government.

J. F. Rielly moved that the resolution be held over until Thursday morning, and this was carried.

THE FARMER IN LEGISLATURE.

Fred Dixon presented figures to show that there was only one farmer in the present provincial legislature. The farmers could not be proud of this. In the legislature there were, he said, 13 merchants, 12 lumbermen, 10 lawyers, 5 medical men, 3 scattering occupations, and 1 farmer. The farmers paid the bills, but the other occupations had the representatives.

The judgment of the farmer, he believed, would compare favorably with that of men in any other occupation, even though he might not be able to talk so much. There were only two divisions in a community, the wealth producing classes and the non wealth producing classes. The farmer was a food and wealth producer. All business men were necessary, but they were not wealth producers like the farmers. He claimed the laboring men should be represented also.

Mr. Dixon moved the following resolution, seconded by J. F. Riley, of Westmorland:

Whereas, It appears that the farmers of this province are not represented in the Provincial Legislature, nor in the Parliament of Canada by men of their own occupation; therefore,

Resolved, That a committee consisting of a chairman and one mem-

RENNIE'S SEEDS.

For 41 years, as seedmen to the best Canadian farmers, we have given closest attention to the re-cleaning of Timothy and Clover Seeds. Our cleaning plant is recognized as the most complete and up-to-date in Canada, and all seeds sent out by us are acknowledged by leading authorities to be the highest grades obtainable. Ask you local merchant for **Rennie's XXX Red Clover, Rennie's Mammoth Clover, Rennie's XXX Al ike, also Rennie's XXX** and other grades of **Timothy. The XXX goods are our leaders**

Rennie's Root Seeds are above the average generally found in a country store, and if your merchant does not carry a line of RENNIE'S TURNIP, MANGEL, SUGAR BEET, CARROT and GARDEN SEED you can get your supply at our Montreal warehouse, 190 McGill street. The name RENNIE is a voucher for PURE SEED, both in Field and Garden. If you have not received a copy of our Illustrated 1911 Catalogue, we will be pleased to mail you a copy.

Do you want the Earliest of all TOMATOES? "Sunnybrook," packet 10c. Write to-day!

CORN and SEED GRAIN always in stock. Secure your 1911 requirements from your local merchant, or

Your Mail Orders

In response to many inquiries from all over Canada, The John Murphy Company, Limited, of Montreal, has decided to issue, about March 15th, a catalogue, which in a unique sense will be

The Catalogue of a Woman's Store

It will include a list of practically everything that Women, Misses and Babies wear or carry, whether fully made up, party made up or not made up at all, in Woollens, Silks, Linens, Cottons or Notions, as well as Table Linens, Household Cottons and Bed Comforts.

In order that customers will know exactly what the goods will cost delivered to them, we propose to pay all freight, express or mail charges on all articles illustrated or described in the catalogue.

Please address applications for copies to Department R.

The John Murphy Company Limited

MONTREAL, QUE.

SEEDS for the Farm. for the Garden.

We are ready with the best stock in all our 45 years' experience. You will now be preparing your plans for your 1911 crop and we wish that it will surpass anything of the past. A suggestion for a good beginning in this direction would be the use of "Keith's Seeds." Also we think it is exceptionally good business to make your selections early. You will want some pure Clovers and Timothy. These are becoming harder to get every year. Not one grower in 200 has pure seed. Send for samples of our best brands.

We will pay the freight to your nearest station for **March** orders of 200 lbs. and over of Clover and Timothy, at the following prices per bushel: "Sun" brand medium Red Clover, $10.00; "Sun" brand Mammoth Clover, $10.25; "Ocean" brand Alsike, $11.25; "Gold" brand Alfalfa, $14.25; "Crescent" Timothy (48 pounds), $6 75; "Diamond" brand Timothy (48 pounds), $7.50. **These all grade No. 1 Government Standard**. Cotton Bags, 25c each.

We are always pleased to hear from you and will be only too glad to furnish you with samples of any seed grain, clovers or timothy you may wish to examine. In this way you will receive as much satisfaction as a personal visit to our warehouse will give. Our catalogue is now in the mail. No doubt you will receive one—if not, it may be had for the asking.

A Nova Scotian's Experience in Sugar-Making.

(Continued from page 361.)

water and not dry till they get hard. I used a pair last season for 250 gallons of syrup and they are apparently as good as ever.

If cleaned with hot sap and dried hard they are sure to crack. Care should be taken to always strain from the same side.

In this locality the product has always been made into syrup, candy and grain sugar, but lately a demand has sprung up for cream sugar, which brings a better price but is rather harder to make and requires some what different equipment, and as a result has not found favor amongst the majority of the sugar makers here.

Large quantities are imported from Ontario and Quebec, but the quality is far below that of home product.

I believe when the manufacture of cream sugar is better understood, it will become as much of a staple article as grain sugar is at the present time.

I will give you some of my own experience covering the last ten years. We tap 2,200 trees with Gilroy pattern covers on our bottles. And use the Grimm No. 2 spouts.

We have a Grimm Evaporator, size 3½x14, which is rather small for that number of trees, necessiating considerable night boiling.

We always finish our syrup in the evaporator, boil it to 220F. and run off two or three quarts at a time, if boiling deep perhaps a little more.

We usually boil a quarter inch deep on the corrugations, but sometimes at nights when the steam is bad we run in a little deeper for safety.

For a gathering outfit we have two Grimm gathering tanks, holding about sixty-five gallons each. They are low to pour into and easy to empty and never spill any in transit.

I might say that we have discarded three gathering rigs since we started, but we like the present rig best of all.

Now, the making of the sugar is where the fine art comes in and I don't claim to know it all. In fact, I am just learning and will give my experience with the hopes that others will give theirs.

A good deal of candy is made here and gives the best results when it is cooked to 248F, but if the fire is too hot it may have to come off a degree or two less.

The common practice is to pour it on the snow till it partly cools and then put it in birch barks.

Some have marble slabs to run the candy on. This is no doubt a great improvement but the writer has not had the privilege of trying it.

There is probably more grain sugar made than anything else in the maple line and there are various ways of handling it, in fact, most every one has his own particular system.

The usual points followed are to cook as quickly as possible and to cool and stir the right amount.

If stirred too hot the sugar will be red and if not stirred enough it will have a very coarse grain. We used to cool it to 244 F. It would be pretty hard to give intelligable instructions to one who had never made any.

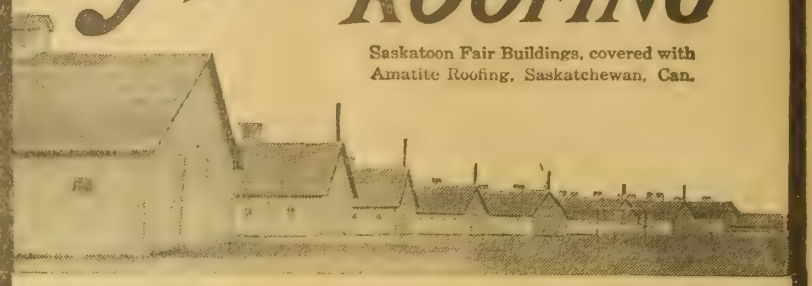
The last two or three years our energies have been directed chiefly towards cream sugar. It was up hill work at first till we got onto the idea of the thing and many a batch we spoiled the first year.

We boiled it in the same pot that we used for making the grain sugar. Cooked and cooled what we thought was right, then stirred until it came real soapy and started to put it in the common moulds, when our trouble began, it set in the pot before you could turn around.

We got some of the next batches into the moulds and there it stuck fast, and at least half of the cakes would be mutilated before they could be got clear of the flange tins. Thus we got along selling the good and melting the poor over again, till at last we concluded that the equipment was in the fault.

But we got onto the principal of the thing which might be summed up briefly as follows. Cook to 235 F., cool as long as you dare, stir till the goods change color, then put into

Amatite ROOFING



Saskatoon Fair Buildings, covered with Amatite Roofing, Saskatchewan, Can.

60,000 Feet of Amatite Roofing

The accompanying view shows a series of buildings at the Saskatoon Exposition, all of them covered with Amatite Roofing.

Amatite was selected because it was inexpensive, easy to put on, required no care or attention or expense afterwards, and would give excellent durability.

If ordinary smooth roofing had been used, these roofs would require painting every year or two at considerable expense and trouble. Amatite, however, has a mineral surface which *requires no painting.*

Use Amatite for every roof where you want to save expense. It is the most economical solution of the whole roofing problem.

Amatite Roofing requires no skilled labor to apply; it costs no more, (in fact much less) than other roofings; and the fact that it requires no painting makes the total expense far below that of any other type of roof covering.

You can use Amatite for every kind of steep roofed building. We supply galvanized nails and liquid cement for the laps free of charge.

Send for free sample and booklet. Address our nearest office.

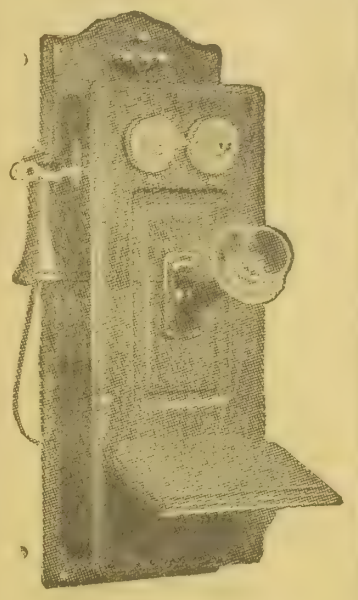
Guaranteed Telephones.

RURAL telephone systems—or any other—cannot give satisfaction unless the instruments will give perfect service month in, month out, without needing expert attention. That is the kind of telephones we make—the kind that gives the best possible service for the longest time with least attention. Made of the best materials by highly-skilled men, who can safely—as we do—fully guarantee them.



Try Ours This Way

If you are using any other make of 'phone on your lines, let us send you for test two or three of ours under conditions that commit you to no outlay at all. We welcome comparison with other makes. We know ours will excel in any practical test. Write us for details of this FREE TRIAL OFFER. Ask for Bulletin No. 1.

To New Companies

Our engineers will gladly furnish you full information if you think of building a line. Write for Bulletin No. 2 and big illustrated book, "Canada and the Telephone."

Supplies

We carry in stock wire, insulators, and everything else in construction supplies. Get our prices. Prompt delivery assured.

CANADIAN INDEPENDENT

Telephone Co., Ltd.,

1820 Duncan Street, Toronto, Ont.

the moulds quickly. One half minute either way will spoil the batch. Or I might put it differently, the longer you cool it, and the longer you stir it the better the sugar will be; but if you cool it too long it cannot be stirred and if you stir it too long it cannot be put into the moulds for it will set on your hands.

With a change of equipment better work was done the next year. We got a cooking pan made of galvanized iron, twelve inches high and twenty inches in diameter, with a flat bottom. This would set on the sugaring off stove and cook in thirty minutes and cool in about the same time; this with a batch of twenty-five pounds, a larger batch would take longer.

The moulds were made with all straight tins, no flange on them, and two tins in a place so that when the moulds were opened the tins would readily fall apart and they could be taken from the cake by raising one corner.

The goods should be left a day or two in a warm room to weather, that is to form a little crust on the outside, and then should be wrapped in parchment paper bearing the makers name and a catchy design. We cannot handle it without wrappers as it is too soft to knock about, and the cakes would have a tendency to stick together.

Now this is only my experience, there must be other ways of handling the goods, and no doubt better ways. I will anxiously await the publication of other letters on the subject, in the Maritime Farmer.

A DAIRYMAN'S PROBLEM SOLVED.

Starr's Point, Oct., 28. 1910.

A. A. ARCHIBALD, ESQ., Truro, N. S.

DEAR SIR:—In reply to your inquiry as to the success I have had in feeding Blatchford's Calf Meal. I am pleased to report that I have used a great deal of meal during the past four years and have found it a great help in raising young calves and pigs when milk is scarce As I have been selling all my milk; I have substituted the meal entirely to young calves after they were a week or ten days old and found no trouble to raise good calves in this way. I have had grade Jersey heifers started on Blatchford's Meal drop their first calf at eighteen months and give 20 pounds milk per day I can recommend the use of this meal as a substitute for milk if fed with judgment.

Yours truly,
J. RUFUS STARR.

MOST dairymen are tempted to sell all the milk that they can produce. It may not be the best for them to do so, but when bills have to be met, something must be done, otherwise embarrassment for the time being often stares them in the face. We believe they all realize the importance of raising the young heifers and bulls, but you know how it is, things must be arranged temporarily at least, it is impossible to give calves the milk This is something that institute speakers overlook, nevertheless it is an actual condition that must be met somehow. There was a time when one could go out in the back districts and get new milch cows, but that day has gone, too. How to get calves to maturity without milk is the problem. We have solved it for you, but unless we can tell you more about it and unless you will have confidence enough in what we have to suggest, you should not read another line. Our

Blatchford's Calf Meal

is not a tonic, a patent medicine or an offal from a large manufacturing plant. It is a substitute for milk and **will** make bone, flesh, fat and muscles, etc. It is not only the best, but it has stood the test. We have been manufacturing it for a longer time than any of the other supposed calf foods.

We thoroughly understand dairy conditions in the Maritime Provinces and have given your conditions a great deal of attention. We know what you want and so do you, but unless you give Blatchford's Calf Meal a trial, you will still be without what you want. Nothing short of a trial will convince.

Let us assist you in your business. We can do it. Write today for catalogue.

Blatchford's Calf Meal Factory, = Waukegan, Ill

Or A. A. Archibald, - - Truro, N. S.

New Brunswick Farmers and Dairymen in Annual Convention.

(Continued from page 363.)

ber from each county represented in the attendance at this association be appointed to draw up resolutions declaring the attitude of this association with respect to the representatives of the farmers in the Provincial and Dominion Parliaments, and that the report of the said committee be laid before the Thursday evening session for consideration.

A committee consisting of one delegate from each county represented was appointed as follows:—Victoria, Jas. E. Porter; Gloucester, Alfred Payne; Westmorland, F. A. Dixon and J. F. Riley; York, S. B. Hatheway; Sunbury, M, A. Smith; Queens, John Moore; Kings, O. W. Wetmore; Albert, R. A. Smith; Madawaska, G. Martin; Carleton, Jas. E. Long; St. John, D. J. Barrett.

Mr. Dixon was appointed chairman of the committee.

The nominating committee were appointed as follows:— York, Walter Limerick; St. John, D. J. Barrett; Victoria, Donald Innis; Kings, A. R. Gorham; Sunbury, Ashley Harrison; Madawaska, D. L. Daigle; Gloucester J. Dempsey; Kent, F. O. Richard; Westmorland, Geo. Trueman.

THURSDAY MORNING.

Mr. Limerick's resolution re dairying, which was laid on the table at Wednesday night's meeting was the first subject up for discussion on Thursday morning.

Mr. G. E. Baxter, of Victoria County, suggested that the resolution be amended so that the committee would only have power to familiarize itself with the scheme as carried on in Ontario and that the committee report back next year. He also suggested an importation of stock.

Mr. J. F. Reilly introduced an amendment to Mr. Limerick's resolution, requesting the Government to import purebred stock, proved and tested, special attention to be paid to the production of the females and to see that the males be of a good producing family.

It was also suggested that certain counties be grouped into groups of three or four, and the stock divided among each group, to be auctioned at group centres by the Government, and that the dairy superintendents get more in touch with the farmers, instructing them in the testing and weighing of milk and to carry on extension work as a trial for one year.

The amendment carried by a large majority.

Following the passing of the resolution re the importation of live stock, there seemed to be a general inquiry as to where various classes of live stock could be procured. Replies came thick and fast, from all parts of the hall, recommending inquirers to read the columns of the Maritime Farmer, where the most progressive live stock breeders advertise their surplus stock.

PROFITABLE POULTRY RAISING.

Mr. Seth Jones, the efficient Poultry Superintendent for the province, gave a most interesting and instructive address on poultry raising. Mr. Jones had a long and successful career as a poultry breeder and it is needless to say that his address was thoroughly enjoyed by every one present. Mating, breeding, rearing, feeding, housing, fattening and marketing of poultry were all discussed in the short time at his disposal. We will publish Mr. Jones' address in a future issue.

SWINE RAISING

was the subject of an excellent paper prepared by Mr. A. G. Dickson, a successful swine breeder of Chatham, N. B. The paper was read by Mr. G. E. Fisher and contained some valuable ideas. We will publish the paper in full in our next issue.

LEGISLATIVE COMMITTEE.

Messrs. J. F. Reilly, Morris Scovil B. M. Fawcett and Walter Limerick were appointed a committee to interview the Government regarding matters suggested in the resolution about dairying.

Mr. Morris Scovil introduced the following resolution which was passed and handed over to the Live Stock Committee:

DAIRY SHORTHORNS.

Whereas, the stock of cattle in this Province is at a very low ebb, and it is almost impossible for the farmers to procure suitable foundation stock to increase their herds; and

Whereas, large quantities of beef are being imported to supply the markets of St. John, Fredericton and other parts of the Province, which should be raised by our own farmers thus keeping at home the money spent abroad.

Therefore resolved, that this meeting of the F. & D. A. do urge upon the Government the immediate importation of a large number of dairy Shorthorns, which would give the farmers an equal opportunity to improve their herds as they have done for the horse breeders, and further

Resolved, that a committee be appointed to lay this matter before the Government and urge upon them its importance.

THURSDAY AFTERNOON.

The Thursday afternoon session was short as many of the delegates wished to attend the opening of the New Brunswick Legislature.

Resolution re Dominion Exhibition Grants.

The Secretary read the following letter from Mr. C. R. B. Bryan, Secretary of the Nova Scotia Farmers' Association:

Durham, N. S.,
Feb. 4th, 1911.

The Secretary Farmers' and Dairymen's Association,
New Brunswick.

Dear Sir,—Herewith I enclose copy of a resolution, passed at our annual convention of recent date, which I think explains itself.

Will you kindly bring the matter before your Association at your earliest opportunity and advise me of their views and action, and oblige,

Yours truly,
CHAS. R. B. BRYAN,
Secretary.

The resolution which reads as follows was passed unanimously:

Copy of Resolution passed at the Annual Convention of the Nova Scotia Farmers' Association, at Windsor, N. S., Jan. 25, 1911.

THE DOMINION EXHIBITION GRANT.

Whereas the present policy of the Dominion Department of Agriculture re the annual grant of the Dominion Exhibition brings to the Maritime Provinces about $60,000 once in four years, and

Whereas, we believe that greater good would come to the agriculturists of the Maritime Provinces by a more even expenditure of this grant, therefore

Resolved, that this Nova Scotia Farmers' Association make application to the Hon. Minister of Agriculture of Canada that $60,000 might be divided to the Maritime Provinces in an annual grant of $3000 to Prince Edward Island, $6,000 to New Brunswick and $6,000 to Nova Scotia, and further

Resolved, that a copy of this resolution be forwarded to the Provincial Farmers' Association of New Brunswick and Prince Edward Island for their consideration.

TILE DRAINAGE.

Mr. F. L. Fuller, Truro, N. S., then gave an interesting talk on drainage. He pointed out the reasons why and the advantages of properly drained soil. He explained the operation of the Drainage Machine and answered an unlimited number of questions which showed that the question was a popular one. When the hour for adjourning had arrived Mr. Fuller was greeted with the expression "keep on!" "keep on!" which showed that many of the farmers would much rather listen to a talk on land drainage than to the hot air in the Legislative Chambers.

DRAINAGE RESOLUTION.

There was a full house on Thursday evening when President Hatheway called the meeting to order.

A resolution, accompanied by a widely signed petition asking the Government to encourage land draining by purchasing a Traction Ditcher such as is used in Nova Scotia and Ontario was unanimously carried.

LICENSING OF STALLIONS.

A resolution asking the Provincial Government to induce legislation regarding the registration and licensing of stallions was referred to the Live Stock Committee.

SHORT COURSE STUDENTS.

Mr. A. J. Jensen introduced the following resolution which received unanimous approval.

Whereas, we find that only eighteen students from New Brunswick attended the Short Course at the Truro Agricultural College, last January, and

Whereas, this is all out of proportion to the interest which farmers in this Province should take in this matter, considering that tuition is free and that the transportation charges are paid by the local government.

Therefore, resolved that this association is of the opinion that this question should be taken up by the various agricultural societies in the province and they should be asked to see to it that at least one representative be sent from each society, preferably young men, and that the society should pay the expenses for board, etc., if necessary.

Further resolved, that the Department of Agriculture be asked to cooperate with the various societies by notifying them of the passing of this resolution and asking them to take action.

FARMERS IN POLITICS.

The special committee appointed on Wednesday evening to consider the motion made by Mr. F. A. Dixon regarding the representation of farmers in the Dominion and Provincial Parliaments, presented the following resolution:

Whereas the farmers of our province are not represented in the councils of our county by many of their own occupation. Therefore resolved that in the opinion of this association this fact is a discredit and an injustice to the farmers and other people as a whole; and that the blame attaches to themselves as the remedy rests with themselves.

Resolved that in the opinion of the association there shodld be at least one bona fide farmer in the legislature from each constituency in which agriculture is the principle or one of the principal pursuits.

Resolved that in the opinion of the association, in order to secure the representation referred to, it will be necessary to call a convention to nominate one or more of their number for election to the legislature of the province, and to support their nominees irrespective of party politics.

Also resolved that for each county, the vice-presidents of this association together with the presidents of the different agricultural societies, be appointed as an executive committee for the purpose of assembling such county conventions.

Resolved, that the services of a provincial organizer shall be procured to assist the county executive committee in assembling and conducting the county conventions.

CARBONOL
THE COAL TAR DISINFECTANT ANTISEPTIC INSECTICIDE GERMICIDE DETERGENT
A Non-Poisonous Non-Corrosive Preparation OF GREAT CLEANSING HEALING PROPERTIES
Barrett Manufacturing Co. BOSTON.

CARBONOL

"NECESSARY AS SOAP"

FOR GENERAL HOUSE CLEANING

PUT a dash of **Carbonol** into every pail of water you use in house cleaning. You will find that cleansing becomes much easier than before. You will find that old stains and smears which you thought could not be removed, disappear like magic. You will find that floors and woodwork, marble, metal and tile look cleaner after they have been washed with a **Carbonol** solution than you ever were able to make them look with soap and water.

Carbonol is a disinfectant and while it is removing dirt, it is also killing germs. Keep your house so free from germs that nobody would ever catch a disease in it.

Carbonol will remove stains of oil and grease; it will wash windows and give them the clearness of crystal.

A free sample of **Carbonol** will be sent on request.

The Carritte-Paterson Manufacturing Co., Limited.
St. John, N. B.

ARITIME FARMER COMMENDED TO STOCK BREEDERS.

Whereas, the sentiment was strong- expressed at this morning's meet- g that many of our farmers would ke to get in touch with breeders of ure bred stock, and

Whereas, the opinion was freely ex- ressed that the Maritime Farmer is ie best medium in Eastern Canada, hereby the stock breeders can bring is stock to the notice of the Mari- me Farmer province farmers who ish to purchase such stock, there- ore,

Resolved that this association re- ommend stock breeders to advertise heir surplus stock and give as con- ise a description of such stock as ossible in the columns of the Mari- me Farmer.

SOCIABILITY IN THE HOME.

VEGETABLES—Potatoes, 45c to 50c

MISCELLANEOUS.—Hay, $7.50 to $8 00; straw, $5 00 to $5.75; beef hides, 8c to 8½c; sheep skins 35c to 60c; lamb skins 3 0c to 50c

There is little change in our market to report. Roads are good but still the supply of produce offering is limited Considerable oats have been stored and it is generally supposed that there is still large stocks on the farmer's hands. Hay is offering freely and buyers are not desirous to stock large quantities unless bought at the inside quotation. Beef is in good demand and strictly first class quality is scarce and dealers are buying for future delivery at as high as 6c per pound, live weight. A lot of the beef being offered is of very inferior quality and sells at 7½c to 8c. The pork market is quiet and not over supplied. Price for selects are firm but heavy sows are quoted as low as 6½c, dressed Potatoes are not offered except in very limited quantities and the retail trade takes care of all that comes on the market. Other vegetables are not being offered. Butter is quite plentiful and there is sufficient offered to keep the market freely supplied and prices are easy. Eggs are lower than they have been at this season for years. The supply is only limited and with increased supplies we would look for slightly lower prices.

A Chronic Cough.

J. S. F., P. E. I.—I have a seven-year-old horse that has had a cough since the first of November. I have tried a great many horse remedies but he does not seem to be getting any better. He runs a little at the nose all the time. I think the trouble started from a cold contracted by standing out in the cold, too long. I would like to know what would be best to give him.

Ans.—A chronic cough may succeed many diseases. Cough is not a disease but a symptom in several, such as Pneumonia, Bronchitis, Laryngitis, Broken Wind, Influenza and may be a symptom of Cronic Indigestion or Worms. The proper treatment in all cases of cough, is to discover the disease, of which it is a symptom, then cure the disease, if possible, and the cough will cease. As the enquirer has tried all horse remedies, I am at a loss to know what to recommend. But would advise careful feeding of well cured, nutritious food in sufficient, but not over abundant quantities, feeding three times a day, allowing three or four hours between each feed, during which the animal cannot acqire food. Water when desired at least three times a day. Keep the stable clean, well lighted and well ventilated, without drafts. Give the animal well regulated exercise, twice a day, for at least two hours at a time. Dampen the hay with half an ounce of lime water mixed in one pint of water, twice a day. Give in the grain food, oats and bran, the oats boiled bran mixed in it at night warm, one tablespoonful of African Ginger pulverized and one teaspoonful of Bicarbonate of Soda and in the morning give same in dry food, oats and bran. Continue giving for a week then give one teaspoonful of Oil of Tar in the faod, night and morning, for another week and if not well at that time give one dram of Iodide of Potassium, night and morning, in one quart of cold water, one hour before feeding.

J. STANDISH, V. S.

SEND US 75c. Receive by return mail post paid this beautiful little dress made with a little waist joined to a full pleated skirt with a half belt to the front panel. Neck trimming belt, and cuffs, are of a plain dark red material, while the dress is of a dark red tartan dress goods It comes in ages from 3 to 12. It is worth double. To introduce our dresses we make an ad. of this number and send it by return mail for only 75c. and 12c. for postage. We can supply a 14 year size at $1.25. Order No 831

THROWING OTHERS AWAY FOR SHARPLES TUBULAR CREAM SEPARATORS

All over Canada—all over the world—farmers are discarding common cream separators for Sharples Dairy Tubulars.

Why? Because the Tubular skims twice as clean as others—is guaranteed to save enough more butter fat, as compared to any other make, to pay at least ten per cent interest every year on the cost of the Tubular. No business-like farmer is overlooking a sure way to make ten per cent on his money. It is cheaper to throw away a common separator and buy a Tubular than to stand the loss caused by common machines.

Here is another reason: Tubulars last a lifetime—are guaranteed forever by the oldest cream separator concern on this continent. No wonder that farmers are putting Tubulars in place of disk-filled and other complicated machines that are out of fix and in need of expensive repairs half the time.

Tubulars are later than, entirely different from, and vastly superior to all others. You can own and use a Tubular for less than any other make. Save yourself the costly experience of others. Get a Tubular in the first place. Our local representative will show you a Tubular, inside and out. If you do not know him, ask us his name. When you can see a Tubular so easily—and own and use it for less than any other, and make more with it—how can you afford to waste time or money on a "peddler's" or any other inferior machine? The manufacture of Tubulars is one of Canada's leading industries. Write for catalogue No. 194.

THE SHARPLES SEPARATOR CO.,
Toronto, Ontario. Winnipeg, Manitoba.

VANCO LEAD ARSENATE

Kills Codling Moth and Leaf-eating insects every time.

VANCO contains a guaranteed amount of Arsenic Oxide. Simply mix VANCO LEAD ARSENATE with water and you have a spray that is sure death to Codling Moths, Potato Bugs, Cabbage Worms, Asparagus Beetle and all other leaf-eating insects.

Easy to spray—will stand two or three rains without washing off—and **will not burn the foliage.**

Absolutely guaranteed in quality and strength. Made in Canada. Factory near at hand, *means low prices and less freight.*

Write for prices and free book on spraying.

FERTILIZERS—We also sell Nitrate of Soda, Muriate of Potash, Sulphate of Potash and Acid Phosphate.

1 Cent a Word.

This department is one of the most valuable in the MARITIME FARMER. At a cost of only one cent a word, you can advertise anything you wish to buy, sell or exchange. The address must be counted as part of the advertisement and each initial or a number counts as one word. Cash must accompany each order and advertisement must have address on, as we cannot forward replies sent to this office. Copy must be received not later than Friday before the date of issue, which will always be found on the editorial page of the proceeding issue. No black faced type or display of any kind will be allowed under this head, thus making a small ad. as noticeable as a large one. The rate for this column is one cent a word, each insertion. School ½ mile, church near. For other particulars enquire of

B. McKENZIE, P. O. Apohaqui, N. B.

Oxygenator ! Oxypathor ! !

The Maritime Oxygenator Co., 19 Market Square, ST. JOHN, N. B.

C. FRASER MacTAVISH, General Manager. Tel. Main 2367.

It has come to our notice that an absolutely untrue and malicious falsehood is being circulated by a competitor that the machines we handle are imitations of some other.

We believe that when a dog howls loudly he is either one of two things—he is either hurt or frightened.

It might be well to tell the public the exact truth about **The Oxygenor King,** (whose managers published the above referred to statement.)

The General Manager of this Company (supposed to be Mr. J. Raoul Cote, of Chatham, Ont.,) has been anxious for a long time to get his poor little machine introduced into this part of the country and for this purpose I have letters on file **now** in my office, offering to supply me with **The Oxygenor King,** his **best P. O. K.** for **$8.50** net. (They sell it to the public for $35.00), enough said.

However I investigated both **The Oxygenor King** and **its business methods** and as a result would not buy the machine at **any** price.

The Oxygenator is not an imitation. The Oxygenator is not a cheap machine. It sells for $25.00 and $35.00. It may be rented for $10.00 per month and all rentals paid applied on purchase price.

The Oxygenator lasts for life. May be used by every member of the family and positively cures all curable diseases.

I will forfeit $100 to any charitable institution mutually agreed upon if the following statements cannot be made good :

1. That Mr. A. R. Mosher, Provincial Manager, (now for The Oxygenor King), has not only sold dozens of **Oxygenators** but has by word and letter endorsed them in the highest possible terms.
2. That at the present moment hundreds of **Oxygenators** are in the homes of the people of the Maritime Provinces—dozens of these in Nova Scotia—many sold by Mr. Mosher and giving the most unqualified satisfaction. Letters to prove this on file.
3. That the Oxygenator is not only, **not an imitation,** but for many years has been proving its therapeutic power in England, Mexico, United States and hundreds of places in Canada.
4. That to any "Honest seekers after truth" we shall be pleased to send, upon request, our new 72 page book, "Oxypathy," and the names and addresses of scores of the best known citizens of the Maritime Provinces who are glad to endorse The Oxygenator.
5. That W. A. Taylor was an unsuccessful applicant for a job with us and we do not seriously consider him as a competitor.
6. That the dishonorable business tactics employed by the Oxygenor King people are strictly on a par with the methods they employ nearly everywhere and where their machine is best known and their above referred to methods—they are doing the least business.
7. That The Maritime Oxygenator Co. welcomes a competitor that is fair and on the level, but we have neither use for nor time for **cowards** who publish what they know is not so.

This statement is published because it is due the public, but as we are too busy filling orders for Oxygenotors and Oxypathors (our newest machine) we cannot afford to notice further either The Oxygenor King or its unfair and untrue methods of getting itself before the public.

The public is a pretty fair judge and it won't take long to decide.

P. S. To any one who cares enough write to any of the following for endorsement of **The Oxygenator :**

A. B. Farmer, Lumberman, 295 Main Street, St. John, N. B.
W. A. Lee, Manager Eastern Steamship Co., St. John, N. B.
Rev. Jas. Strothard, Pastor Methodist Church, Summerside, P. E. I.

ings, as branch wires can be run from the main line to the buildings and thus save wire and simplify the construction. Reference to Fig. 4, in which c, e, etc., represent the buildings to be connected, mn the main line and a and t the branch wires, will make this point clear.

POLES.

Poles twenty-two or twenty-five feet long of any good stock, cut when green, should be used. Cedar and chestnut are particularly desirable on account of their lasting qualities. The poles should be reasonably straight and well proportioned. The diameter

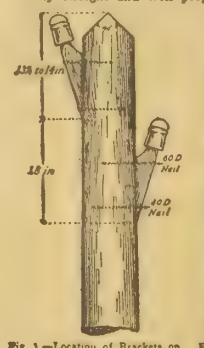

Fig. 5.—Location of Brackets on Pole for Straight Lines.

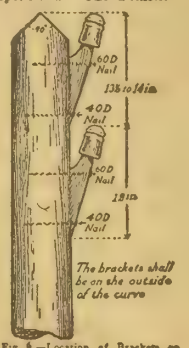

Fig. 6.—Location of Brackets on Pole at Curves.

of the top of the pole should be about 5 or 6 inches. In order to prolong the life of the poles and add to their attractiveness, all the bark should be removed, knots trimmed close and the butt cut off square. The top of the poles should be roofed as shown in Fig. 5.

POLE FITTINGS.

Where only one or two line wires are to be mounted on the poles, oak brackets fitted with glass insulators are fastened to the pole as indicated in Fig. 5 for straight lines, or as shown in Fig. 6 at curves. The brackets should be attached to the poles before the poles are raised.

Fig. 7 Fig. 8 Fig. 9

BRACKETS.

Brackets Figs. 7 and 8 are usually made of oak and given two coats of metallic paint and have a thread on the upper end to which is fastened a glass insulator, a type, as used in telephone work, is shown in Fig. 32.

They should be about 18 inches apart. The upper bracket should be 8 inches from the top of the pole

WE Send This VOLUME FREE BUT ONLY ON REQUEST

THIS book consists of 100 solid pages of carefully compiled information on the building of rural telephone lines. It is well printed, profusely illustrated and handsomely bound in stiff, cloth-covered binding. Apart entirely from its actual cost of printing and binding, the preparation of the technical matter in it has run into a great deal of money. That is why we ask for the coupon —we want to be sure that you are interested in the subject, before we go to the expense of sending you this book dealing with

The Complete Story of "How to Build Rural Telephone Lines"—Use the Coupon

The two pages shown above give you an idea of how thoroughly this book covers every detail. Every other page in the book is just as full of information as the pages shown. Among the matters dealt with in this volume, is the organization of mutual-companies, of stock-companies, line construction, equipment, costs of construction, companies already organized, their history and what they have accomplished, government regulations on the subject—in fact, every detail you could possibly think of or need to know. If there is no telephone system in your community to-day, it is only a matter of time until there will be one. Farmers are organizing community-owned systems all over the country. Some day one will be organized in your locality. You owe it to yourself to know the facts, for knowing the facts may mean money to you. Send for the book—use the coupon NOW.

YOU Can Furnish Your Home FREE!

ANY housewife buying goods at the stores mentioned below may have their cash purchases apply on Asepto Soap Premiums. Every cent you spend counts toward a premium. A sure and mighty convenient way to save without increasing living expenses. Over 300 premiums of honest value to select from. The list will be increased every few weeks. Furniture will be offered next. The old way was to allow premiums to apply on Soap Wrappers only. Now at any of these stores—no matter what you buy—everything has its equivalent in Soap Wrappers. That is every five cents spent counts the same as one wrapper, while purchases of our goods as here advertised entitles you to two coupons—the one the merchant allows and the ones found in or on our goods themselves.

Dr. White's Honey Balm.—A cough syrup that is safe and sure. We are positive that no other cough syrup equals it. Price 25c. Equal to 5 soap wrappers.

Pendleton's Panacea.—The best hot medicine, in use nearly 100 years. Every person knows it is good. Price 25. Equal to 5 soap wrappers.

Brown's Cutilive.—A witch-azel cream for chapped hands, sunburn, etc. Price 25c. Equals 5 soap wrappers.

Scott's.—Salts, Senna, Sulphur, Saltpetre, Borax and Alum in 5c packages. Equal to 1 soap wrapper.

Brown's Spearmint Tooth Paste—Sweetens the breath, prevents decay, hardens the gums and whitens the teeth. Price 25c. Equals 5 soap wrappers.

Napatho Soap.—A pure laundry soap, containing naptha and incorporated by a process that prevents it from hurting the hands, as other Napatho Soaps do. The wrappers count for Premiums.

Sapid Tea.—A blend selling at 40c, in 1 lb. packages only. Blended by J. Harvey Brown, one of the most competent tea men in Canada. Each package carries a coupon equal to 8 soap wrappers.

Dr. Scott's White Liniment.—The largest bottle and best liniment. Price 25c. Equal to 5 soap wrappers.

Banner Flavoring Extracts.—All flavors and from 10c to $1.25 per bottle. Coupon on each bottle.

Herner's Dyspepsia Cure.—The only kind that tells you to eat what you like while taking it. Money back if not good. Price 35c. Equal to 7 soap wrappers. Price $1.00. Equal to 20 soap wrappers.

Brown's Stomach and Liver Pills.—A good family pill. Price 25c. Equals 5 soap wrappers.

Scott's Furniture Polish.—Renews the life of old furniture. Price 25c. Equals 5 soap wrappers.

Asepto Soap.—Is equal to the best and contains the same anti septic features that Asepto Soap Powder does. The wrappers count for premiums.

Scott's.—Nitre, Glycerine, Iodine, Iron, Squills, Friar's Balsam, Carbolated Oil, Camphorated Oil, Castor Oil, Sweet Oil, Oil of Tar, Sewing Machine Oil, Spirits of Camphor. Price 10c per bottle. Equal to 2 soap wrappers.

Scott's Fruit Syrups and Lime Juice.—Pure and excellent flavor. 10c, 15c and 25c. Coupon on the bottle.

Ebony Polishes—None better, both paste and lustre. Coupon on each box. Try them.

Banner Spices.—In packages only. Absolutely pure. ¼ lb. packages carry coupon equal to 2 soap wrappers.

Venus Floating Soap.—Made from pure vegetable oils and unexcelled for the toilet and bath. Price 25c. Coupon counts for premiums.

Asepto Soap Powder.—Has been the greatest success of any soap or powder ever put on the market. This is the best evidence of its quality. It is antiseptic as well. It absolutely sterilizes every article washed. Think what this means to a family. Price 5c, and the trade mark counts for premiums.

Alfalfa—Root and Branch.

If you prepare your soil and seed properly you can grow from three to four crops per year, yielding at least $100 per acre in feeding value Are you going to give it a trial?

Feeding value of Alfalfa Hay as compared with other feeds. This shows what a ton of each is worth comparatively for feed :

Alfalfa Hay,	per ton,	21,66=20,16
Clover Hay,	do	14.12
Timothy Hay,	do	9 80
Wheat Bran,	do	24.50=22,80
Shelled Corn,	do	20 16

—N. S. Bulletin, No. 339.

ALFALFA.

THE enthusiasm in Alfalfa growing that is being manifested by readers of **The Maritime Farmer** since the inauguration of our campaign, "How can Alfalfa Growing receive a Boost in the Maritime Provinces?" is simply marvelous. From every part of the Maritime Provinces we hear that farmers are going to give it a trial. We want to assist further and are, therefore, offering a one pound package of Alfalfa Seed to anyone who will send us one new cash-in-advance subscriber at 80 cents the year. Or if you can send us two new cash-in-advance subscribers we will send you as well a bottle of Nitro-Culture. Will you make an effort to get one or other, or both?

A FEW ALFALFA DON'TS.

1. Don't fail to provide for ample inoculation, soil from an old Alfalfa field is best.
2. Don't sow poor or weedy seed.
3. Don't sow on a weedy soil.
4. Don't sow on any but a sweet limed soil
5. Don't sow on poorly drained soil
6. Dont sow on any but a finely prepared, well settled seed bed.
7. Don't pasture the first or second year.
8. Don't lose the leaves; they constitute the best part of the hay.
9. Don't seed a large acreage to begin with. Experiment on a small acreage first
10. **Don't give up.** Many prominent Alfalfa growers finally succeeded only after many failures.

Farmers of Quality

Stationary and Mounted, in 1 1-2 to 30 Horse Power

Want Quality !

Readers of THE MARITIME FARMER are of the quality stamp; we realize their discerning ability to pick an article of machinery that is correct in every mechanical detail. That is the reason why such care is taken to see that the **Ideal Gas and Gasoline Engines** are what we claim for them.

Every part of the **"Ideal"** is interchangeable—a mighty strong feature. The cylinder, instead of being cast with the base, is cast separate and bolts on the base. The valves, instead of sealing directly on the cylinder head are enclosed in a valve cage, and the valve cage is inserted in the cylinder head so that when the valves become worn, the valve cage and valve can be taken out and ground without removing the cylinder head.

The idea of casting the cylinder separate from the base is a good one, for when the walls of the cylinder become worn you don't have to buy a complete new engine, you only require a new cylinder that can be bolted on the base. Another good feature is an extremely long piston with double rings instead of using three rings. We use three sets of two rings each on the Ideal.

Another thing, there is a speed regulator on this engine which enables you to run the engine at any speed, and, of course, when you reduce the speed of the engine, you also reduce the fuel consumption. For instance, if a man had a 6 H. P engine and wanted to run a cream separator with it, he could reduce the speed and thereby cut down his fuel consumption to suit the work.

All these are points to consider when looking for a gasoline engine of quality—one that stands without a peer.

"Ideal" Gas and Gasoline Engines are built on honor and built to give their operators satisfaction, and they do it. We do not build a cheap or low grade engine, but do cater to that class of buyers who wish a first class article at a reasonable price.

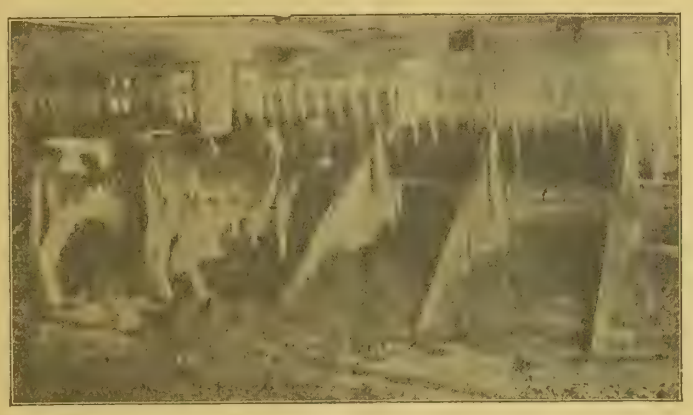
Sanitary Cow Stalls and Their Construction

Many Valuable Ideas

By C. A. Ocock, University of Wisconsin.



This simple stall insures the comfort of the cow, convenience of cleaning and feeding at low cost; the requirements in modern sanitary stall construction.

THE demand for pure milk, produced under sanitary conditions, is constantly increasing, and to produce such milk it is necessary to have clean cows kept in sanitary stalls. That dairymen of the state are realizing the wisdom of constructing sanitary barns is shown by the many inquiries for information on this subject. This awakening among the dairymen is in part an outcome of the pure food laws which have been enacted to meet the demand for pure milk and its products.

Sanitary cow barns should contain sanitary fastenings for securing the cows, but this does not necessarily imply that such fastenings need be patented. There seems to be a prevailing impression among dairymen that a comfortable sanitary stall or stanchion is an expensive factory product, while the fact is that any farmer who is handy with carpenters' tools can build a stall which will secure as good results as any patented stall upon the market. The stalls described in this bulletin embody in their construction all of the principles found in any of the patented stalls and the dairyman may easily choose a stall among these types which will meet the needs of the average dairy.

NEED OF SANITARY STALLS.

The average dairyman of 20 years ago gave the sanitary stall little consideration and used any method of building which best suited his individual ideas. He cared little about the condition of the cow at milking time so long as she gave the milk. The most of the old dairy barns are so arranged that it is impossible to keep cows clean in them.

Many systems have been tried for fastening cows to secure sanitary milk. Ties, rigid and swinging stanchions, stalls, and the open shed system have been resorted to and are still being used. The method of fastening dairy cows which best meets the demands of the dairy and pure food laws is the stall. The stall must be sanitary to be a success. Stalls are of many different types, but to be sanitary they must be constructed so that the cow will be comfortable and at the same time not be forced to lie down in her own filth. A prominent authority gives five things to be accomplished in cow stall construction. 1. It should keep the cow clean. 2. It should make the cow comfortable. 3. It should be convenient for feeding, milking and cleaning. 4. It should be inexpensive. 5. It should hold the cow securely.

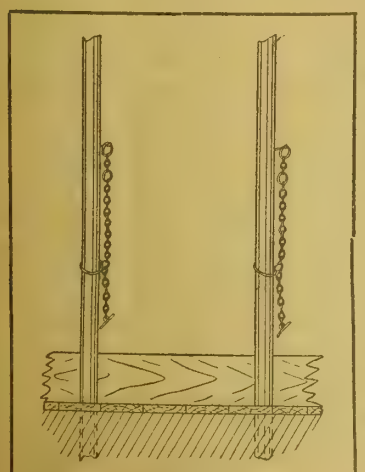


Figure 1. The simple chain tie, which has long been used, is more humane than the rigid stanchion. The chain here shown is attached to a ring which slides on the upright post and is fastened around the cow's neck with a toggie link.

The cow's health should be considered when choosing a method of fastening. It is undesirable to place cows in rigid stanchions since they do not have the freedom of their heads obtainable in a stall. Compelling a cow to lie in a cramped position is not conducive to a gentle disposition. Such a disposition is found in those individuals producing the largest returns for food consumed. A stall which most nearly approaches perfection is one in which the cow is permitted to have the same freedom she has when lying in the field or paddock. This height of perfection is difficult to obtain.

THE HOME MADE STALL.

Those stalls which are herein described are home made stalls and can be constructed by any farmer who has a little mechanical skill. These stalls are considered the most sanitary by successful dairymen. So far as sanitary conditions are concerned, these home made stalls compare very favorably with the best patented stalls and in some respects they are superior to the latter. The frontispiece shows the interior of Ex-Governor Hoard's barn where the Model stalls are used. The drawings here shown are selected from a large number of plans of home made stalls, and although they do not fill the requirements of a perfect stall, they are considered by competent judges to be the most sanitary cow stalls that have yet been designed.

THE PLAIN TIE.

Since the earliest days of dairying some method of fastening cows has been resorted to. If not tied with a rope or thong attached to the base of the horns, a rope or chain was placed about the neck and fastened to a post, tree or other stationary object to prevent the cow moving about while being milked.

A familiar tie still in use in a great many barns is shown in Figure 1. This simple arrangement has many good features. A ring large enough to pass freely up and down on a five inch post is attached to a chain which is placed about the cow's neck. With the proper construction of manger, platform and gutter this method of tying is even more desirable from a humanitarian stanppoint than the fastening shown in Figure 2. Although the chain tie is fast becoming obsolete it has filled an important place in the development of the sanitary stall.

THE RIGID STANCHION.

Three stanchions of the rigid type are shown in Fignre 2. Just how and when this stanchion originated is not generally known, but after years of service they are being discarded. These stanchions hold the neck of the animal in a vice-like grip when closed; especially is this true when the stanchion is too narrow. Such a stanchion not only irritates the neck of the cow but also prevents the free movement of the head from side to side, so that a cow is prevented from throwing her head around in

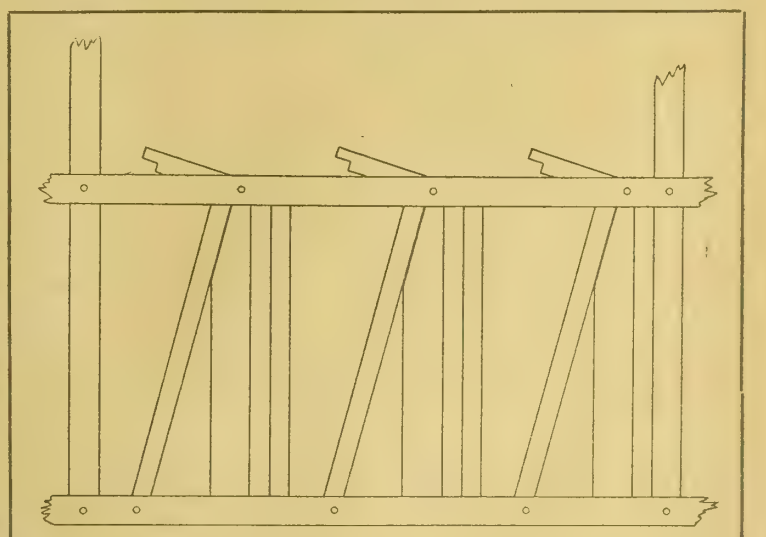

Figure 2. Three simple stanchions of the rigid type opened to receive the cows. These stanchions are very uncomfortable giving little freedom to the animal, as well as preventing a natural position when the cow lies down.

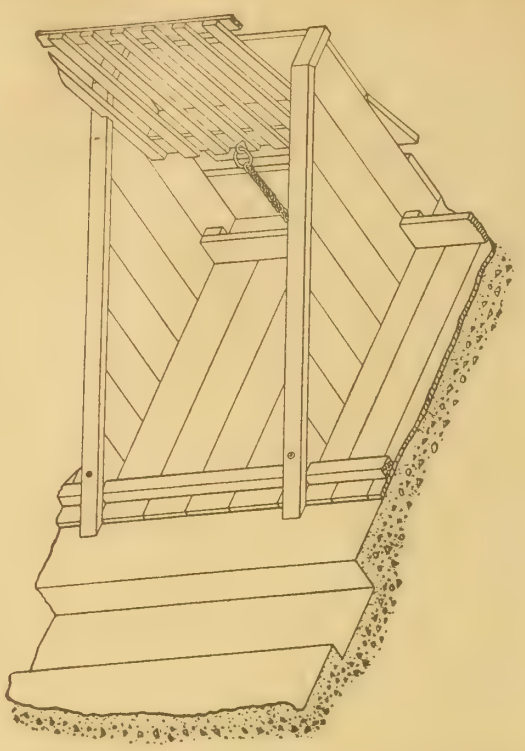

Figure 3. The Model stall which has been in use for several years, has been adopted by many of the best dairymen of the country. The essential feature of this stall is the movable cross bar near the hind feet of the cow, which causes her to move forward when lying down, thus advoiding her own droppings.

a resting position upon her fore leg when stretched out upon the ground, which is a common habit with this animal. Freedom of movement is very important to the cow and every effort should be made to discourage the use of the rigid stanchion.

THE MODEL STALL.

The Model stall is a home made product and was originated by Ex-Governor W. D. Hoard. He has used this stall in his own stables for several years and finds it very satisfactory. It is probably the nearest approach to a perfect stall of any in use at the present time. It is constructed, as shown in Figure 3, so as to force the cow to have her hind feet between the crossbar and gutter when standing, thus preventing the fouling of the stall by her own droppings.

When lying down she is brought forward and is compelled to lie in front of the crossbar. The cow is forced to stand back from the hay rack when eating because of the position in which it is hung. The crossbar is adjustable and the stall will accommodate a large or small cow. The chain or fastening is so arranged that as the cow starts to lie down she is drawn forward and will step in front of this crossbar to prevent an uncomfortable position. The door in front is hinged at the top and opens upward when grain and water are given. Hay is placed in the hay rack from the front. The partitions are so constructed that it is almost impossible for a cow to step upon the udder or teat of one lying down next to her. This feature alone is worth the cost of several stalls to the owner of valuable individuals.

A wooden mat is laid over the concrete floor. This mat is removable, permitting the cleansing of the entire floor when ever occasion demands. If it seems desirable the manger may be constructed of concrete the same as the floor and where new stalls are being erected the manger and floors should be made at the same time. This construction will be more durable than separate construction.

THE HELENDALE STALL

This stall includes some of the principles embodied in the Model stall. Those dairymen who are using this type of stall believe that it is more satisfactory than any other. It has several points of importance which should be considered. One of the features of this stall shown in Figure 4 is the crossbar which prevents the cow from going too far forward. This crossbar is adjustable and can be raised or lowered to accommodate the size of the cow. The chain which connects the stall partitions is so arranged that it can be hooked back out of the way to allow the cow to enter the stall. This is then hooked in the eye of the opposite partition and furnishes an obstruction which prevents the cow from backing out of the stall. These partitions are hung on selfcentering hinges, another good feature, which causes the partition to swing back into the original position whenever they are disturbed by cows coming into the barn. If these hinges were not selfcentering the partitions would be swung across the stall, which would prevent the cows from entering, causing more or less confusion if several of these stalls become closed. In constructing such a stall one of the chief expensive parts will be the selfcentering hinges, but these should be secured for reasons already mentioned. The board mat should also be used upon the concrete, as described for the Model stall.

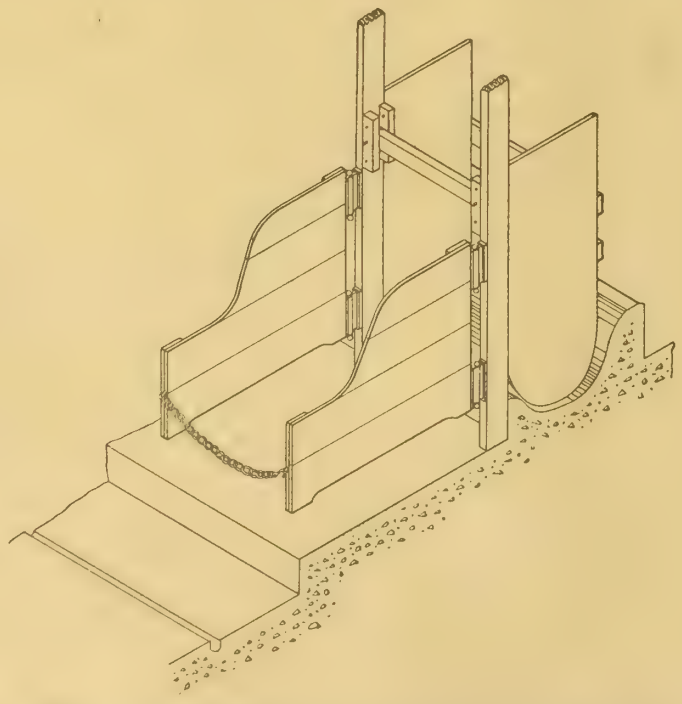

Figure 4. The Helendale stall with swinging partitions, which may be hooked back to the manger leaving the stall space open The self-centering hinge which brings the partition back into this particular position when released is an essential feature. The lower portions of the partitions in the mangers as here shown, may be omitted, permitting greater freedom in cleaning.

The gutter here is constructed differently than the one previously described, having a drop of eight inches back of the cow and two inches at the walk behind. There is also a drain one inch deep for carrying off the liquids. This drain can be conducted to a cistern or well provided for the purpose of containing liquid manures. For the average dairy it is believed that this stall will give excellent satisfaction and those who are using it are satisfied that it is among the best.

THE IDEAL STALL.

The Ideal stall, shown in Figure 5, is constructed somewhat similar to the Model stall, and while it does not have the same characteristics, yet it is nearly equal to the former in desirable features. The chief difference in the stalls is the method of feeding hay. There is no hay rack shown, as in Figure 3. Of course the cows would stand nearer the drop in the Model stall than with the construction shown in the Ideal. This difference may be easily seen by comparing the two sketches.

A desirable feature in the Ideal stall is the chain arrangement which admits of more freedom by having guides on either side of the stall. These guides are constructed of gas pipe with the ends flattened. The manger, if so desired, can be constructed of concrete, thus permitting of a place for water as well as feed. Construction of wood would not permit of watering the cows in the stall except by individual pails or boxes. This stall is being used quite generally and seems to be giving as satisfactory results as the Model stall. A little more care may be required to keep the stall clean, but the cow has more freedom than in the Model which will undoubtedly offset its undesirable features.

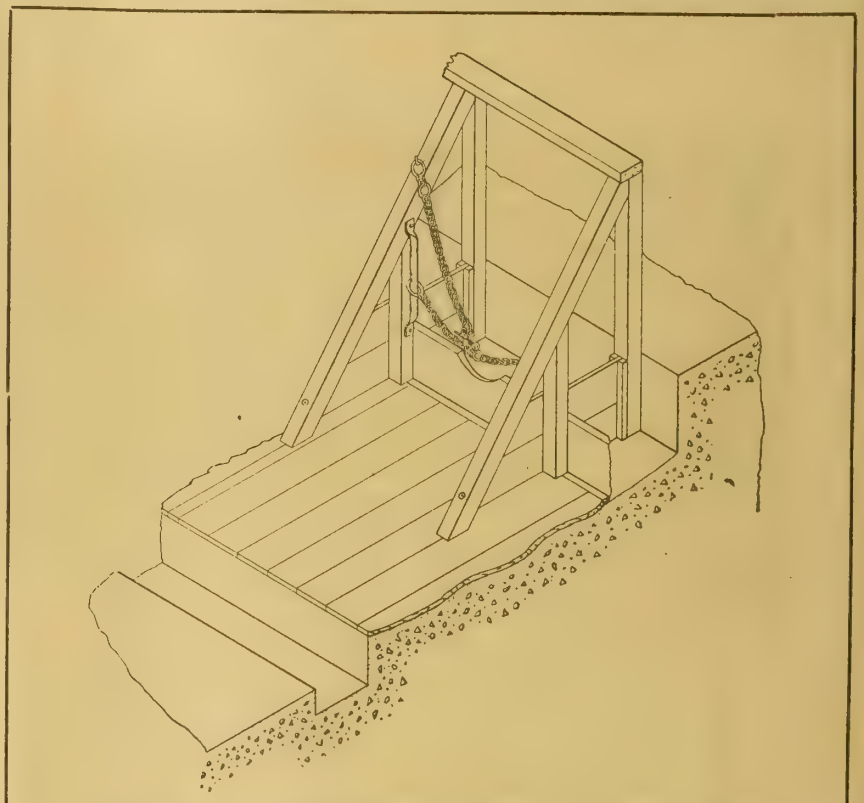

Figure 5. The Ideal stall has desirable features not found in ot her types here shown. The chain tie slides upon the guides on each side giv ing maximum freedom to the cow. The manger partitions are usually omit ted which reduces the cost and is often more convenient.

THE NEW IDEAL STALL.

This stall, as shown in Figure 7, is constructed on the same lines as the Ideal with the exception that the material used is gas pipe. This construction of course is more costly than that shown in the Ideal stall. A desirable feature, which is not embodied in the Ideal, that of having the gas pipes which retain the chain

placed so as to slant. This construction permits of a loosening of the cross chain when the cow stands up and a tightening of it when she lies down. This gives more freedom to the individual than any stall which has been described. This is considered a very sanitary stall and is giving excellent satisfaction where used. A board mat may be provided the same as shown in the others, or if this is not desirable, bedding in sufficient quantities will prevent any contraction of rheumatism by the animals lying on the concrete.

SANITARY STABLE FLOORS.

The material for floors varies in different localities and it is difficult to induce dairymen to discard the unsanitary floors. The floors now commonly found are dirt, wood, either block or plank, brick, stone, and in some cases concrete. Dirt of course is very undesirable since it affords an excellent harbor for bacteria, insects and vermin. In order to maintain a sanitary stable such floors must be eliminated. Wooden floors are about as undesirable as those made of dirt, but when care is exerted may be so constructed as to be fairly satisfactory.

Brick or concrete are the only floors one can safely say are sanitary. Brick should be laid upon a good sub-base and if this is not a good firm foundation it should be well tamped before laying the brick. The brick floor having been completed, the cracks should be filled with a mixture of cement and sand. The proportion which will best fill the requirements is 1 part cement to 1½ part of good clean sand. This should be mixed thin enough to spread easily and then swept into the cracks with a heavy barn broom or steel brush. Such a floor will be found sanitary and not so slippery as concrete. For driveways where loads are to be drawn or where horses are to stand, a better grade of brick will be required. If the foundation is not of good character where driveways are desired, then a concrete base should be constructed.

Concrete is the best and most sanitary floor that can be used in a dairy barn and effort should be made to have such floors installed whenever a barn is being constructed. When stable floors become dangerous, making it necessary to replace them, concrete should always be used if the floors rest upon the ground.

LAYING CONCRETE FLOORS.

Stable floors should be laid with a slope or pitch either to a common centre or to one end of the barn. For floors a slope of one to two inches in eight feet is ample and ⅝ to 1 inch is usually considered desirable for the average cow stall. A good method for laying such floors is to tamp the ground thoroughly, making sure that a good substantial sub-base is secured. Upon this spread three inches of mixed concrete, consisting of 1 part cement, 2½ parts clean, coarse sand, and 5 parts broken stone or clean gravel spread in one continuous layer. Unless there is to be excessive wear no finishing coat is needed. If such a coat seems desirable in the driveways it should be mixed of 1 part cement and 2 parts sand. The finished coat should be about three-fourths of an inch thick and laid off in 4 inch squares the grooves about one fourth inch deep. Finish a floor in this way and horses pulling a load will not slip and fall.

Stall mats should be constructed of seven-eighth inch lumber and so placed in the stall that they may be removed frequently to facilitate in cleansing the stall, since it is quite evident there will be a small amount of filth collecting from time to time thus polluting the sanitary condition of the stall.

In Figure 8 are shown four gutter designs. The fall of a gutter should be about one inch in 50 feet, but this may vary to meet conditions. If a cistern is used for retaining the liquid manure it may be desirable to have more fall.

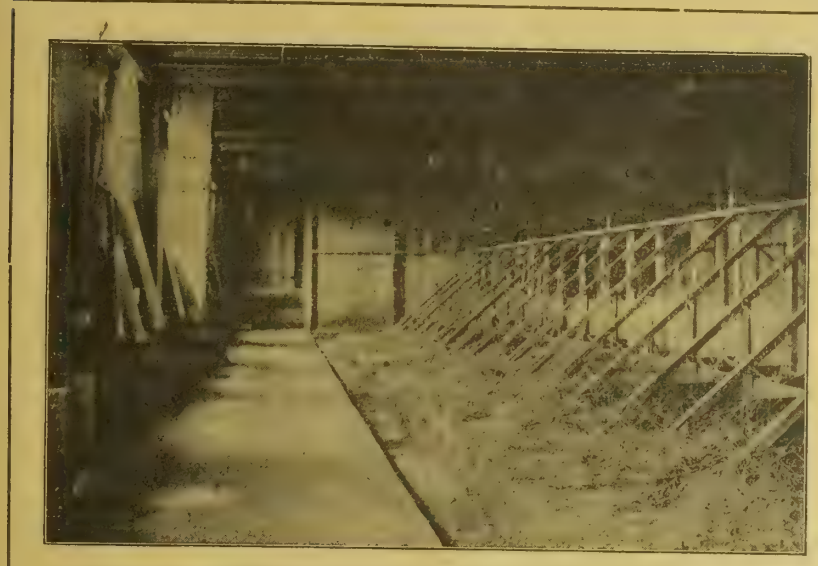

Figure 6. Interior of stable equipped with Ideal stalls and concrete floor with gutters of the type C in Figure 8.

LIQUID MANURE CISTERN.

The liquid manure cistern should be so situated as to permit of as few angles as possible in the pipes leading from the gutters. Traps should be so constructed where the pipes have their beginning in the gutters as to permit of quick cleaning. Openings should be provided in the floor at each bend of the pipes. In this way little difficulty would be experienced in keeping the drains free.

WATER IN THE BARN.

Water in the barn in some instances appeals to the dairymen, but as a rule it is better to have a tank in a sheltered place in the yard. In winter weather a tank heater should be used and the water always kept free from ice. Cows should not be compelled to go long distances to drink water in winter weather. This is another argument for having water in the barn either running in the mangers or in individual water buckets. The outdoor method is better, however, if the cow is not forced to stay out too long. The claim being that the cow gets a little exercise each day, and also comes in contact with cold outdoor air which prevents the individual from being so susceptible to colds.

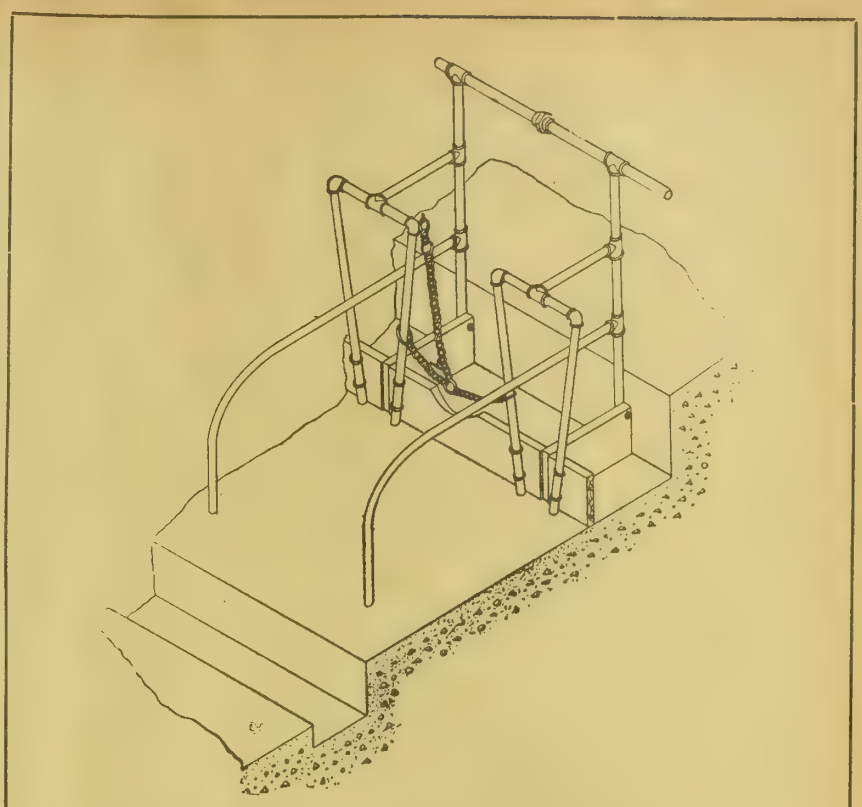

Figure 7. The New Ideal stall used in the dairy barn of the Purdue Experiment Station is one of the most sanitary of the simple home-made stalls now used This is made of gas pipes with the exception of the mangers and their partitions which are of wood. The guides for the chain tie are placed at an angle nearer to each other at the top, which tightens the chain and draws the cow nearer the manger when she lies down, thus preventing entanglement and bringing her forward out of her own filth.

The ideal water tank is the air pressure system. A 50 barrel, air tight, steel tank is located in some place where it will not freeze, and the water is pumped to this by a force pump worked either by a wind mill, gasoline engine, or other power. An outfit of this nature will maintain a pressure almost as regular as city water works. This can be so arranged as to lead the water to all parts of the house as well as to the different watering places about the barn.

PATENTED STALLS.

The frequency of inquiries which are received at this Station would lead one to believe that an awakening has taken place in the midst of the dairymen of the state. These questions relate to the best swinging stanchion, the best stall, and which is better, a stall or a stanchion. Before purchasing any of the patented animal fas-

(Continued on page 407.)

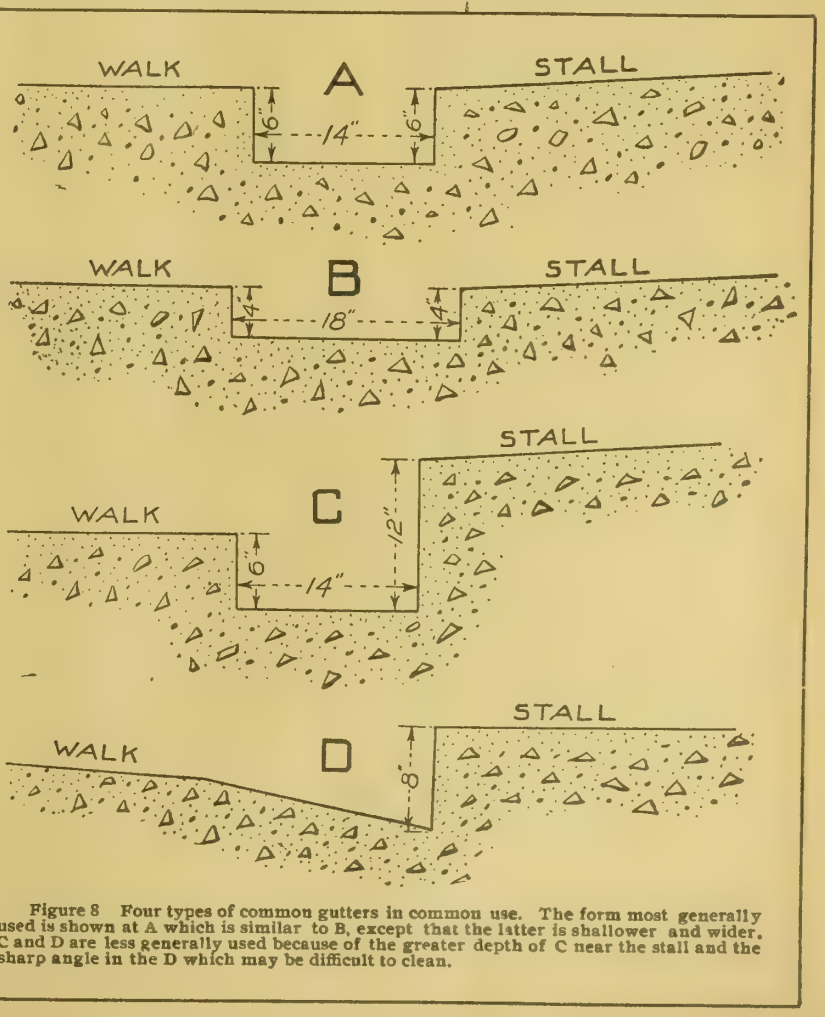

Figure 8 Four types of common gutters in common use. The form most generally used is shown at A which is similar to B, except that the latter is shallower and wider. C and D are less generally used because of the greater depth of C near the stall and the sharp angle in the D which may be difficult to clean.

The Advantages of Farm Life.

Editor Maritime Farmer:

I am sending under separate cover an essay written last fall by Robert Lamb, who is one of your best informed farmers in the country, for publication in the "Farmer". This is one that was handed to me in connection with our agricultural society work. We offered prizes on three subjects, viz., "The Relation of Trees to Agriculture", "The Advantages of Farm Life," and "Cultivation of the Soil." We got a good response and I would like to have them printed as I believe they are well worth it.

Professor Cumming, who judged them, spoke very highly of them and sent press notices to a number of papers approving of this in connection with our society's work, and if you will be good enough to publish we will be very much obliged.

J. R. TAYLOR.

Little Shemogue, N. B.

"ADVANTAGES OF FARM LIFE."

"In writing of the advantages of Maritime agriculture, we must first speak of the education of the young men. To be born and brought up on a farm, good though that may be, is not enough. He must have an agricultural education which presupposes superiority. This education can be obtained on the farm, without even going to an agricultural college or a city school. Some of the ways in which a farmer may become an educated man are by reading the experimental farm reports and several good agricultural papers, and by personal observation of the birds, animals, crops, etc. To sum it all up, a farmer must be a student if he wishes to succeed.

There are several things a farmer's son may obtain at a good country school. He may become a botanist, knowing the various weeds with which the farmer has to contend, their habits of growth, their powers of reproduction, how they disperse themselves over the land, the character of their roots and stems, the soil most suitable for their development, and the best means of their destruction. He may become an entomologist, knowing the various insects, their life history and to which of the classes (those which chew as the potato beetle and those which suck, as the oyster shell bark louse), each belongs.

"He may become a chemist, knowing the ingredients of the soil as Nitrogen, Phosphoric Acid and Potash and how each of these elements may be secured—Nitrogen, by plowing in leguminous plants, which, on account of the nodules on their roots are able to take Nitrogen from the air, storing it up in their leaves and stems; Phosphate by use of Basic Slag; Potash, by using Potash in some form.

"He may obtain a knowledge of fungus growth, as blight on the potato and scab on the apple, and the proper remedies for their eradication and may study of bacterial life, learning which are harmful, and which beneficial.

"Although a farmer's son knows very little of the dead languages, as Latin, Greek, etc., or of Roman history which our city cousins know so much about? yet our country schools educate our boys and girls to be good farmers.

"After he has secured as good an education as is possible to secure in our country school, it would be a great advantage to him to attend an agricultural college for a year or two where he may see the best in live stock of all kinds, what would be the best for the locality in which he intends to reside, the best methods of farming, and the best rotation of crops for the line of farming he intends to follow. While here he may obtain a good country girl who has been trained in the domestic science for a life partner, and they should become the producers of the finest of food products.

"As the supply of our own table is of the first impotance, the farmer, being the producer, has the first choice. His beef is the best, not as tough as is generally had in towns; his bacon, the Willshire sides; his butter, the gilt-edged; his milk or cream by measure or weight; his vegetables are both early and late, and fruit of all kinds in season.

"Another advantage of farm life is that the family, having been fed the balanced ration, are able to take a first place in the affairs of the world. Farmers sons are wanted as leaders of the government, as professional men and captains of industry. In all ages of the world great men have been called from the farm, as Moses kept the flocks of Gethroe, his father-in-law; David, the king, kept his father's flock, and our late King Edward, though he was not brought up on a farm, there was no part of the great realm over which he presided, that he took more pleasure in than in the flocks and herds.

"If we wish to have our names on the roll of great men there is ample opportunity of doing so in the many lines of work. The names of Bates and Booth as improvers of Shorthorns are known the world over, and also the name of the late Sir J. B. Laws, who devoted his life and fortune in experimental and research work for the betterment of agriculture. Our own Dr. Robertson, who started at the foot of the ladder, is now considered one of the foremost educationalists of the day and has done much for agriculture.

"Another advantage is that the farmer is the most independent. He need call no man master, even it be only a hundred acre farm he is head of it. With modern machinery the work is not hard. It is chiefly the guiding of a horse which is a pleasure to any man or boy.

Each farmer should have a good pair of team horses and a good driving horse and carriage. In our locality, every boy over 16 or 17 years of age, owns a nice driving horse, a good carriage and sleigh, which is an advantage over our city friends, who very seldom have a driving rig. What can be more delightful than a nice ride over a smooth road on a moonlight night, or along a frozen river on a cold but fine night, hearing the sleigh bells ringing and the ice crackling?

"Again, we have more of God's pure air to breathe than do our city friends, and our drinking water is rarely taken from a river but from a good well or spring.

"In bringing up a family in the country the chilhren are not so liable to be hurt while at their play as in the city, because they are not cramped for room so do not have to play on the street.

"Children in the country are not exposed to so many dangers of contracting the dread disease tuberculosis, the germs of which lurk in the streets and slums of the cities. They are not so liable to use tobacco, drink liquor or swear, as if they had been brought up in a city or town.

"During the winter months we can skate, toboggan and snowshoe to our hearts content without paying any rink bills. Unless we are engaged in lumbering, the winter months are months of rest? for the farmer. He can get some one to feed his stock well, go on a trip and feel that he is not wasting much money as the stock will do as well as if he were at home.

"If the farmer is very tired he can rest while his crops are growing. If he wishes he can spend several days fishing, gunning or trapping without going off his own farm.

"In conclusion, I think that farm life is in many ways superior to city life, and we should do everything in our power to get our sons to remain on the farm. Where would the city be if it were not for the farmer?

The farmer's gathering the dust,
And adding sheckles to his hoard,
For board with him the whole world must,
And he can fix the price of board."

ROBERT LAMB.

Westmorland Co., N. B.

Couch Grass.

Couch Grass is one of the troublesome plants or weeds that some farmers have to contend with in making and maintaining a proper seed bed suitable for more useful plants. Following are expressions on the extermination of this weed from some of our readers:—

In answer to your request for experience with couch grass, I may say that I have it on my place and have had to deal with it all my life. In the first place I do not regard couch grass as an unmixed evil. It is good for pasture, it makes good hay and it furnishes the ground with an immense amount of humus or vegetable matter. Land infested with it is generally dark in color, and, if it can be controlled, will give a sure catch of clover and a much larger yield of grain or roots than the average run of land where the grass is not found. This is due to the large amount of vegetable matter in the soil making it more responsive to fertilizer and cultivation. On the other hand it is not denied that couch grass, on the whole, is a noxious weed that most farmers would gladly dispense with In my experience, the best way to deal with it is to plow the sod in the fall, harrow thoroughly in the spring and the last of May sow oats or oats and vetches, and when they are up two inches high, say about the middle of June, sow about a hundred pounds or a little more of Nitrate of Soda. The oats and the grass are both very responsive to this fertilizer but peas and vetches would not be so much so. This crop should be cut soon after the oats begin to turn, and should give a large quantity per acre of the best of fodder, the oats and grass being both very palatable to all kinds of stock. Now plow the stubble again in the fall, preferably late in November, and do not plow more than four or five inches in depth. Leave the furrows as they are turned, well on edge, if possible, all winter. In the spring, as soon as the ground is dry, harrow thoroughly, making a perfect mulch over the furrows, which must not show through at all. The object now is to smother the grass roots that the frost did not kill and this must be done thoroughly. Harrow every few days with disc or spring-tooth harrow. If the weather is dry all the better, but the grass must not start in any case. By the middle or twentieth of June your couch grass is dead and will never again show a green shoot above the surface. This treatment would of course, be impossible on wet land in a wet spring. I had a piece of light gravelly land in fair condition that was so badly infested with couch grass that it could hardly be plowed. It was positively as bald as it could be. I followed the above treatment and then about June twentieth I put the land in turnips, manured in the drill. There was a good crop of turnips, there was no grass, and there has been no grass on that land since, and that was a dozen years ago. I make it a point to put my garden stuff on that same piece as it is the best cleaned land I have, In a word, with a fairly dry spring or on dry ground in any average spring you can kill couch grass on stubble plowed the preceding fall in time for a good paying crop of turnips or other late crop and such crop will be notably larger because of the large amount of organic matter left in the soil by the decaying grass roots.—A. C. POOLE, Charlotte Co., N. B.

I have a little couch grass in a few places on my farm that I have never been able to eradicate altogether. I think the only way it can be done is to summer fallow and harrow with a spring-tooth harrow as often as once a week or oftener if convenient, and rake the ground to gather the roots and burn them.—S. A. COOK, Yarmouth Co., N. S.

I have not had much trouble with couch grass. I find one root crop will get it about all out. I think some lands are more subject to it than mine. We have had quite a few patches. Two or three good plowings and harrowings and carting away of the roots is the best remedy we can find.—R. A. CHRISTIE, Cumberland Co., N. S.

When I came to this farm, ten years ago, I found couch grass in full charge. My plan of eradication is as follows: I turn over old sod lands in the fall, plowing not more than four inches deep, as couch grass runs no deeper than that. The next spring I plow and harrow two or three times, at intervals of ten days or so up to the 20th June, when I sow turnips having first applied a liberal dressing of manure, in order that the turnips may start quickly. I keep the cultivator going until the leaves cover the ground and the turnips do the rest. In case there is any left I follow the next year with a hoed crop which I have always found sufficient to clean land thoroughly. I may say that I find it very easy to kill it and easier still to keep it from growing.—B. C. SIMS, Yarmouth So., N. S.

We have an intervale farm and we are bothered very much with couch grass. We find that harrowing is the best remedy for killing it, by first using a disc harrow and then an old fashioned spike-tooth harrow, beginning as soon as the ground is fit for harrowing. I find where you plow early in the fall a harrowing soon after is good for killing out the couch grass.—W. S. JOHNSON, Colchester Co., N. S.

I may say that I have considerable couch grass on my farm and when I want to get rid of it in any particular place, I experience no trouble in eradicating it in the following manner. After a crop of grain, I plow the field about the first of September and harrow it smooth with the pin harrow. About the latter part of October I cross plow it and leave it rough as plowed during the winter and the next season I have a good field free from couch grass for my root crop.—JOHN HOWLETT, P. E. I.

$5.00 Free.

To the reader who finds the words "seed or seeds" in advertisements in this issue of The Maritime Farmer the largest number of times, we will give $5.00 in cash. If there should be a tie the money will be equally divided between those having correct counts. The words "seed or seeds" in The Maritime Farmers' own advertisements or in the reading matter will not count. The contest closes May 30, 1911. Send in your count. You may get the $5.00. Mention the names of any advertisers to whom you have written or of whom you have bought goods, also tell about how much you or your family have paid for seeds or trees of any kind that your family has bought within the last year.

The Prince Edward Island Central Seed Fair.

After the lapse of several years, during which time a new seed fair association, bearing the Provincial cognmen, came into being and flourished at Summerside, the seed growers of Queens County, Prince Edward Island bestirred themselves and again re-organized. They went at their work with that determination that knows no failure. Right nobly they worked and well; seed growers from all parts of the Island Province were interviewed, special inducements were offered to induce every progressive seed grower to make an exhibit of their wares and when the eventful days of receiving, March 14th, 15th and 16th arrived they were not found wanting as the Market Building, Charlottetown, where the fair was held, was found to contain the very best in the line of seed, that Prince Edward Island produced during 1910.

Rev. P. D. McGuigau, Pres. of the Association, was at the helm and with him were associated an able staff of assistants, of whom Mr. J. H. Gill, the efficient secretary, was by no means the least active in directing affairs, as smoothly as possible.

In the open classes, there were no fewer than thirty-two (two bushel) samples of White Fife Wheat; seven, White Chaff; fourteen, White Russian and four samples of other varieties. White Banner lead the oats classes in number of entries. Other sections had entries as follows: Ligowo Oats, 11; any other varieties White Oats, 20; Black Tartarian or Norway, 6; Beauty or Old Island, 7; any other variety Black Oats, 5; Two Rowed Barley, 13; Six Rowed Barley, 9; Silver Hull Buckwheat 15; other varieties Buckwheat, 3; Field Peas, 3; White Beans, 3; Colored Beans, 3; Flax, 7; Timothy Seed, 17; Fodder Corn, 1; Garden Corn, 1; Red Clover, 2; Eschallots, 4; Mangel Seed, 1; Turnip Seed, 2; Cabbage Seed, 1; Other Garden Seeds, 1; McIntyre Potatos, 29; Long White Potatoes, 27; Dakota Reds, 18; Rose Type Potatoes, 21; Green Mountains, 10; White Round Potatoes, 9; any other variety Potatoes, 16 entries.

The class for one bushel samples of Hand Selected Grain had the following entries: White Fife Wheat, 10; White Russian Wheat, 10; White Chaff Wheat, 1; other varieties Wheat, 1; White Banner Oats, 10; Ligowo Oats, 4; other White Oats, 6; Black Beauty Oats, 11; Black Tartarian Oats 3; Two Rowed Barley, 11; Six Rowed Barley 6.

The hand selected sheaves of grain were artistically arranged on one side of the hall by Mr. Peter Brodie. There were 5 sheaves of Fyfe Wheat varieties; 9, White Russian; 3 Other Varieties Wheat; 6 Banner Oats, 4, Ligowo oats; 6, other varieties White Oats; 2, Old Island; 2, Tartarian, 6, collections of one sheaf of Wheat, Oats and Barley and 2 collecions for competition by Institute against Institute, sheaf each of Wheat, Oats, Barley, Buckwheat and ½ bus. Potatoes, each of McIntyre, Dakota, Long White, Round White and Rose types.

The total number of entries in the seed classes numbered about 500 and the total number of entries in the Domestic Science Department was nearly as many. The latter deserves suecial mention. The tables set apart for this department were laden with the best that the experienced cooks' art could produce in the lines of breads, cakes, biscuit, pies and pastries, pickles, preserves, jams, jellies, marmalades and home made candy.

In the room adjoining that in which the foregoing display was made was an excellent exhibit of first class poultry, including many of the winners at the fall and winter shows. The exhibits noticed were L. H. D. Foster's Barred and Buff Plymouth Rocks; Messrs. Geo. Lightizer and A. O. F. Gill's White Wyandottes, m. H. Cudmore's Minorcas; Messrs. L. A. Haszard and P. C. Brown's Hamburgs; J. F. Burke's White Crested Polands, W. A. Miller's and Perfection Poultry Yard's Rhode Island Reds, John T. Blanchard's Buff Leghorns, Messrs. Geo. Williams and John Whittock's Brown Leghorns, H. G. Lowe's Black Orpingtons; Haszard and Duchemin's Buff Orpingtons, Harry Riggs' Light Brahmas, W. H. Arbing's White Leghorns and Petersen's Andalusians.

The exhibits in the seed classes were judged by Mr. S. J. Moore, Maritime representative of the Seed Branch, Ottawa; Mr. Donald Innis, Tobique River, N. B.; Mr. F. C. Alward, Havelock, N. B.; Mr. J. A. Clark, Supt. Experimental Farm, Charlottetown and Mr. Baird, Chipman, N. B.

The educational meetings held in connection with the fair were well attended.

On Tuesday afternoon the following programme was carried out. Address on Dairying, by Mr. R. S. Stevenson, Ancaster, Ont.; Address on Fruit growing, by Mr. Thomas A. Peters, Fruit Inspector; Address on The Present Status of Agriculture, by Prof. Theodore Ross, an address on Agricultural Education by John A. Dewar, M. L. A. The various addresses elected some interesting discussions.

Mr. Stevenson's address on Dairying was an especially practical one. He strongly emphasized the necessity of keeping individual records of each cow, the doing away with the robber cow, and the better feeding and stabling of the profit producers. Mr. Ross' address showed the growth of agricultural education and the statistical reports re the expenditures by various counties for the promotion of agriculture. Mr. Dewar's address was brim full of optimism re agricultural education and the large place it is bound to fill in our future history.

On Wednesday, the ladies held a convention in the Board of Trade rooms where they listened to interesting addresses on subjects pertaining to the home by Mrs. Benj. Rogers, and the Misses Dutcher, McLeod, Ross and Dykes. We will publish several of the addresses in future issues. Judging by the interest taken in the women's meeting we cannot see any reason why regular Women's Institutes could not be profitably organized in Prince Edward Island. This sentiment was quite freely expressed at the meetings and undoubtedly, ere long, Mrs. Rogers and her colleagues will see the realization of their dreams.

None the less interesting was the Men's Meetings that were held in the Market Hall, where at 10 o'clock, a. m.,—His Honor Lieutenant Governor Rogers, in an able address declared the Seed Fair formally opened. After short addresses by Hon. Mr. Richards and Justice R. R. FitzGerald, Mr. J. A. Clark gave an interesting talk on Field Crops, in which connection he recounted some of the results of experiments conducted at the Island Government Experimental Farm last year. Mr. Clark is doing a great deal of original research work and is receiving the hearty co-operation of many practical men all over the Island Province.

Mr. Justice FitzGerald, in his address set forth a stirring appeal for pure, unadulterated honesty in dealings between man and man as one of the chief mainstays that tend to elevate a country's produce on foreign markets and bring the farmers, eventually their own.

Addresses by C. F. Alward on Seed Selection, Seth Jones, on Poultry Raising were the chief features of the meeting on Wednesday afternoon. Both the addresses were highly practical and the numerous questions asked by the audience showed that the speakers were talking to a live group of men and women.

On Wednesday evening a large audience listened with keen interest to inspiring addresses by the President, Rev. Mr. McGuigau, His Worship, Mayor Rogers; American Consul, Mr. Deed Meyer; Mr. F. C. Alward, Premier Haszard, Hon. J. A. Matheson, Hon. J. J. Richards and others among whom was Mr. Harvey Mitchell, the efficient representative of the Dairy Division, Ottawa, who gave an instructive and inspiring address showing the results that have been achieved by various dairymen in upbuilding a profitable herd from an unprofitable herd after the principles laid down by the Cow Testing Association had been carefully applied.

Mr. Mitchell is doing good work in Prince Edward Island along these lines and already some excellent results have been obtained by those who are following and adhering to his teachings.

Thursday morning's meeting was devoted to the passing of resolutions. The three most important resolutions asked for:

1. The taxing of dogs as a protection to the sheep raiser.

2. The appointing of a Provincial Ispector for export seed and import commercial feeding stuffs.

3. The transferring of County scholarships from the Prince of Wales College to the Nova Scotia Agricultural College and the increase in numbers of Short Course Scholarships to the latter institution.

The explanation of awards by Messrs. S. J. Moore, Donald Innis, F. C. Alward and Baird brought the most successful series of meetings to a close.

WHEAT.

White Fife—1, A. E. McLean, Southwest, Lot 16; 2, W. K. McGregor, Lot 16; 3, James Carruthers, Carleton; 4, A. A. McBeath, Marshfield; 5, N. Drummond, Brookfield; 6, E. J. Veysey, Little York; 7, W. B. Drake, Cornwall; 8, Locke Jones, Pownal; 9, Hector McLean, New Dominion; 10, Howard Parkman, New Glasgow.

HAND SELECTED GRAIN.

White Frye Wheat—1, A E. McLean; 2, Fred Bulman; 3, Penelope McKinnon.

White Russian Wheat—1, J. H. Gill & Son; 2 A. E. McLean; 3, E. T. Mullen, Dunstaffinage.

White Chaff Wheat—1, Duncan Stewart.

Any other Variety Wheat—1, Peter Jackman, Village Green.

White Banner Oats—1, A. E. McLean; 2, D. P. Ross, Aiken's Ferry; 3, Locke Jones, Pownal, 4, Duncan Stewart.

White Ligowo Oats—1, A. E. McLean; 2, Benj. Mellett; 3, F. Bulman, Rusticoville; 4, W. J. Gibson, Marshfield.

Any other Variety White Oats—1, D. P. Ross; 2, John H. Court, Donaldston; 3, James McLeod, Mermaid.

Black Tartarian Oats—1, Fred Bulman; 2, James Simpson; 3, Ira L. Rodd.

Black Beauty or Old Island Oats—1, Wm Kain, Summerville; 2, Fred Bulman; 3, John Corrigan, Tracadie Cross; 4, G. W. Aiken.

Two Rowed Barley—1, J. H. Gill & Son; 2, Jas. P. Duggan, Bedford; 3, John Cook, Little York.

Six Rowed Barley—1, Fred Bulman, Rusticoville; 2, W. J. Gibson; 3, J. H. Court.

HAND SELECTED GRAIN IN SHEAF

White or Red Fyfe Wheat—1, Patk. McIntyre Bedford; 2 H. McMillan, 3, Jos. A. Hughes, Bedford

White Russian Wheat—1, E T Mullin, Dunstaffnage; 2, J. H. Gill & Son; 3, Jas. Smith, 10 Mile House.

Any other variety Wheat—1, M Henry, Southport; 2, Duncan Stewart, Southport; 3, John Munn, Marshfield.

White Banner Oats—1, E. T. Mullin; 2, Frank Murphy, Augustine Cove; 3, Duncan Stewart.

Ligowo Oats—1, Benj. A. Mellett; 2, W. J N. Gill Pleasant Grove; 3, J. A. McLeod, Darlington.

Any other variety White Oats—1, John H Gill & Son; 2, Richard Creed; 3, Jas. Essory, Union.

Black Old Island Oats—1 and 2, Peter Brodie

Black Tartarian Oats—1, Ira L. Rodd; 2, Patrick McIntyre, Bedford.

Collection of sheaf each of wheat, oats and barley—1, John H. Court; 2 jas. P. Duggan, Bedford; 3, J. H. Gill & Son; 4, W. H. P. Cook; 5, Richard Creed.

Collection—Institute against institute, sheaf each of wheat, oats, barley buckwheat and ½ bus. potatoes each of McIntyre, Dakota, Long White, Round White and Rose Types—1, Tracadie Cross Institute; 2, Excelsior Institute, Little York.

THE MARITIME FARMER.

And Co-operative Dairyman.

Semi-Monthly Journal devoted to the interests of the farmers of the Maritime Provinces.

Official Organ of The Farmers, and Dairymen's Association of New Brunswick; The Nova Scotia Farmers' Association The Nova Scotia and P. E Island Fruit Growers' Associations The New Brunswick Fruit Growers' Association; The Maritime Stock Breeders' Association; The Maritime Bee-Keepers Association, and The New Brunswick Poultry Aassociation.

Subscription Price $1.00 per year. **When paid in advance 80 cts.** Persons taking advantage of the 80 cent rate when subscribing are only entitled to it by paying in advance each year. When subscription gets in arrears, $1.00 per year will be charged. Subscribers are requested to bear this in mind- This paper is sent to subscribers unless a definite order for dis. continuance is given.

The date after your name on the little green label on front Page is, in every case, the time to which your subscription is paid.

OUR GUARANTEE.—With each subscriber to the MARITIME FARMER, we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within one week from the date of any unsatisfactory transaction, with proof of the swindle and loss, and within one month from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said :—**"I saw" your adv. in the MARITIME FARMER.**

Photographs of farm life, when accepted, will be paid for at the rate of 50 cents each. Communications on all subjects connected with farming and stock-breeding are invited. The publishers will pay a reasonable rate for matter of practical value and for agricultural news. Photos and matter not accepted will be returned on receipt of postage.

RATES FOR CASUAL ADVERTISEMENTS.

2 inch—First insertion 75 cents; 2 inches—First insertion $1.50
3 inches—First insertion $2.25.
Contract rates on application.

GO HOME AND WORK.

"Go home and work" were the very significant and appropriate words used by Mr. A. J. Jensen, of Salmonhurst, N. B., at the recent New Brunswick Farmers' and Dairymens' Association in talking to the question of encouraging the dairy industry. His contention was that instead of sitting on the fence and watching for the government to make a move, farmers should go home and forgetting government movements do something for themselves. While we are heartily in accord with the sentiment of the speaker in this respect we believe there is much that the government can do in the line of extension work that will greatly assist the onward move for better agricultural methods. There is no trouble in interesting a man who will say to himself "I will go home and work." The indifferent worker is the man that is sadly in need of government extension work.

But why bother about the indifferent man? Why be anxious for the man who is unwilling to receive benefit from any source which is different from the old way? Is there not enough to do to keep up with the men who want to learn? There surely is enough to do, but it is the indifferent man who is keeping the agricultural industry down, and it is his uplift, the improvement of his farm and the increase of his income which is needed to place farming in the position it should occupy in the business of the world. As for means it ia probably that in a general way the means now in use must be continued. Institutes must continue to be held; the associations must continue their work, hold meetings, discuss the problems and get in new members as they are able, thus gradually interesting the indifferent.

Some of the newer methods, such as the farm specials on the railroads. the demonstration farms of the departments of agriculture, and the work of the cow-testing associations, will reach and convert many of the farmers who otherwise would not be reached at all, for the general advancement of the farming business.

There are men in all kinds of business who will not take up improved methods; not all such men are farmers, as might be thought by listening to the talk of those who think farmers are away behind the times, but in the other industries they are being weeded out more rapidly through their failure to keep up a proper kind of a balance between expenses and income. The farmer who will not improve in his methods has the advantage over the man in trade, for nature will do considerabie for him. Trade is an artificial sort of business in which man can get no assistance from nature. This is the reason why so many men are able to get along in the business of farming, while so many other men fall in commercial businesses.

It is to overcome the failure of many farmers to make the success that is due honest endeavor and hard work in the most essential business of the great world in which God places them, that we are anxious to spread the gospel of better methods in the science and in the business of farming. And perhaps of the two, better business methods are of just as much importance as anything connected with farming. The man who carries on his business of farming in a thoroughly business-like way, according to the standards and methods of the modern business world, is the man who is making the best success of his work.

SEVERAL REASONS WHY.

It is all very well when you have nothing to do but kill time, to talk about keeping the boys on the farm but you might as well spend your time spitting at a crack. Boys will start on a farm as well as anywhere, if they receive decent treatment at home. The boy who is yanked out of bed by the hair, kicked out to milk and cuffed into breakfast, as a preliminary to being popped through the field all day, is not likely to be consumed by his love for glories of agriculture—nor for his sire.

One of the speakers at the recent New Brunswick Farmers' and Dairymens' Association told how his ten-year-old son had come to him when the holiday season opened last year and said "I am going to work for Mr. So-and-So" This set the father to do some good, deep thinking and turning to his son he said, "I will hire you to work for us." "But" said the boy, "I have made my agreement with Mr. So-and-So." The father asked his son to call on Mr. So-and-So and explain the situation and on doing so the would be employer released the boy from further obligations. One job after another was tackled by the boy; his father paid him as regularly as if he were an outsider; the boy was contented and father and son interested each other as son and father should.

Is there not a lesson in this epeside for some other father. Ask yourself the question "Do I use my boy right?" Will your answer be yes? or will it be no?

Give the boy a fair show, and he will stay with you till the cows come home. If you are so mean he can't stay at home, don't you go to you neighbors with a hypocritical snuffle and tell about your boy's ingratitude after you have raised him.

PREPARATION EOR SPRING WORK.

Now that the winter has well nigh spent its force, the progressive farmer will devote his attention to preparing for field work before the land is ready for cultivation. The utilization of every hour to the best advantage when the ground is dry enough to work may mean the difference between a good crop and a partial failure, since, as a rule, the early sown seed makes the strongest growth, and insures the most abundant yield. Moreover the chances of a successful seeding to clover and grass are much better when the grain is sown early. In order that they may do their best work and most of it, the teams, harness and tools should be in the best condition, the horses well fed and groomed, and given sufficient exercise to harden their muscles and impart strength and endurance. When put to heavy work it will pay well in the long run to give them a few easy days at first, increasing the labor only as they are able to do it easily. Bathing the shoulders in the evening with salt water will tend to toughen them and prevent abrasions. The harness should be taken apart, washed and oiled, and the implements of cultivation overhauled, repaired and sharpened, to be in a condition for the most effective work. The cultivator with dull points, which does good enough work in some loose land, may slide along near the surface on the hard hill thus leaving only an inch or less of loose soil for the seed bed, while the same implement, if sharpened, will bring up and pulverize four or five inches of the earth, making a difference of many bushels to the acre in total yield, and insuring a uniform appearance and return from all parts of the field, and an even ripening for the harvest, avoiding loss from shelling in the overripe portion while waiting for the more backward to manure.

The selection, securing, testing and preparation of the seed in good time is also important. Only shouud seed of the most suitable variety for the district, well cleaned and screen out weed seeds and small grains, should be sown, and, in case of any doubt as to the vitality of the seed, testing it by same simple means in the house before seeding time arrives may avoid disappointment and loss. A simble way to test the seed of cereals for germination is to count out a hundred representative grains, place them on a dampened, dark, woolen cloth in the bottom of an ordinary plate put another cloth on top, and invert a second plate over the other, keep the cloths damp, but do not drown the seed with moisture. By the number of grains that sprout and by their promptness in doing so, the germinating quality is determined. With good strong seed, there will often be from seventy-five to one hundred seeds germinated in the first four days but with seed of weak vitality there may be little sign of germinating in this time, though a considerable percentage may start. It is, of course, very important to sow seed of strong vitality with high percentage of germination say 95 to 100 per cent., but, when inferior seed has to be sown, allowance should be made in the quantity sown per acre.

RELATE YOUR EXPERIENCES.

We had a visit from an old subscriber the other day, one who has been a regular reader of the MARITIME FARMER since it was started sixteen years ago. This man is a breeder of pure bred Jurseys, in small but effecent way. He says that he gleans many useful hints from the MARITIME FARMER that are worth a great deal to him every year. He follows the system of soiling his cows in Summer with green peas, oats and vetches a system which he says he learned by reading accounts of the experiences of other dairymen in the MARITIME FARMER. We get many letters similar to this gentlemen's testimony and the moral that we would like to draw is this. "In recounting your experiences in the MARITIME FARMER you may be giving some other reader an unestimable amount of valvable assistance."

SEEK AND YE SHALL FIND.

The deeps of Agricultural pursuits are constantly being explored by practical men and as day by day goes by new light is being continually shed abroad. We cannot all be personally in touch with these men, but we can be able by following closely the experiences which they publish in our farm papers gain an adequate idea of the subject to enable us to grasp it. So thoroughly that we may follow in their footsteps and greatly profit by their teachings.

How Can Alfalfa Growing Receive a Boost in the Maritime Provinces?

Some of our readers will probably have read in the agricultural press about an Alfalfa boom in the Province of Saskatchewan, when futurity prizes have been offered for fields of Alfalfa, to be judged in 1914.

At a meeting of the Sussex and Studholm Agricultural Society, Sussex, N. B., held last November, a resolution was passed asking us to write for information re the methods pursued and recommended that a contest along similar lines be conducted by the New Brunswick department for agriculture.

In compliance with their request we have the following information:

Saskatoon, Saskatchewan,
February 15, 1911.

Editor Maritime Farmer:

"The movement for this competition started during the annual convention of agricultural societies held in Regina in January 1910. The question was taken up heartily and a live discussion ensued, resulting in several prizes being offered then and there by agricultural papers represented at the convention. A little in the meantime. Circulars of instruction have been sent out to officers of the societies. The newspapers and the agricultural press of the West have interested themselves in it and altogether the people are quite alive to the importance of alfalfa growing. We know of no other state or province having taken up this question in the same way as has Saskatchewan."

SASKATCHEWAN PROVINCIAL ALFALFA GROWING COMPETITION.

OBJECTS—To encourage the growing of alfalfa, a leguminous crop which will both enrich the soil in nitrogen and humus, and furnish a highly nitrogenous food for all classes of live stock.

PLAN AND DISTRICT BOUNDARIES.—For the purpose of this contest the Province of Saskatchewan will be divided into four parts, namely: District A, lying south of the Qu'Appelle River and bounded on the west and south by the railway from Lumsden to Regina, and from Regina to Antler. District B, lying south of the South Saskatchewan River and bounded on the east by the railway from Lumsden to Regina thence to Antler. The Lumsden Agricultural Society and the other agricultural societies on the said rgilway lines shall be included in District A. District C bounded on the south by the Qu'Appelle River to the Elbow on the south branch of the Saskatchewan and by the South Saskatchewan River on the west. The agricultural societies of Fort Qu'Appelle and Outlook shall be district C. District D, lying north of the South Saskatchewan River and bounded on the east by the South Saskatchewan. The agricultural societies at Saskatoon, Kinistino, Melfort and Tisdale shall be in District D.

PRIZES.—In each of the said four districts there shall be a contest conducted by the province for which prizes will be offered as provided for below, and there shall also be a grand sweepstakes prize for the best field in the province.

The prizes in each of the four districts and the championship prize are as follows:

1st	$500.00
2nd	400.00
3rd	300.00
4th	200.00
5th	100.00
6th	75.00

Grand Sweepstakes Prize for the best field in the Province, Silver Trophy, value $250.00.

RULES.

1....Each contestant must be a paid up member of the nearest agricultural society.

2. Entries will not be received for alfalfa fields farther than twenty (20) miles from the nearest agricultural society.

3. Each field entered for the competition shall consist of not less than ten (10) acres.

4. No artifically irrigated crop will be eligible for entry in this contest.

5. The crop must have been seeded not later than 1912.

6. The crop must not be cut in 1914 until it has been judged in both the local and provincial contests.

7. All contestants must furnish the Director of Agricultural Extension Work from time to time, details concerning the growing of the crop on forms supplied by him.

ENTRY.

8. Each contestant shall be eligible to have only one entry.

9. Entry must be made by the contestant to the Director of Agricultural Extension Work on or before Aug. 1, 1913.

10. Each contestant shall pay an entry fee of $5.00 which must accompany the entry and be paid in to the Director of Extension Work not later than August 1, 1913. All fees paid in to him shall be credited to the society to which the contestant belongs, and shall be paid into its treasury when the society has satisfied the committee that it has complied with rule 12 and the otner regulations governing this contest.

11. Each agricultural society shall send to the Director of Agricultural Extension Work before August 1, 1912, a list of its members who purpose to enter the competition.

JUDGING.

12. Each agricultural society having two or more contestants in the provincial alfalfa growing competition shall hold a local contest in 1914. In case the society does not comply with this regulation, the Director of Agricultural Extension Work shall arrange for holding the contest and defray the expenses of the same out of the fees collected from such contestants as are members of the said society. Should the entry fee received from the members of any society exceed the amount of the expenses of the contest, they may be used in defraying the expenses of the provincial contest.

13. Each agricultural society shall be responsible for judging the fields belonging to its members in the societies' local contests.

14. In the agricultural societies' contests judging shall be commenced on June 22 or 23, 1914 and be completed by Wednesday, June 24, 1914.

15. The Director of Agricultural Extension Work will arrange the plan of judging the prize winning plots in the local competition so as to determine the winners in each of the four divisions of the province in the provincial competition and the champion field of the propince

EXPENSES.

16. The agricultural society shall meet all livery expenses while the fields in its district are being judged. The Department of Agriculture will

Reading from left to right. Top row—Marcel J. Poirier, R. A. Smith, Wm. D. Johnson, C. A. Harrison, D. L. Daigle. Middle row—H.H. Smith, Treasurer; A. J. Jensen, Vice-President, Col. H. Montgomery-Campbell, President; Geo. E. Fisher, Corresponding Secretary; Bliss M. Fawcett, Recording Secretary. Lower row—C. C. Hansen, Edgar Shamper, Robert Reynolds, Isaac W. Baird.

Officers of the New Brunswick Farmers' and Dairymen's Association, 1911-12.

bear all the expenses in connection with the provincial contest.

17. The judging in the provincial contest shall be commenced on Wednesday, June 24, 1914.

ALFALFA GROWERS SHOULD KNOW:

1. WHAT TO SOW. Alfalfa seed of a hardy strain and free from noxious weeds. Turkestan alfalfa is the kind most commonly grown, but the home grown seed if it can be procured is likely to be the best.

2. WHERE TO SOW.—Alfalfa thrives best on well-drained, well-tilled, firm, fertile loamy soil. Potatoes or other hoed crops leave land in good condition for alfalfa. Likewise a summer fallow, if there is not a danger of drifting, will give good results. Stubble land, plowed in the spring, well harrowed and packed, makes a good seed-bed if cultivated until it is of the required firmness. Spring plowed land is not so liable as the summer fallow to drift.

3. WHEN TO SOW. — Alfalfa should be sown when there is sufficient warmth and moisture to insure quick germination and rapid growth. This condition is usually found about the last half of May or early in June.

4. HOW TO SOW.—The best way to sow alfalfa is with a wheel-barrow broadcast seeder at the rate of from 12 to 20 pounds per acre. Harrow with light harrows so as to cover the seed to a depth of from 1 to 1½ or 2 inches. The seed should reach moisture but should not be placed too deep in the soil, hence the necessity for careful tillage. Alfalfa may be sown by hand or with an ordinary grain drill if the seed is mixed with chopped wheat or barley so that the quantity per acre may be carefully regulated. By using half the desired quantity of seed and sowing the plot a second time at right angles to the first sowing, better results may be obtained. Apply about 100 pounds per acre of soil from an established alfalfa field so as to introduce the bacteria which are essential to the healthy growth of alfalfa, and are not present naturally in all soils.

SOME ALFALFA DON'TS.

Don't sow alfalfa in land that is liable to be flooded.

Don't attempt to grow alfalfa in loose soil.

Don't expect every kind of alfalfa seed to produce equally good results.

Don't cut a hay crop the first season.

Don't allow the weeds to seed in your alfalfa plot but run a mower over them whenever they attain sufficient growth.

Don't clip the alfalfa too low as this will injure the crown.

Don't mow the alfalfa after August but leave a good growth of from 8 to 12 inches to collect the snow and protect the plants during the winter.

Don't turn your alfalfa patch into a hog pasture. Alfalfa should not be pastured before the second or third year.

Interested in Alfalfa.

Editor Maritime Farmer:

I have been a subscriber to your paper for a number of years and find it a great help in over-coming farming problems. I am much interested in the growing of alfalfa. I have tried it on two different occasions but I did not treat the seed and the first year it only grew slim, pale stalks. I think it will grow on many Maritime farms if it is grown under the right conditions. I intend to sow about an acre of it next spring and have plowed in thirty-six one-horse loads of stable manure on land which I had in oats last year. The soil is light and loamy and has a southern well-drained slope. It will grow red clover and give good crops. I have lots of slab wood ashes on hand—about fifty-two horse loads. Would it be a good plan to spread some ashes on the land which I intend to seed with alfalfa? Did I do right by turning the manure under in the fall?

In regards to boosting alfalfa in the Maritime Provinces I would say that the Government could help in this way if it would supply the nitro-culture and procure the seed from some reliable party to re-sell to those who want to sow it. It would be necessary to find out how many farmers wanted to sow it and send the seed to each district. If a farmer sends to a seed house for alfalfa seed it costs twice the amount that the seed is worth before it is delivered. If the College Farm, at Truro, would get the seed and then sell it to those who want it, I think it would be a good idea.

Will alfalfa grow where Red or Alsike Clover hoes well?

Will it kill out where the snow blows off and is bare?

Does it have to be manured every year to give a good crop and does it grow well after it is well established.

ARMER.

Moose River, N. S.

Ans.—Ashes contain a high percentage of potash and lime. It has been found that an application of lime to soil on which alfalfa seed is sown is very beneficial, so you would make no mistake in applying a liberal quantity of ashes. Tne only out-look in this case would be that if your soil were rich in potash perhaps you could use the ashes to better advantage on some other part of your farm and use commercial lime on your alfalfa plot.

In regard to plowing manure under last fall, we believe the idea is all right as it can be more easily incorporated in tne soil early in the spring and will be readily available for the young plants.

Alfalfa should do all right on land where Red Clover and Alsike thrive, providing the proper nodule producing bacteria are there.

After a field of alfalfa is properly established it does not require so much fertilizing as do other crops, as the plant gleans its supply of nitrogen from the air and as its root system is very extensive it forages for the other elements of plant food to a great depth.

On well drained soil that does not heave with the frost, there is little danger of alfalfa being winter-killed once it has gained a good root system. Even if the tender crowns are injured other shoots will grow.

Kind of Alfalfa Seed.

C. H. McKinley, Alma, N. B.:—Please let me know what kind of Alfalfa seed is best suited to this part of the county.

Long before this time should we have known what was the best kind of Alfalfa seed for the Maritime Provinces. Not, to our knowledge, has there yet been made a practical study of the subject; and without doubt it will be a fruitful field of investigation. Guiding principles in the selection of seed would be the purchase from reliable individual growers or seed merchants seed that was grown near our own latitude and under similar climatic conditions Our best Canadian investigators are however, rather non-commital as to the superior hardiness under Canadian conditions—of some of the highly recommended seed from the United States. Alfalfa as a plant has many families and strains and within these is a wide range of marked individualities. Possibly the best method to pursue at present would be to select clean, well matured, plump and good colored seed in the open marked and then each farmer keep in view a seed plot of his own. In case of winter killing, by all means protect any plants that may survive. These plants will be the keynote to selection by adaptation, and they are the most prolific in seed production when they have ample room for growth.

Bye and bye we find the answer to this question and each farmer can help to bring it to pass. Let it be soon; let it be soon.

C. W. McDougall.

Good Drainage is Easential.

One of our poorest fields of 10 acres that was full of limestone and very hard to cultivate was sown to alfalfa. This was a very stiff clay and with the solid rock near enough the surface in places to quarry, with one small area containing no soil, the blue clay forming the surface. Although quite rolling it is in places spongy; clover was always a fine crop and commonly on the wet places as well. Oats did well, corn poorly

You Can Get This Gramaphone on

FREE TRIAL

We will send to any responsible person this Victor Gramophone and twelve selections for an absolutely free trial. We do not ask any money down or in advance. There are no C. O. D. shipments, no papers of any sort to sign. Absolutely nothing but a plain out-and-out offer to ship this Gramophone and the selections mentioned on a free trial so that you can hear it and play it in your own home. There is no catch about it anywhere. If you stop and think a moment you will realize the high standing of this firm would prohibit anything except a straight, forward offer.

ALL YOU NEED DO

All we ask you to do is to invite as many as possible of your friends to hear the wonderful Victor Gramophone. We feel certain that out of the number of your friends who will hear your machine there will be at least one and probably more who will want a Victor of their own. If they do not, if not a single one of them orders a Gramophone, we will not blame you in the slightest.

IF YOU WANT TO KEEP

If you wish to make the Gramophone your own, you may do so, but it is not compulsory. This is a free trial. You may send it back at our expense if you wish. We won't be surprised, however, if you wish to keep the machine after having it in your own home. If you wish to keep it, either remit us the price in full, or if you prefer, we will allow you to pay for it on the easiest kind of payments.

OUR EASY PAYMENT PLAN

There are so many people who really want a Gramophone, but who do not have the ready cash to pay for it all at once, that we have decided on an easy payment plan that gives you absolute use of the Gramophone while making small weekly or monthly payments. Just sign your name and address on the coupon now, and mail it to us to-day.

J. A. McDonald Piano & Music Co.,

and wheat often froze out in early spring.

On our first trial we made a plot test of lime, phosphorous, inoculated earth and stable manure. The last named only produced any noticeable results, and this we credited to the mulch more than the fertilizer applied.

After sowing three years we have decided in favor of late fall plowing with thorough and deep disking in early spring, followed with frequent light harrowing after each rain until all the summer seeds have been sprouted that lie near the surface. This will require personal knowledge of your soil. We can safely sow the last of June on our soil. The earliet the better providing the weeds can be controlled as the root system is stronger and better able to withstand the winter.

HOW MUCH SEED TO SOW.

Fifteen pounds seed to the acre is an abundance and will make it much thicker than it can grow. A finely pulverized surface with solid seed bed beneath is a much greater factor than a few pounds of seed more or less.

The first season we clip the growth as often as the weeds grow as high as the alfalfa, and neglect to do this means certain failure. During the winter it is a great insurance toward a perfect stand to top dress with strawy manure. We will sow no more than we can give this treatment in the future.

Last year we harvested four times with a little less than four tons to the acre. One of the most important lessons we have learned is that the field must have the drains as the richest of the field is growing nothing.

There is no question regarding alfalfa being a success in Ohio. Possible the extreme of future possibility is expressed in the 1½ acres along the Miami river that last year produced 11 tons of hay.

A small lot near the barn sown two years ago as described and all through March looked as green as the wheat field beside it. The sows and young pigs have done finely on it. The small pigs creep through the fence and may often be seen eating the alfalfa. The chickens prefer it to blue grass and clover which is in abundance about their runs, and from the same number of hens we never gathered so many eggs.

During the winter we gathered the alfalfa chaff where it accumulated on the barn floor and after pouring boiling water on it a small amount of mill feed was mixed with it and given to the hogs. It was very cheao source of protein and went nicely with a corn ration for brooa sows.—Wm. M. Cook, Preble Co., O.

A New Brunswickers' Experiences.

Editor Maritime Farmer:—

As you have been using considerable space of late trying to boost Alfalfa, would you spare me a few lines. The few notes which I will give this time will likely be of little use, however, it may help to keep the good work moving on.

In the spring of 1909 I sowed 1-3 of an acre with one pound of Turkestan Alflafa seed, bought from Wm. Rennie & Co. The crop on plot in 1908 was roots. I sowed with the alfalfa, barley at about 1 bushel per acre. The Alfalfa came on fine and grew very thick. I used no culture and gave it the same care as any new seeded land. In the fall, when the grain was cut the alfalfa was in bloom, and a good height. Last spring part of the plot looked fine, as it wintered all right, the most of the plants had splendid crowns, and their root growth was very large. On quite a number of roots nodules were found, which shows there is a possible chance of growing Alfalfa without soil from an old Alfalfa field or culture.

Last spring, I put down another plot of Alfalfa, size of plot 1-10 of an acre. I used on this plot soil from an old Alfalfa field, and part of the piece I put lime at 200 pounds per acre, and on part at 400 pounds per acre.

I will not now make a report of last years crop, however, when spring opens and when I can see how those little plants out there in the the Alfalfa plot has stood the winter's blast and frost, I will give a detailed report, as I tried on the same plot the common and the Turkerstan Alfalfa, with and without lime..

You have asked for suggestions how to "Boost Alfalfa Growing in Maritime Canada." Would you excuse me if I suggested that you have a special number of The Maritime Farmer this coming spring and call it the "Alfalfa Number," and have it well filled with the story of Alfalfa growing, with all the good things about it, its nature, its history, etc.

IRVINE H. DUNFIELD.
Portage Vale, Kings Co., N. B.

The Second Maritime Horse Show.

April 4th, 5th and 6th, 1911 are the dates set for the second Maritime Horse Show, in the Winter Fair Building, Amherst, N. S. The success attained by the first Maritime Horse Show in 1910 far exceeded the most sanguine expectations of its promoters, The Maritime Stock Breeders' Association. We understand that the prospects are good for a big entry, including many St. John and Halifax Horses. All exhibits will be returned free and exceptionally low passenger rates have been secured. The Maritime Horse Show is destined to be a potent factor in the improvement of horse breeding and training in Maritime Canada and as such it deserves the hearty co-operation and support of all Maritime horse men and general public. Further the cause by exhibiting your horse. If you do not chance to have a show horse you can assist materially by swelling the gate receipts by your attendance. Mr. F. L. Fuller, Truro, N. S., is the Secretary Manager. He will gladly send you any desired information re the Show.

New Brunswick Dairy School.

The Dairy School at Sussex opens on the 20th inst, with courses in Buttermaking, both creamery and home dairy, soft cheese making in the home and milk testing with which are included lecutures upon the Care of Dairy Animals, embracing the prevention and cure of diseases and information as to feeding, etc.

These courses are free to all residents of the Maritime Provinces and provision is made for ladies; who are especially invited. The Intercolonial Railway give a round trip to and from the school at single fare on the Standard Certificate plan. The courses conclude on the 31st of March and the two weeks' course in Factory Cheese making begins on the 4th of April.

Full information may be obtained from C. W. McDougall, Dairy Superintendent, Sussex, to whom applications should be made.

A Sole of Steel.

The wet weather of the past season was responsible for much sickness; and this sickness chiefly due to colds—rheumatism, catarrh, pneumonia, and the ever prevalent grippe.

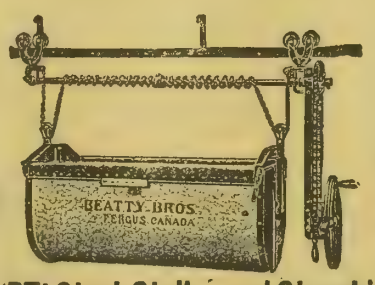
In ninety cases out of every hundred those colds were the result of exposure to weather and wet feet. Folks have not time to wear rubbers, and, besides, all kinds of overshoes or rubber boots wear out quickly and are not practical for heavy, everyday wear. Even the heaviest leather seems inadequate protection, and one of ordinary make heavy enough to be water proof is very apt to be clumsy, uncomfortable, and of short wear. Nothing is so nerve-wrecking as sore feet. History tells us that Napoleon's feet cost him Waterloo—He stopped too long for a hot foot-bath. But anybody who has suffered with aching feet will agree that an Empire was well lost to gain foot comfort. Any shoe which guarantees weather protection and is easy to wear, ought to find a wide and useful field. And it does. There is a shoe on the market which is as remarkable as it sounds—one in Toronto and they have a wide market especially among those whose work exposes them to weather. And it does not seem to matter what weather. This steel shoe keeps the feet dry and warm in the winter and cool and dry in the summer. It protects from perspiration no less than outside damp. The "rub" lies between shoe and sock saving the friction which in leather shoes induces bunions, corns, and all the ills of swollen, aching feet. "Steel Shoes" sound heavy, but experience proves the contrary. They are lighter than ordinary thick-soled shoes, and neat in shape and appearance. The sole and lower portion of the shoe is of seamless steel extending one inch and more all around the upper, inviting the wearer to wade, if necessary. Wet ploughed fields, marshes or flooded roads, muddy streets, the wet concrete floors of creameries, grimy factories—all the same to the man or boy in Steel Shoes.

One vital point which ought not to be overlooked is the immunity which these shoes secure from lockjaw, blood-poisoning, and such serious troubles as result from rusty nails, wire, splinters, etc. The wearer is insured, too, against slipping, as the soles are fitted with adjustable rivets which can be replaced by the wearer for a trifling sum. And the makers have such confidence in their product that they send a pair on trial to be returned if unsatisfactory. But sightly, comfortable, and a guarantee against grippe—these Steel Shoes are altogether well worth the cost. Our advice to those who have not seen these Steel Shoes is to write a postal for the booklet—"The Sole of Steel"—Address: The Steel Shoe Co., Dept. 25, Toronto, Canada, and get all the facts. They are mighty interesting. See advt. in another part of paper.

For Better Seed Oats.

On another page of this issue will be found the advertisement of Joseph Read & Co., Ltd., the only seed firm in Prince Edward Island, that has installed a proper separating plant for taking the large kernels out of the ordinary oats for seed purposes. They have found it impossible to get satisfaction by having the farmers reclean the oats themselves, as there were just enough careless and dishonest men amongst them to occasionally give trouble. One of the directors of the company, Mr. A. E. McLean, is a farmer and a member of the Dominion Seed Growers' Association and the greatest prize winner in Prince Edward Island for seed oats. This company is making a specialty of the seed oat business and hope eventually to make a National reputation for supplying the best seed oats in the wotld.

Buy a "BT" Litter Carrier



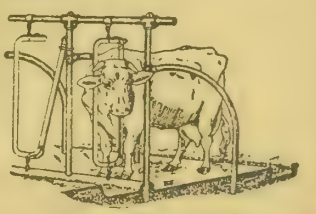
and save yourself the dirtiest and most disagreeable job about the farm. With a litter carrier four barrow loads of manure can be removed from the stable at one time—no heavy wheeling, no climbing through snow or mud. If desired the manure can be dumped directly into a wagon or sleigh and save reloading. The "BT" Litter Carrier has splendid features of advantage over other makes, which we would like to tell you about.

'BT' Steel Stalls and Stanchions Should be in Every Stable

Because

They will make it easier for you to keep your stables clean
Having Sanitary stables means more profits.
Every cow should be kept clean and comfortable. With "BT" Stalls and Stanchions this is made possible.
Be up-to-date and equip your new stable with modern fittings.
They cost no more than the old style and with cement floors Steel Stalls and Stanchions will practically last a life time.

We have just gotten out our new catalogues on both the above lines. If you are interested send us your name and address and we will mail you copies of same. In writing let us know how many feet of track you expect to require and how many cows you intend stabling.



Write To-Day To

BEATTY BROS., - Fergus, Ont.

The Prince Edward Island Provincial Seed Fair.

Another page has been added to the history of the P. E. Island Seed Fair and on that page is inscribed the "best ever." The 8th, 9th and 10th were in reality red letter days for the farmers of P. E. I. The weather was all that could be desired and the attendance the largest and most enthusiastic on record. The entries in both departments, the Seed Department and the Household Science Department, attained the 1800 mark far surpassing in number and quality those of previous years. The judges, at the head of whom was Mr. Donald Innis, the pioneer and progressive farmer of the Tobique, N. B., were unanimous in their verdict that never before had they been called upon to judge superior grain than that exhibited in all the sections. Such advance had been made according to one of the judges, during the last five years that grain taking 10th place at the present seed fair would have carried off first prize at the first Provincial Seed Fair in Summerside.

A very interesting section of the Household Science Department is the handicraft section which has been added this year.

The educational programme was well and wisely filled and never before in the history of agriculture on the Island was such interest manifested in these educational meetings.

At these meetings Prof. Ross discussed "The Development of Agriculture," and by his charts showed the growing interest in agriculture by the increase of monies voted and spent for agricultural education and development in Canada and the United States. Another phase of this development and progress he traced out by noting the rapid expansion, during the last ten years, of agricultural publications. He had a word of commendation for The Maritime Farmer for making good every time by supplying such excellent matter to the farming community and for keeping it in the very forefront with the best publications of this kind in America.

Mr. Alward, of Kings County, N. B., spoke on the value of good seeds and by the aid of charts made his theme most interesting. He closed his instructive and practical address by an eloquent appeal to the farmers for co-operation and closer union among themselves.

Mr. J. A. Clarke, of the Experimental Farm, laid before the farmers of the Province the results of his experiments and gave them much useful and practical information. It may be noted right here that Mr. Clarke has broken the world's record for the production of oats per acre the last season.

Mr. Harvey Mitchell, of the Dairy Department, Ottawa, gave an address which was extremely practical. He laid particular stress on the importance of our dairy industry and emphasized the good results derived by testing every cow and weeding out the boarders. He spoke at length on the remarkable results achieved in a comparatively few years by Denmark, which is now producing $50,000,000 worth of creamery output, after feeding her population of 2,000,000. He called the attention of the farmers to the fact that we spend three years in producing per cow what Denmark peoduces in one year, since our average in these provinces is a little better than 3000 lbs. per annum, whilst in Denmark the average has gone beyond the 9000 mark. He gave instances of P. E. Island herds where selection, weeding and testing had produced good results and one herd in particular, that of Mr. Walter Lea, of Victoria, which had averaged 10,000 per cow during the last year.

Rev. Dr. Gauthier, President of the Fair, as is his wont had a good word to say for the boys and girls and he pleaded eloquently with the parents to give them a chance by taking them in as responsible partners in their agricultural ventures. In his evening address he spoke of the school, the home, and the roads, three indexes by which we may safely also spoke in eulogistic terms of the judge the standing of a country. He Agricultural College, at Truro, but declared that P. E. I. should not and ought not to go there a begging.

In the Household Science Department addresses were given by Miss Jean MacLeod on the "Educational Value of Domestic Science"; by Miss Dykes on "Sanitation of Public Buildings," and by Mr. Deeameyer, U. S. Consul, on the "Influence of Women on Society."

Hon. John Richards spoke to the ladies on the "Organization of Woman's Institutes" and he was enthusiastically received. Immediate action will be taken up in this direction by the Department of Agriculture.

To sum up these days were full of inspiration to the farmers towards higher ideals and it was the general impression oft and by many expressed, that such meetings are productive of more lasting good to farmers than the autumn shows and exhibitions with their fakirs and horse trots.

COL, ISLAND WEED SEEDS, INJURIOUS TO CROPS TO BE NAMED.

1, Harry L. Fowler; 2, Robt. Laird, N. Bedeque; 3, Alex. Laird, Charlottetown; 4, Alex. Laird, North Bedeque.

COL. ISLAND WEEDS PRESSED MOUNTED AND NAMED

1, Blanche McLean, Lot 16; 2, Margaret L. Murray, St. Eleanors; 3, Mrs. Willard McDoull, St. Eleanors; 4, Alex Laird, Charlottetown.

SPECIAL PRIZES.

Richard's Cup—A. E. McLean, Lot 16. This cup was won by Mr. McLean in 1909 and 1910, and now becomes his property.

Heartz Cup—Frederick Ballman, Rusticoville, W. H. McGregor, Central, Lot 16, was a close competitor.

Carter & Co.'s Prize—Joseph F. Henderson, Bedeque, with W. H. McGregor closely following.

Fertilizer For Potatoes.

Editor Maritime Farmer:

Will you kindly give me some information about home mixed fertilizers for potatoes, the different ingredients and how and where to get them. Also about what the cost for material per ton for, say, a 10 per cent potash and 4 per cent ammonia, and 10 per cent Phosphoric Acid and if hardwood ashes would do as a base for the same? Would it be rich enough in Potash? At the market price of potash and lime what is good hardwood ashes worth per barrel? I am a farmer and have been using from 3 to 5 tons of fertilizer a year and it seems to me that the prices asked by dealers is too high. I have been a subscriber to your paper ever since it started and find it very useful and would not be without it if it cost three times the money.—E. F.

REPLY BY WALTER SHIPLEY OF THE POTASH SYNDICATE.

Under average conditions the following mixture should give very satisfactory results. The quantities given are per acre:—

200 lbs. Sulphate of Potash	$6.00
400 lbs. Acid Phosphate	$4.00
150 lbs. Nitrate of Soda	$4.50
750 lbs.	$14.50

Where a light dressing of barnyard manure is given the Nitrate of Soda could be cut down to 100 lbs per acre.

These ingredients can be obtained from all reliable fertilizer dealers. We would suggest writing to Anglo-Canadian Chemical Co., St. John, N. B.

We would not recommend using a 4 per cent. Nitrogen, 10 per cent. Phosphoric Acid, 10 per cent Potash mixture on Potatoes as, while the percentage of potash is correct, the percentage of Nitrogen and Phosphoric Acid are unnecessarily high. Wood ashes are sometimes used as a source of potash, but as their potash content is so small and very variable their use can hardly be recommended. They are also said by some authorities to have a tendency to produce "scab" in potatoes. Owing to their variable percentage of Potash it is impossible to give any definite value, but good, unleached ashes containing 5 per cent. of potash would be worth about $5.00 per ton. Hardwood ashes would do very well for a base but, for the reasons given above, their use is not recommended.

Experiments have proven that better results can more ecobomically be obtained by using a mixture similar to the one given above.

REPLY BY PROF. SHUTT, DOMINION AGRICULTURAL CHEMIST.

1. The proportions of the several ingedients most advantageous to use would depend to a considerable extent on the nature of the soil, its manuring and cropping. On a clay

soil, in fairly good condition, I should suppose a fertilizer containing Nitrogen 2 to 3 per cent., Phosphoric Acid 7 to 9 per cent., and Potash 4 to 6 per cent. would answer. Again, on a light soil, rather sandy and poor, the proportions might be Nitrogen 3 to 4 per cent., Phosphoric Acid 8 to 9 per cent., Potash 8 to 10 per cent.

If we take Nitrate of Soda, say 16 per cent. nitrogen, Superphosphates, say available phosphoric acid 14 per cent., and Sulphate of Potash, say, actual potash 50 per cent., as the ingredients more readily obtainable, we might suggest the following formula for a medium loam in fair condition.

Nitrate of Soda .....150 lbs.
Superphosphate .....300 lbs.
Sulphate of Potash .....100 lbs.
300 to 800 lbs. per acre.

A certain proportion of the Nitrate of Soda (say one half) may be reserved until the potatoes are a few inches above ground and then applied.

2. Hardwood ashes of good quality should contain in the neighborhood of 5½ per cent potash and 2 per cent phosphoric acid. They do not furnish any nitrogen and consequently their use might necessitate an application of Nitrate of Soda for the best resdlts. They may be used to would be well to apply them in the advantage for potatoes, though it autumn before planting, or, at all corportaed with the soil some little events, have the ashes thoroughly intime before putting in the potato sets.

Assuming the weight per bushel to be 50 lbs., the value of this quantity should lie between 15c and 20c, but we serongly advise buying only on a guaranteed analysis. There is much opportunity of fraud in this matter of ashes; they may be partially leached, unduly wet or loaded with sand or coal ashes without much fear of detection unless analysed.

We cannot quote prices nor recommend firms, but most probably it would be advantageous, from freight considerations, for the New Brunswick farmer to obtain his materials from one or other of the wholesale fertilizer firms in St. John. The quantity ordered affects the price considerably and therefore it is well to indicate what may be required when asking for quotations.

Importation.

The "Scottish Farmer" says:—

Trade for 1911 has opened briskly. A fortnight ago between 60 and 70 head of pedigree Clydesdales were shipped per the Donaldson liner Cassandra to St. John, N. B. This is a more convenient port for Canada than any on the United States coast, there being no finical Customs arrangements to adjust. The shippers last week were to all parts of Canada.

Mr. A. H. Thompson, St. John, N. B., as nearest the port of landing, may be mentioned first. He shipped nine, purchased from different owners in various localities. He had several from Mr. Ja...es Dick, Ballinton, Blair-Drummond. A two-year-old filly was by Arnprior (14571), a son of the champion Baronson (10981); a three-year-old was by the Dunblane, Doune, and Callander premium horse Baron Ruby (11268!; and another, of the same age, was by the Stirling premium horse Argosy (11247); and yet another was by Baron Cedric (12818). A two-year-old filly was by Blacon Snsation (12487), which won premiums in various districts; and a yearling colt was by Arnprior, already referred to. A three-year-old colt by the well-known black horse Petruchio (9967) was bought from Rattray's trustees, Ross, Maddderty; a six-year-old stallion by Crathorne (11669), the Duke of Montrose's premium horse, was bought from Wisely & Sons, Ltd., Mannofield, Aberdeen, and another of the same age, King of Drumry, (13,509), Xol. IX., dark brown, foaled 1905. Bred by William Veitch, Dru ry, Drumchapel, Dumbartonshire. Sire, "Hiawatha," (10,067), Vol. XVIII. Dam, "Jessie M'Kinlay," (20,146), Vol. XXX. Sire of Dam, "Royal Alexander" (9997), Vol. XVII. Gr.-Dam, "Irene" (2714) Vol. VI. Sire of Gr.-Dam, "Farmer," (286), Vol. I. G.-Gr.-Dam, "Jess of Ardoch" (323), Xol. II., by "Clansman" (150), Vol. I. G.-Gr.-Dam, "Nancy" (82), Vol. II., by "Victor" (892), Vol. I. G.-G.-G.-Dam, "Old Nancy," by "Briton,'j (1082) Vol. II.

"King of Drumry" is a capital thick, well-built horse, up to a good size, with rare good feet and legs, good clean broad bones and beautiful, close, straight action. A glance at his pedigree will show that he is one of the best bred horses that ever travelled in Scotland, and all over he is a horse of splendid quality, a typical Clydesdale, and in every way fitted to get first class stock for show-yard or market. Those who use him will find it to their advantage.

SIRE.—His sire "Hiawatha," won first prize at Newton Stewart in 1893; first at Newton Stewart and Straraer in 1894; the Girvan and Ballantrae Premium in 1895; the Hamilton Premium in 1896; the Dalkeith Premium and third at the Stallion Show in 1897; the Glasgow Premium and

WEAK MAN, GINGER UP!

Arouse Yourself, Feel the Spark of Life in Your Nerves, Recover the Vigor You Have Lost.

If you are a man whose youthful vitality has been wasted by indiscretions, excesses or overwork, I want to assure you that there is a positive remedy for your trouble. If your condition is that of exhaustion, or feebleness, the very element which you have wasted, viz., human electricity, can be put back into your body. When you get it back your weakness will disappear, and you will become strong in nerve, brain, muscle, and every organ, and filled with joy that you are once more a perfect specimen of manhood. **DR. McLAUGHLIN'S ELECTRIC BELT** will fill your system with the power you have lost. It does this in a gentle, glowing, soothing way while you sleep. You get up in the morning refreshed, all aches and pains disappear, and you feel strong enough to attempt and accomplish what any other man can or may. It makes you feel like a new man, because it restores and develops the vigor originally given to men by nature.

Pick out the men who have worn my Belt. See them, with head erect, chest expanded, the glow of health in their cheeks, courage in their hearts, and a clasp of the hand that tells you: "I am a man."

To those who are tired of paying without results, and to those who doubt if anything will help them, I make this offer: If you will secure me my

PAY WHEN YOU ARE CURED

I will let you have my Belt without paying me one cent in advance.

The Dr. McLaughlin Electric Belt is a cure for all signs of Breakdown in Men and Women. The Vitality of the body is Electricity—the force in the Nerve Cells. My Electric Belt will give you back this power and enable you to fight on in the Battle of Life!

The Dr. McLaughlin Electric Belt cures Neurasthenia, Hypochondria, Nervous Prostration or Nervous Weakness, Headache, Sleeplessness, Stomach Trouble, Indigestion, Constipation, Weakness of the Kidneys, Lame Back, Rheumatism, Lumbago, Sciatica, Neuralgia, Poor Circulation, Urinal Trouble, Weakness of the Organs, Night Losses, all evidences of Premature Decay.

NERVOUSNESS---SLEEPLESSNESS---RUN DOWN

Dear Sir,—One year ago last February I was taken with Nervous Exhaustion (the doctors pronounced it). I suffered all the tortures of that disease; was all run down, so weak I could hardly do anything at all. Since I began to use your Belt there has been a marked improvement in my condition in the different ways mentioned. I have slept well every night since wearing your Belt, which is one of the greatest blessings of mankind. I have a great deal more ambition; work used to seem such a mountain, now it seems more a pleasure; more strength and vim; memory better; digestion better; constipation about gone, which I was bothered with a great deal; head feels better, and I feel far better in every way.

Yours truly, NELSON ROSE, South Bay, Ont.

ALFALFA SEED . . FREE

WE want farmers in the Maritime Provinces to become better acquainted with us and our seeds. We use the utmost care in selecting our seeds, but unless you give them a trial you will probably never know what you are missing in not getting them direct from us. With a view to our getting in touch with each other—to both our mutual advantage—we are going to offer, for a limited time, a one-half pound package of Alfalfa Seed absolutely free—one package only in a family—to each and every farmer who sends for our seed catalogue. Sending for catalogue does not in any way bind you to buy from us. Write to-day and get one-half pound Alfalfa seed free.

Geo. Keith & Sons,
124 King St., E. Toronto, Ont.
Established 1866.

This offer is not binding unless you mention the Maritime Farmer when writing.

first in the Aged Open Class, and winner of the Cawdor Challenge Cup in 1898; first in the Aged Open Class and winner of the Crawdor Cup, also first at H. & A. S. Show at Edinburg and winner of the Prince of Wales' Gold Medal in 1899; first at the Glasgow Summer Show and the winner of the Duke of Montrose Plate also the Duke of Portland's Cup at Ayr Show in 1900; and first at the Glasgow Stallion Show and winner of the Cawdor Cup both in 1901 and 1902. His "get" have won leading honors in all the National show rings, and include the champions "Marcellus", "Hiawatha", Godolphin" and "Labori" amongst stallions, and "Lady White" and "Minniewawa" amongst mares.

Gr.-Dam:—His grand-dam, "Irene", was one of the finest mares ever seen in Dumbartonshire, and easily one of the best ever got by the celebrated "Drumflower Farmer." In the early eighties she was a well known figure at the country show when she repeatedly carried off premier honors. Her sire, "Drumflower Farmer," won third at the H. & A. S. Show at Dumfries in 1870, receiving the Machars of Wigtown Premium in 1876, and the Premium for Dumbartonshire in 1877 and 1878. He also is well known as the sire of a class of excellent breeding mares, and amongst his sons may be named the celebrated prize horses, "Disraeli" (234), "Sir Colin (777), "Druid" (1120) and "Knight of Snowden" (2212) all four first prize winners either at Glasgow or the H. & A. S. Shows, and "Druid was champion at the R. A. S. E. International Show at Kilburn in 1879, beating the world-famed "Darnley."

Thus it will be seen that King of Drumry possesses the very best of Scottish Clydesdale blood.

The following extracts from the table of winning sires in 1910 published in the Scottish Farmer Album for 1911 may be of interest. Of the hundreds of stallions represented at the Scotch Shows you will notice "Hiawatha" (10067) stood second on the list of winning sires to the world renowned "Baron's Pride" (9122), with four less representatipes, "Hiawatha" had five champions to "Baron's Pride" three:—

	Prizes.	Firsts.	Seconds.	Thirds.	Champ.	Animals.
Baron's Pride (9122)	42	15	9	6	3	19
Hiawatha (10067	38	10	10	5	5	17

and is acknowledged by all unprejudiced breeders to be the peer as a breeder of any stallion in Scotland; his stock are all good dark colors, with the objectionable white eliminated.

Mr. Thomson also brought with him three Percheron stallions which he purchased in France, as he was early on the ground, before the Americans commenced to swarm in , he was able to make satisfactory selections, which our readers will agree, that for use, quality and action are the best that have been imported into the Maritime Provinces. Any one needing a stallion for the coming season will do well to get into communication with Mr. Thomson as early as convenient. For at the prices he is asking for his stock they will soon find new homes.

A Prize of $5.00

We will give $5.00 to the school boy or girl who makes the most number of words from the letters contained in the word "Alfalfa." No letter is to be used in one word oftener than it appears in the word "Alfalfa". The only condition is that each person competing must send in at least one paid in advance new or renewal subscriber to "The Maritime Farmer." Make up your lists boys and girls, show them to your friends, get them to help you win the prize by subscribing for The Maritime Farmer. Contest closes May 30th. Address Circulation Manager, Maritime Farmer.

A Prize Winner.

Harold McKay, Shubenacadie, N. S., was the winner of our $5.00 prize to the person making the greatest number of words from the letters contained in "The Maritime Farmer." He sent in a list of 867 words. His closest competitor was Miss Mary Shaw, Berwick, N. S., with a list of 850 words.

FLORICULTURE

Ferns, Chatham, N. B., writes:—I have a large, handsome sword fern in seven-inch pot. It was repotted last spring but lately the new leaves are not developing well and some are turning brown at the tops. It is sending out an abundance of new leaves and it seems to require a lot of water every other day or it becomes wilted. What had I better do for it?

Ans.—Your fern wants repotting. Probably it is a little early to do so, but if you find difficulty in keeping it moist and the tips go back you had better repot it into a pot about nine inches in diameter, using good, rich soil and not disturbing the roots any more than possible. Have plenty of broken crocks in the bottom of the pot for drainage, cut off all diseased leaves and those little hard runners that make out from the side of the plant, spray the foliage frequently and give moderate heat only. Be sure that drainage is always perfect and that no water be allowed to accumulate in jardinere.

Inquirer, writes: I have a large Hyderangea, that I purchased in bloom last summer. It has been in a dark, cool part of the cellar all winter without water. I discovered yesterday that the green buds were bursting all over it. What should I do with it now?

Hyderangea should be turned out of the pot and after removing all the loose soil repot it in fresh soil. Water well and bring up to the light. Give only moderate heat at first, and no sunshine for at least a fortnight, when it should have all the sun possible and plenty or water. An occasional spraying of the stems will help it develop more evenly.

Plant seeds now for early Pansies.

Give Dutch Hyacinths, in pots, plenty of water until done blooming; liquid cow manure will improve the flowers wonderfully.

Save all bulbs of Yellow Narcissus and plant in the garden in the spring for future blooms.

A St. John correspondent writes:—Can different colored Roses be budded on one bush and when should it be done? Is it safe to plant hardy Lilies in the ground as late as the middle of December? I have a corner bed covered so that the frost will not reach it until that time. Could Tulips also be planted then? What is the best season of the year to purchase Palms, and where can they be obtained?

Different colored Roses can be budded together and the spring would be the best time to do so. It is quite safe to plant the Lilies, if well protected, but they must be well covered, as green bulbs thus planted, are apt to rot if they freeze and thaw much I have never planted Tulips as late as you speak of, but I have understood from others, who have done so, that they do well.

I am afraid that I hardly understand your meaning as to the best time to procure Palms. They are for sale at all seasons of the year by the principal florists, who would give you directions for their care, when you make your purchase.

Fully nine out of every ten cases of rheumatism of the muscles is simply due to cold or damp, or chronic rheumatism, neither of which require any internal treatment. All that is needed to afford relief is the free application of Chamberlain's Liniment. Give it a trial. You are certain to be pleased with the quick relief which it affords. Sold by all dealers.

HORTICULTURE

S. C. Parker, Berwick, N. S. Staff Correspondent.

New Brunswick Apple Lands.

Editor Maritime Farmer:

During the last five months there has appeared in the St. John Telegraph several communications setting forth the great natural advantages of the St. John Valley as a fruit growing district; and now our Horticulturist, A. G. Turney, gives us his views through your issue of January 24th, 1911.

I do not purpose to butt in just for the fun of seeing my name in print, but will try and give my evidence in such a way that it will strengthen and encourage you, sir, together with all others who are doing all in their power to encourage fruit growing and all other lines for the betterment of the Province of New Brunswick.

It struck me that probably a stranger reading Mr. Turney's communication would conclude that the Valley of St. John would mean only a few miles on either side of the river as far up as Fredericton, some 80 or 84 miles from St. John. I would like to say that you can proceed up river to the upper boundary of Carleton caunty and still find apples grown profitably, wherever properly cared for. Then, again, instead of the narrow strip, of a few miles on either side of the river that constitutes the valley, I claim it includes the adjacent valley of its branches To prove this assertion, I would ask you to take a drive up the Oromocto, next spring when the apple trees are in bloom. Don't stop until you reach the home of the last settler and then contemplate the vast area of fruit lands adjoining that branch of the St. John River and you will have full proof of its excellency as an apple producing district demonstrated on almost every farm. Then, if you are not satisfied cross over the river and drive out to French Lake and visit the Randall orchard, thence to Maquapit and on to Grand Lake and after you drive around its shores, it being about thirty miles long by seven miles broad at the widest place, you will begin to have some conception of the extent and the capabilities of the Valley or the St. John. After you count all its tributaries, you will be assured that fruit ran be grown on all of them.

Now, sir, after thanking you in anticipation for your space for this article, I will close after telling your readers several things that I know.

I know it has been over 50 years since I first set a graft, using clay and horse manure, mixed, instead of grafting wax.

I know that the New Brunswick apple is not an annual bearer with me.

I know that I would give as much for a barrel of a native apple, grown in Hampstead, called Mother Merrit, as I would for Spies.

I know that Hurlburt, North Star and Pawaukie are all good and perfectly hardy with me.

I know that the Red Russet—the king of the Russet family, is perfectly hardy here and for a very long keeper and a very early bearer equalling the Pewaukie in those respects.

I know of an inland district that could not be reckoned with as the St John Valley, that, in my opinion will equal the St. John Valley or the Annapolis Valley. for all varieties that can stand the climate. I refer to the Havelock district. I know of trees there, over 60 years old, growing in the grass, that produces what the owner calls Bishop Pippins. I did not taste the fruit but they were larger and yellower than any Bishop Pippin, I ever saw from the Annapolis Valley before the days of the black spot. I would further advise any one who wishes to test the apple business, to look that country over before locating elsewhere.

I. T. HETHERINGTON.
Queens Co., N. B.

Fruit Growing in Relation to Rural Life of Province.

Mr. President and Gentlemen:

The subject selected for me by the executive of the Farmers' and Dairymen's Association may be truly characterized as a very important one and I can hardly hope to do justice to it in the brief time at my disposal.

To trace the relation of fruit growing to rural life from its beginning up to the present time would be rather a big task, as I suppose it started in the Garden of Eden, when according to the popular version of the Creation, Eve handed Adam an apple, only that apple, to make use of an Irish expression, was a lemon, and ever since that time there has been more or less of trouble in the world. I don't propose to trace that relation through its various periods of development up to the present time, but shall make my remarks as brief as possible.

For the sake of convenience we will consider the relation of fruit-growing to rural life, first, from the financial standpoint, and secondly, from its effects on the social conditions.

When we hear on authority that a certain section of a province or state has achieved a reputation for producing fruits on a shipping or exporting basis of considerable extent, we immediately associate certain things with that particular section of country—we associate with it the possession of good soil, good climate, pleasing environments and good shipping facilities—we generally concede it to be a country where we may find rural life developed to a very desirable degree. I do not think that anyone will deny that these things are to be found in the best fruit sections of this continent. Naturally, we hardly expect to get such lands for the same price as lands in less favored sections and

LAND VALUES HIGHER.

As such sections increase their reputation for fruit production and as greater areas are planted out to orchard, the price of land increases until in many cases today it has risen to $300 and $400 per acre of bare land, and $1,000 to $15,000 per acre of full bearing apples. You may say that are out of all proportion to the maximum possible return from such land, but is this so? These prices are being paid for such lands—that fact is undisputable to those who care to investigate; moreover, further inquiry will reveal the fact that the persons who are paying these prices the hard-headed, shrewd business men. They are willing to pay such prices because they are getting all the way from 10 to 30 per cent. interest on that money—that is, on an acre of orchard at a valuation of $1,000. The Sharpe orchards at Woodstock for many years gave an average yield of 150 barrels per acre, but I do not know their cost of production. Next year I hope that we shall be able to give definite figures from New Brunswick orchards to show as soon as we adopt better orchard methods and go into apple growing in a business-like manner, we here in this province, will procure as large individual net returns per acre as has been procured elsewhere. Even now, we don't have to go west to prove my statements as to the profit producing power of land under orchard. In Nova Scotia a number of apple orchards are producing from 10 to 25 per cent. on a valuation of $1,000 per acre. Prof. Shaw, of the Truro Agricultural College, speaking at the Fruit Growers' Convention in St. John last November, said in part:—"If it is possible to take from 100 to 250 barrels a year from one acre of orchard and that has been obtained often in the Valley of the Annapolis, even this year some orchards are producing near 100 barrels to the acre, it might be of interest to know

COST TO OPERATE ORCHARD YEAR AFTER YEAR.

Those who are engaged in orcharding on a commercial scale and who keep a careful record of the cost of running orchards, place these figures as the cost for the different operations: For cultivation and pruning, about $12 per acre per year; spraying three times, about $8.60 per year; cover crop and fertilizer, $8.44

Be Sure Not Sorry

When you buy seeds you are investing not the price of the seeds only, but the value of the land for a year and the season's work as well. That makes it most important that you should buy

EWING'S Reliable Seeds

That is the first and perhaps the most important step towards a good crop. Ewing's Seeds are clean, vigorous, healthy, true to type, and sure to grow if they get any kind of a chance. For over forty years they have been making Canadian farms and gardens famous.

Write for our handsome Illustrated Catalogue, and if your dealer hasn't Ewing's Seeds buy from us direct

All goods handled by us are tested in our poultry yards before we offer them for sale.

per year; for picking (say it yields 75 barrels and that is not as much as it ought to yield in a well cared for orchard) about 15 cents a barrel, or $11.25; for empty barrels, trucking and delivering to the station, etc. about $45, making the cost of about $74.05 per acre. If you have 75 barrels of apples per acre that will be a little under $1.00 a barrel to produce the apples and land them at the station ready for shipment. If you produce 100 to the acre it would cost considerably under a dollar, and at 150 to 175 barrels an acre a cost of about 75 cents a barrel. The people who make a business of producing good fruit for the English market get about $2.00 a barrel for their fruit from the trees." At this rate, on a valuation of $1,000 per acre, the 'orchard producing 75 barrels is yielding from 11 to 15 per cent., a 150 barrel yield from 20 to 30 per cent. I do not know of any branch of farming that is so profitable as apple growing and at the same time capable of as large an extension.

As another and last instance of what fruit growing may mean financially to the country, look at the Pacific Coast section of this continent. The apple was introduced into that section of the country in 1847 but the real development of apple growing did not begin there till the early 90's, and yet, in last year, 1910, the fruit growers of that section produced $25-000,000 worth of new wealth.

SOCIAL CONDITIONS OF RURAL LIFE.

So far we have spoken only of the money producing results of fruit growing but I do not wish to close without a few words concerning its relation to the social conditions of rural life. Certainly it would seem better that a man would work at an taking up an occupation, which though it may be far more remunerative, may yet be deterimental to the health and morals, and tend to shorten life. The fruit growing, besides being able to make a comfortable living and in many cases to acquire a satisfactory bank balance, has a splendid opportunity to acquire the richest treasure of all, that of good health, without which nobody can take the very best out of life.

The conditions nearest to the ideal in rural life are to be found in the best fruit sections. There you will find country life made additionally attractive by the possession of almost all the advantages of the city but lacking its temptations. One explanation of this is that fruit growing is an intensive form of farming —it means large returns for small areas, it necessitates small holdings. Ten men may be found occupying the same amount of land, which before the section acquired a reputation for fruit growing, was occupied by one man alone. You must know what that means for rural life—it does away with one of the most potent factors in the desertion of the country for the city—that of comparative isolation and loneliness—it means better schools, better churches, better roads, quicker communication and greater chances for social enjoyment. For example in the Niagara Peninsula and the County of Essex in Ontario, the fruit grower has an hourly electric service in many cases agreeable occupation in preference to right at his doorstep, he has electric light in the house and electric power in the barn—these and other modern conveniences he has, but greatest asset of all, he has the fresh air, the sweetness, the expanse and the scenery that are to be found in the country only.

STAMP OF MEN ENGAGED.

Again, fruit growing means better rural conditions because of the stamp of men it calls for. Successful fruit growing means not only ambition, perseverance and determination, but is based upon the constant study of nature and upon an efficient understanding of soil and plant requirements. The successful fruit grower is a man of marked ability and the environment with which fruit growing is carried on together with the characters which success in it calls for tends towards a high degree of intelligence and a high type of citizenship.

The effect of this environment on the children of such district is obviously a very desirable one and the happy combination of the best in both city and country life surely forms the ideal condition for the upbringing of the boys and girls. Certainly those who have grown into manhood under such conditions will not be found deserting the country for the city.

What fruit growing has done and is doing for other sections, I have every hope, may before many years are past, in a large measure be duplicated in New Brunswick. I do not know of a better way of increasing the value of your farms today than by planting out a certain portion of them to apples. First, you must convince yourself of the suitability of the land and site. Second confine yourself to a few varieties and where a number of men are planting in the same section, plant the same varieties. Third, be careful how you buy your stock. Fourth, expect to have to grow that orchard —don't expect it to grow itself.—An address by A. G. Turney, Provincial Horticulturist, before the recent New Brunswick Farmers' and Dairymen's Association.

Knocks Spots off Anything!!!

Niagara-Lime Sulphur

is made right and will act right when used as DORMANT or SUMMER spray.

Other brands have been sold in Nova Scotia testing down as low as 23 1-2 Baume. Anyone finding a barrel of NIAGARA testing below 32 (that has not been tampered with) will be awarded with $100.00.

At strength of 1 to 10 it will kill Oyster Shell bark louse and many objectionable things upon the trees.

At 1 to 40 it will control Black Spot better than Bordeaux, and is much more simple and quicker to use, besides being cheaper.

Get our Porcelain Lined Cylinder Pump, guaranteed for 10 years.

SEED MERCHANTS. ESTABLISHED 61 YEARS AGO.

LIVE STOCK

Swine Raising in New Brunswick.

Mr. President and Gentlemen of the Farmers' and Dairymen's Association.

In leading the discussion on the breeding of swine in the Province of New Brunswick, I propose being brief merely introducing the subject.

In looking over the statistics and noting the number of pigs raised in the province, and the amount of pork imported annually and consumed within the province, and the high price prevailing, surely it is evident to the most casual observer that the farmers are standing in their own light by not raising more pork.

A word in regard to the breeding, feeding and marketing.

In breeding, I would say to choose one of the good breeds and stay with that breed. Some crosses, such as the Berkshire and Yorkshire, do very well, but always use a pure bred boar of the breed you adopt. Too often boars are used for service too young. The result is, as a rule, smaller litters and weakly pigs. He should be at least eight months old before using him for service. When you get a good boar, do not hurry to part with him. Keep him in your herd as long as you can do so without inbreeding. Also, with the breeding sow; do not mate her too young. She ought to be from twelve to fifteen months old before farrowing her first litter, and if the young sow proves to be a good mother do not turn her off for pork after having one or two litters, which is the habit of many farmers, but keep her five or six years at least. I will venture to say that she will declare you a larger dividend on the money invested in her than the same amount invested in any stock you raise. A good brood sow should be a true type of the breed you are breeding. She should be large in size, good limbs, and a robust constitution; should be prolific, rearing at least ten pigs twice in the year, and should have at least twelve good teats and be kind and gentle to her little ones.

Now, as to feeding. I know every farmer has his own methods in practising economy in feeding his swine. It is not good economy to feed too sparingly and have your breeding stock in low condition, nor yet is it wise to go to the opposite extreme. In going through the country, this is in evidence; one man's pigs will be "wind-splitters," while his neighbor will have his entirely too fat. With a liberal amount of roots, lots of exercise and enough of crushed grain or mill feed to keep the breeding stock in fair condition is best. Of course the boar should be better fed in the service season, according to the amount of service required of him. Also the sow's grain ration should be increased as she approaches farrowing time, but great care should be taken afterwards to feed very sparingly on swill with a little wheat bran and middlings for a few days. After about a week you may put her on full feed.

When the little pigs are two to three weeks old, teach them to eat by having a creep pen and low trough, where very soon, when meal time comes around, they will look for their food in their own trough. At weaning time, which is best not younger than from six to eight weeks they have grown so accustomed to eating by themselves that they scarcely miss the mother when she is taken from them. Be careful to give the young pigs plenty of exercise, and not too much concentrated food. The cause of very much of the lameness and seeming disease in pigs is attributable to over-feeding when young, causing indigestion which will very soon put them off their feet. Variety in feed is the spice of a pig's life, so aim at changing the food as much as possible.

Now, then a few words about marketing, which is very important, as generally it is only after the hogs are sold that we know whether we have a good margin left for our labor. Pork, like any other commodity consumed, should be made to suit the trade in the market in which you sell, so as to command the highest price. The most profitable age to market at is from six to eight months old, when they should weigh from 150 to 200 lbs. It will cost more to produce a pound of pork after the age of eight months than it will before. Another advantage to the producer as well as to the local dealer, is to have some pork ready for the market at the different seasons of the year. As a rule the farmers plan to turn off all their pork in the fall, causing an over-supply for the time, and consequently lower prices.

I believe, Mr. President, that there is no branch of live stock husbandry that will return the money invested so quickly, with as large a profit as the raising of swine.

I trust you will give all the time you can to the discussion which may follow on this subject.—Paper prepared by Mr. A. G. Dickson, Chatham, N. B., read before the New Brunswick Farmers and Dairymen at their recent convention.

Brampton Phra,

of the Brampton Jersey Herd, owned by B. H. Bull & Son, Brampton, Ont., was one of the sensations of the Jersey show at the Dominion Fair, St. John, N. B., being first prize Senior Yearling and Junior Champion. This bull was also first prize and Grand Champion Bull at Sherbrooke Exhibition, 1910, in competition with the Grand Champion Bull at St. John, also entries from the largest herds in Quebec and Vermont State. There Judge Weyman, from Vermont, pronounced him the most perfect type of Jersey Bull he had ever seen. Bred as he is, from long distance producers, we congratulate Messrs. G. S. Creighton, of St. John, who have secured him, to follow their aged herd bull, Brampton Champion. Intelligent breeding deserves credit.

Feed the Lambs.

It is not worth while to try to raise lambs without feed and extra care above that which the mother is naturally expected to provide. In a bunch of ewes there may be reasonably expected to be a few light milkers. This is true of all kinds of animals; some are very heavy milkers and afford an abundance of this natural feed for their young, while others run from an abundant supply down to a starvation supply, scarcely enough to keep the offspring alive. There are instances where the mothers have failed absolutely to furnish milk for their young and before the real cause has been discovered the lambs were too far reduced to revive and died.

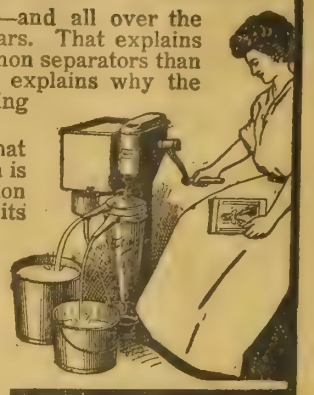
It is important that a close watch be kept over the flock, be it large or small, to see that all the lambs are well fed and happy. It is an easy matter to detect the impoverished lamb. It will be observed standing around humped up. It does not look cheerful like the well provided lambs it does not engage in their sports and races. On the contrary, it is usually trying to steal a little milk from the ewes as they stand at the hay rack or feed trough.

All lambs should be provided with want it or not. The best feed for the the means of feeding, whether they young lambs is a mixture of shorts, cornmeal and bran. Keep some of this feed in a low trough, fastened up against the wall of the shed where it cannot get dirt in it, and so protected that the lambs cannot get in it with their feet. It is best to let them clean this trough out twice a day, as in this way the feed will always be fresh and palatable. It is equally necessary that this feed used for the lambs be stored where mice and rats cannot get in it and thus cause it to be unpalatable. There is nothing more offensive to animals than a rat smell on their grain feed.

It is surprising how young the lamb is when it can be taught to nibble at this mixture of feed. Lambs that are not full fed by the mother will often be found nibbling at the shorts and bran. It helps greatly to catch the lamb and put a little feed in its mouth, then let it down and give it plenty of time. A few such efforts will teach them to eat and when a lamb gets to licking about the feed

Do You Realize That
SHARPLES
Tubular Cream Separators
Save You What Other Separators Lose?

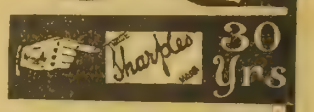
That explains why farmers all over Canada—and all over the world—are discarding other machines for Tubulars. That explains why Tubulars are probably replacing more common separators than any one maker of such machines sells. That explains why the manufacture of Tubulars is one of Canada's leading industries. These facts will set you thinking.



You can't afford to use a common separator that loses cream which a Tubular would save. Cream is money to you. It is cheaper to throw away a common machine, if you have one, and put a Tubular in its place than it is to keep on losing cream.

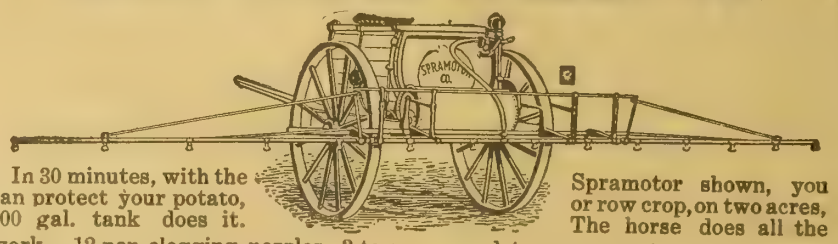
Tubulars save what others lose because Tubulars are later than and different from all others. Tubulars produce twice the skimming force, skim faster, and twice as clean as others. That is why Dairy Tubulars neither need nor contain disks or other contraptions. The simplicity and efficiency of Tubulars prove them The World's Best. Tubulars wear a lifetime—are guaranteed forever by the oldest separator concern on this continent.

You can own and use a Tubular for less than any other make. Then how can you afford to waste time or risk anything on any "peddler's" or other inferior machine? Our local representative will be glad to show you a Tubular inside and out. If you don't know him, ask us his name. Write to us now for our complete catalog No. 194.



THE SHARPLES SEPARATOR CO., Toronto, Ontario, Winnipeg, Manitoba

HORSE POWER SPRAMOTOR.



In 30 minutes, with the Spramotor shown, you can protect your potato, or row crop, on two acres, 100 gal. tank does it. The horse does all the work. 12 non-clogging nozzles, 3 to a row, and 4 rows, spraying both tops and vines, with 125 lbs. pressure.

Has Automatic Regulator, Nozzle Protector, Pressure Relief, Agitator, 12 Gal. Air Pressure tank, Draining, Air and Controlling Cock. Full control from driver's seat. Fitted for Orchard, Vineyard and Grain Crops. 1 or 2 horses or by hand. Write for particulars, and prices—free. Agents wanted.

Gold Medal at National Horticultural Congress.

Agents Wanted !

We want farmer agents in all parts of the Maritime Provinces to sell the Acme Stee Ladder.

It is one of the best propositions ever offered to a farmer who wants to make money during his spare moments.

Write to-day for particulars as to territory, etc.

The Acme Steel Ladder Co.,

Sussex, N. B.

Cattle and Sheep Labels

Metal Ear Labels with owner's name, address, and any numbers required. They are inexpensive simple and practical. The greatest thing for stock. Do not neglect to send for free circular and sample. Send your name and address to-day,

F. G. JAMES,
Blowmanville, Ont.

If any lambs get chilled at birth trough do not be further troubled about it.

It is also well to use the milk bottle on the lambs that are shy on a milk supply from the ewe. The best plan is to have a pint or quart bottle and heat the milk warmer than natural milk temperature, as it soon cools below this. The rubber nipple is the quickest, easiest cleaned and best all round device for feeding the lamb. The opening in the nipple may need to be enlarged for the stronger and older lambs, as they demand the milk to come pretty fast, besides it is economy in time.

Get ready with bottles, feed, etc., so there will be no delays or loss when the lambs commence arriving. through neglect or mishap in any way the best remedy is a warmed woolen blanket wrapped around the lamb except its head, put in a moderately warm room and administer a teaspoonful of whiskey diluted with four or five times its measure of milk given slightly warm. The lamb will revive in ten or fifteen minutes and will be ready to take its nourishment from its mother thereafter.

Lambs can be practically raised from the dead in this way. Great caution must be observed, however, administering the dose, as it is an easy matter to strangle a lamb that is in the last stages of chill. Give a very few drops at a time to those not inclined to swallow; be patient and give the stimulant time to do its work.

A. W. HERVEY.

Prevent Loss of Ewes.

Considerable illness and some considerable losses of sheep have been reported to the animal husbandry department of the College of Agriculture of the University of Wisconsin and Frank Kleinheinz, university shepherd, says that these reports are but forerunners of quite general complaints which are received by the college each year.

"In most cases constipation is responsible for this trouble," says Mr. Kleinheinz. "Many flock masters have not learned the importance of succulent feeds for sheep in winter. Where only dry feed is used, and particularly when timothy hay forms most of the roughage, this trouble will appear, especially among the pregnant ewes.

"Timothy hay is dangerous feed for sheep. It is coarse and woody; it causes more indigestion than any other feed and hundreds of sheep are lost each year from being fed on timothy hay. It also leaves the wool around their heads and necks filled with heads which prevents the wool bringing the highest price.

"Provide some succulent feed for ewes in winter," says Mr. Kleinheina "corn silage, roots, cabbage or potatoes may be used. This keeps the bowels of the sheep in proper condition. Where no provision has been made for this green feed, some wheat bran mixed with a little oats or some oil cake will help to prevent constipation.

"The symptoms of constipation are: Loss of appetite, standing with the head down, stretching the body frequently. Later the sheep begins to bloat, lies down awhile, gets up again and finally staggers, drops and dies. When these symptoms are noticed the following treatment will be helpful in most cases, if begun in time and inflammation of the intestines has not set in:

"Put five or six ounces of epsom salts in a long necked bottle, dissolve it with warm water by shaking thoroughly. Pour about one-third into the sheep's mouth, taking care not to give too much so as to strangle the animal. Give the rest in two doses at once. This amount is for a full grown sheep and a lamb should be given less.

"If there is no movement of the bowels in five or six hours give another dose, adding a little castor oil if necessary. In severe cases an injection of warm water with a little soap in it will aid. An ounce of prevention with good green feed is worth a pound of cure."

Where alfalfa hay can be had there need be no concern about the above trouble. Breeding ewes should be given every day exercise out on the pasture field; never closely yarded only at night. This observance with alfalfa hay removes all trouble of indigestion.

AN IHC MANURE SPREADER MEANS NEW LAND ON THE OLD FARM

THOUSANDS of people during the past year paid fabulous prices for new land—gave up their savings and their homes and moved into unknown country just for the sake of securing more productive property.

Hundreds of farmers found a better plan. They stayed at home and invested in an I H C Manure Spreader a small part of what it would have cost them to move to the new country.

Now in leisure time during the winter they are returning to the soil the rich fertility that has been drained from it—making new land out of old—putting it into condition to yield bumper crops.

With an I H C Spreader the manure can be distributed in the proper amount required by the condition of the soil. A light coat, where land is good, a heavy coat where it is most needed.

I H C Manure Spreaders have many exclusive features which you ought to know about. Years of successful service has shown their superiority. In buying an I H C machine you are assured satisfaction, for they are backed by a company that cannot afford to risk its reputation by offering you anything but the best.

I H C Spreaders are made in two styles—

Corn King—Clover Leaf

in varying sizes suitable for any size farm.

The Corn King is of the return apron type—Cloverleaf Spreaders have endless aprons. Lime hoods for spreading lime and drilling attachments for distributing manure in rows are furnished on special order.

Let the I H C local dealer tell you all about I H C Spreaders and how you, too, can turn your manure pile into money with one of these simple, efficient machines. Catalogues can be secured from him, or, by writing nearest branch house for them.

CANADIAN BRANCHES—International Harvester Company of America at Brandon, Calgary, Edmonton, Hamilton, Lethbridge, London, Montreal, North Battleford, Ottawa, Regina, Saskatoon, St. John, Weyburn, Winnipeg, Yorkton.

International Harvester Company of America

Chicago (Incorporated) U S A

I H C Service Bureau

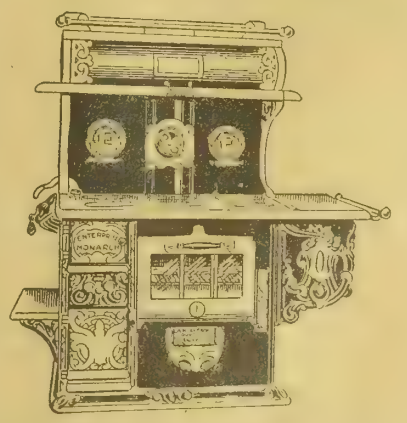
The Bureau is a center where the best ways of doing things on the farm, and data relating to its development, are collected and distributed free to every one interested in agriculture. Every available source of information will be used in answering questions on all farm subjects. If the questions are sent to the I H C Service Bureau, they will receive prompt attention.

For the Farm Kitchen of To-day the Best is None too Good,

and in Kitchen Stoves the best to be had is

THE ENTERPRISE MONARCH

STEEL RANGE.



With its heavy castings, large fire box for wood burning and improved labor saving attachments, it is just the Range for heavy work.

Has an extra large reservoir which heats water to the boiling point in double quick time. This reservoir is constructed on the new Contact principle which has many advantages over the old style encased tank. Made of heavy copper and lined with pure tin; no reservoir dampers to get out of order and interfere with the baking.

Write us for circular setting forth the many other good features of the MONARCH.

DAIRYING.

C. W. McDougall, Dairy Inspector, staff Contributor.

When a Cow Should go Dry.

There are few subjects connected cattle management on which there is more difference of opinion than the period during which the cow should be dry. It may be taken that there is a general agreement among farmers and dairymen as to the desirability of allowing a cow a period of rest by drying off the milk secretion during the closing days of gestation, but the question is, for how long before its completion? As a general thing, it is the man who has had the least to do with dairy cattle who advocates the longest rest, but, within reason, the cow should be milked as long as possible, and especially is this the case withithe young cow or heifer with her first calf. This is called inculating the milking habit, and experience goes to show that as the cow is treated one year she expects to be treated again. Furthermore, the cow-keeper owes it as a duty to himself to get the greatest amount of work out of his milking machine in the least possible time and at the minimum of cost, for in these days it does not pay a man to have idle stock about him.

The cow herself has a great deal more to do with it than is generally realized, and the period has to vary with the animal and the particular circumstances of the case. Thus, absolutely hard and fast rules are impossible. A rest from milk secretion is, of course, for the benefit of the cow, of her prospective offspring and, I believe, of the milk yield after the production of the calf, for it is certainly not in accordance with the arrangements of nature for a female to be always producing milk, and continued secretion must be a terrific drain on her system where no opportunity is allowed for recruiting.

In the case of the poor milker which, in these days of high pressure and keen competition, no one should keep as a dairy animal, there is no difficulty about fixing the period during which she should be dry; she simply goes dry herself, generally a deal too soon for her owner; and some will take as much as three months' rest, or yield in response to persistent draging and generous feeding a quantity of milk that does not pay expenses. The short and best way with animals of this class is to weed them out, for they are quite out of place in the modern dairy.

A cow in poor condition may be allowed two months in which to recruit her strength, with advantage to herself and prospective calf, but this is to some extent a matter of keep, for the poor cow generally belongs to the poor feeder, and if the feeding is generous, the animal in healthy condition and the quality of milk produced pays expenses there is no reason why the period of rest should not be further reduced.

In the case of the average cow, the milking can be continued until within a month of calving. If a cow is in a low condition, it is better in my opinion, to resort to higher feeding than to dry off. I have known cows treated thus for several years, sometimes being milked to within a month of calving that have carried as good as appearance and produced equally good calves, as those which run dry nearly three times as long. Six weeks may be considered the average period during which a cow should be dry, unless the circumstances are exceptional.

It is, however, the extraordinary milker that occasions the greatest difficulty to the dairyman fortunate enough to possess her, both as to the policy of her drying at all, and, if it is decided that this is necessary or desirable, in the matter of the way in which the secretion is to be stopped without incurring great risk of injury to the udder and possible loss of secretive function in parts of the gland structure.

There are some deep milkers that are the despair of their owners, who would often enough be willing to accord them a reasonable period of rest if there was a possibility of drying them off without having to take considerable trouble and running a great risk. For these there seems nothing but "milking round" as it is called, and I am bound to admit, much as I prefer a moderate rest, that so far as immediate consequences are concerned, the animals do not appear any worse for it, nor is the milk yield after calving materially affected. This last named point is perhaps difficult to determine, it is not possible to say, athough the cow milks splendidly, of what she would have been capable had it been possible to accord her a month's rest.

This much, however, seems certain, the risk of causing garget, or inflammation of the udder, and the possible loss of one or more quarters, is too grave to be lightly incurred, and in such cases the practice of "milking round" is quite justifiable.

In the case of heifers, they should never be permitted to go dry early, or the habit of ceasing the supply may be perpetuated. This class of animals should be kept in milk even when the yield falls below a profitable quantity, for it is by persistent asking for more that the qualities of prolonged lactation have been developed in the cow. Needless to say, the animals should be well fed.—W. H. Underwood.

Pure Air in the Dairy Barn.

If the cattle could live without breathing there would still be sufficient reason for providing good ventilation in the dairy barn. Prof. Martin of the North Dakota Agricultural college has found by a series of experiments that milk taken from poorly ventilated stables contains an average of 38 per cent. clean natural sour flavor, 45 per cent. stable flavor and 17 per cent. musty flavors, while well-ventilated stables contain 93 per cent clean natural sour flavor, no stable flavors and no musty flavors. They did contain 7 per cent slightly ensilage flavors, while the milk from the poorly ventilated stables was so smothered with other bad flavors that this ensilage flavor was not detected. But under proper feeding there need be no ensilage flavor at all.

The longer the milk from these poorly ventilated stables was kept the worse the flavor became, due to the increase of unfavorable bacteria. It is perfectly natural that all milk contain the necessary bacteria to make it sour. This clean natural sour flavor is as much a part of milk as the cream itself. When other bacteria in the milk predominate, the milk-souring bacteria are suppressed and instead of becoming normally sour, such milk may become bitter or rank flavored and thus spoil the cream and butter.

From a milk standpoint alone plenty of fresh air in the cow stable is absolutely necessary.

The Weakest Point.

The weakest point in dairying today is the dairy cow. There are greater chances for improvement in the breeding and management of the dairy herd than in any other branch of farming. The great majority of

"A bird in the hand is worth two in the bush"

Just so, one coat of *good* paint is worth two coats of *poor*. Don't deceive yourself with the idea that in buying a cheap paint you save money. Buy the best on the market. It covers more surface, looks better and lasts longer and will give you "wear" service. If you buy a cheap paint, at the end of one or two years it will have peeled off, cracked or worn away. Get best results in your painting by using and insisting on your painter using good paint. There is a dealer in nearly every town who handles Sherwin-Williams Paint. Ask him for color cards and booklets. *The Little Paint Man*

SHERWIN-WILLIAMS PAINTS & VARNISHES

Sherwin-Williams Paint, Prepared (SWP) is made from pure white lead, pure zinc, pure linseed oil, and the necessary coloring pigments and driers.

Sherwin - Williams Varnishes are made from the best gums, pure linseed oil, pure turpentine, and are thoroughly aged.

farmers who have been keeping cows for forty years have no better stock now than when they started. There is something wrong. Most of us have not been using the intelligence we should in breeding dairy cows.

Getting better stock does not consist entirely in using pure bred sires. I can recall one man who has used pure bred Ayrshire sires for forty years with no improvement in the producing qualities of his stock. The sire he had when I visited his place was of such a size that it could be conveniently carried on a man's back. Yet this man expected to get better stock. We must have not only pure bred sires but good pure bred sires.

We do not give encouragement enough to those who would buy pure bred sires if they were sure of the patronage of their neighbors. Many farmers will not take their cows to a pure bred bull when there is a scrub bull close by. Many prefer to keep a scrub sire rather than be bothered taking the cows away. While such indifference exists how can we expect to see any noticeable improvement in our dairy herds.—Geo. H. Barr, Chief of Dairy Division, Ottawa.

Brampton Foxy Rosette.

First prize Senior Heifer Calf and Reserve Junior Champion at the 1910 Dominion Fair, St John, N. B. This calf was conspicuous in the Brampton exhibit as being a type which intelligent breeding and developing can produce. Her wonderful udder and milk vein development, her uniformity of type and strength of constitution being much admired. Her brother, Brampton Champion, was exhibited by G. S. Creighton & Son. One of her sisters is now undergoing a yearly test under the Dominion Government supervision.
Bred, owned and exhibited by B. H. Bull & Son, Brampton, Ont.

Why Cream Tests Vary in Winter.

The cream test is more liable to vary during the winter months than in summer, since conditions are such that a little neglect or carelessness will have a great effect on the cream.

Milk drawn from cows that are not salted regularly fails to produce cream that will test as well as it would where plenty of salt is supplied, at the same time falling off in quantity.

If you leave the cream where it will freeze, or allow it to freeze after you start to market with it, as many farmers do, a part of the butter-fat will be damaged, and the test cannot fail to be lowered by such carelessness.

Where for any reason the milk is allowed to sit around and cool before separating it, not only will you fail to secure all of the cream at separation, but the test will not be the same as it would have been had you separated the milk at once at as near the animal heat as possible.

Where a quart of warm water is run through the bowl after separation, to flush out all of the cream, the test on a ten gallon milking will not come up with that of a twenty-gallon milking, since there will be as much water get into the small amount of cream as in the larger quantity, this thinning and weakening it.

If you run the warm, separated cream directly into a can of cold cream you may expect an unsatisfactory test. Keep the cream secured at each milking separated from the rest till it is thoroughly cooled, leaving it where the temperature is as near 60 degrees as possible, then mix it all together, stirring it well.

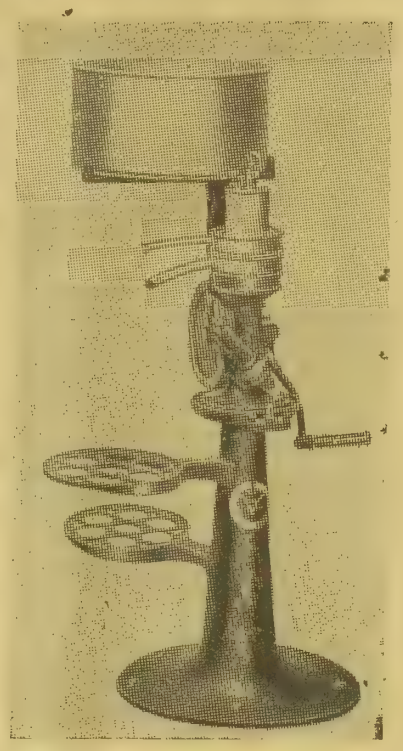
As we all feed mostly dry grain and roughage from now on, their richness will cause the cream to thicken and consequently test considerably higher. In fact, the cream finally will become too thick, the separator failing to take all the cream out of the milk. Keep a close watch of the cream spout as winter feeding progresses and regulate the cream screw accordingly.

Failure to run about a quart of warm water throgh the separator just before running the milk through it will give you less cream and a lower test, as the milk will lose a part of its cream by warming up the skimming device so the milk will not adhere to it. Of course, care must be taken to prevent too much of this flushing-out water from entering the cream, or a lower test will result from that over-sight.

Aside from the above losses thrugh the varying of cream tests during the winter months, we must consider that, in almost every case, the trouble is such that it increases the labor of separating, since difficult and improper running of the separator is sure to result from handling the milk improperly. Add to these the wearing and strain on the separator caused by improper running and you may appreciate the necessity of keeping the winter cream test more uniform.

Calves, like other farm animals, get thirsty, even though milk forms a large part of their ration. Calves three months of age will drink as much as five quarts of water daily per head. They like to drink often, sipping a little at a time. A half barrel, cleaned and replenished twice daily, will serve nicely as a water trough. Another good device is an automatic waterer, which may be easily cleaned, situated a little above the floor to keep out the litter.

WE SAVE YEARS WITH OUR GEARS



The question of GEARS is an important one. The gears in the CAPITOL Separator are not heavy and clumsy as in some separators but they are built in accordance with the work they have to do—this work is to furnish power, or speed, to the bowl—in the CAPITAL, the bowl with a capacity of 500 pounds of milk per hour, weighing less than four pounds is the smallest and lightest bowl of any separator of equal capacity on the market—hence it is not necessary to have the numerous and heavy gears other separators have; **numerous,** because their particular type necessitates many reductions of gear to produce the required speed; **heavy**, because the bowl in other separators is so much heavier than in the CAPITOL, the gears must necessarily be heavier.

The LIGHT BOWL and the SIMPLE yet STRONG GEARS in the CAPITAL make it the EASIEST separator on the market to TURN.

And again; by the use of an ingenious clutch devise—found in the CAPITAL ONLY—the gears stop running instantly when you drop the handle. NOT A SINGLE GEAR IN MOTION after you STOP TURNING. We SAVE all the running down WEAR without resorting to a brake. These POINTS of SUPERIORITY are making the CAPITAL SEPARATOR more popular every day; these points of superiority, together with the separator's ability to SKIM CLOSE and the ease with which it can be THOROUGHLY CLEANED are responsible for the steady increase in sales each year.

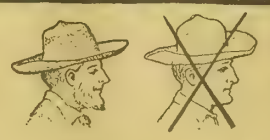
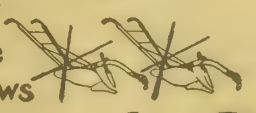
What the "Crown" Gang Plow does



One man instead of two

Three horses instead of four

One "Crown" Gang Plow instead of two single furrow Plows



Make this test: The first day give your hired man a single-furrow plow and two horses. Take another single-furrow plow and two horses yourself. Then, do one day's plowing. Together, you will plow three acres, under favorable conditions.

Next day, use the "Crown" Gang plow and three horses. You'll find that you can still plow three acres.

The second day the same work has been done with one man instead of two, three horses instead of four, one "Crown" Gang instead of two single-furrow plows. What this saving means to you in dollars and cents you can figure out for yourself. But it is enough to pay for the "Crown" Gang in a few weeks.

The "Crown" Gang stays right down to its work. It turns the furrows more evenly than a single-furrow plow. The easy-working levers are conveniently located. The wheels have dust-proof boxes with roller-bearings. You should learn more about the "Crown" Gang right away, and about our special orchard gang plows, too. So write for CATALOGUE B 40

THE HORSE.

The Brood Mare.

SELECTING.

The most profitable animal on the farm today is the brood mare. If properly handled she may do practically a full season's work and raise as good a colt as if she ran idle in the pasture. Perhaps it would not be wise for every farmer in Manitoba to breed every mare of a productive age that he has on his farm, but many of them should be bred that are not. In choosing the mares to breed it must be remembered that the chances of the colts resembling their dams are just about as strong as the chances of their resembling their sires, and that the better the mare and the nearer to purity her breeding the stronger will be the chances that the colt will resemble her. Therefore, to the mare owner the necessity of selecting a sound mare possessing good size for the type she represents and good individuality is just as important as to get the right type of stallion.

Two characteristics should be given special consideration. As differing from the masculine appearance of the stallion, the mare should have a feminine appearance about the head and neck, yet should possess a good active disposition, these being indications that she will be a regular breeder. In form she should possess what is termed a roomy conformation, not only a large abdomen but a wide spring or rib, deep body and fair length of body.

MATING.

Some difficulty is occasionally experienced in getting mares to breed, but usually mares that are properly fed and exercised through the winter will come in season in the spring of the year. If a mare does not come in season there is some good reason for it and the only way to ever get her in foal is first get her in good health and then she will come in naturally and when bred will quite likely conceive.

WORKING.

It is not only possible to work the brood mare while in foal, but it is far better for her that she should be worked. This is particularly true during the winter when brood mares as well as work horses are frequently subjected to too close housing without sufficient exercise. The question is frequently asked as to how near to foaling time may a mare be worked with safety. In reply it is only safe to say that it depends on the nature of the work and the man driving her. On no account should a mare due to foal in three or four months be asked to back a heavy laod, nor should she be made to pull heavy loads on unsafe footing. If handled carefully she may be worked at the ordinary work in the field right up to foaling time, though it is safe to discontinue working about one week before she is due to foal, taking the precaution to see that she is turned into a lot that she may walk about and thus receive exercise each day, also the grain fed should be cut down to about one half or two thirds the ration while at work.

FEEDING.

Great care must be exercised in the feeding to bring the mare up to the foaling time in the proper condition of health. Breeders are apt to be too anxious to keep the mares in too high a condition rather than to allow them to become too thin. Trouble at foaling is frequently due to no other reason than simply that the mare is too fat. This does not mean that she should be starved down to a weak condition of health, but judgment must be used with each individual in the amount of grain and hay required daily. Any of the standard rough feeds from oat straw to alfalfa hay, so long as they are clean and have been properly stored and kept free from must, are satisfactory. A variety of roughage adds to its value. For grain nothing will beat a ration of three parts crushed oats and one part of bran by weight. This may be advantageously supplemented by a bran mash or a feed of boiled barley and flax fed as the evening meal from one to three times a week. Not more than a pint of flax seed should be used in one feed. Condimental stock foods are altogether unnecessary with the above ration.

PARTURITION.

To avoid loss by neglect of the mare at foaling time, the exact date upon which she was bred should be known. The period of pregnancy in the mare is about three hundred and thirty-five (335) days, most of them foaling between the 330th and the 340th day. Many, however, foal before the 330th day, so that they should always be more or less closely watched for three weeks before they are due. There are certain signs of the near approach of parturition that rarely fail. The udder often becomes quite large and full, some time before foaling, but the teats do not fill out plump and full to the tips until at most two or three days before the foal is born. The formation of a small amount of wax-like substance on the end of the teat is invariably a sure indication that the mare will foal in two or three days. The falling away of the muscles about the tail head is another indication of the near approach of the foaling time. Another question is frequently asked as to whether or not it is necessary that an attendant be with a mare when she foals, even though it be at night. If the mare is in good health and the colt comes in a normal presentation she will get along far better if left to herself than if too closely watched by a rattle brained attendant. However, abnormal presentations are common enough so that it pays, particularly with high priced mares, to keep a pretty close watch on them even though it does require the use of an alarm clock for several nights. When trouble in foaling is evident it will usually pay the farmer far better to secure the services of a veterinarian as quickly as possible rather than to attempt to assist the mare himself. Having delivered the foal every mare should be given one or two weeks absolute rest, except that after the second or third day she should be turned into a lot with the foal a part of the day for exercise. During this time the grain ration should be increased gradually again to the

(For sale by all Druggists.)

amount that was given before foaling.

RE-BREEDING.

So far as the mare is concerned the first problem presenting itself after foaling is to get her re-bred. There is much difference of opinion among horsemen as to the proper time to try mares to the stallions after foaling. The consensus of opinion seems to be that the ninth day after foaling is the date at which most mares are likely to come in season and to conceive. Failing to get them to breed on this day, or even if they do take the stallion then, they should be tried again at regular intervals of eight, nine or ten days. Mares frequently take the stallion and conceive if bed on the eighteenth to twenty-first days or on the twenty-seventh to thirtieth days.

CARE AND HANDLING.

In handling the brood mare about the stable and in the field it must be remembered that she has a more sensitive disposition than the average lazy gelding and must at all times be handled kindly, without the use of loud, abusive language or abuse with the whip. Kind treatment is worth as much as good feed.

In feeding it should be remembered that besides the food required to maintain her own body the mare requires additional food for three purposes, to do work, to produce milk for the foal, and to build up the foetus for the next foal. Consequently she requires not only a great deal of food but such food as is highly concentrated and easily digested. During the time she is working she should receive a heavy grain ration and not too much hay, as the hay requires a great deal of the energy it contains for its own digestion and assimilation. No absolutely fixed amounts can be quoted because some mares will handle more feed than others. The average farm mare of 1,400 to 1,500 lbs, weight will require somewhere in the neighborhood of 20 lbs. of grain and 15 lbs. of hay per day.

Care of Farm Horses.

There is no economy in not keeping the draft horse well shod. It costs from a quarter to a third more oats to neglect the proper care of their feet. A good set of new shoes at $2.50 will protect a horse's feet for a year. If they are set once in seven or eight weeks at $1.15 a setting, they will cost $9.20 annually. Therefore a man is on the losing side who neglects to care for his horses' feet.

It hurts horses to travel bare footed over rough roads as much as it hurts a man. The hoofs split, spread and receive injuries in various ways. Many horses are harmed or entirely spoiled in this way.

All a horse asks for his life long service and faithful labor is good care and food. But good care and food should be given him as his future value and usefulness depend upon it. More than one man has tried to practice economy by underfeeding his team in the winter, and has had them die on his hands.

A horse always tells by his looks what kind of an owner he has.

The kinder and more considerate treatment a horse receives, the more intelligent will he become. They have no knowledge of events outside of their environment, but the average horse is quick to learn anything about his work if the driver is intelligent and patient.

A man who owned a handsome pair of bays said to the hired man, "You just hold the lines and they will teach you to plow if you do not know." One of them would cultivate corn all right without having any bridle on. He was hitched to the cultivator and nothing but a halter was put on his head.

They rarely forget a road over which they have once traveled, and will take one to whom that part of the country is new, safely home on the darkest night.

It makes one indignant to think of a man tying his horses out unprotected in the winter while he carouses away the midnight hours. Here again they show their patient service by waiting for him until almost morning when they might break away and run for home.

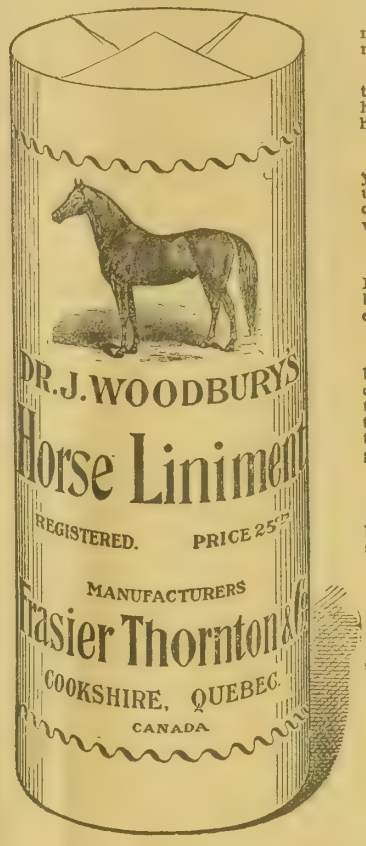
A merciful man is merciful to his beast.—Z. I. Davis.

DR. J. WOODBURY'S Horse Liniment.

INFALLIBLY THE REMEDY.

For the removal of Splints, Bog Spavins, Enlargements of any and every description it has no equal. Given internally, it will promptly relieve and remove any and every character of Cough, Enlargements of the Glands, Affections of the Kidneys For Distemper, Strangles and Colic it is infallibly the remedy

All horses that are stabled should have an applicatiou of Dr. J. Woodbury's Horse Liniment to the hoofs of the fore feet to prevent their becoming feverish, dry, brittle, hard, contracted or otherwise injured.



Insist on having Dr J. Woodbury's Horse Liniment. We warrant it to effect that for which it is recommended when used according to directions.

Its beneficial effects are so prompt and decided that it has excited the admiration of the leading horsemen of the Dominion and secured their highest confidence

Bear River, N. S.

Dear Sirs :—We do not hesitate in recommending your Dr. J Woodbury's Horse Liniment. We have used it in the woods for coughs, colds, distemper and cuts, and would say that no lumberman should be without it. Yours truly, CLARKE BROS.

Hubbard's Cove, N. S.

Dear Sirs :—I have used Dr J. Woodbury's Horse Liniment in my stable for years and consider it the best liniment on the market for both internal and external use. Yours truly, C. C McLEAN.

Truro, N S.

This is to certify tha I have used Dr. J Woodbury's Horse Liniment with the very best results for colds, coughs, distemper and all lung diseases. It is the best thing to give horses in the spring to keep them in condition. It purifies the blood, cleanses the lungs from impurities, which may exist, and gives the system healthy action.

NEWTON LEE, Owner "All Right" 5817.

Elmsdale, N S.

Dear Sirs :—Kindly send me 6 dozen Dr J Woodbury's Horse Liniment. I have not a bottle in the store and it is the only kind my customers will take.

Yours truly,
ELMSDALE MERCANTILE CO.,
Elmsdale, N S.

Dear Sirs :—I cured my horse with Dr. J. Woodbury's Liniment It was a bad case of distemper. I always recommend this liniment to my friends as the best for all diseases of the horse. Yours truly,
H. R. WHITEHEAD.

Dear Sirs :—One of my horses had a bad cough, and I made a complete cure with three bottles of Dr. J. Woodbury's Horse Liniment. The cough was of twelve months' standing. In my large experience with horses, I consider this liniment to be the best made for all diseases in the horse and I recommend it to my friends.

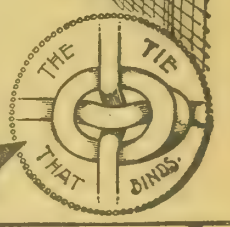
Standard Wire Fence

The greatest improvement in wire fencing was made when we perfected "The Tie That Binds." This hooks on the running wire and locks flat on both sides. It is not driven down on the wires at the point of crossing, but at an angle —thus, it cannot injure the fence. The Tie is smooth—no ragged edges to cut animals or catch in hair or wool.

Standard Steel Fence Posts are No. 12 gauge steel that enable you to build a permanent, lasting fence without staples. We also make improved Galvanized Tube Gates. If you are in the market for Fencing, write us at once for our booklet and sample lock. They'll prove a lot of things that you ought to know about Wire Fence. 16

THE STANDARD WIRE FENCE CO. of WOODSTOCK LIMITED
Woodstock, Ont. and Brandon, Man.



DR. WILSON'S "DERBY" CONDITION POWDERS

are the result of many years' experience.

Recommended and prescribed by the best veterinarils in Canada, for horses, cattle, sheep and pigs. Produce great results in short time.

DR. WILSON'S VETERINARY GALL CURE

should be in every barn. An invaluable preparation for healing galls, scratches, sore shoulders etc., and all irritations of the skin.

Ask your dealer. Refuse substitutes. Insist on Dr. Wilsons

POULTRY.

Better Poultry.

My advice may not meet your approval,
But what I have said I have said:
If you've got any mongrels, then sell 'em,
And get something pure bred instead.

It'll cost you a little more money
To start you in something real nice,
But you'll never have any occasion
To complain the least bit of the price.

You market your measley old dunghills;
They'll get you a quarter perchance.
You're pretty well paid for the eggs they have laid
If a cent a piece drops in your pants.

You scarcely get started with pure breds,
Till your neighbor that's over the way
Says, "Hello, Mr. Jones, have you got any eggs
Of those fine, handsome pullets today?"

And for your fine cockerels and pullets
You'll have to ask prices unfair,
Lest you sell off all of your breeders
And thus leave your poultry yard bare.

N. E. Loveland.

The Ottawa Experimental Farm Poultry Dept.

Editor Maritime Farmer.

May I ask what a reader of the Government Report of the above for the year ending 31st March, 1910, is to deduce from the figures therein?

The averages given for pens heated are 65 eggs 41½, 65½, 75½ and 83, 74¼, 89 and 78 in unheated Unheated houses— i. e., open-fronted, wind screened ones are best. So far, so good; but what is one to make of the actual figures themselves, an average of 81 for the unheated pens? The very best indiv dual record given is 140 eggs, for a Buff Orpington. I have been interested in poultry farming, both in England and Australia, and have studied records from the States for some years 180-200 are almost common records on good farms, and 220 and over are not uncommon.

A friend of mine farming in Tasmania, has in five years—the same length of time the above Government Farm has been running—succeeded in getting pens of six birds to lay over 220 eggs each. Surely the difference in climate cannot make all this great difference.

In the States a flock of 800 Leghorns averaged over 180. I think it was 189 eggs, per bird. These are not isolated examples, there are hundreds of others just as good.

In this Government Report, I have done my best to understand a quotation is made from a paper called the "Stratford Beacon," "Why should there be such difficulty in obtaining new-laid eggs in winter, when the Experimental Farm, Ottawa, has practically shown that well-fed and cared for hens will lay well in winter." I have gone over the figures given several times in the vain attempt to find any that agree with such a statement. The actual winter laying, taking 5 months when prices are highest, are 2,731 eggs, as against 10,042 for the other seven. In 1909 (March) there were 246 females on the farm, 80 were sold for breeding, and market purposes, leaving 166. In March, 1910, there were 119 pullets on hand, so it would be fair to take the average number of birds at 230. 230 into 2,721 gives an average of 12 eggs a bird for the five winter months 2⅖ eggs a bird per month. Is that a proof of good winter laying?

May I ask if such results are really what one must reasonably expect in Canadian poultry farming? Is such a result what one would achieve in five years work. I had thought of poultry Farming in Nova Scotia. The Government Report is a veritable cold douche. Perhaps, sir, you may be able to gather some rather more favorable reports from your many readers. As a new comer to your country I do not want to criticise Government experiments. When so much is done well, why should the Poultry Department be an utter failure?

Yours truly,

V. P.

Berwick, N. B.

Improvised Brooder.

There were fifteen more chickens than the brooders would accommodate, and there was no mother hen to care for them. We did not wish to get another brooder, so improvised one in this manner.

We placed one box within another slightly larger one, and filled the intervening space with sawdust. A well fitting door with a large pane of glass was placed over the open side. This box was set in a dry, secluded place and a small scratching park made in front of it.

Within this brooder was placed yet another box only a little larger than was necessary to hold the chickens; this was the hover. A piece of warm flannel was tacked across the upper side so that it hung down against the little bodies, and a small flat jug full of hot water was placed in it every morning and evening. After placing the chickens in this for a few times they learned to go there for themselves. This box being small retained the heat of their bodies, and with the aid of the jug kept them comfortable through some severe early weather.—Alice M. Ashton.

Profit in Raising Broilers

There is hardly any period of the year when it may be said that poultry needs less attention than at other times, but it's certainly the case that there is a time when the most profit may be made from the poultry yard and that time is winter, says the Inland Farmer. It is not necessary to remind anyone that 30 to 45 cents a dozen is a high price for eggs, and that there is a good profit in them at that price. Fewer people, however, realize that there is a big profit in broilers and that broilers can be raised as successfully in winter with the proper preparations and care as they can be in spring, and better than they can in mid-summer,

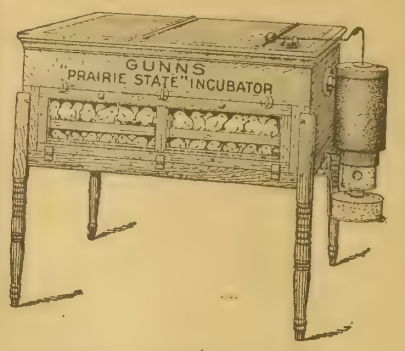
To raise broilers in winter hens must be set in sheltered places and shut up to prevent their leaving the nest for too long a time. Food and water must of course be kept within reach. After the chicks are taken off they must remain under shelter and be protected from cold winds as well as the wet until they are well feathered and able to take care of themselves. It is much better that they be kept under shelter until they are eight or ten weeks old, when they will be ready to market for handsome prices if they are the proper kind of stock and have been cared far properly. Of course if they are kept

The Remarkable Success of
GUNNS PRAIRIE STATE INCUBATOR

is due largely to its moistened **Sand Tray** just beneath the egg tray.

By regulating the amount of water poured on this Sand Tray you can supply **exactly the degree of humidity needed** in the air surrounding the eggs at the different stages of incubation. Thus you can prevent the eggs from drying up, and secure big, healthy chicks.

Before hatching begins the Sand Tray is removed, a burlap mat slipped in, and you have a warm, roomy nursery.



Write for our book on Practical Poultry Raising. Besides telling all about the "Prairie State" line of poultry equipment, it gives a lot of valuable information. **It's free for the asking.**

Hamilton Incubator
Hatches Big, Healthy Chicks

You never find the Hamilton guilty of hatching deformed chicks, or allowing chicks to die in the shell. That is because the heating and ventilating systems introduce the correct amount of life-giving oxygen and moisture into the egg-chamber—because the heat-regulating system is accurate to a fraction of a degree—because the directions are so simple and correct. The Hamilton Incubator hatches every fertile egg. The chicks are so plump, healthy and lively they make the old hen jealous of the Hamilton. You can make a success of hatching chicks with the Hamilton Incubator, and just as big a success of raising them with the Hamilton Brooder. Send for our **free booklet** and get complete information about the always successful Hamilton Incubators and Brooders.

longer they will grow larger and bring more, but the larger they grow the more feed it takes to make an ounce of meat. Of equal importance with proper shelter is the proper feed for both old chickens and the chicks. If hens are to be expected to lay during the winter months, when eggs are highest, they must be given the kind of food that will make them lay. If they have no pasturage some substitute for it must be provided for green stuff is one of the first essentials. Sprouted oats are excellent. Ground or shredded alfalfa is a good substitute when the real succulent green stuff is not to be had. Beef scrap has been regarded as the only substitute for the worms, bugs, etc., that form an important part of bird's food when on range in the spring and summer months. I find however, that cottonseed meal contains even more protein than the beef and that it is much cheaper and more agreeable to handle. It is entirely too rich to be fed by itself and I feed it one part to two and three of bran and cornmeal mixed, in both wet mash, which I feed in the morning, and a dry mash that I keep before my chickens all the time. I find that the most convenient way to feed my chickens is to feed a wet mash, sometimes varied with grain, swelled oats etc., in the morning and feed of grain at night, with the dry mash within reach all the time.

A good feed for chicks is bread baked thick from a mixture of two parts cornmeal, one part bran and one part cottonseed meal. Dry bran may be kept before them practically ll the time.

Egg Basket Robbers.

Here are some of the robbers of the egg basket. Watch to see that they do not keep your basket empty.

1. Poor ventilation of the poultry house. Foul air means stuffy houses and is about as dangerous as cold drafts of wintry winds.

2. Too much sloppy food and a lack of gravel and grain. Eggs cannot be manufactured without plenty of egg producing foods.

3. Parasites of different kinds. These suck up the vitality of the hens. White wash, carbolic acid and kerosene emulsion mean death to the lice.

4. A thin or broken roof. The hens generally roost near the roof, and if it is thin they will be uncomfortable in cold weather. If the roof leaks, on rainy days or nights the hens will be made to suffer from the cold shower baths.

5. Damp or wet floors. Hens do not like slop or mud. They will not wade around in it unless compelled to do so. They are sure not to lay under such conditions, besides disease of some kind is liable to break out among them.—W. D. Neale.

Picking Breeders.

Summer hatched chicks won't do for the early breeding pen. If you must use late hatched birds for breeding purposes give them time to mature and do not try to hatch extra early chicks. Even when a late hatched male bird gives promise of exceptional merit he will not be as prepotent as a fully matured bird if used too young, and his chicks will be lacking in size and vigor. And the chicks from immature pullets will never amount to much. The habitual use of unmatured breeders will injure the size and constitution of any flock.

PEDLAR Nestable Corrugated Galvanized CULVERT

Is The Strongest, Most Practical, Durable and Easiest Laid Culvert Made

YOU ought to show this advertisement to your township reeve or warden. Get him to write for the free book about Pedlar Culverts, or write for it yourself and tell him about this new Culvert—the quickest, most economical, strongest for any use any culvert can serve.

See How It Saves Farmers' Money, Betters Roads, Lowers Taxes

This picture is from a photo of a washout fourteen feet deep in the Township of Darlington, caused by use of cement tile for drainage purposes. The township authorities have replaced that with Pedlar Perfect Culvert, forty feet in length by three feet in diameter; strongest, easiest laid and most durable they could get.

This picture of the Pedlar Perfect Culvert assembled and ready to lower into place, shows the immense strength and rigidity of these Culverts. Though forty feet long with a bearing of only a few feet at the centre it does not give one-sixteenth of an inch. See how easily Pedlar Culvert can be lowered into place. No skill needed.

Here you see the Pedlar Culvert doing its work of drainage twenty-five minutes after being put in place. It would have taken three times as long and cost three times as much to have installed any other type of culvert. Yet this Pedlar Culvert will last far longer and give no further trouble of any kind.

This view shows the Pedlar Culvert after the fill-in was completed. The Culvert has to carry a dead weight of several hundred tons of earth, as well as the live weight of traffic passing overhead. But that can't strain Pedlar Culvert, which will neither give nor spring. It stands what no other culvert can.

Write For My FREE Book No. 60 and Sample

And get a correct idea of what makes a good Culvert. Learn how Pedlar Culvert can be used on your farm.

How to Become a Wealthy Farmer.

Editor Maritime Farmer:—

Now friends if you imagine that I am going to tell you where or how to get a soft snap or something for nothing, you will be disappointed. My experience has taught me that, unless in rare instances where wealth is inherited, if we would become sich we must hustle and work hard, not only with the hands but with the brain also. We must be good manag'ers and know how to spend money to the best advantage as well as to earn it. I have in mind some farmers who are as poor as church mice, because they will not make an effort to become rich. They are loitering about, neglecting their work, complaining of hard luck, and wishing that some of their relatives would leave them a fortune, which, if they did, would soon be spent.

The best way to get a fortune is to earn it by the sweat of your brow. Farming is pleasant and healthful work. Much of the work is simply light exercise. In order to maintain good health we require out-door exercise. Many of the pent-up city folk would gladly change places with the farmer.

In this Province, many of our thrifty, industrious farmers are making a clean fortune. All that is required is good health, courage and grit. Make up your mind that you will become rich and work. Faith and work will win. Aim to excel in every branch of agriculture. Keep your work ahead, never neglect anything, keep the best breeds of stock and be good to every animal on the farm. This is an item of importance.

A SERIOUS MATTER.

Young man, if you are just starting out on your own hook, a little advice in regard to the future will not be out of place. We shall suppose that your father has given you a nice farm, and you have some money saved to buy stock and farm implements. Well you are pretty well fixed, aren't you?

Why what's the matter, you don't look satisfied yet? O, yes, I know, you want a wife now, or imagine you do at any rate. Now, Mr. Farmer, the selection of a wife is a more serious matter than you imagine. If you happen to choose wisely, you will be all right—if unwisely, all wrong. The Bible tells us that a good wife is from the Lord. We can guess who the bad ones are from. Be careful now, for you future happiness and prosperity depend largely on your choice of a partner. Don't marry a giddy butterfly, who thinks of nothing but dress and fashion or spending money. Such a one would keep you poor, would be a hindrance instead of a help. Marry a religious girl if possible, one who will be nice to live with. A farmer's daughter, who has been taught to work will suit you better than a city girl. Don't marry the girl who wants you to be treating her with chocolates, ice cream, etc., and taking her to places of amusement, nearly every night. Marry the sensible girl, who tells you not to waste money in that way. I have in mind two young men who earn good wages, but who never save a cent. They spend all their money, with the exception of paying their board, treating and giving the girls a good time, and the girls don't care a rap for them. Choose a girl who is industrious and a good manager.

A great deal depends on hereditary and environment. Become well acquainted with the girl's mother. If she is a first-class housekeeper, the girl has probably been well trained. Don't be in a hurry; short courtships often result in unhappy marriages. Now don't let love blind your eyes, but be careful, many a man gets badly taken in. Keep your eyes and ears open during courtship. You want a sweet tempered maiden, blessed with good, common sense, not a scold or good for nothing. If you draw a good prize in the lottery, we shall consider you a lucky man.

A YEAR LATER.

"O, you've found her, and the pretty little maid is installed as mistress in your cosy home. How lovely she looks, flitting hither and thither, dressed in such a neat looking costume, with white collar and cuffs. Yes, she has a large apron on to keep her dress clean. All right to look at; no wonder you are proud of her. We congratulate you on your choice and predict that you will become a wealthy farmer."

ANNIE RODD.

Charlottetown, P. E. I.

Music in the Home.

The time has come when every one may enjoy music in his home. The satisfaction that may be derived from instruments at one time hopelessly beyond the price of any save the ultra rich is now within the reach of those in medium circumstances. The sublime melodies of the pipe organ as it fills the vaulted dome of the cathedral with its rich volume of sound or the fanciful airs of the orchestra, the classical opera or the popular songs of the passing comedy can all be reproduced in the farm home today, thanks to the modern phonographs and the player pianos. When we say phonograph a great many people conjure up the idea that it is some instrument that reproduces sounds in such a way that the person of a vivid imagination can, by centering his entire attention on the matter in hand, surmise that he is hearing the reproduction of some vocal or instrumental piece. The phonograph of today is entirely different. All of the metallic resonance has been removed and the instrument is so sensitive that it reproduces the variations of tone and the expression in a way that is highly gratifying to the cultured ear. In some communities this is the only opportunity that people have to hear the better classes of music. Before the era of these modern instruments such communities were left entirely out in the cold. The lecture courses and chautauquas that are fortunately being put on even in the smaller towns bring a very high class of talent but greater satisfaction will be attached to these programs for those who will find in them some of the airs with which he has become familiar through the instruments in his own home. These instruments that are so easily operated not only afford pleasure but they do much towards educating people along musical lines. One may have the simple old songs or the more classical music at a moment's notice. The person to whom music does not appeal is the exception. In many a home there is a piano that is dumb for the lack of a player. The instrument is perhaps a gift or possibly the one for whom it was bought has passed out of the home and it remains mute except as the occasional guest can call forth melodies. The player will unlock its secrets and will give you the kind of music that you desire. Those who are struggling with the technicalities of a musical education will find satisfaction in the perfect rendition which these players

THE BEST REMEDY

For Women—Lydia E. Pinkham's Vegetable Compound

Belleville, Ont.—"I was so weak and worn out from a female weakness that I concluded to try Lydia E. Pinkham's Vegetable Compound. I took several bottles of it, and I gained strength so rapidly that it seemed to make a new woman of me. I can do as good a day's work as I ever did. I sincerely bless the day that I made up my mind to take your medicine for female weakness, and I am exceedingly grateful to you for your kind letters, as I certainly profited by them. I give you permission to publish this any time you wish."—Mrs. ALBERT WICKETT, Belleville, Ontario, Canada.

Women everywhere should remember that there is no other remedy known to medicine that will cure female weakness and so successfully carry women through the Change of Life as Lydia E. Pinkham's Vegetable Compound, made from native roots and herbs.

For 30 years it has been curing women from the worst forms of female ills—inflammation, ulceration, displacements, fibroid tumors, irregularities, periodic pains, backache, and nervous prostration.

If you want special advice write for it to Mrs. Pinkham, Lynn, Mass. It is free and always helpful.

SIXTEEN MONTHS ON CRUTCHES!

NOW COMPLETELY CURED

PERTH, N.B.

"I am writing this to let you and sufferers from Rheumatism know of the wonderful benefits I have derived from GIN PILLS. For two years, I was an invalid, incapable of work of any kind. For sixteen months, I was unable to move without the assistance of a crutch and cane. I was treated by our best doctors as well as taking treatment from a specialist in Chicago. I did not improve and had about given up hope of ever being well again when a friend advised me to try GIN PILLS. This I did, and with a two months treatment was a well man again. This was four years ago and I have had no return of my trouble since.

I still use a box or two of GIN PILLS a year, just as a preventative and am enabled to go fishing and shooting in the spring and fall, and lie out on the ground at night, without any inconvenience.

GIN PILLS are a wonderful medicine and I take great pleasure in recommending GIN PILLS to all sufferers from Rheumatism, for I have no doubt that if they will persist in the treatment, GIN PILLS will do for them what they have done for me".

ALEX. W. STEVENSON.

GIN PILLS are sold by all dealers at 50c. a box—6 for $2.50. Sample free if you write us. National Drug and Chemical Co. Dept. M. F. Toronto.

National Lazy Liver Pills are just what you need if the bowels are "tight" or the liver torpid. They act gently but surely. 25c. a box. 65

Dates to Remember.

Chamberlain's Stomach and Liver Tablets invariably bring relief to women suffering from chronic constipation, headache, biliousness, dizziness, sallowness of the skin and dyspepsia. Sold by all dealers.

give. Those who never hope to play will learn to know and love good music. When the opportunity comes to listen to music from the great operas or noted composers it is not above one s head or beyond one's comprehension because every part is familiar and anticipated. Your boys and girls will appreciate music in their home because whenever the young folks get together they like to play and sing. The phonograph will bring them whatever they like. They may hear Nordica or Sousa or join in the chorous of some rag time melody.

Cultivate a Pleasant Voice.

Perhaps of all human possessions that count for amibility and peacefulness in our intercourse with others nothing has greater influence than a pleansant musical voice, a quality which few possess, and yet is recognized and generally appreciated wherever found.

In the home the voice, as a potent factor in the machinery of its workings is most conspicuous. To visit a house where all the members are shouting, or even speaking to one another in harsh, rasping tones, is to find what might have been an enjoyment turned into a session of untuneful and discordant experiences. The members seem to be all at sixes and sevens, the jarring tone is everywhere and if one is a stranger he is apt to imagine that the spirit of unity is far absent from the family circle.

And yet it is possible that the conclusions of the visitor would be all astray. The discords of the voice may not have any meaning deeper than those that float in the air, but the effects on the home atmosphere are nevertheless fateful to the maintenance of the harmony so gracious to the ear and soul of the sensitive visitor. The strident, unpleasant voices are perhaps merely the neglect of the little thought and culture which demand that the tones of our speaking voice be looked after more generally and just as carefully as those of the singing mechanism.

In no place is the pleasant voice more essential than in the sick room and by the sick. Here all loud, sharp rasping tones are something to be deeply deplored. On the other hand whisperings and undertones that excite curiosity and suspicion are just as censurable. The even, bright, pleasant voice is the only one that should be found in proximity to the invalid, and as these desirable qualities cannot be exercised at a moment's notice, it were well that we have them always in readiness, so that the extra call like that of the sick chamber may find us always ready. Generally speaking, in our assaciation with our fellows, there are perhaps few things that act of-and they to us, but none the less surely, to draw us towards them and theyto us, than the voice, the tones of which are smooth and pleasant to the ear.

For the Invalid.

Baked milk is a drink recommended for invalids. Put the milk into a stone jar. Closely cover it. Let it bake several hours, when it should be thick and of a creamy consistency. The flavor is unique and reminds one somewhat of Devonshire cream. It may be served with fruit or merely alone as a custard dessert.

As all good nurses know, an invalid's or convalescent's food should be dressed up in an attractive way to tempt the palate by means of the eyesight. A new way of seeing the special kinds of food which the doc-

DAY AFTER DAY-YEAR IN YEAR OUT AN IHC PAYS BIGGEST —PROFITS—

NOT only should your cream separator pay you the best possible profit at the start—but it should keep on paying biggest profits for a lifetime.

The durability of a separator is just as important as its skimming qualities. Many separators break down just when they are beginning to pay for themselves. Avoid loss and disappointment by getting an I H C Cream Harvester. They skim as clean and run as easily years hence as on the day they were bought.

I H C Cream Harvesters

have proved their value by years of perfect service. If you investigate all cream separators you will appreciate I H C features and advantages all the more. You will find that I H C Cream Harvesters are the only separators with gears which are dust and milk proof and at the same time easily accessible; I H C Cream Harvesters are protected against wear at all points by phosphor bronze bushings—not cast iron or brass. I H C Cream Harvesters are constructed with larger spindles, shafts, and bearings than any other separator, insuring greater efficiency and durability; the I H C bowl is free from slots or minute crevices—that is why it is so remarkably easy to clean.

A Style and Size for You

Made in two styles—Dairymaid and Bluebell—each in four sizes
The I H C local dealer will be glad to explain the many I H C Cream Harvester advantages, all of which have much to do with your dairy profits. Ask him for catalogues and all information, or, write nearest branch house for information desired.

The Metallic Roofing Co. Limited

MANUFACTURERS

TORONTO AND WINNIPEG

(50)

tor has recommended helps decidedly to stimulate the appetite, especially where a continuous variety in food cannot be given. Remember that surprises are delightful to a sick person. Never let the bill of fare (if possible) be known beforehand, and if you can disguise a well known dish so much the better. Beaten white of egg is a good fairy, and serves you cheaply. Snowy white or made golden brown in the oven, it may top many a dish, concealing at one time a custard, at another a mould of chicken jelly or even a cup of delicate apple sauce.

Dishwashing Art.

It requires a certain art to be able to do the most menial tasks correctly. Those who hate dishwashing the most cordially are generally the ones who do not do the work well, either through lack of proper training or careless haste. They find it hard and disagreeable to put it off as long as possible, and by the time they feel they cannot defer the job any longer the dishes have become dry. Perhaps beef or chicken gravy has dried on the plates, or there may be baking dishes, some in which cake has been stirred, and the cook has neglected to fill with water to keep moist. The dishwasher starts her work with cool dishwater, which becomes cooler and richer as the work progresses. She does not add hot water and a little more soap occasionally, and finds a great deal of scraping necessary. When finished the dishes feel rough and look dull, and the result is far from gratifying to the dainty housekeeper.

That such dishwashers do not like the work is not at all surprising. One often hears housekeepers say they admire cut glass and the clever imitations which are sold so cheap, but never indulge, as it is impossible to keep it clean, and they are glad china is taking the place of glass to such an extent, as it is easily cleaned. A woman who makes such a remark is a poor dishwasher.

Glassware should always be washed in clean hot suds, first of all the dishes, silverware next, then cups and saucers, followed by plates, butter-chips, and platters, so on through the list of table dishes. After washing they are carefully rinsed in clean hot water.

Dish cloths and towels are a most important factor in successful dish washing. For those who do not wish to buy the glass toweling white or cream outing flannel that is partly worn is excellent for dish towels, as it does not lint, is soft and absorbs readily, keeps white, and is altogether quite satisfactory. For the dish-cloth a square yard of cheese cloth is fine for those who like a large one. It may be folded twice before putting into the dishwater and will not unfold while wet, wears a long time and may be unfolded and easily cleansed and so quickly dried that there is no excuse for having a sour, slippery dishcloth.

The careful dishwasher always has two dishcloths, one for glass, silver and china, while the other is kept for tinware, kettles and granite ware and still another cloth is kept for wiping tea kettle and reservoir Dish towels and cloths should be washed out after each using and if not too unhandy should be hung in the sun to dry.

Influence of Women.

The wonderful influence of women of culture and fashion with their "happy way of doing things," in the political as well as in the social world, is as great now in the world's centres as it ever was in the palmiest days of dead and gone dynasties.

The graces and courtesies of life are in the hands of women. It is women who create society. It is women from whom etiquette is learned, not from association with men. The height of a stage of civilization can always be measured by the amount of deference paid to women.

The culture of a particular man can be gauged by his manner when in the company of ladies. Primitive man made women do all the hard work of life, bear all the burdens, eat of the leavings and be servants of the tribe.

Civilized man on the other hand gives precedence to women in every particular. He serves her first, he rises to assist her at every opportunity, and we measure his culture by sins of omission or commission along this line.

Thus all these small observances not only conduce to the comfort of woman, but they refine and do away with the rough and selfish side of man's nature, for without this refining touch with gentle womanhood a man will never lose the innate roughness with which nature has endowed him.

It is women, as before said, who create etiquette, and Burke tells us that "manners are of more importance than laws." A fine manner is the "open sesame" that admits us to the audience chamber of the world. It is the magic wand at whose touch all barriers dissolve.

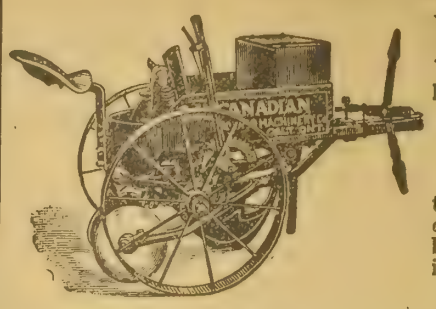
EFFECT OF CULTURED MANNERS.

"Give a boy address and accomplishments and you give him the mastery of palaces and fortunes wherever he goes. He has not the trouble of earning or owning them; they solicit him to enter and possess."

Whatever enjoyments we obtain from our daily intercourse with others is through our obedience to the laws of etiquette which govern the whole machinery of society, and it is largely to women with their leisure and their tact that we must look to create and maintain the social fabric.

"To know her was a liberal education" was a stately compliment once paid to a woman, and there are women left to whom it still applies.

As Emmerson says in his essay upon "manners:" "Are there not women who inspire us with courtesy; who unloose our tongues and we speak; we say things we never thought to have said. For once our walls of habitual reserve vanished and left us at large; we were as children playing with children in a



POTATO PLANTER.

If You Want Durability, Reliability and Simplicity, You Get Them in the O. K. Canadian

It requires only one team and man to plant your crop. Its automatic cup device does not puncture or bruise the seed in any way; handles it almost as carefully as by hand.

Perpetual Youth.

Let Me Tell You How to Regain All Your Old Vim, Vigor and Manly Strength. Be a "Health Belt Man;" Feel Young for Balance of Your Life. Age Doesn't Count if You Have the Vitality.

"I could shout for joy. After years of Weakness and Debility your Wonderful Health Belt cured me. I am a man again. Use my name as you see fit."

Leon Turpinat,

Stellarton, N. S.

Perpetual youth. That is precisely what I mean. I say as man to man give my Health Belt a reasonable chance and it will carry you through any business, mental or physical strain you may be under. It doesn't stimulate; it simply adds the electro-tonic element to your bone, nerves, tissue and blood; all the force and strength which has been drained from your system by some earlier indiscretion. My Health Belt is essentially a strength giver. It overcomes the private symptoms of weakness in men which sap the vitality. If you are nervous and lack manly vigor, you are passing away thousands of brain cells every day. Ask your physician if this is not true. I stop this awful weakening process. You wear my Health Belt nights; while sleeping a great stream of soft electricity passes into your body at the small of the back; it cures backache in one application; you feel better immediately; inside of an hour; two months will make a new man of you. No drugs; no privations; no restrictions except that you must give up all dissipation. Follow my advice and I promise you will feel younger and look younger. Let me restore your vitality, and you will be able to face the world with new ambitions The Health Belt cures other ailments too. A positive remedy for rheumatism in any part of the body, sciatia, lumbago, kidney, liver, stomach disorders.

Special attachments furnished, and worn by women as well as men.

FREE UNTIL CURED.

Call or write to me and I will at once arrange to let you have the Belt on trial, not to be paid for until cured. No deposit or advance payment. Send it back if it doesn't do the work. Liberal discount for cash if you prefer to deal that way.

Let Me Send You These Two Books FREE.

They fully describe my Health Belt and contain much valuable information. One is called "Health in Nature" and deals with various ailments common to both men and women. The other, "Strength, the Glory of Man," is a private treatise for men only. Both sent upon application, free, sealed, by mail.

If in or near this City, take the time to drop in at my office that you may see, examine and try the Belt No charge for professional advice either at my office or by mail. If you cannot call, fill in the coupon and get the free booklets by return mail. They are better than a fortune for any one needing new vigor.

DR. M. F. SANDEN CO., 140 Yonge Street, TORONTO, Ont.

Dear Sirs,—Please forward me your books as advertised.

NAME.....

ADDRESS.....

wide field of flowers. Steep us, we cried, in these influences for days, for weeks, and we shall be sunny poets and write out in many colored words the romance that you are."

The successfdl woman has a genius for leadership. She undervalues the talents of no one; she rather draws out and makes the most of every one with whom she comes in contact. She is quiet, she is reposeful, she has the and above all she is symathetic. A tact that puts everyone at his ease, judiciously expressed sympathy with our fellow beings is one of the highest attributes of our natures.

Tact is in a great measure a natural gift, but it can be cultivated and it is well worth the trouble. Nothing can be so utterly painful in society as the tactless person who is perpetually doing those things which he ought not to have done and leaving undone those things which he ought to have done.

When Things go Wrong.

I count it best when things go wrong
To hum a tune and sing a song;
A heavy heart means sure defeat,
But joy is victory replete.

If days are dark, just shed afar
The radiance of love's bright star;
'Tis happiness that wins the throng,
So hum a tune when things go wrong.

If skies are cloudy, count it gain,
New life depends upon the rain;
The cuckoo carols loud and long
When clouds hang low and things go wrong.
When things go wrong, remember then
The happy heart has strength of ten;
Forget the sorrow, sing a song,
It makes all right when things seem wrong.

Charles Henry Chesley.

Physicial Training for Teachers.

An official notice from the Chief Superintendent of Education, in the January number of the "Educational Review", announces that the courses in Physical Training will be provided at the Summer School of Science. Courses will also be provided in School Gardening and other modern school subjects, so that teachers desirous of keeping themselves abreast of the times should find these courses very useful.

The Summer School meets this year at Fredericton, from July 12 to August 2, and a large attendance is expected.

Linseed Tea for the Throat.

The value of linseed tea in cases of catarrh and in throat affections is due to its demulcent and soothing effect on the inflamed surfaces of the mucous membrane. Put an ounce of linseed into a pint of water and boil it gently to a pint. Strain and add lemon syrup to taste, or half an ounce of licorice-root may be boiled with the linseed. The remedy may be taken repeatedly.

A $5.00 Wire Fence Prize.

We will give $5.00 in gold to the person who finds the word "fence" or "fences" the most times in ads. in this and succeeding issues between now and May the 31st. It doesn't cost you one penny to try for this $5.00 but in looking for the word "fence" note which fence ads. interest you most, and write those advertisers, sending an order or asking for free catalogue. In your letter to us telling how many times you find the words "fence" or "fences" you must give us the names of all fence advertisers in this and succeeding issues up to May 31st, to whom you have written mentioning The Maritime Farmer. This is an easy condition, and the catalogues or fences you buy will be worth much more than you pay. Go to work. The $5.00 will be mailed promptly to one finding them most times. Tell how many times you find them on each page. In case of tie the prize will be divided. Don't delay. Don't cost a cent to enter. You might as well have the $5.00 as you are going to write for catalogues, so do it now. Lists must be mailed by May 31st, 1911.

Psychine is a scientifically compounded preparation, made in one of the finest laboratories in Canada, from herbs for which we go to the ends of the earth. Won't you let us buy a 50-cent bottle from your druggist and give it to you free to try?

A five-story pressed-brick building, filled with costly apparatus, equipped with electrical machinery and apparatus—

A splendid building in every respect, situated on Spadina Avenue, Toronto, is eloquent testimonial to Psychine.

For Psychine in a third of a century's extraordinarily successful use built that building—

And it did more—

It cured hundreds of thousands of people suffering from disease—

And made the most remarkable record for efficient curing power of any preparation known to medical science.

Psychine is a tonic—

It builds up the body—by strengthening the white corpuscles of the blood, or phagocytes, which by devouring the germs of disease keep the body in condition to cure or resist sickness.

Below is a list of diseases that Psychine will cure.

If you are troubled with or fear any, please fill in and send the coupon to us to-day—you'll never regret your decision:

La Grippe	Bronchial Coughs
Bronchitis	Weak Lungs
Hemorrhages	Weak Voice
Sore Throat	Spring Weakness
Anaemia	Early Decline
Female Weakness	Catarrhal Affections
Indigestion	Catarrh of Stomach
Poor Appetite	Night Sweats
Chills and Fevers	Obstinate Coughs
Sleeplessness and	Laryngitis and
Nervous Troubles	Dyspepsia

After-effects of Pleurisy, Pneumonia and La Grippe.

Now, we don't ask you to take our word for the tremendously beneficial effect of Psychine. Fill out the coupon below, mail it to us and we'll give your druggist an order (for which we pay him the regular retail price) for a 50-cent bottle of Psychine to be given you free of cost.

We will undoubtedly buy and distribute in this manner hundreds of thousands of these 50-cent bottles of Psychine.

And we do that to show our entire confidence in this wonderful preparation.

A confidence that has been based on our thirty years' experience with this splendid preparation, with a full knowledge of the hundreds of thousands of cures it has made.

COUPON No. 77

To the Dr. T. A. SLOCUM, Ltd.
193-195 Spadina Ave., Toronto

I accept your offer to try a 50c. bottle of Psychine (pronounced Si keen) at your expense. I have not had a 50c. bottle of Psychine under this plan. Kindly advise my druggist to deliver this bottle to me.

My Name.....

Town.....

Street and Number.....

My Druggist's Name.....

Street and Number.....

This coupon is not good for a 50c. bottle of Psychine if presented to the druggist—it must be sent us—we will then buy the 50c. bottle of Psychine from your druggist and direct him to deliver it to you. This offer may be withdrawn at any time without notice. Send coupon to-day.

At least one-third lighter draft

Genuine Kemp Manure Spreader

You can only buy one manure spreader with the Reversible, Self-Sharpening, Graded Flat-Tooth Cylinder—and that is the Genuine Kemp.

Because of this Graded Flat-Tooth Cylinder the Genuine Kemp is at least one-third lighter draft than any other spreader.

There is less friction on the Flat-Tooth Cylinder, because the teeth are wide and graded. On that account only one-third as many teeth are required, which reduces the friction when the manure is passing through the cylinder.

The square or round teeth on ordinary cylinders are not wide enough apart and the manure backs up, chokes cylinder, causing heavy draft.

The manure cannot back up against the flat teeth, and because the flat teeth are graded they will handle and thoroughly pulverize all kinds of manure from the clear gum to the strawy material.

There are many other exclusive improvements on the Genuine Kemp. Our big catalog describes and illustrates them fully. Send for a copy and learn some new facts about manure spreaders.

There would be twenty times as many manure spreaders in use in Canada today if farmers realized the economy of spreading manure with the Genuine Kemp. The Genuine Kemp will pay for itself faster than any other farm machine.

But send to us for catalog B 62 That's your first step. We are sole selling agents. 62

FROST & WOOD CO., LTD. SMITH'S FALLS, CANADA

Water unfit to Drink.

When foul smells exist water absorbs them, and it is then not fit for use. Water which has stood in an open vessel in a bed-room is unfit for drinking unless the room is much better ventilated than bedrooms usually are.

Prize Winners at the Fredericton Seed Fair.

The following were the prize winners:

H. Wilmot, Lincoln, 3rd, Ped Fife wheat; 1st on onions.

Wm. H. Moore, Scotch Lake, 5th, Red Fife wheat; 3rd, Banner oats; 3rd, any other variety; 1st, grey buckwheat; 1st, Timothy seed; 1st, Delaware potatoes; 2nd, any other variety potatoes.

H. B. Parlee, Sussex, 1st Two Rowed barley; 1st, Six Rowed barley; 1st, Silver Hall buckwheat; 1st, Rough; 2nd, peas.

Wm. E. Palmer, Scotch Lake, 4th, white Russian wheat; 1st Banner oats; 2nd, Delaware potatoes; 2nd, Irish Cobler potatoes; 1st, any other variety; 1st, turnip seed.

D. Innis, Tobique, 2nd, white Fife wheat; 2nd, Banner oats; 3rd, Banner oats; 3rd, Abundance oats; 1st, Early Blossom; 4th, any other variety; 4th, peas; 4th, colored beans.

R. Rivers, Upper Pokemouche, 5th, oats, any other variety.

G. E. Fisher, Chatham, 3rd, white Russian wheat; Sensation oats; 2nd, Two Row Barley; 2nd, Silver Hull buckwheat; 3rd, Rough Hill buckwheat.

T. E. Strong, Lindsay, 4th, Red Fife wheat; 2nd, white Russian wheat; 1st, Red clover.

A. Harrison, Maugerville, 2nd, Early Blossom oats; Corn Golden.

E. Jarvis, Stanley, 1st, oats, any variety; 3rd, Two Row barley; 4th, Rough buckwheat; 3rd, Delaware potatoes; 3rd, any other variety potatoes; 2nd, Rose potatoes; 1st, Red Skinned.

D. Currey, Tobique, 1st, white Russian wheat; 2nd, any variety oats; 3rd, peas; 1st, peas, white; 2nd, beans, colored.

H. Gordon, Chatham, 1st, White Fife wheat; 1st, Red Fife wheat; 2nd, Abundance oats; 1st, Sensation oats; 1st, field peas; 2nd, potato onions.

L. Hamilton, Fredericton, 3rd, Sensation oats; 5th, Delaware potatoes; 1st, potato onions; 2nd, potato onions.

John A. Courser, Prince William, 5th, Banner oats; 3rd, Six Row barley.

A. E. Kilburn, Mouth of Mactnaquac, 1st, colored beans; 1st, corn, Flint.

Robert Shaw, New Maryland, 4th, Banner oats; 2nd, Six Row barley.

Jas. W. Smith, Nashwaak, 2nd, rough buckwheat; 3rd, colored beans; 2nd, corn, Flint; 4th, Delaware potatoes; 1st, Rose potatoes.

N. F. Phillips, 2nd, Red Fife wheat 1st, Abundance oats.

Mr. S. J. Moore stated that this year's seed fair was the most successful and encouraging yet held.

Barnyard Manure Holds Moisture.

Barn yard manure increases the water-holding capacity of the soil; and instead of dumping the manure in some convenient, out-of-the-way place or leaving in the yard to deteriorate, or to rot the structures against which it is so frequently piled, the farmer can not only save money, but at the same time conserve the moisture of his soil, by immediately spreading it upon his fields. To get manure onto his fields quickly and effectively a manure spreader is very useful.

Without moisture, fertility is of little consequence; and moisture without fertility will not produce satisfactory results. The soil must be supplied with organic matter to replace the plant-food extracted from it by growing crops. This must come largely from the barn yard; from plowing under the green weeds, etc. Without paying attention to modern methods of agriculture farmers will soon be complaining of wornout soil; the value of the land will drop, and the young men will look for a "better chance" elsewhere.

PILES CURED at HOME by New Absorption Method.

If you suffer from bleeding, itching, blind or protruding Piles, send me your address, and I will tell you how to cure yourself at home by the new absorption treatment; and will also send some of this home treatment free for trial, with references from your own locality if requested. Immediate relief and permanent cure assured. Send no money but tell others of this offer. Write to-day to Mrs. M. Summers, Box P. 309, Windsor, Ont.

N. M. RUTHSTEIN
The Steel Shoe Man—He has made a million feet happy.

To Dealers—

Get in line with the leading merchants of Canada and supply your customers with my Steel Shoes. Save them the bother and delay of ordering direct—as they do when dealers disappoint them. A man who knows Steel Shoes will have no other kind—he knows their extra comfort, extra health and economy features. Write for terms today to Blachford, Davies & Co., Ltd., 60-62 W. Front St., Toronto, Canada's Leading Shoe Jobbers.

Do it *now* and give your customers a square deal on the work shoe question.

Free

Write for my book, "The Sole of Steel." But order your pair now in a hurry.

Join the Great Army of 500,000 Who Wear Ruthstein's Steel Shoes—

For Comfort, Health and a Saving of $10 to $20

HALF a million people have bought my Steel Shoes. Every pair was sent out on Free Examination. Every pair *could* have been returned. But the half million people recognized *at once* what my Steel Shoes meant. Today, not one of them would do without my Steel Shoes. They now know perfect foot comfort in all kinds of work—in all kinds of weather. They know what it means to be free from wet feet, and all resulting sickness, such as colds, rheumatism, neuralgia, sore throat, and even the dreaded pneumonia. They know what it means to be free from corns, bunions, callouses, and sore, aching, tired feet. And they know **real shoe economy.** For the half million Steel Shoe wearers will each save $10 to $20 shoe money on every pair of my shoes. Steel Shoes outlast 5 to 6 pairs of ordinary shoes.

Don't **you** want to join this great army of health-savers and money-savers? Don't **you** want to do **your** work without your feet bothering you? Don't **you** want to save about $10 on **your** shoe money every year? **Then wear Steel Shoes,** like the half million that are now doing it!

No More Wet or Cold Feet

There is nothing in the world like my Steel Shoes. Nothing can even compare with them. The soles are stamped out of a thin, rust-resisting, seamless, special process steel. This steel extends from heel to toe and up around the edges. There are no cracks or seams. The soles are studded with adjustable steel rivets which protect them from wear and give a sure, firm footing. When rivets wear out they can easily be replaced by yourself. Fifty rivets cost 30 cents and they will keep your shoes in good repair for two more years.

The uppers are made of the very best quality of pliable, water-proof leather, fastened forever to the steel bottoms. Water or cold cannot penetrate my Steel Shoes. Thus they keep your feet always dry and comfortable! And Steel Shoes have inner soles of springy hair-cushion which gives elasticity to tread and absorb jar when you walk on frozen ground. But comfort isn't all. You

Save Doctor Bills

Prevent Rheumatism Colds, Neuralgia Corns, Bunions, Etc.

Do you know the real reason why you get so tired standing on your feet all day tramping around? It's a hundred to one that you have broken down the instep of your leather shoes, making you stand flat-footed. There's where the fatigue comes in. Thousands of people have their shoes made to order putting in steel shanks to prevent this.

Every pair of steel shoes that I make prevents it. But that isn't all. Steel Shoes protect your health in many ways. They are easy to wear and dry as powder. Cool in the summer, warm in the winter and dry all the year round.

Outwear 3 to 6 Pairs of the Best All-Leather Shoes

Note the quality of the uppers. See the turned-up steel soles—and how everlastingly they are fastened to the uppers. Note the adjustable rivets which can be replaced at a trifling cost when worn down. Examine every part carefully. Satisfy yourself that Steel Shoes are the only kind of work shoes fit to wear. Nearly every progressive, wide-awake dealer in Canada sells and recommends Ruthstein's Steel Shoes. Go to **your** dealer. If he can't supply you, order direct from me. I'll send you a pair—the size and style you want at these prices—and I'll send them out on free examination. Made in all sizes from 5 to 12, for boys and men. 6-in. high—$3.00. 6-in. high with **extra grade of leather**—$3.50. 9-in. high—$5.00. 12-in. high—$6.00. 16-in. high—$7.00—the best shoe on the market regardless of price. Boys' Steel Shoes—sizes 1 to 4. 6-in. high, Boys' Steel Shoes—$2.50 per pair. 9-in. high, Boys' Steel Shoes, black or tan—$3.50 per pair. In ordering give correct size. Boys' Steel Shoes will **please the boy and save you money** and worry.

Start Wearing Them At Once Ask your dealer, but if he can't supply you, order right from this advertisement if you are in a hurry. Be sure to state **size of shoe you wear.** You take no risk. Money back if not exactly as I say or if you are not satisfied when you see my Steel Shoes. See your dealer at once—or order from this advertisement. Anyway send for my book—"The Sole of Steel," it is free. Address me personally.

Objects to Peaches with Apples.

Five years ago and again two years ago I planted apple orchards with peaches as fillers, but from my experience and what I have since seen in other orchards, I believe this plan is wrong. The treatment that the peaches require is different from that which apples need, especially with respect to fertilizing, so that in resetting this 20-acre orchard which I pulled out because of the poor stand secured after top-working, I shall use apples for fillers, because I believe that I will have a more satisfactory orchard upon this basis.—S. W. Wadhams in N. E. Homestead.

Fertilizer Experiments on Oats.

The Potash Syndicate, of Toronto, were kind enough to supply me with fertilizer the past season for an experiment in oats and having results with same that were very satisfactory I venture to make a few notes concerning same for the benefit of any interested.

My soil was sandy loam and was in sward. This was plowed in the fall. I made three plots in the experiment. One was unfertilized. No. 2 had Nitrate of Soda 120 pounds and Acid Phosphate 300 pounds and Muriate of Potash 100 pounds to the acre. No. 3 had Nitrate of Soda 120 pounds and Acid Phosphate 300 pounds per acre. The Potash and Phosphate with part of the Nitrate of Soda were applied the 10th of May. The balance of Nitrate of Soda was applied the 28th of May or after crop was nicely above ground. No other fertilizing material was applied to these plots. The plots were exactly correct in size and every precaution taken to ensure correctness in calculation. "Early Blossom" Oats were sown on acre on the 10th day of May on a carefully prepared seed bed. The crop was harvested August 29th after a very excellent season for this land. Very soon after growth started we these plots at the rate of 2½ bus. per could notice the difference between the plots fertilized and unfertilized. However, as the season advanced we almost thought that No. 3 plot was going to win. In fact, almost all of the visitors wha had the pleasure of inspecting these plots cast their vote that way.

I was particularly anxious to get the exact results of these plots and so did almost all of the work on them myself. We cut the plots with a reaper, and when I mowed No. 2 plot I could easily see that it was going to be the leader. The field was threshed out of doors. The plots were loaded one at a time and were threshed separately—an exact account of each being taken.

No. 1, unfertilized plot yielded as follows:—36 bus. oats and 1000 lbs. of straw per acre.

No. 2, with Potash yielded as follows:—63 bus. oats and 1 ton of straw per acre.

No. 3 Plot, without Potash, yielded as follows:—42 bus. oats, and 1550 lbs. of straw per acre.

Balance in favor of Potash was 21 bus. per acre. We figured our grain at 50c. per bus. and straw at $4.00 per ton and on this basis No. 2 plot or the one which had Potash added yielded us a profit after deducting cost of fertilizer at the rate of $6.40 per acre. No 3 plot without Potash in its constituents showed a loss of $2.70 per acre.

I might say in regard to these plots that the field was entered in the County Competition for standing field crops. This field was successful in tieing for third place. The fields that scored above were only fractions ahead. A number of the heads we measured were found to be 18 inches in length. The results of this experiment goes to show very plainly that no guess work can be set down for facts as exact measurements are necessary for absolutele correctness. I took great pleasure in conducting the experiment and am adding Potash largely to my fertilizers this year.

C. FRED FAWCETT.

Upper Sackville, N. B.

An Experiment With Fertilizers.

Editor Maritime Farmer:—

In the spring of 1910, at the request of the Potash Syndicate, I consented to conduct an experiment to determine the profit from using commercial fertilizers, especially Potash. The field selected was a light soil of medium quality but well cultivated and previous to planting it had received a light dressing of barnyard manure. The crop selected was potatoes, which were planted May 21st and harvested Oct. 6th. Beetles were very numerous the first of the season which retarded their growth somewhat, and the latter part of the growing season was very dry. The field was divided into three plots; Plot No. 1 received no fertilizer which yielded 224 bushels per acre. Plot No. 2 received Nitrate of Soda, 150 lbs. per acre, Acid Phosphate, 360 lbs. and Sulphate of Potash, 180 lbs. Plot 3 received Nitrate of Soda 150 lbs., and Acid Phosphate, 360 lbs. per acre. Plot No. 2, on which "complete fertilizer" was applied yielded 342 bushels per acre, which was a gain of 118 bushels over Plot No. 1. Plot No. 3 which received Nitrate of Soda and Acid Phosphate gave 274 bushels which was a gain of 50 bushels over Plot No. 1. The profit from using Nitrate of Soda and Acid Phosphate was $5.00 above cost of fertilizers and from using Soda, Phosphate and Potash $21.00, allowing 30c. a bushel for potatoes, which was below selling price here last fall. The plot on which the "complete fertilizer" had been applied gave tubers of a uniform size and free from rot. On another field for which I did not have enough stable manure to finish out, I applied complete fertilizer, 600 lbs. per acre, which gave a larger crop than where heavily manured. The tubers were of larger size and sound while 30 per cent. of crop was rotten where stable manure was used.

DANIEL STEWART.

Alliston, P. E. I.

Not Haws.

Subscriber, N. B.:—Horse six years old, has growth over left eye like little lumps or more like a thickening of skin, and the hair is off.

1. Do you think the trouble is haws?
2. Is it liable to affect the sight?
3. How can growth be removed, and will the hair grow again?
4. What is the cause?

Horse has medicine for his blood regularly.

Ans.—1. No.

2. Not unless they grow large enough to hang over the eye.

3. The growths may be removed, preferably with a knife. If they have a small neck, they may be removed by tying a small cord around the base tight enough to arrest circulation, and after they drop off apply a caustic to the raw part. Butter of Antimony is useful for this purpose but whatever caustic is used, care should be taken to prevent it running into the eye and injuring it. Silver nitrate may be used in pencil form.

4. The specific cause of warts is difficult to explain. They are a diseased over-growth of the surface layers of the skin.

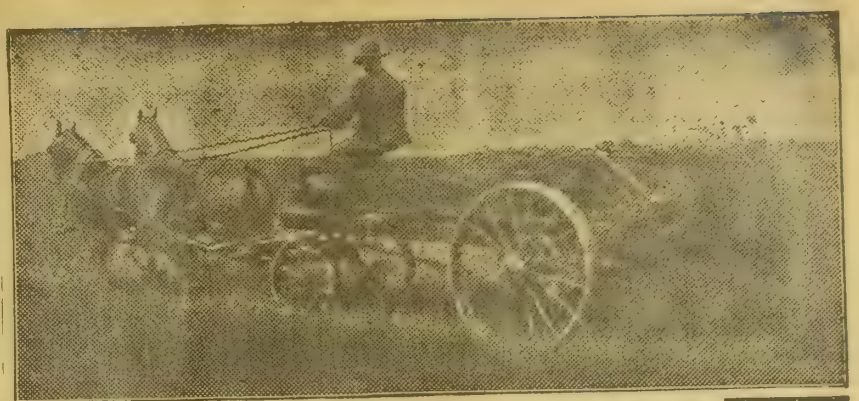
As to medicine for the animal's blood being given regularly, if the animal is properly fed, exercised and cared for, medicines are not necessary and may be injurious.

J. STANDISH, V. S.

Double Mouldboard Plow.

N. S., West St. John:—I am thinking ol buying a riding plow. Could you let me know through your paper which is the better kind, the single or double mouldboard type? For a hay pitching outfit would you prefer a wooden or iron track machine?

The choice of plow must depend on the system of plowing you purpose following. If you have a good team and you want to plow your fields without ridging the double mould board plow would be preferable. If you ridge your land, we do not see any advantage in using double mouldboard plow. We would urefer an iron track for a pitching machine as the wooden tracks are liable to warp and cause the mechine to work rather stiffly.



Do You Intend To Abandon Your Farm?

In New England there are hundreds of abandoned farms—abandoned because the soil has been drained of its fertility. Had these farms been properly fertilized they would still be producing bounteous harvests.

New England farms are not the only ones that are being depleted of fertility. There are thousands of other farms which are rapidly approaching the point where further cultivation will be unprofitable unless some means is adopted to renew the fertility of the soil.

If you do not intend to abandon your farm, it will be necessary to supply fertilizer to the soil. It is not only necessary to apply manure, but it is absolutely essential that it be applied evenly and in proper quantities.

Manure cannot be spread evenly by hand. Experience has demonstrated that the spreader is the only method by which manure can be applied uniformly.

It is just as necessary to exercise judgment in selecting a spreader as it is on any other subject. There are many spreaders on the market. The I H C spreader has proved its superiority by giving the users years of efficient service. With an I H C spreader you can regulate the distribution of manure so as to make every ounce count. Adjustments can be made to spread a light top-dressing or a heavy covering. This is possible because I H C spreaders have a wide range of feed, and the long, square, chisel-pointed beater teeth thoroughly pulverize the manure that is applied. Wide tires and roller bearings insure light draft.

I H C spreaders are made in two styles—

Cloverleaf—Corn King

Cloverleaf spreaders have endless aprons. Corn King machines have return aprons. These machines are made with capacity suitable for farms of any size. Call on the I H C local dealer and let him show you the style and size best suited to your purpose, or, if you prefer, write to nearest branch house for catalogue and full particulars.

I H C Service Bureau

The Bureau is a center where the best ways of doing things on the farm, and data relating to its development, are collected and distributed free to every one interested in agriculture. Every available source of information will be used in answering questions on all farm subjects. If the questions are sent to the I H C Service Bureau, they will receive prompt attention.

A PREMIUM THAT BEATS ALL

YOUR OPPORTUNITY!

NEVER before in the history of The Maritime Farmer has there been shown such a rapid increase in the circulation as during the past season. Read the description found below of one of the most remarkable premium offers that has ever been put on in this part of the country. It is sterling worth, a real premium and something that nine out of ten homes will welcome. It costs you practically nothing to have The Farmer and at the same time fit your kitchen for quicker, more pleasant and efficient service. Housewives see to it that you do not fail to get one of these handsome premiums while they last. The supply is limited and this offer may not appear again.

Description of the 8-piece Set

No. 1—A 7-inch Meat Cleaver, one of the handiest of kitchen tools, well balanced and of tempered steel. Light enough for anybody to handle, yet heavy enough to be very effective.

No. 2—An 8-inch blade Kitchen Knife; no better knife can be had; made of tempered steel and a keen edge and a knife that will do valiant service as long as there is a strop of it left.

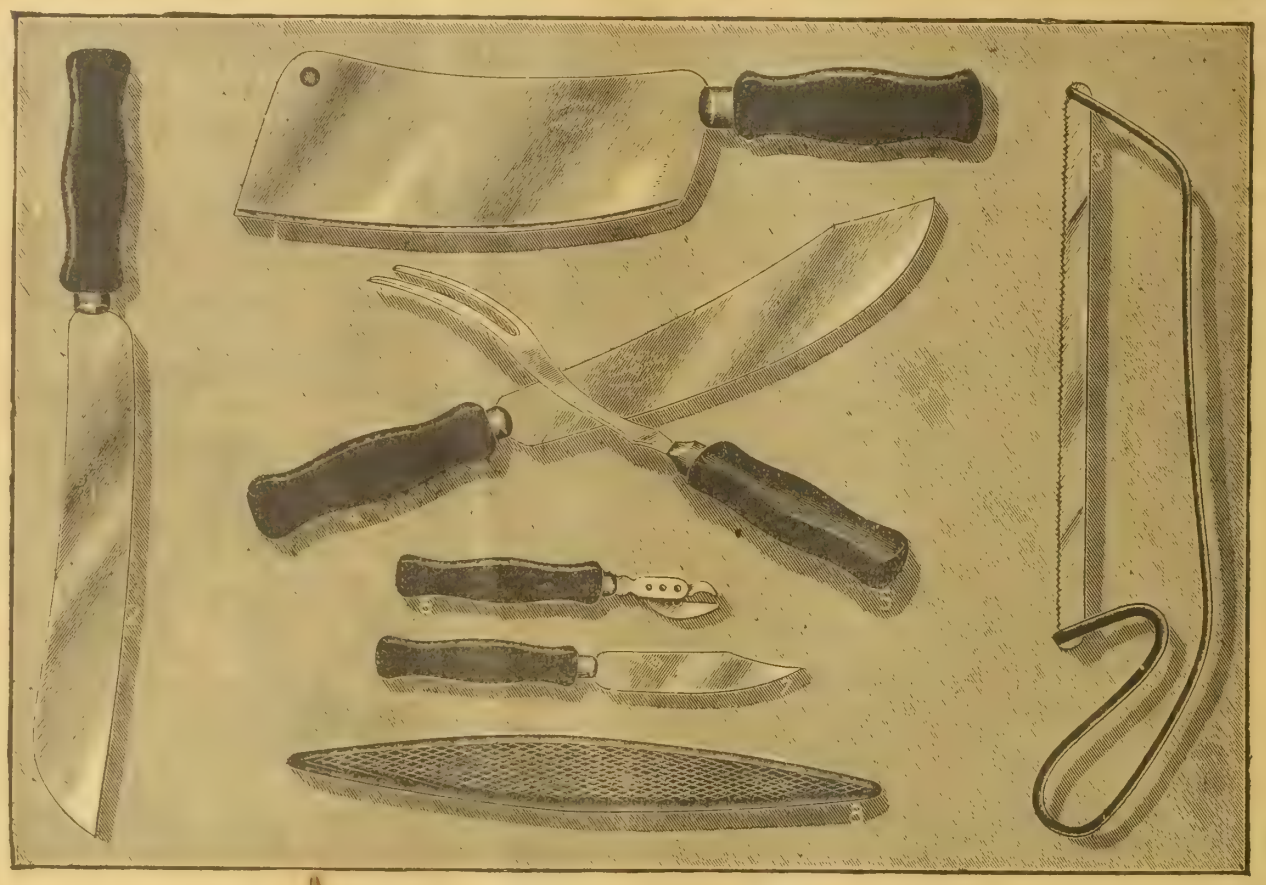
No. 3—The handiest of kitchen tools, a real Meat Saw, 8 inches in cutting service. It is sharp and set wide so as to cut with ease. No kitchen is complete without it.

No. 4 and 5—A serviceable Carving Set; just the thing for actual service; handsome enough to use on the table if you desire; sharp enough to carve any meat and made of best tempered steel. A valuable part of this set.

No. 6.—A Can Opener that will open cans. No danger of cutting your hand on the tin; strong and substantial; will cut any can top; made of best steel; will last a lifetime.

No 7—A keen, properly shaped Paring Knife. Will pare the thinnest peel and do it quickly; sharp-pointed for cutting out cores, etc. No kitchen is complete without it. A beauty and a dandy.

No. 8—Every housewife wants something to keep her knives sharp. This whetstone, made of the finest material, will put an edge on any knife with a few strokes. Nothing so handy in the kitchen as the real whetstone. This one is the best for kitchen use that can be found.



THIS IS THE SET

Our Kitchen Set Outfit consists of the following:

One Kitchen Cleaner, best cutlery steel, fully warranted,	$0.65
One Bread Knife, best cutlery steel, fully warranted....	.50
One All Steel Butcher-Web Kitchen Saw, strong and durable.....	.65
One Butcher and Carving Knife, extra guaranteed.....	.50
One Carving and Flesh Fork, handsome and guaranteed	.50
One Can Opener, small but powerful, guaranteed.....	.25
One Paring and Peeling Knife, razor edge, guaranteed,	.15
One Imported Aluminum Diamond Sharpening Stone..$	.25
Total value of above at retail	$3 45
One year's subscription to Maritime Farmer (in advance)	.80
Total value	$4.25

All of these articles for $2.50

This offer applies to either New or Renewal Subscriptions. Neither article can be purchased Separately.

Live Agents Wanted in Unrepresented Territory.

THE MARITIME FARMER, - Sussex, New Brunswick

Nitro Culture.

Now that the spring season is approaching, farmers are, no doubt, beginning to think of seeding operations. Everything points to more clover, including alfalfa, being sown than ever before. No doubt the unusually high quotations for timothy seed will lead to the use of a larger proportion of clover than heretofore. With many it is a difficult problem to get clover of any kind, and more especially alfalfa clover, to catch. One of the chief sources of trouble is that the soil has not been inoculated with the bacteria necessary to the successful growth of these plants.

As in previous years, the Nova Scotia Agricultural College will supply bottles of bacteria, suitable for the inoculation of alfalfa, red clover, alsike, peas and vetches. The commercial charge for these bottles of bacteria is usually $2.00, but the Nova Scotia Agricultural College, like the other agricultural colleges in Canada, are supplying these nitro cultures at the nominal cost of 25c. per bottle. Last year nearly 600 cultures were sent out from the College and, while in many cases very indifferent results were obtained, yet in a large proportion of the cases results are reported very satisfactory.

Those who are interested are advised to address the Principal, Nova Scotia Agricultural College, Truro, Nova Scotia.

An Incubator Free.

The Maritime Farmer believes there should be an incubator on every farm. It means chickens for eating, more eggs and a money maker. To help encourage this we are going to give an incubator absolutely free to the person making the best hatch.

Here are the only conditions. You must buy the incubator this season of some advertiser in The Maritime Farmer. Keep a careful record of the hatch which you can acknowledge before a notary if necessary, write us before May 30th, giving the number of eggs started with, and number of chicks hatched, and to the person making the largest per cent of hatch we will refund every dollar they paid for their incubator. This is simple and easy. Remember, the incubator must be bought this season of an advertiser in The Maritime Farmer. When writing to a firm mention The Maritime Farmer. Take this copy and write every incubator advertiser in it or at least send for catalogue so as to get all the information possible, pick out your machine, get it and then be careful with your hatch, if you make best hatch we will repay you every dollar you paid for the machine.

It does not matter whether you start 50, 100 or 200 or any number of eggs. Test at the end of the 10th day, taking out infertile eggs, keeping a record of those so taken out. Then keep a record of eggs hatched from the rest.

Don't fail to take advantage of this. You want an incubator anyway, and by buying it of our advertisers you stand every chance in the world of getting your money all back. We positively guarantee every advertiser in our columns to do as they agree. Write us if you intend to compete and be sure to get your record of hatch by May 30th. You can make two or three hatches by that time. Address all letters in regard to this to Poultry Department, The Maritime Farmer, Sussex, N. B.

Send for the booklets of advertisers in The Maritime Farmer—you don't have to buy and you may learn some thing useful.

"EVERITT" Quality

Pays you dividends of service from the day you buy

$1450 Gets you a COMPLETE car and assurance of PERFECT service. **$1450**

Behind the "Everitt" factory, in which every part is jig-manufactured for accuracy, with new machinery, stands the Tudhope name, known for 57 years. INTERNATIONAL STOCK FOOD CO., LTD., Toronto, Can.

CASH CAPITAL $2,000,000 LARGEST IN THE WORLD

M. W. Savage, sole owner of "International Stock Food," and also of "International Stock Food Farm," **positively** Guarantees that His World Famous Champion Stallions, Dan Patch 1:55, Cresceus 2:02¼, Minor Heir and Arion 2:07¾ and his brood mares and colts eat it every day. You are specially invited to visit this Great Harness Horse Breeding Farm ten miles from Minneapolis, and see the practical results of the every day use of the greatest purely vegetable animal tonic ever used on a farm. It is constantly used and strongly **endorsed by over Two Million of the most up-to-date Stockmen and Horse Breeders** of the world.

INTERNATIONAL STOCK FOOD THE GREAT ANIMAL TONIC

Is sold by over 100,000 dealers on a spot cash guarantee that the use of one ton will make you a net profit of $368 over its cost, or that 100 pounds will make you $18 net profit. If it ever fails your money will be promptly refunded. International Stock Food is a strongly concentrated medicinal preparation composed of roots, herbs, seeds, barks, etc., and is equally good for horses, colts, cows, calves, hogs, pigs, sheep, goats, etc. It is fed in small amounts mixed with grain and purifies the blood, tones up and strengthens the system and greatly aids digestion and assimilation, so that each animal obtains more nutrition from all food taken. **It is not the amount of grain fed but the amount assimilated or taken into the system that fattens** or keeps your stock in good condition, and as International Stock Food increases assimilation it will save you money. It will make you more money than you can possibly make without its use. It also cures and prevents many forms of disease, and is absolutely harmless, even if taken into the human system. International Stock Food is endorsed by over two million farmers who have used it for years. The editor of your farm paper will tell you that we do exactly as we agree, and as reference we give you the Traders Bank of Canada.

PROVED ITS INVALUABLE WORTH. KEHO, ALTA, 10-10-10.

The International Stock Food Co., Toronto, Ont.—Gentlemen: I feel in honor bound to offer you my testimonial in favor of your Stock Food. I have used it faithfully this summer and proved its invaluable worth. It made my pigs grow, the results were simply marvelous. I would not be without it for anything. My horses got a very nasty distemper cough in the spring, but the food cleaned it completely out of their system and they went through the Spring work fine and came out of it rolling fat. Please duplicate my last order. Mrs. Coe requests me to tell you that your Poultry Food is excellent, that feeding your Poultry Food doubles the quantity of eggs, in fact, it could not be better for egg production and keeping the fowl healthy.—Yours sincerely (sgd.) ALF. R. COE.

Agriculture Legitimate Not Illegitimate.

Editor Maritime Farmer:—

As a farmer of Westmorland Co., N. B., I desire to utter a firm protest to many of the impeachments thrown on us by D. McDougall in his letter in your last issue on "Agriculture, Legitimate and Illegitimate." He tells us that 75 per cent. of us farmers are working destruction and sums us all up after 20 years of observation as ignorance and extravagance personified, which is not true—a reflection and blot upon our industry and intelligence. Then he bluntly publishes abroad that the ashes are thrown out at the kitchen door, the slops of the chamber upon them to breed flies. That statement is unfair to 99 per cent. of our farmers and unbecoming to the gentleman who made it. He says the farmers have no money to buy fertilizer nor knowledge to apply it. I wish to say briefly in reply that at least 75 per cent of our farmers have money to buy anything and abundant knowledge how to use it for the very great est profit. In proof of this I can give the names of scores of farmers in eastern Westmorland who buy fertilizer and pay cash and in return grow crops fully equal to any pioneer farm he speaks of and away beyond his quotations. In travelling over our county buying and shipping potatoes many farmers have interested me with their experience in the use of fertilizer, showing enormous crops of 100 barrels of potatoes to an acre an even more as a result of their knowledge gained by our Experimental Farms, the yearly Government bulletins and their own practical application and yet Mr. McDougall says these bulletins are no use, being neither read nor believed when read; an injustice to the intelligence of the farmers of our county and province.

He speaks of 30 bushels af unmarketable potatoes on half an acre as a sample of destruction. That may be true but do not pass it out as a fair sample of the general crops of our farmers. We have bad years, of course. Take this past year. When did the farmers in every section of our Province have such abundant hay and grain crops—no shortage anywhere, showing with a fair season results in a practical manner of industry and the careful application of the high knowledge gained through reading, experience and their own good common sense. We have such papers as our own Maritime Farmer continually scattering gems of thought, new ideas and practical experience of practical men and agricultute is on a higher plane today on this account. Farmers are better off, are more comfortable, have more conveniences and better everyway than ever before. GEO. A. FAWCETT.

Westmorland Co., N. B.

Poultry Fencing that is Stronger than Seems Necessary

We make our poultry fencing close enough to turn small fowl—then we make it extra strong, so it will last for years and keep the cattle out. The heavy, hard steel top and bottom wires hold it taut and prevent it from sagging.

PEERLESS POULTRY FENCE SAVES EXPENSE

It is well galvanized so as to protect it from rust. It makes such a firm, upstanding fence that it requires less than half the posts needed for the ordinary poultry fence, and that means a big saving to you. Write for particulars.

We make farm and ornamental fences and gates of exceptional quality. Agents wanted where not now represented.

Sanitary Cow Stalls and Their Construction.

(Continued from page 377.)

teners the farmer should consider the sanitary and humanitarian principles involved in the construction of any of these ties. Study them for principle, not alone for economy. Of course economy should be considered but it should not be placed above the consideration of the welfare of the cow; she should always receive due consideration, and in turn will reward her owner.

A careful study of this bulletin will convince the reader that the principles involved in the construction of a home made stall are equal to those of the patented stalls and in many ways they are more satisfactory. Some of our more prominent dairymen are using such stalls in preference to those which are patented.

COST OF STALLS.

The variation in price of labor and material in different localities will naturally produce a variation in the prices of stalls.

THE MODEL STALL.

In vicinity of Madison at current prices the items of expense for 10 Model Stalls would be about as follows:

Rails and movable crossbars. 110 feet of 2x4 inch, 12 and 16 foot lengths, at $25 per M ..	$2.75
Front side of mangers, 36 feet of 2x6 inch, 12 foot lengths, at $25 per M...	.90
Rear side of mangers, 80 feet of 2x12 inch, 10 and 12 foot lengths, at $25 per M.....	2.00
Slats in hay and straw racks, 114 feet of 1x3 inch, 12 foot lengths, at $18 per M.....	2.05
Crossbars for slats in racks, 54 feet of 1x4 inch, 16 foot lengths, at $18 per M.....	0.97
Stall partitions, movable floor mats and fronts of stalls 680 feet of 1x12 inch, 10, 12 and 16 foot lengths at $37 per M...	27.10
Chain ties, 10, at 25 cts. each	2.50
Carpenter work, $18 to $20 ...	20.00
Nails, hinges and bolts, $1 to $2	2.00
Total	$60.33

Cost of a single stall, approximately $6, which is not excessive considering its excellent characteristics.

THE HELENDALE STALL.

The items of expense for ten of these stalls would be about as follows:

Supports for swinging partitions and manger divisions, 88 feet of 2x6 inch, 10 and 16 foot lengths, at $25 per M...	$2.20
Adjustable crossbars and brackets to hold bars in place, 42 feet of 2x4 inch, 10 and 14 foot lengths, at $25 perM.....	1.05
Stall and manger partitions; 73 feet of 1x10 inch, 14 and 16 foot lengths; 138 feet of 1x12 inch, 12 and 14 foot lengths; 84 feet of 1x14 inch 12 foot lengths at $38 per M	11.21
Floor mats, 150 feet of 1x12 inch, 14 foot lengths, at $35 per M	5.25
Hinges, 10 sets, at $1.50 per set	15.00
Carpenter work, $18 to $20	20.00
Nails, bolts, etc., $1 to $2.....	2.00
Total	$56.71

Cost of a single stall, approximately $5.70, which is a very moderate cost for a stall of this class.

IDEAL STALL.

Crossbars, 36 feet of 2x6 inch, 12 foot lengths, at $25 per M	$0.90
Mangers, 72 feet of 2x12 inch, 12 foot lengths, at $34 per M	2.45
Manger and partitions, 30 feet of 1x9 inch, 12 and 16 foot lengths, at $35 per M.....	1.00
Floor mats, 158 feet of 1x12 inch, 18 foot lengths, at $37 per M	5.85
Jprights and partitions, 224 feet of 4x4 inch, 12 foot lengths, at $32 per M	7.17
Chains, 10, at 35 cents each.....	3.50
Guides for chains, 10, at 20 cents each	2.00
Bolts for holding partitions in concrete floor, 11, at 10c	1.10
Nails	2.00
Labor, $18 to $20	20.00
Total	$45.97

Cast of single stall approximately $4.40.

NEW IDEAL STALL.

Since this is constructed of gas pipe and lumber it will cost more than the stalls previously discussed, but is more sanitary. The following list gives the cost of materials for 10 of these stalls.

Floor mats, 158 feet of 1x12 inch, 18 foot lengths, at $37 per M	$2.85
Mangers, 120 feet of 2x12 inch 12 foot lengths, at $34 per M	4.08
Stall pipes, 250 feet of 1½ inch black gas pipe in 12 and 14 foot lengths, at 10 cents per foot	25.00
Tees, 40, 1½ inch at 10c each...	4.00
Elbows, 20, 1½ inch, at 7c each	1.40
Unioos, 10, 1½ inch at 20c each	2.00
Chains, 10, at 35 cents	3.50
Eye bolts, 55, at 10 cents each	5.50
Nails	0.50
Labor, $18 to $20	20.00
Total $68.83	

Cost of single stall approximately $7.18.

DRAWINGS AND SPECIFICATIONS

Blue prints of the detailed drawings of the stalls, gutters and mangers shown in this bulletin may be obtained by farmers who contemplate the construction of sanitary stables upon application to the Agricultural Engineering Department, Experiment Station, Madison, Wis., at the cost of printing.

Dr. Standish on Leave of Absence.

We are sorry to announce that, owing to ill health, Dr. J. Standish, Veterinary Instructor, at the Nova Scotia Agricultural College, has been obliged to take a leave of absence. He left for Ontario last week, where we hope he will soon recuperate and be able to be back in the Maritime Provinces again in time to take charge of his 1911-12 classes.

OYYGEN== GOD'S WONDERFUL FREE GIFT TO HUMANITY.

All Vegetable, Animal and Human Life Must Use It

This advertisement is an appeal to the ordinary common sense of the reader. Listen to what we say :—

A—We control, for the Maritime Provinces and Newfoundland, the sale of the marvellous Oxygen Machines, known as The Oxygenator and The Oxypathor.

B—The principle upon which these machines work is that of so affecting the body, when properly attached to it, that largely increased quantities of Oxygen are transmitted through the pores to the blood.

C—The record of the past 14 years prove conclusively that the machines, by this method, not only cure all curable diseases, but may be used by each and every member of the family. (It may be added that the machines last for life and never need recharging or refilling.) (We use no drugs, powders or pills.)

D They are made to sell in two sizes at $25.00 and $35 00, and to any person who so wishes it, they will be rented for $10.00 per month, payable strictly in advance, and all such rental money paid will be applied on the purchase price if the person later decides to buy.

E—We have a very **attractive book,** entitled "Oxypathy," 72 pages in it, also another little booklet, entitled **"Oxypathy Victorious,"** giving the **names and addresses** of **scores** of our **delighted patrons** in the **Maritime Provinces. Free for the asking.**

F—It might interest **you** to know that we were granted a **magnificent Gold Medal and Diploma** for our **exhibit** at the **recent Dominion Exhibition,** held in **St. John, N. B., last Sept.**

G—**We** have absolutely **no connection with** nor **responsibility for** any other **Oxygen Machine** on the market and would **caution** any **investigator** to make sure that you get the **right machine**—either an **Oxygenator** or an **Oxypathor.**

H—**Our machines** are **sold strictly on their record.**

I—If **you cared** to do so, you could **write** to **any** of the **undersigned** who will **gladly tell you what they know:**

1—A. B. Farmer, Accountant Chas. Miller Lumber Co., 295 Main St., St. John.
2—I. O. Beatteay, Undertaker, 115 Prince St., Carleton, St. John.
3—Mrs. Hall, Secretary Associated Charities, 118 Charlotte St., St. John.
4—Rev. Mr. Robinson. Pastor Ludlow Street Baptist Church, St John, N. B.
5—Rev. Mr. Brewer, Paster Exmouth Street Methodist Church, St. John, N. B.

And scores and scores of others who know what the machines can do and are doing.

Our beautifully located offices at 19 Market Square, Suite 20, Robinson Building, Telephone Main 2367.

Maritime Oxygenator Co., C. Fraser McTavish, Gen. Mgr., ST. JOHN, - New Brunswick

P. S.—**One or two exceptionally attractive agency propositions** open to **superior men and women** who have **business ability** of a high order, coupled with **integrity** and **tact.** Salary or Commission. Apply to the Manager.

Types of Shorthorns.

Editor Maritime Farmer:

I have just returned from attending the annual meeting of the New Brunswick Farmers' and Dairymen's Association. If there was one feature that impressed me more than another it was the stick-to-it-iveness of some of the advocates of the "Dual Purpose Cow." I cannot say this feature was an amusing one because to my way of thinking it was a matter of deep concern. Any one who had the opportunity of following Prof. Cumming's deductions re the comparative profitableness of the Dairy Cow vs. the Beef Cow could not fail to see the folly of making a move recommending the importation of dual purpose stock.

I would like to hear from our Westmorland County friends, who claim they have thousands of dual purpose cows in their district. Let us have some of their records. I have no hesitation in saying that the resolution referred to was rushed through at a meeting that was very slimly attended and that if properly discussed it would never get the assent of a representative meeting.

If we go into dairying let us use an out and out dairy breed. If beef raising suits our locality let us raise beef from animals of a strictly beef type. The dual purpose cow is a fallacy.

Following are two articles on "Types of Shorthorns" that recently appeared in the Breeders' Gazette:

ONE WHO WAS THERE.

"Certain men who seem to have no eye for beauty or utility seem to be trying to make a dairy breed out of a beef breed, and if allowed to run their course they will give Shorthorns a backset. This seems to be more prevalent in the East, where a high milk record seems to be what they want. I can not resist answering George Ashbridge's article in The Breeders' Gazette of Feb. 1. He says: "She is the real Shorthorn cow." He is mistaken. The true Shorthorn cow is the low-set, thick fleshed cow of our modern showyards that gives milk enough to raise her calf and usually a little more. He further says: "The real Shorthorn cow is the milker, and the beef cow, the product of local conditions is now rapidly disappearing." The leading shows of recent years prove "how rapidly she is disappearing." When the Shorthorn beef cow disappears the breed will disappear also.

"It is beef we are after; there are plenty of dairy breeds now to supply milk. We are not living in Thomas Bates' time. If a man is going to run a dairy he had better get dairy cows of a dairy breed. The average farmer wants a cow that will give him enough milk to make his butter and supply his milk. It is a poor cow that will not do that.

The Shorthorn has been a beef breed for a century and it should remain so. We cannot have a good beef cow and a good milker combined. One must be sacrifices in order to make a true specimen. Many will disagree with this, but I believe it to be a fact. To allow 50 per cent in the show ring for the milking capacity of a beef cow is all wrong. I doubt whether anything need be allowed.

"Mr. Ashbridge says the future of any dairy breed depends on the average farmer. I think he is wrong again. Let dairymen take care of the dairy breeds. They are for milk and milk only. The Shorthorn is for beef and beef only. Of course every-

MAXWELL'S
HIGH SPEED
CHAMPION
Is The Most Satisfactory Washer Ever Placed On The Canadian Market
Last year, Maxwell's "Champion" was the recognized leader of all high speed washing machines. This year, we have put the final touch to it, and offer you the ideal machine, that includes every important improvement known to modern washers.
Maxwell's "Champion" has the largest opening of any washing machine. As you can see, the Wringer attachment is at the side, and practically the whole top of the washer opens up. This makes it easy to put in and take out clothes.
No other washer has this feature. No other washer can be worked with crank handle as well as top lever
In design, finish and appearance—in ease and quickness—in service and durability—Maxwell's "Champion" is the peer of them all. If your dealer does not handle it, write us for illustrated catalogue.
Have better butter. Use Maxwell's "Favourite" Churn. Recommended by best butter makers the world over. More of them used in Canada than any other. All sizes from ½ to 30 gallons.

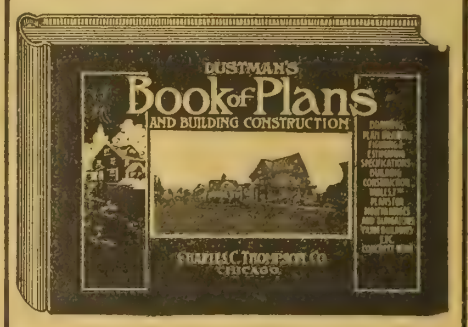
Dustman's Book of Plans

—AND—

BUILDING CONSTRUCTION

By U. M. DUSTMAN
(Licensed Architect.)

10,000 sold in 30 days



Price, $2.00 Prepaid

Here's a different book from those upon the market. It contains information not generally known outside the building trades; just such information which the building public want. The author has written a book in which he has embodied the cream of over thirty years successful experience. He is widely known as a practical and expert architect and is an authority on the construction of medium priced homes.

Everyone interested directly or indirectly in building should have this book. 250 pages; oblong size, 9x13 inches; bound in blue cloth; white hand stamping—150 plans for modern houses, bungalows, barns, farm buildings, store fronts, store buildings, garages, etc. etc.

CONTENTS

General Construction Plans—Arrangement of Rooms—Things to be Considered in Laying Out a Building—Heating Facilities—How to Estimate Cost—Figuring Amount of Material Required—Time Saving Tables—Mechanical Drawing and How it is Applied in Construction of a Building—Plans with Estimated Cost of 150 Houses, Bungalows, Barns, in Frame, Concrete or Brick Construction—Country Houses—General Barnes, Cattle and Horse Stables—Dairy Barns—Poultry Houses and Silos—Hints as to Best Style of Structure—Details of Interior Construction and Finish—Window and Door Framing—Stairways—Store Fronts—Roof Construction—General Directions for Mixing and Placing Concrete—Proportions—Sand and Gravel—Itemized List of Material Costs—Writing of Specifications.

This book will be sent, together with a year's subscription to The Maritime Farmer, to any person upon receipt of $2.00. That is if you are already a subscriber and will send us two dollars we will send you the book and give you credit for one year's subscription. If you are not already a subscriber and want the book, you may obtain it and The Maritime Farmer for $2.00. These books cannot be purchased anywhere for less than $2.00 each and they are a bargain at the price.

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Extension to Wharf, Approach and Dredging, Richibucto," will be received at this office until 4.00 P. M., on Tuesday, March 28th, 1911, for the construction of an Extension to Public Wharf, and Approach and Dredging, at Richibucto, Kent County, N. B

Plans, specification and form of contract can be seen and forms of tender obtained at this Department, at the offices of E. T. P. Shewen, Esq., District Engineer, St. John N B, Geoffrey Stead, Esq., District Engineer Chatham, N B., and on application to the Postmaster at Richibucto N. B.

Persons tendering are notified that tenders will not be considered unless made on the printed forms supplied, and signed with their actual signatures, stating their occupations and places of residence. In the case of firms, the actual signature, the nature of the occupation and place of residence of each member of the firm must be given

Each tender must be accompanied by an accepted cheque on a chartered bank, payable to the order of the Honourable the Minister of Public Works equal to ten per cent. (10 p. c.) of the amount of the tender, including dredging, which will be forfeited if the person tendering decline to enter into a contract when called upon to do so, or fail to complete the work contracted for If the tender be not accepted the cheque will be returned.

The Department does not bind itself to accept the lowest or any tender.

By order,
R. C. DESROCHERS,
Secretary.

COWS GIVE MORE MILK
---cattle make better beef---Bulls are no longer dangerous when dehorned with the
KEYSTONE DEHORNER.
Cuts 4 sides at once---No crushing or bruising. Little pain. The only humane method. Write for free booklet. R. H. McKENNA
219 Robert St. Toronto, Ont. Late of Picton, Ont.

one has his own opinion about this. I am stating mine.

Why or how this "dairy Shorthorn cow" idea ever originated is more than I can understand. If anyone can see any beauty in a Shorthorn cow with an udder as big as a basket and horns like an Ayrshire, thin-fleshed, as many of them are, he has lost his eye for beauty, and beauty in a beef breed is one of its crowning features. I prefer to look on the modern Shorthorn of the beef type, low-set, thick-fleshed, with nice head and horns, such as are exhibited at our leading shows. The Shorthorn is too grand a breed to spoil by the milk craze."

SHORTHORN ADMIRER.

Dodge Co., Neb.

"We have been reading for many years about the excellent qualities of the Shorthorn cow as a profitable dairy animal; but we have failed to find any proof to show that she stands in the front ranks as a profitable dairy cow. Why? Simply because she cannot produce the goods, not having been bred for that purpose. Is there one first-class dairy establishment in this country using Shorthorns or their grades to produce milk or butter that has succeeded? It is true we occasionally stumble onto a good performer in the Shorthorn breed, but can we rely on her offspring? We also find a Percheron occasionally that makes a fair driver, but who is breeding Percherons and using them for road horses? More than 22 years ago, when I first embarked in the dairy business, I was of the opinion that Shorthorns were best suited for milk, so I bought many, including grades and pure-breds of "dairy conformation." Some of them were heavy milkers, for a while, but for only a short while. They soon fell off in milk and were dry from three to six months of the year, eating and laying on fat and making preparations for another short spurt at the pail, but producing nothing from a dairy standpoint, so I was not long in deciding that I had tied to the wrong breed and so began to look for something better. I am sure now, after my long experience in the business, that any of the dairy breeds, including Jerseys, Guernseys, Ayrshires and Holstein-Friesians, are much more profitable than Shorthorns for dairying; but I dairy breeds is profitable for beef do not claim that any of the named production. I do think Holstein calves are as profitable as Shorthorns for veal.

"I note on page 278, issue of Feb. 1, Breeders' Gazette, that Mr. Ashbridge says Shorthorns are the cows for average farmers; but is it the average farmer we must follow or the one above the average? Mr. Ashbridge also says: "It is not necessary to go into the early history of the Ayrshires, which are known to have been produced by crossing of Shorthorn blood on native cows; nor of the Holsteins which are said to have had the benefit of the Teeswater cross many years ago." Now we should like to know where he got his information that Holsteins have been crossed with Teeswater cattle or Ayrhires with the Shorthorns, which it is inferred made them profitable at the pail.

"I advise readers of The Breeders' Gazette who are contemplating embarking in the dairy business to use any of the dairy breeds. If they are going in for beef production I advise them to select one of the beef breeds. Do not expect to get dairy profits from a beef breed or beef profits from a dairy breed.

MARKETS.

Charlottetown Prices.

GRAIN.—Oats, white, 34c, black, 36c.

FEEDSTUFFS—Bran, $1.25 to $1.30; middlings, $1.40 to $1.50; oil-cake, $2.20, to $2 50; corn meal, $1.60 to $1.65.

LIVE-STOCK—Butcher's cattle, 5½c to 6½c; stockers, $20.00 to $35.00; milch cows, $35 00 to $55.00; sheep, $3.75 to $5.00.

DRESSED MEATS—Beef (Carcass) 8½ to 9¾; beef, (retail), 10c to 14c; mutton, carcas, 8c to 9c; veal, 5c; pork, 6½c to 8c insp.

HORSES.—Drafte.s, $125 to $250; roadsters, $125 to $225; carriage, $125 to $250.

DAIRY PRODUCTS.—Butter, solids, 23½ to 24½; creamery, butter, prints, 24 to 25c; dairy butter, 18c to 22c

POULTRY & POULTR PRODUCTS.—Eggs, 16c to 18c; fowl, 10c; chickens, 10c to 12c.

FRUIT.—Apples, $2.50 to $4.00.

VEGETABLES.—Pota'oes, 45c to 50c.

MISCELLANEOUS.—Hay, $7.00 to $8 00; straw $5.00, beef hides, 8c to 8½c, calfskins, 10c to 12c; sheep skins, 35c to 60c.

There is little new to report since our last. Perk is lower and selects are now selling at 8c and light at 6½c to 7c½, and heavy at 6½c to 7c with fair supply and market easy. Beef is higher and fancy prices are being paid for good quality, 6½c being paid for some and the lower grades are also higher and the supply is reported scarce. Eggs are lower and market fairly well supplied. Butter is also lower with fair offerings. Potatoes are offering in limited quantities and shippers are paying 45c for Blues, while the retail trade are paying 50c Oats are unchanged and market easy. Hay is offering quite freely, but as soon as the roads break up we expect supply will be lighter, all offering is being stored for spring shipment and it would be hard to get over $7.50 for good quality.

St. John Prices.

GRAIN—Oats, 45c per bush.; peas, $1.75 to $2 10; barley, $1.25 to $1.50; buckwheat, $2 50 to $2.75.

FEEDSTUFFS—Bran, $24.00 ton; shorts, $25.00; middlings, $26 00; linseed meal, $8 00; cottonseed meal, $39.00 ton; corn meal, $25 00 ton.

GRASS SEEDS—Timothy, $6 00 to $7.50; common red clover, 17c to 19c pound; mammoth red clover, 19c

LIVE STOCK—Butcher's cattle, 5c to 5½c; milch cows, $40.00 to $60.00; sheep, $4 00; lambs, $4.00; hogs, $6 00 to $7.00, live weight.

DRESSED MEATS—Beef (carcass), $9.00 to $12.00; beef (retail), $9 00 to $20.00; mutton, 8c to 10c; veal, 9c to 10c; pork, 9c, 10c and 10½c.

HORSES—Drafters, $200 to $225; roadsters, $180 to $200; carriage, $180 to $200.

DAIRY PRODUCTS—Creamery butter, 26c to 28c; dairy butter, 25c to 26c cheese, 12c to 13c pound.

POULTRY AND POULTRY PRODUCTS—Eggs, 23c to 26c; fowl, $1 50 to $1 75; chickens, $1 50 to $1 75; ducks, $1.25; geese, $1.00 to $1 25; turkeys, 26c to 28c.

FRUIT.—Apples, $3.00, $4 00 to $5.00; cranberries, $12.00 per bushel; honey, 16c per pound; maple products, 20c pound.

VEGETABLES—Carrots, $1 50; potatoes, $2.00 per barrel; turnips 80c to $1.00; beets, $1 30

MISCELLANEOUS—Hay, $9.00 to $11 00 per ton; straw, $7.00 to $8.00; wool, 20c; beef hides, 6c per pound; calf skins, 15c per pound; sheep hides, 30c to 90c; lamb skins, 30c to 90c.

Market very dull this week. Beef is very plentiful. There is a drop in beef this week. The Western beef is gluted at present. Potatoes are scarce and in good demand. There is a poor class of butter. The p ople are asking for better goods. The week has been very dull.

A Carriage Horse Must Not Pace.

"A. B. C.", Nfld.—In your opinion can a pacer be classed or in any way deemed to be looked upon, as a regular carriage horse, in the usual or legal acceptation of the same.

Ans.—It is an established rule at all horse shows that a pacing horse is not eligible for a carriage class. A carriage horse must not pace.

CUMMER-DOWSWELL
HAMILTON, ONT. Ltd.

SEEDS for the Farm. for the Garden.

We are ready with the best stock in all our 45 years' experience. You will now be preparing your plans for your 1911 crop and we wish that it will surpass anything of the past. A suggestion for a good beginning in this direction would be the use of "Keith's Seeds." Also we think it is exceptionally good business to make your selections early. You will want some pure Clovers and Timothy. These are becoming harder to get every year. Not one grower in 200 has pure seed. Send for samples of our best brands.

We will pay the freight to your nearest station for **March** orders of 200 lbs. and over of Clover and Timothy, at the following prices per bushel: "Sun" brand medium Red Clover, $10.25 per bus.; "Sun" brand Mammoth Clover, $10.50 per bus.; "Ocean" brand Alsike, $11.25 per bus.; "Gold" brand Alfalfa, $14.25 per bus.; "Crescent" Timothy (48 pounds), $6.75; "Diamond" brand Timothy (48 pounds), $7.50. **These all grade No. 1 Government Standard.** Cotton Bags, 25c each.

We are always pleased to hear from you and will be only too glad to furnish you with samples of any seed grain, clovers or timothy you may wish to examine. In this way you will receive as much satisfaction as a personal visit to our warehouse will give. Our catalogue is now in the mail. No doubt you will receive one—if not, it may be had for the asking.

Concrete Fence Posts.

Concrete—cement, sand, gravel and water combined in proper proportions—has become one of the leading building materials of the day. It has shown its worth as a substitute for wood; houses built entirely of cement, the trimming and supports of wood, being merely for decorative effect; it is used by the government, by railroads, by farmers in hundreds of ways, either alone or reinforced; and has been found to produce even good posts. Its moderate cost, its durability, the ease with which it is handled, the wide distribution of the sand, gravel and stone of which it is composed, commend it to the consideration of all builders.

As a material for fence posts, concrete has been found to possess but few of the disadvantages of wood, to have practically all of its advantages and to be superior in some respects to timber. Of course, the first cost may be more or less than the best wooden posts, but that depends on local conditions—the timber supply, the deposits of sand, gravel and rock and the skill of the workman.

If manufactured as usual and cured for three months, concrete posts are as good as the best wooden posts. After three years, wooden posts possess only one-third to one-half of their original strength, whereas concrete grows stronger with age, and needs no repairs, as neither weather nor fire injures it. Under ordinary circumstances concrete posts will last forever; and even if in the course of a few years a few should be broken by unusual strain, it is cheaper to replace them than to replace an entire fence of decayed posts with a material with the same lack of durability.

Concrete posts are attractive in appearance because of their uniform size and color, and can be made either square, triangular or round, either straight or tapering towards the top. They can be purchased from dealers or made at home, and this latter plan together with suggestions as to the construction of the fence after the posts are made and cured, is the theme of Farmers' Bulletin, No. 403, recently issued by the United States department of agriculture.

The pamphlet closes with a warning to persons intending to buy post molds, either steel or wooden, to beware of travelling agents who are selling molds or rights for the sale or use of their respective molds. No dealings should be had with these agents except when fully satisfied through reports from one's banker or lawyer that the company represented by the agent is reliable and that the agent is their authorized representative. Patents have been issued on special types of reinforcement, and they can not be generally used without danger of infringing patent rights; but none of the simple forms described in the bulletin is patented or patentable and they are just as good as the special forms advertised and recommended by the agents. No one need hesitate to use the simple form of construction recommended, for it has been in constant use in all countries for a number of years, and all claims that the general use of reinforced concrete fence posts is controlled by patent rights are unjustified and untrue.

A WINDSOR LADY'S APPEAL.

A $5.00 Seed Prize

We will give $5.00 in gold to the person who finds the word "seed" or "seeds" the most times in ads. in this and succeeding issues up to April 30th. It doesn't cost you one penny to try for this $5.00 but in looking for the word "seeds" note which seed ads. interest you most, and write those advertisers, sending an order or asking for free catalogue. In your letter to us telling how many times you find the words "seed" or "seeds" you must give us the names of all seed or nursery advertisers in this and succeeding issues up to April 30th to whom you have written mentioning The Maritime Farmer. This is an easy condition, and the catalogues or seeds you buy will be worth much more than you pay. Go to work.

The $5.00 will be mailed promptly to one finding them the most times. Tell how many times you find them on each page. In case of tie the prize will be divided. Don't delay. Doesn't cost a cent to enter. You might as well have the $5.00 and you are going to write for catalogues, so do it now. Lists must be mailed by April 30th.

Chamberlain's Stomach and Liver Tablets invariably bring relief to women suffering from chronic constipation, headache, biliousness, dizziness, sallowness of the skin and dy-

Feeding a Colt.

L. H. R. U., N. B.:—1, What would you advise feeding a colt during the first, second and third winters? 2. What would you put on them to rid them of lice? 3. What would you give them if they were troubled with worms?

Ans. 1. Suitable food for colts in winter at any age would be early cut, well cured clover hay or clover and timothy—more clover than timothy—oats, wheat bran, roots, either turnips, carrots, mangels, sugar beets or a small amount of potatoes and a small quantity of ground flax seed. The flax seed should be soaked and given about two or three times a week, along with the bran and oats. The roots may be either whole or crushed. As there is such variation in size as well as assimilation power in colts, it is impossible to intelligently state the quantity of each of any of these foods most suitable for one or a number of colts. The second winter more is required than the first and the third than the second, but the necessity for the food in abundance the first winter is as great or even greater than in subsequent years.

2. There are many remedies for lice. Dusting with dalmation insect powder, mixed with cement or finely ground brick dust, is frequently effective. If the colt is badly infested and has a heavy coat of hair, clipping the hair off and applying a decoction of staunesacre seeds made by boiling four ounces of bruised seed

CANADA CEMENT COMPANY, LIMITED.

Annual Report of the Board of Directors.

TO THE SHAREHOLDERS :

Your Directors beg to present herewith the annual statement of the affairs and financial position of the Canada Cement Company, Limited, as of the 31st December, 1910.

In presenting the Balance Sheet, we call attention to the Company's strong financial position as disclosed by the large amount of cash on hand, and other quick assets, and the comparatively small amount of current liabilities. After providing for interest on our Bonds and Dividends on our Preferred Stock for the year, we have been able to set up reserve for depreciation, extraordinary repairs and renewals, bad debts, etc., and carry forward a substantial balance to Surplus Account.

The consumption of cement during the past year was not as large as anticipated. Our business also suffered on account of the Railways not being able to meet our full requirements for cars during the heavy shipping season; consequently, we carry over from last year 781,116 barrels of cement.

Early in 1910 the price of our product was fixed at a lower price than cement had ever been sold for in Canada, excepting for a short period in .909, but your Directors are pleased to state that the anticipated savings in manufacturing and distributing our products were such that they were able to still further reduce this price.

We trust, when you consider the above mentioned conditions, and also the fact that during 1910 our plants were only operated to 57.6 per cent. of their capacity, the profits shown will be satisfactory to the Shareholders.

During the current year, we look for a larger natural demand, which demand will be stimulated by continuing to manufacture a strictly high grade article, and by selling it at the lowest possible price. This anticipated increase will enable us to operate our plants to better advantage than in the past, but we do not expect that the demand will be sufficient to enable us to put into operation either of the two plants which have been idle since the organization of this Company. However, it is confidently expected that the increased demand, and increased output, will result in further savings in the cost of manufacture and distribution, and it is the policy of your Directors to give your customers the benefit of these reductions.

The Shareholders' profits will depend on the increased volume of the Company's business, the policy of the Company being the maintenance of such a stable position as will insure regular and uniform payments of interest on its bonds and dividends on its Perferred stock, and at the same time be in a position to withstand any unforeseen emergency that may arise consequent on business depression or otherwise, which condition naturally necessitates the accumulation of, and the maintenance of a large cash reserve.

It is also the policy of the Company to equalize the price of cement throughout Canada in so far as the physical conditions make such possible, and in futherance of this policy, your Directors have arranged to purchase a site near Winnipeg, on which they will erect, this year, a mill to grind clinker, which clinker will be shipped from one of our Eastern mills. The buildings, machinery, etc., will be planned so that, should it at any time in the future be advisable, a Burning Department can be added, and the clinker produced on the property.

And further, an agreement has been entered into whereby this Company expects to acquire, in the near future, a property at Exshaw, which, added to our Calgary plant, and the projected plant at Winnipeg, will put us in the position of anticipating any extraordinary growth in the consumption of cement in the Great West.

With the view of educating the public, and popularizing the use of cement, in addition to the ordinary advertising, the Company has published a small book illustrating some of the many uses to which cement may be put, for which book there has been a great demand, 25,000 applications for same having been received during the past six months.

For the purpose of stimulating interest in the Company on behalf of the Employes, both in efficieny and cheapening production, as well as creating a feeling of mutual goodwill, your Directors deem it expedient to introduce a system, already adopted by several large industrial corporations with beneficial results, viz., to enable employes to become the possessors of Preferred and Common Stock at prices which will be attractive to them, the employes paying a fixed amount per share per month out of their earnings, and the Company carrying the stock for them, charging a rate of 5% interest. If the plan is put into effect, all dividends will be credited to the employes applying for the stock. Said stock will be held in trust for the employe for a term of five years, excepting in exceptional cases, such as death, when his heirs will receive what benefit a deceased employe has derived from subscribing to the stock.

Your Directors feel that the policy, as herein outlined, will, as nearly as possible, make the interests of the consumers, the employes, and the shareholders identical, and will inure to the most enduring and beneficial results for all concerned.

All of which is respectfully submitted.

On behalf of the Board of Directors,

WILLIAM C. EDWARDS.

President.

Heart Trouble

Caused Dizziness, Weakness and Smothering Spells.

Through one cause or another a large majority of the people are troubled, more or less, with some form of heart trouble. Wherever there are sickly people with weak hearts, Milburn's Heart and Nerve Pills will be found to be the most effective medicine on the market.

Mrs. F. Leslie Craig, 114 Erie Ave., Brantford, Ont., writes:—"It is with the greatest of pleasure I write you stating the benefit I have received by using Milburn's Heart and Nerve Pills. I suffered greatly from heart trouble which caused dizziness, weakness and smothering spells. I used a great deal of Dr.'s medicine but received no benefit. A friend advised me to buy a box of your pills, which I did, and before I had finished one box I felt so much better I continued their use by taking two boxes. I highly recommend these pills to any one suffering from heart and nerve trouble."

Milburn's Heart and Nerve Pills are 50 cents per box, or 3 for $1.25, at all dealers, or mailed direct by The T. Milburn Co., Limited, Toronto, Ont.

Grand Trunk Railway System

REDUCED RATES.

In effect until APRIL 10th inclusive.

Second Class Colonist fares from Montreal to

Nelson, Vancouver, Victoria, Westminister, B. C. Seattle, Spokane, Tacoma, Wash.; Portland, Ore.... **$47.70**

San Francisco, Los Angeles, San Diego, Cal.; Mexico City, Mex..... **$49.00**

Low rates to many other points, and also from other stations on the Grand Trunk Railway System.

TOURIST SLEEPING CARS.

Leave Montreal for Chicago on Mondays, Wednesdays and Fridays, at 10.30 p. m. Berths, which may be reserved in advance, available for accommodation of passengers holding first or second class tickets on payment of nominal charge. Connection made with trains carrying cars of similar style at Chicago.

THE ORIGINAL AND ONLY GENUINE

BEWARE OF IMITATIONS SOLD ON THE MERITS OF MINARD'S LINIMENT

Minard's Liniment Co., Limited

for two hours in one gallon of water, afterwards adding sufficient water to make a gallon. This dressing should be repeated every four or five days until all lice and eggs are destroyed. A five per cent. solution of Creolin used in the same way is often effective. The clothing, walls, brushes and bedding should be treated with one of the above mentioned remedies, to destroy insects lodged in them, or the clothing and brushes may be boiled, which will destroy the insects and eggs. Of course there are many remedies but the above are effective and safe. Many preparations of mercury are effective but require care in application to prevent injury to the animal.

3. If long white worms and small worms (pin worms) I would give Gentian, Nux Vomica and Sulphate of Iron, night and morning, for a week and then a physic of raw Linseed Oil, with Oil of Turpentine, well mixed in it. And injections of an infusion of quassa chips made by macerating two ounces of chips in one gallon of water, for one hour. This quantity is sufficient for two injections for a two-year-old, four for a yearling and eight for a weanling. Two or three injections should be given about four days apart. The first one when the physic is given. The dose of bitter tonic and authelmintic above advised, as well as the physic should be governed by the size of the colt. For good sized agricultural colts, weanlings should have twenty grains of the above advised ingredients; a yearling forty grains and a two-year-old one dram, and after the physic ceases acting repeat the authelmintic and tonic for another week.

The quantity of raw Linseed Oil for a weanling would be twelve ounces; for a yearling, sixteen ounces; and for a two-year-old, one pint. Quantity of Oil of Turpentine for a weanling would be two fluid drams; a yearling, four drams and a two-year-old, six drams well mixed in the raw Linseed Oil.

Truro, N. S.

Raising Better Fruit.

A bright western fruit grower knowing that everything outside of the ordinary attracts attention, announces a scheme to grow apple trees to be registered, the same as live stock, with pedigrees. He claims to have perfected a plan to place the science of growing commercial fruit of highest quality, color and uniformity of size on a practical basis.

It is well known to observing orchardists that in any cultivated apple orchard there are trees which stand out for yielding prize-winning specimens, or more and better fruit than the others. Scions taken from these and transferred to other trees by budding or grafting will perpetuate these qualities.

This method has been followed by some growers for many years, but this promoter intends to carry it a step further. The trees are to be recorded, upon an orchard plat, then registered, and a pedigree issued to the grower. He does not claim that all trees grown in this way will produce prize-winning fruit, for so much depends on the care the trees receive, but the experiment will show that a greater percentage of high-grade trees may be raised. This plan is not patented, and is one that every fruit grower could profitably practice in starting new orchards.

To learn the value of cooking feed for live stock, extensive trials were made at the experiment station of the North Dakota Agricultural college in feeding hogs and cattle raw and cooked feed. It was found that more pounds of gain were made from a given amount of feed when raw. Potatoes were an exception as they gave the best returns when cooked.

Amatite ROOFING

Saskatoon Fair Buildings, covered with Amatite Roofing, Saskatchewan, Can.

60,000 Feet of Amatite Roofing

The accompanying view shows a series of buildings at the Saskatoon Exposition, all of them covered with Amatite Roofing.

Amatite was selected because it was inexpensive, easy to put on, required no care or attention or expense afterwards, and would give excellent durability.

If ordinary smooth roofing had been used, these roofs would require painting every year or two at considerable expense and trouble. Amatite, however, has a mineral surface which *requires no painting.*

Use Amatite for every roof where you want to save expense. It is the most economical solution of the whole roofing problem.

Amatite Roofing requires no skilled labor to apply; it costs no more, (in fact much less) than other roofings; and the fact that it requires no painting makes the total expense far below that of any other type of roof covering.

You can use Amatite for every kind of steep roofed building. We supply galvanized nails and liquid cement for the laps free of charge.

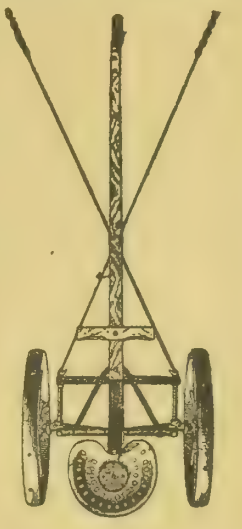
Send for free sample and booklet. Address our nearest office.

Carritte-Paterson Mfg. Co., Limited,

St. John, N. B.; Halifax, N. S

You Don't Have to Walk Behind a Harrow.

TRAMPING through the soft ground behind a harrow is about the most tiresome job on the farm. You don't have to do it. Attach a Massey-Harris Harrow Cart to your harrow and ride in comfort. You will appreciate the Spring Seat which is so placed that the cart always balances. Wheels are high and have wide tires, they run easily in soft ground and keep you up above the dust. Each wheel has twelve large oval spokes rivited into the tire and the inner end is firmly clamped between the two parts of the malleable hub, the hub extending well out on the spokes. Wheels have removable sleeves. Outer end of sleeve has screw oil plug, and the inner end is provided with a collar which turns in a Dust Proof Sand Cap with oil hole.



The cross rods control the wheels perfectly at all times. No Foot Trip to operate, absolute Automatic control under all conditions.

MASSEY-HARRIS CO., LIMITED,

MONCTON, - New Brunswick.

Contracted a Heavy Cold.

It Became a Lung Splitting Cough.

Mr. J. H. Richards, 1852 Second Ave. East, Vancouver, B.C., writes: "Allow me to write a few lines in praise of your Dr. Wood's Norway Pine Syrup. Last fall I contracted a heavy cold which left me with a hacking cough and every time I would get a little more cold this hacking cough would become a lung splitting one. It kept on getting worse and I kept on spending money buying different cough remedies until a friend asked me if I had ever tried Dr. Wood's Norway Pine Syrup. I told him I was willing to try anything I thought would cure, and on the same day bought two bottles. Before half the first one was used my cough began to get much easier, and by the time I had used a bottle and a half my cough was gone. I am keeping the other half bottle in case it should come again, but I am sure I have a positive cure. Let me recommend Dr. Wood's Norway Pine Syrup to all who suffer from a cough or throat irritation of any kind."

So great has been the success of this wonderful remedy, it is only natural that numerous persons have tried to imitate it

Don't be imposed upon by taking anything but "Dr. Wood's."

Put up in a yellow wrapper; three pine trees the trade mark; price 25 cents.

Manufactured only by The T. Milburn Co., Limited, Toronto, Ont.

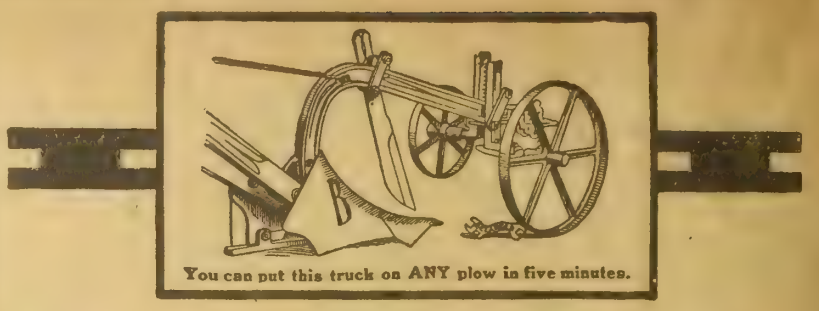
STOCK NOTES.

AMERICAN MARE RECORD.—A new mark was set for the breeders of draft horses at the McMillan sale, held at Sioux City on February 14th, 1911, when the grand mare, Iolanthe, champion Percheron mare at the International, sold for $3 500 to Mrs W S. Corsa. of Gregory farm, White Hall Ill., where she will add to the glory of a Percheron stud that already possesses Carnot, the champion Percheron stallion of America $ 000 more than any pure-bred mare of any draft breed has ever heretofore brought in America No other mare has ever accomplished the fact of winning two championships at the International This daughter of Calypos won her first high honors as a three year-old, and after four years in the breeding stud during which time she foaled three colts she returned to the showring and at the International in 1910 won premier honors over the pick of France and America Iolanthe 40925 was bred at the Lakewood Farm at Rock Rapids, Iowa and reared by her breeder, the Hon H. G. McMillan whose personal pride in the show ring and auction ring is surpassed only by the pleasure which he feels in being able to demonstrate to the world that American breeders and breeding establishments are second to none,

THE QUEBEC HOLSTEIN BREEDERS' FIRST ANNUAL SALE.—On the 21st February the first annual sale of the Quebec Holstein Breeders Sale Association took place at the G. T. R stock yards Montreal, Que. It was a great success, there were many in attendance and prices were good for Quebec. The sale is brought out by the consignors not so much to dispose of their cattle as to spread them through the country. Probably the likelihood of the Reciprocity bill going shortly into effect had something to do with the success as all the farmers know how much more they made out of United States cream business last year with the duty off, with this knowledge they cannot help believing there will be a great deal more profit when the United States duties are removed in all dairy products, The Holsteins are the cows that will be needed above all others to get this profit to the full. It will be noticed from the following detailed list that the cattle were distributed through the Eastern Townships, the Island of Montreal, near Ottawa, and between Montreal and Toronto, thus illustrating how much Montreal is a centre for the dairy business and Holsteins. Since the sale and in connection with it a bull has been bought in the Montreal district and will go to Toronto for a little less than $250 00 this is by a son of King of Pontiacs, Steven's celebrated bull, a brother of the champion cow of the world whose official record for butter is 37.28 lbs for the seven days

The buyers were all satisfied, those from the west congratulating themselves that what they bought would have cost 30% more at home. Mr. Gooderham, of Toronto, saying he could easily sell the cow he paid $180.00 for at $250 00 in Toronto. The facilities at the G. T. R. stock yards were excellent and will be improved before another year. Some of the cattle were not brought out in very good condition. The consigners were:—Dr L deL Harwood, Los henaux Farms, Vaudreuil; P J Seeley, Riverview Farm, Lachine Rapids; F.E Came Canaan Farm, St. Lambert; Lieut. Col. T. J. Riley Homewood Farm, Lavigne; R. W. Brown, Fraser Farm Lachine Rapids. Twenty-six head of pure breds were sold at prices ranging from $15 00 for a yong bull calf to $200 00 for an eleven year old cow Eight Holstein grades of various ages were also sold, one to go to the North west and two to T. A. Trenholm, of Montreal West

SHERBROOKE POULTRY SHOW.—A successful show has recently been completed in the city of Sherbrooke, and the breeders of the fancy and utility stock in that section are to be congratulated on having one of the finest exhibits of birds ever shown in the Province of Quebec. This is the report of the expert judge, Mr. Victor Fortier, assistant manager of the Experimental Farms Poultry Department at Ottawa. It is interesting to note that the well known firm of Gunn, Langlois & Co, Ltd., 241 St. Paul St, Montreal, who have been conducting in Ontario and Quebec a campaign for "More and better eggs and poultry" this season, have carried off a great many of the laurels at this show No fewer than 800 birds were entered in competition. covering all the principal breeds well known in Ontario and Quebec, A number of the birds which were shown at Ottawa and won prizes were also shown here, and the competition was keen in all the classes The firm of Gunn, Langlois & Co., Ltd, carried off no less than 10 first prizes, 4 seconds, 2 thirds and 3 specials, so the silver cup for them this winter, and as they also swept the boards at the Ottawa Winter Fair, it only goes to show what can be done when people are really in earnest and enthusiastic about what they undertake. The marked interest which is so much in evidence in connection with this trade in the province of Quebec will give an impetus to the poultry industry throughout the province, and in the course of the next few years we shall no doubt see an increase in the quantity and quality of poultry and eggs produced that will result in increased profits to the individual as well as to the country, With this in view, the management of the Sherbrooke Poultry show invited the above named firm to send Mr. John I. Brown, manager of their special Poultry department, to give an address along the lines of commercial poultry, this taking place in the lecture room at eight o'clock on the last evening of the show. Over two hundred interested hearers were present, and one and all were of the opinion that good would result from the helpful information given in reference to the marketing of poultry and poultry products. After the lecture was over a banquet was tendered to the local and visiting poultrymen at the Sherbrooke Hotel, and after the inner man had been refreshed the President proposed the health of the King, which was heartily responded to by the singing of 'God save the King." The President then proposed the health of the Expert Judge, Mr Victor Fortier, and in response Mr. Fortier took up, at some length, the successful mating and breeding of fancy stock and proper methods of fitting them for the show. The President then called upon those present to drink to the health of the visitors, namely, Messrs Brown and Johnston of the firm of Gunn Langlois & Co Ltd. In response to this toast.



You can put this truck on ANY plow in five minutes.

A Boy Can Plow This Way

THIS attachment—these wheels to go under the beam—make it unnecessary to buy a sulky plow to plow comfortably—makes the ordinary plow as solid in the ground as a Sulky plow.

The large wheel on the right—18 inches in diameter—runs in the furrow—regulates the furrow thickness and width. The small 12-inch wheel supports the plow when the plowing is too deep and the plow has a tendency to overthrow. The wheels are adjustable independently and have compensating axles to take up wear.

With these wheels, the plow always works at the same depth—the draught is regular and easier on horses—the plowman's work is easier and it is almost unnecessary to hold the handles. They can be put on ANY plow in five minutes. **Write for our Catalog if your dealer cannot supply you.**

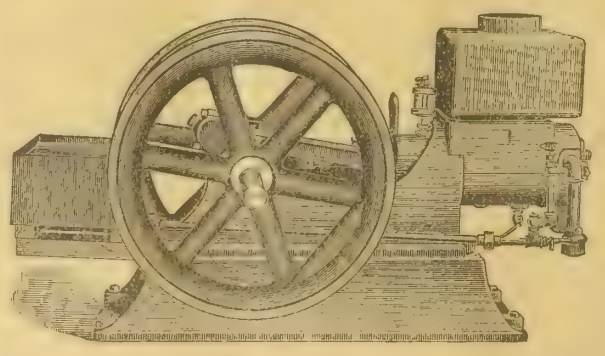
Don't Wait for a Gasoline Engine Agent



to come to your house if you are thinking of buying. Write to the different makers or their representatives and get catalogues. Investigate the different makes thoroughly before you buy. You will have to pay good money and do not want to be disappointed. Remember, that if you make a mistake in purchasing it will worry you as long as the engine lasts. You cannot afford to take chances. These are the things that confronted us when we went into the markets of the world to select an engine that would give you satisfaction. Our experts went not to the factory where they were made, but out in the fields, the workshops and other places where they were being used, and found out just how each make of machine was doing. Every working part was thoroughly inspected. Not one dollar of expense was saved in order that we might get the best. We could not afford to take chances. Our organization is too big, our interests too great, our reputation too dear to us to allow even the slightest defect to creep in. We went at the Gasoline Engine business thoroughly and we believe you should do the same. We want you to find out for yourself just how good our Gasoline Engine is. We have 200 agents in the Maritime Provinces. Every county is represented. We can have a man call on you any day, but before we have him call we would like you to write us for our catalogue. It explains the things you should know about Gasoline Engines. Other information regarding our selling plan will be given you by our representative.

STANDARD GARMENT CO. London, Ont.

Mr. Johnson dwelt upon the exceptional opportunity that was presenting itself to the producers of Quebec to undertake and carry on this very profitable branch as a side line to their farming. In conclusion Mr. Johnson stated that it gave him a great deal of pleasure to be present and see that the poultrymen of Quebec were evidently in earneat and ready to undertake and forward this movement to a successful issue, and he assured them that the same assistance which his firm had been endeavoring to give the poultry interests this past season would not be curtailed this coming year. Mr Brown spoke briefly on the strains of the different breeds and the mixing of foreign blood, which was one of the evils of the poultry trade to-day, emphasizing the fact that there was a great deal more in strains than breeds, although the breed was a very important factor to the success of the poultry industry on the farm, and closed by recommending the Barred Plymouth Rock as an all round farmer's bird. "The Press" was next proposed, and responded to by two of the local editors, both of them voicing the same sentiment in connection with the development of the trade, and offering their very best assistance, which, judging by the applause, was fully appreciated. Mr. Hillhouse, who was in charge of Gunn, Langlois & Co's, poultry and breeding plant at Hondville, Que., was called upon to say a few words and as he had had wide experience in attending shows, he made a few suggestions in connection with better facilities for taking care of birds and visitors to the show. He emphasized one item in particular, that instead of using tickets to deck the prize winners they should use ribbons, and closed by saying that they all believe in doing things right, and his firm were willing to contribute to help the Sherbrooke Association procure the ribbons for the show next year. This brought to a close the first poultry show of Sherbrooke, which will henceforth be an annual affair, and after singing the National Anthem the visitors dispersed, everyone being well pleased and quite enthusiastic as to what the outcome in the province of Quebec will be.

The PUBLISHER'S DESK.

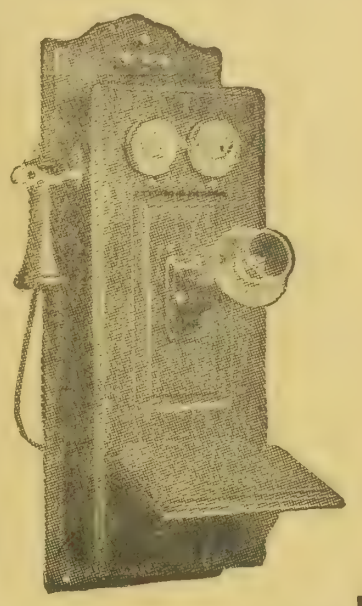
INCREASING FARM PRODUCTIVENESS.—"A good many farmers could show a handsome profit on their fixed capital, so long as they shut their eyes to the fact that they are merely mining their land—not farming it. You might just as well open up a gravel pit and load your farm in wagons at so much per square yard, as to mine its fertility with crops and put nothing back. This gravel pit style of farming is not a profitable method of wringing from the soil the utmost there is in it." The above striking paragraph is from a book entitled "How to Increase the Acre's Yield" published by A. Belanger, at Montmagny, Que. This book is worth a reading by every farmer who is interested in the increased productiveness of his land. "How to Increase the Acre's Yield" is divided into three parts. The first part deals with Soil and Fertilizers and goes exhaustively into the subject of rebuilding run down land. The second part under the title of "Plowing and Plows" takes up the scientific construction of plows of different types for different purposes, and explains the various processes by which these plows are made. Under the heading of 'Seeds and Seeding", an important part of the book deals with this real basis of the harvest, and the actual control over it possessed by the skillful agriculturist. The book also deals at length with "B" Plows and their manufacture. Those of our readers who have not read this book, would find themselves well repaid by a careful study of it. It is worth reading, at least twice. Although a charge ought to be made for it, Mr Belanger will send a copy free on request, as long as the edition last. Write for it to A Belanger Department 100, Montmagny, P. Q.

AN INTERESTING REPORT.—Published elsewhere in this issue is an annual report for the past year of the Board of Directors of the Canadian Cement Company, as read by the President to the Shareholders, at the Annual meeting held in Montreal on the 21st of February. The frank statement of the policy and the general attitude of fairness evidenced by this address are such as to warrant more than passing comment. Any lay member of the community reading the report must surely feel disposed to echo

A $5.00 Prize.

We will give a prize of $5.00 to the person making the largest purchase from one or more of the firms advertising in the February, March and April issues of The Maritime Farmer. Send for catalogue and information to each advertiser and see if they have something that you want. The only condition attached to this offer is that you mention The Maritime Farmer when writing and that you send us a list of those to whom you have written and the amount purchased from each advertiser. We believe our advertisers can offer you better value than can be obtained elsewhere and see no reason why you should not patronize and secure this prize. All lists must be mailed us by April 30th. Address Advertising Manager, Maritime Farmer, Sussex, N. B.

HELLO!! HELLO!!! Lend us your ear for a minute or so.



We hear that you are going to build a rural 'phone line in your locality and enjoy the benefits of telephone-served districts. We commend you for your enterprise.

But lend us your ear for a minute or so. Listen while we advise you that you'll find the most satisfactory arrangement is an **Independent System**.

With an Independent System you own the telephones and equipment outright, instead of paying an exorbitant yearly rental to the trust. You soon save a great deal of money.

But send for our No. 2 Bulletin which gives complete information about building and operating a telephone line.

With the No. 2 Bulletin we will, if requested, send you our handsome new book, "Canada and the Telephone." For this book a leading artist has drawn thirty-two pictures, illustrating the necessity and benefits of the telephone in rural districts.

If your system is already in operation ask us to send two or three of our telephones for free trial, so that you can compare them with others. We welcome comparison tests for our 'phones, because we are sure of their superior quality.

We make prompt shipments of all kinds of telephone equipment.

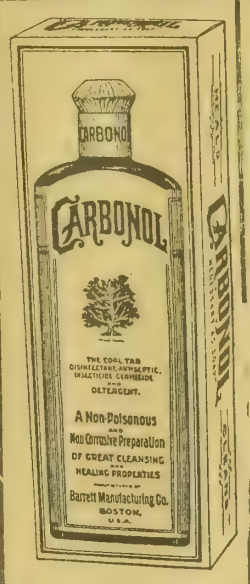
1820 Duncan Street, - - TORONTO, ONT.



CARBONOL
THE COOL TAR DISINFECTANT, ANTISEPTIC, INSECTICIDE AND DETERGENT.
A Non-Poisonous and Non-Corrosive Preparation OF GREAT CLEANSING AND HEALING PROPERTIES
Barrett Manufacturing Co. BOSTON, U.S.A.

CARBONOL "NECESSARY AS SOAP"

FOR GENERAL HOUSE CLEANING

PUT a dash of **Carbonol** into every pail of water you use in house cleaning. You will find that cleansing becomes much easier than before. You will find that old stains and smears which you thought could not be removed, disappear like magic. You will find that floors and woodwork, marble, metal and tile look cleaner after they have been washed with a **Carbonol** solution than you ever were able to make them look with soap and water.

Carbonol is a disinfectant and while it is removing dirt, it is also killing germs. Keep your house so free from germs that nobody would ever catch a disease in it.

Carbonol will remove stains of oil and grease; it will wash windows and give them the clearness of crystal.

A free sample of **Carbonol** will be sent on request.

J. D. IRVING,
Bouctouche, N. B.

the hope expressed by the President that the increased demand and increased output in the year to come will result in further savings in the cost of manufacture; and it further cannot be but felt by the public at large that any such reductions that may be obtained will, according to the broad-minded policy of the Company, be used as an advantage to the customers of the Company—the concern depending for their profits upon increasing volume of business. Especially interesting is the statement that the policy of the Company is such as to tend towards equalization of the price of cement throughout Canada so far as possible. Another noteworthy feature of the Report is the provision made for employes to become possessors of stock. This is, as pointed out, a policy already in force in some of the largest institutions, and shows that the Canada Cement Company are quick to appreciate any means of stimulating interest and confidence upon the part of the staff. The strong financial position of the company is a well known fact, and all that is necessary to ensure the continued success of the concern is continued prosperity of the country together with an increased realization of the importance and economy of cement as a building material.

THE SPREAD OF THE RURAL TELEPHONE MOVEMENT.—The movement for communication among farmers and for better connections between rural and city districts has increased wonderfully within the past few years. To those who are ignorant of the real statistics, the figures of the latest telephone census in the United States are amazing.

To the Canadian farmer, these figures, indicating the possibilities for the growth of the rural telephone in this country, are very interesting

For the period from 1902 to 1907 the number of rural telephone stations in the entire country increased 449 per cent. In 1902, there were but 265, 967 rural telephone stations in the United States; five years later there were 1,464,733.

The census figures show that the South has a great share in this development. The increase in the South Atlantic States was 469 per cent, and in the South Central States it was 367 per cent. The actual figures, however mean more than percentage, showing steadily increasing telephone development in all the States.

Wherever the telephone has gone, it has brought with it better living, an increase in the productiveness of the farms and money-making opportunities for the agriculturist that were not dreamed of before. But when one considers that in this five-year period the number of rural telephones jumped from 94 to 5,073 in Maryland; from 270 to 24,874 in Oklahoma, and from 159 to 12,403 in Arkansas; the manner in which the telephones were popularized and raised from the station of a rich man's luxury to that of an every-day necessity of all the people can be readily understood.

The census, though its results have only recently been published, does not bring the actual conditions quite up to date. No figures are available for the year and a half since December 31st, 1907, but the increase in the number of rural telephone stations has been more marked than in the five year period to which statistics refer.

The reasons for this growth are not so hard to find. Life on the farms used to be irksome—distances were so great The telephone is the annihilator of distance. As one farmer expressed it, "I am next door to everybody I want to talk to. That telephone puts my isolated farm in the heart of things." Roosevelt's Country Life Commission designates the telephone as one of the foremost influences making for the solution of the rural problem.

When it is considered that the average farmer can install this advance agent of development at a cost less than the present return from thirty bushels of wheat it is not difficult to understand why the rural telephone is making great strides throughout the entire country.

The part which the farmers themselves have taken in the telephone movement makes it one of considerable importance It is a fact that for very small trouble and expense a group of neighboring farmers can buy, build and maintain a serviceable telephone system. Equipment conforming with the best recognized standards is at the disposal of progressive rural citizens for their telephone building.

It is not an unusual sight to witness gangs of farmers at work on the roads, erecting poles, stringing wires, and installing the instruments in the farm houses along the countryside. The work is usually done on a co-operative basis.

Often some sort of an organization is formed Sometimes six or eight neighboring farmers can start the movement. In case there are as few as this, no switchboard is necessary. Construction and maintenance are of the simplest nature; A single pair of wires will suffice, and the 'party line" system is found the most convenient and useful As demands grow and the little rural companies branch out, extensions are made, and, usually, connection through trunk lines with the rest of the world.

It is interesting to note that the adoption and development of the telephone in a rural locality is attended by a minimum of expense Of all the agencies that help to bring great opportunities to the farmers—the good road movement, railroad extensions, the rural mail delivery, and the farm telephone—the least costly, and because it reaches the largest number, the most important is the telephone.

The Northern Electric and Manufacturing Co Limited whose advertising appears in our pages, publish a book entitled: 'How to Build Rural Telephone Lines." This publication treats the subject in a simple and comprehensive way; it is profusely illustrated in a way which enables any one with ordinary intelligence to construct a practical telephone line of a limited number of stations.

The attention of our readers is drawn to the advertisement of the Crown Fence & Supply Co., Toronto, in another column. Mr E L. Dyer, Manager, has been in the fence business for 16 years and has made good with over 12000 fence users. He knows how to save you money in fence purchasing and our readers should take advantage of his knowledge when open to buy.

Stallions and Mares for Sale.

I have arrived with Percheron and Clydesdale Stallions and mares, which will be sold at slight advance above cost of importation.

TERMS—Cash or Bankable Note on one year's time. Stallions' freight and purchaser's R. R. fare paid.

A. H. THOMSON, 4 Church St., St. John, N.B.

W.E EATON, Upper Canard, N.S., writes—Since the first of the new year the demand for young bulls has been pretty good, nearly all inquiries say they saw ad in FARMER. Since January came in B have sold five yearling bulls, one to E B. Elderkin for the West Indies, H. A. Baird, Colchester, C. H Angus, Cumberland, Chas. Wade, Annapolis, and A. Snyder, Lunenburg. Have had a number of enquiries from New Brunswick parties also and have bulls enough to supply quite a number of people on hand now, some or them are dandy ones, good enough for most any one.

IMPORTATION AND SALE.—At the request of a number of Ayrshire breeders that there should be an importation of this breed, Geo. E. Fisher, Chatham, N. B., was delegated by the New Brunswick Department of Agriculture to attend some Ayrshire sale in Ontario and bring something choice that would make breeders' foundation stock. Mr. Fisher has secured eight cows and five heifers of high quality and fourteen bulls. This is stock specially selected for its milk producing ability. The stock will be offered at public auction early in April. It is also the intention of the Department that everyone having pure bred horses, cattle, sheep swine of any breed may list them for sale at this auction and they will be included in the advertising. Advertising and auctioneer's fees will be paid for by the Department and an opportunity offered all who have stock for sale to place them before the public without sale expenses and there will thus be an opportunity for purchasers to fill their needs

Farm for Sale.

Boost for THE MARITIME FARMER.

This Book Has Saved Thousands of Dollars For Other Canadians May I Send YOU a Copy FREE

ALL I ask is that you send me your name and address so that I may place a copy of this book in your hands. I believe you will be greatly interested in the facts it contains about roof-cost and roof-value. It is not over-enthusiastic, nor extravagantly-worded. It does not promise "anything to get you to buy my roofing." I have purposely been very careful to confine myself to stating plain facts in their logical order. I leave it to your own good judgment to decide what kind of roof **you** want after reading my book. My object is to give you reliable, complete information so you can decide for your own best interests. You can believe what this book tells you just as you can believe what any Pedlar advertisement tells you I am personally answerable for every statement it makes—as much so as if I were giving sworn evidence in court. That's why it is important you should send for this book of mine—because it contains "the whole truth and nothing but the truth" about the roofing question.

Illustrated from Photos of Modern Farm Buildings, and Full of Hints of Great Practical Value to YOU

YOU have everything to gain and nothing to lose by getting trustworthy information about roofing materials. There's no satisfaction in saying "I wish I'd known" when you face a loss. And you cannot know all you should know about the **cost** and **value** of different kinds of roofing material until you know all the facts you learn by reading my "Roofing Right" book.

SURELY you are interested in a roof that is so fire-proof that fire insurance companies quote much lower rates on buildings it protects. A roof that is positively lightning-proof, wet-proof, leak-proof, rot-proof, wind-proof. A roof that makes your house or barn warmer in winter, cooler in summer. A roof that needn't be painted, nor patched, nor tinkered with to keep right. The only roof that is **GUARANTEED** to be a perfectly satisfactory roof in every respect for twenty-five years.

Just Write Your Name and Address Here — Then

Clip out this coupon and put it in an envelope addressed to our place nearest you. (See addresses below). A copy of "Roofing Right" will then be sent you immediately.

Name.....

Address.....

.....**No. 17**

Now don't say you "Haven't time to bother with it." I'm trying to save you "bother"—and expense. I make it easy for you to get reliable information you ought to have—maybe save you many dollars of roofing expense. Just be curious—critical if you feel like it. But don't fail to send for my book. Do it now, before you forget it.

Don't Wait Until You Need a New Roof—Get It Now

THERE'S no better time to get this information than RIGHT NOW. While you think of it, just clip out the coupon on this page, write your name and address on it, put it in an envelope and mail to my address nearest you. Or simply send me a postal card, mentioning this paper. Say you want my "Roofing Right" book, and a copy will be sent you immediately. You get a lot of valuable information, just by asking for it. You get many facts you should know about all kinds of roofs, particularly about a roof that is

A Good Roof For a Hundred Years Guaranteed in Writing for Twenty-Five

IT may seem hard to believe. Yet that is exactly what you are to expect of an Oshawa-shingled roof. For Oshawa Steel Shingles, made of tough, heavy steel, thoroughly galvanized, make a roof that will not need replacing or repair in a century from the time it is first put on. My book tells why you can **be sure** of this. Also tells about my Guarantee, in proper legal form, to replace at our own cost any Oshawa-shingled roof within twenty-five years from the day it is put on. Do you know of **any** other roofing which is **guaranteed** in writing for any period? I don't.

IN the immense Pedlar factories at Oshawa, Ontario, we make various building materials in sheet steel, of great value to anyone who is going to build or repair a house or barn. Beautiful Pedlar Art Steel Ceilings and Side-walls, for instance, that take the place of unsightly, unsanitary, short-lived plaster. Also Pedlar Steel Siding for outside walls—that make a frame house or barn look as if it were built of stone or fancy cement blocks or brick. Actually cheaper by 20%. Fire-proof, too. Ask for full particulars and learn how you can make your money build a better building by "Pedlarizing." My large, finely illustrated book showing some of the 2,000 designs mailed free.

A PREMIUM THAT BEATS ALL

YOUR OPPORTUNITY!

NEVER before in the history of The Maritime Farmer has there been shown such a rapid increase in the circulation as during the past season. Read the description found below of one of the most remarkable premium offers that has ever been put on in this part of the country. It is sterling worth, a real premium and something that nine out of ten homes will welcome. It costs you practically nothing to have The Farmer and at the same time fit your kitchen for quicker, more pleasant and efficient service. Housewives see to it that you do not fail to get one of these handsome premiums while they last. The supply is limited and this offer may not appear again.

Description of the 8-piece Set

No. 1—A 7-inch Meat Cleaver, one of the handiest of kitchen tools, well balanced and of tempered steel. Light enough for anybody to handle, yet heavy enough to be very effective.

No. 2—An 8-inch blade Kitchen Knife; no better knife can be had; made of tempered steel and a keen edge and a knife that will do valiant service as long as there is a strop of it left.

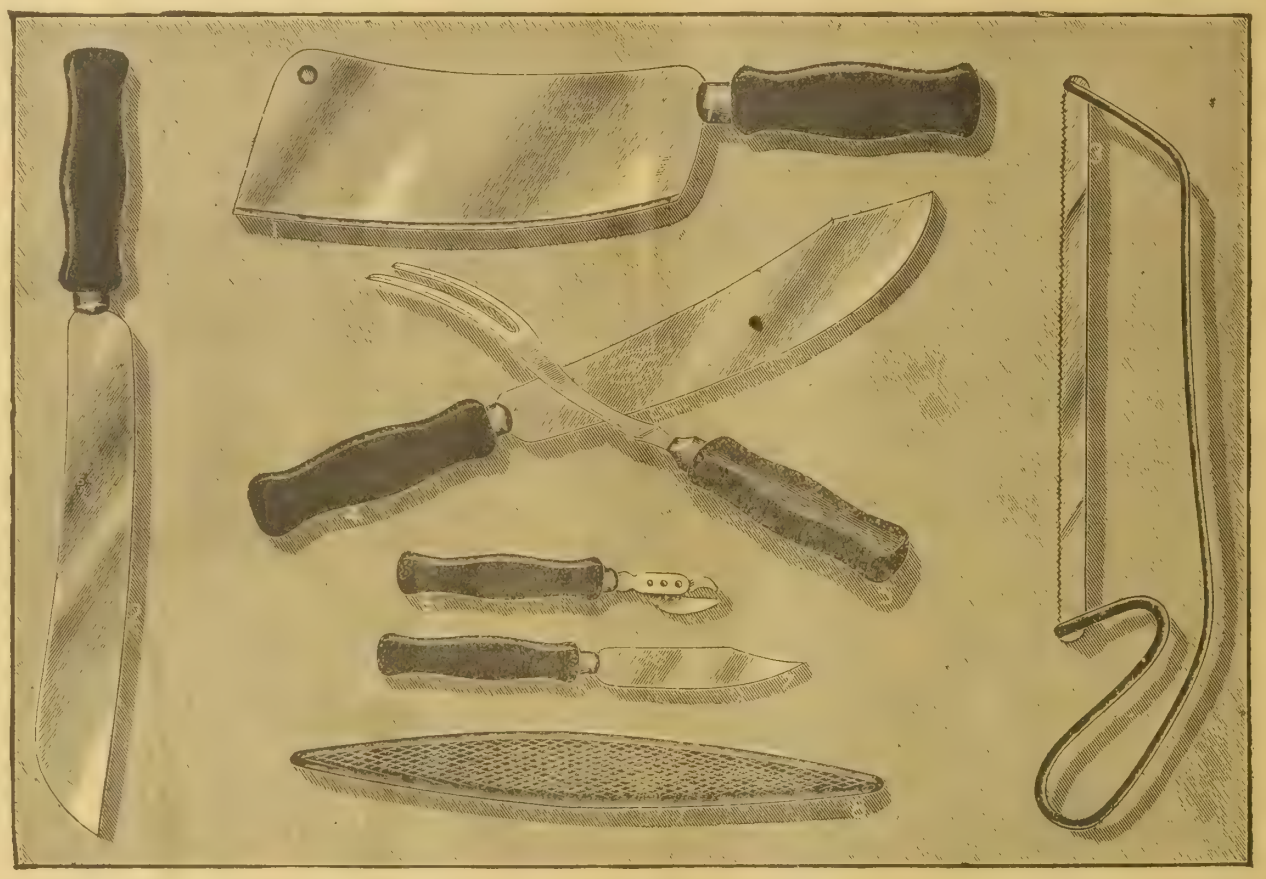
No. 3—The handiest of kitchen tools, a real Meat Saw, 8 inches in cutting service. It is sharp and set wide so as to cut with ease. No kitchen is complete without it.

No. 4 and 5—A serviceable Carving Set; just the thing for actual service; handsome enough to use on the table if you desire; sharp enough to carve any meat and made of best tempered steel. A valuable part of this set.

No. 6.—A Can Opener that will open cans. No danger of cutting your hand on the tin; strong and substantial; will cut any can top; made of best steel; will last a lifetime.

No. 7—A keen, properly shaped Paring Knife. Will pare the thinnest peel and do it quickly; sharp-pointed for cutting out cores, etc. No kitchen is complete without it. A beauty and a dandy.

No. 8—Every housewife wants something to keep her knives sharp. This whetstone, made of the finest material, will put an edge on any knife with a few strokes. Nothing so handy in the kitchen as the real whetstone. This one is the best for kitchen use that can be found.



THIS IS THE SET

Our Kitchen Set Outfit consists of the following:

One Kitchen Cleaner, best cutlery steel, fully warranted,	$0.65
One Bread Knife, best cutlery steel, fully warranted....	.50
One All Steel Butcher-Web Kitchen Saw, strong and durable.....	.65
One Butcher and Carving Knife, extra guaranteed.....	.50
One Carving and Flesh Fork, handsome and guaranteed	.50
One Can Opener, small but powerful, guaranteed.....	.25
One Paring and Peeling Knife, razor edge, guaranteed,	.15
One Imported Aluminum Diamond Sharpening Stone..$	.25
Total value of above at retail	$3.45
One year's subscription to Maritime Farmer (in advance)	.80
Total value	$4.25

All of these articles for $2.50

This offer applies to either New or Renewal Subscriptions. Neither article can be purchased Separately.

Live Agents Wanted in Unrepresented Territory.

THE MARITIME FARMER, - Sussex, New Brunswick

YOU Can Furnish Your Home FREE!

ANY housewife buying goods at the stores mentioned below may have their cash purchases apply on Asepto Soap Premiums. Every cent you spend counts toward a premium. A sure and mighty convenient way to save without increasing living expenses. Over 300 premiums of honest value to select from. The list will be increased every few weeks. Furniture will be offered next. The old way was to allow premiums to apply on Soap Wrappers only. Now at any of these stores—no matter what you buy—everything has its equivalent in Soap Wrappers. That is every five cents spent counts the same as one wrapper, while purchases of our goods as here advertised entitles you to two coupons—the one the merchant allows and the ones found in or on our goods themselves.

Dr. White's Honey Balm.—A cough syrup that is safe and sure. We are positive that no other cough syrup equals it. Price 25c. Equal to 5 soap wrappers.

Pendleton's Panacea.—The best hot medicine, in use nearly 100 years. Every person knows it is good. Price 25. Equal to 5 soap wrappers.

Brown's Cutilive.—A witch-azel cream for chapped hands, sunburn, etc. Price 25c. Equals 5 soap wrappers.

Scott's.—Salts, Senna, Sulphur, Saltpetre, Borax and Alum in 5c packages. Equal to 1 soap wrapper.

Brown's Spearmint Tooth Paste—Sweetens the breath, prevents decay, hardens the gums and whitens the teeth. Price 25c. Equals 5 soap wrappers.

Napatho Soap.—A pure laundry soap, containing naptha and incorporated by a process that prevents it from hurting the hands, as other Napatho Soaps do. The wrappers count for Premiums.

Sapid Tea.—A blend selling at 40c, in 1 lb. packages only. Blended by J. Harvey Brown, one of the most competent tea men in Canada. Each package carries a coupon equal to 8 soap wrappers.

Dr. Scott's White Liniment.—The largest bottle and best liniment. Price 25c. Equal to 5 soap wrappers.

Banner Flavoring Extracts.—All flavors and from 10c to $1.25 per bottle. Coupon on each bottle.

Herner's Dyspepsia Cure.—The only kind that tells you to eat what you like while taking it. Money back if not good. Price 35c. Equal to 7 soap wrappers. Price $1.00. Equal to 20 soap wrappers.

Brown's Stomach and Liver Pills.—A good family pill. Price 25c. Equals 5 soap wrappers.

Scott's Furniture Polish.—Renews the life of old furniture. Price 25c. Equals 5 soap wrappers.

Asepto Soap.—Is equal to the best and contains the same anti septic features that Asepto Soap Powder does. The wrappers count for premiums.

Scott's.—Nitre, Glycerine, Iodine, Iron, Squills, Friar's Balsam, Carbolated Oil, Camphorated Oil, Castor Oil, Sweet Oil, Oil of Tar, Sewing Machine Oil, Spirits of Camphor. Price 10c per bottle. Equal to 2 soap wrappers.

Scott's Fruit Syrups and Lime Juice.—Pure and excellent flavor. 10c, 15c and 25c. Coupon on the bottle.

Ebony Polishes—None better, bothpaste and lustre. Coupon on each box. Try them.

Banner Spices.—In packages only. Absolutely pure. ¼ lb. packages carry coupon equal to 2 soap wrappers.

Venus Floating Soap.—Made from pure vegetable oils and unexcelled for the toilet and bath. Price 25c. Coupon counts for premiums.

Asepto Soap Powder.—Has been the greatest success of any soap or powder ever put on the market. This is the best evidence of its quality. It is antiseptic as well. It absolutely sterilizes every article washed. Think what this means to a family. Price 5c, and the trade mark counts for premiums.

The following stores are now in a position to explain to you what this offer means :—**McLeod & Spence, Port Elgin, N. B.; F. L. Rayworth, Bayfield, N. B.; W. H. Chapman, Northport and Amherst Shore, N. S.; The Sussex Mercantile Co., Ltd., Sussex, Petitcodiac, Penobsquis, Elgin and Havelock, N. B.; R. G. Innis, Norton, N. B.; W. H. Martin, Waterside, N. B.; F. C. Fillimore, Riverside, N. B.; Thorne & Perry, Cody's, N. B.; J. S. Robinson, Narrows, N. B.; H. G. Turnbull, Digby, N. S.; Baird & Craig, Hartland, N. B.; I. M. Tompkins, East Florenceville, N. B.; E. Foster Nicholls, Clyde River, Shel. Co., N. S.** Others are being added continually. If your dealer has not got coupons see that he gets them.

Alfalfa-Root and Branch.

If you prepare your soil and seed properly you can grow from three to four crops per year, yielding at least $100 per acre in feeding value Are you going to give it a trial?

Feeding value of Alfalfa Hay as compared with other feeds. This shows what a ton of each is worth comparatively for feed :

Alfalfa Hay,	per ton,	21.66=20.16
Clover Hay,	do	14.12
Timothy Hay,	do	9.80
Wheat Bran,	do	24.50=22.80
Shelled Corn,	do	20.16

—N. S. Bulletin, No. 339.

ALFALFA.

THE enthusiasm in Alfalfa growing that is being manifested by readers of **The Maritime Farmer** since the inauguration of our campaign, "How can Alfalfa Growing receive a Boost in the Maritime Provinces?" is simply marvelous. From every part of the Maritime Provinces we hear that farmers are going to give it a trial. We want to assist further and are, therefore, offering a one pound package of Alfalfa Seed to anyone who will send us one new cash-in-advance subscriber at 80 cents the year. Or if you can send us two new cash-in-advance subscribers we will send you as well a bottle of Nitro-Culture. Will you make an effort to get one or other, or both ?

A FEW ALFALFA DON'TS.

1. Don't fail to provide for ample inoculation, soil from an old Alfalfa field is best.
2. Don't sow poor or weedy seed.
3. Don't sow on a weedy soil.
4. Don't sow on any but a sweet limed soil.
5. Don't sow on poorly drained soil.
6. Dont sow on any but a finely prepared, well settled seed bed.
7. Don't pasture the first or second year.
8. Don't lose the leaves; they constitute the best part of the hay.
9. Don't seed a large acreage to begin with. Experiment on a small acreage first.
10. **Don't give up.** Many prominent Alfalfa growers finally succeeded only after many failures.

UNDERDRAINING OF MARSH LANDS

Observations of Practical Experiences

By Dr. W. W. Andrews, Sackville, N. B.

THE following address by D. W. W. Andrews, Sackville, N. B., at the Winter Fair, contains much food for thought for Maritime marsh owners:

"I have had a little experience with the great marshes in this section of the Maritime Provinces. I have not the time to go into all that might be said about these wonderful lands, but I will simply say that I have come to this conclusion: The time has come when every acre of broadleaf marsh should be destroyed. There is no reason why any farmer should continue any longer to be the possessor of an acre of broadleaf marsh, for every acre of it can be turned into first class English. The sourest, most discarded piece of land you can find anywhere in this whole Bay of Fundy region can be changed into marsh that will bear year after year never less than two tons of hay to the acre. This is a strong statement, but can be supported by experimental results. After twenty years of life in New Brunswick, in view of the discouraging statements on the part of men who had owned marsh all their lives, if only one result will come I shall be glad of it, viz., that millions of dollars of added value accrue of these broad lands. I say it should be done. Consider what the effect would be to the marsh owners and to the towns of Sackville and Amherst, which are so largely depending on these marsh regions.

The first and most important thing is that these lands should be under drained. And why under drained? First, if the under drain is no better than the open drain, there is this much can be said, there is no annual expense in taking care of it so that if the underdrain is only just as good as the open drain, it pays much better than the open drain. The constant work at the ditches year after year may be done away with once and for all. The underdrain is better than the open drain. Why? The open drains are frozen solid; they have already lost the power of carrying off water. On the little piece of land I own, for two or three weeks yet, perhaps nearly to the New Year, the under drains will carry off any water that may be there. What does that mean? The water being taken off the land, more air is let in, the frost does not get in quite so deep, and it is ready for the spring. In the spring, before the crust of frost is broken on the meadow surface, cracks will appear, and after the very first thaw in various ways the water gets down through the cracks and is carried off by the under drains sometimes a full week before the open drains are opened. It means that when the frost does break the land is at once dry, instead of being chilled, chilled, chilled by the evaporation of the water for a week or two. The sun warms the land up and the grass begins to grow, and i has a week's start over the other land that is not under drained, and you know what a week's start means in the spring.

That is not the only difference—there is another. We lose with every open drain how much? Four, even six feet of the land, the long strips going right across the field. When we have under drained we save that. We lose with the open drains one acre in every ten approximately. And that part we lose is among the best of the land, but with the under drain that lands is saved and we grow hay or oats on that strip sufficient to pay for the under drain in a very few years.

Another thing is this, it adds enormously to convenience of work upon the marsh. Look how a team has to travel up and down the land to a place to cross. When the land is under drained a team can go anywhere. The open drains are a perfect nuisance—always in the way, extra labor and expense.

I have become somewhat of an enthusiast in regard to under-drainage. The cost of tiles is so much cheaper now, there is hardly any excuse why a man should not have annually an acre under-drained. Three inches in the hundred feet is an abundant fall if the tile is laid level and the slope is kept. I have thought it is a comfort to put in manholes at comparatively short distances, one or two hundred feet, generally two hundred. I can go to these manholes usually they are in the dead furrow, and the underdrains are across these at various places. The manhole is

A Fertilizer Experiment on Worn Out Marsh

The above scene is from a photo of marsh plots on which Dr. W. W. Andrews of Sackville, N. B. conducted some fertilizer experiments on a crop of oats. The view is taken looking across the unfertilized area toward the fertilized section. The greater height of oats on the latter is plainly seen.
More remarkable than the difference between the oats is the difference between the timothy and clover on the two plots. Dr. Andrews believes in improving marsh lands by drainage and also by the judicious use of fertilizers.

a catch-basin, and any mud that gets in with the water drops into the basin and can be easily removed. It is a comfort to be able to go over the land and look into the manholes and see how the system is working, and when a man has watched a set of under-drains work in the early spring and notes the wonderful amount of work that is done before the open drains have commenced to work at all, he will have a very high idea of the efficiency of under drains.

Another thing, some marsh owners down in the region of Wolfville have been inclined to say that they not only gain ten per cent. of land by under drainage, but that they get a gain of twenty per cent. in the yield. If that is the case, and you save only five per cent. of the land, you save in the increased crop and you can easily see what that amounts to.

We find the roots of many of our grains and grasses go very much deeper into the soil on our marsh. Sometimes the fine rootlets are found at a distance of four feet from the surface. If you take a pound of sugar and bury it three feet in the ground, after careful tests are made it will be found after a time some of that sugar has come to the surface and spread throughout the surrounding region. Where you have six inches of marsh land it will not support continuous cropping as long as when you have a depth of three feet for the roots to penetrate. Having an amount of fertilizing material to a depth of three feet means a great deal; it worked up from the under layers to the upper soil. This marsh soil is so fine that it would be impossible with any grinding mill to get it as fine as it done by the movement of the water; it is so fine that it absorbs very quickly and there is every chance for the passing of the fertilizer material from the lower to the upper portions of the soil. I think that is the explanation of the marvellous fertility of some marsh lands, which have been cropped for 150 years without the addition of very much fertilizer.

One other thing I would like to add to this, viz., all the poor marsh land, broadleaf, and wire grass of various forms, bushes and things of that sort, in every case where I have tested them, they were found to be growing on sour land. Buy a piece of litmus paper and make a test for yourself. Take a piece of moist soil and press the litmus paper against it. If the paper turns red the sail is acid and some corrective is needed. The cheapest is lime. Three casks to the acre is plenty for a tolerably good marsh. If it is a broadleaf marsh and you want it to grow clover—and there is no soil that will respond and bear clover so well. I saw clover this year standing that high (indicating the height of the table) and vetches six feet. It is a wonderful soil to respond in that way, but the acidity must be corrected after it has been drained. If the soil is sticky and gummy, you will probably require to use six casks to the acre. You might add a little fertilizer if you wish; it will do a great deal of good, because it gives food at once for the plants to feed on.

Choose your seed well. I bought oats at 80 cents per bushel and sowed two bushels to the acre. Off the two acre piece I reaped 94 bushels. That was not as much as I should have got, but a tolerably good yield. But what was more to my satisfaction was to have timothy that high (indicating perhaps to the shoulder) and clover that stood in among the grain There is one advantage in sowing good grain, that you do not have to sow so thickly, thereby giving the timothy and clover a chance to get a little sunlight and make a better growth. This practice will leave the land better for next year. I used Rennie's sub-soiler and what I will call a sub-tiller, in my work. Rennie's sub-soiler is a small colter with a V-shaped flanger. That can be driven forty inches deep into the soil. It may be put into the furrow behind, the ordinary plow can cut eight or ten inches deep. The Rennie's sub-soiler virtues were impressed on my mind very forcibly by the result of experiments I conducted. Hay growing on land which had been in potatoes the year before and on which the sub-soiler was used consistently grew from three to six inches higher than on land adjoining treated in every other way exactly the same. I have noticed land where the Rennie sub-soiler had been worked eight years previous to be fourteen inches deep of good black soil, and I have noticed that the land adjoining would have but seven inches of the same.

Why I Select Seed and It's Financial Advantages.

As you have invited essays on such an important subject as seed selection, I think it is up to every one interested in farming for profit to give their observation along those lines that it may encourage others to go and do livewise; because it pays.

In starting, I would like to pay a tribute to the great Dr. Robertson and also to Sir William McDonald, who made it possible for him, to put into operation this system, and whose far-seeing mind forsaw the importance and magnitude of this work, which has gone on spreading like the ripple on the ocean.

You ask why I select seed and its financial advantages. Well in the first place I select, because there is no other way that seed can be improved to such an extent both in point of productiveness, and in quality of grain, as by hand selection in the fields.

Of course, I am taking it for granted that you mean selecting the best seeds in the field, or in other words, the work done by the Seed Growers' Association, as this is the best kind of selecting and the only one that we can be positively correct in, especially in regard to variety. Another good reason for selection is that, it invites and encourages nature study and a close look into plant life, which I think is very important, as it excites our curiosity and in this way leads us on to investigate and study things that otherwise we might not do. This alone would not be bad pay for our trouble; for when we get well acquainted with our work and get good returns from it, it becomes more interesting and it generally leads to the paving of a certain line of work which at present is paying well, I mean the having for sale pure seed grain, grown from selected Registered Stock.

Then, again, if I select carefully, my work is an immense benefit and also a financial benefit to a great many other farmers, apart from the extra remuneration I receive myself for my work, as the seed sold cannot help but repeat itself and thus the good seed and its enhanced value spreads.

I have in my mind now a man who selects carefully and sells nothing but the best and keeps trace of what he sells and he has noted, that this seed has been a winner in every instance, not only, at field competitions but also at the fairs in the three Provinces, and grain that wins now must be good grain, as one of the judges said in speaking at Amherst this fall, that he would not be afraid to bet that all the winning grain at the fair was grown from carefully selected seed.

The last thing about selecting is that it pays well in dollars and cents There always has and there always will be a demand for good seed and what was called good seed some years ago would not be called good seed to-day by the judges, and the men who are looking for the best. This improvement in quality has been brought about through selections. I think, I am correct when I say that there is an unlimited market for the good stuff at a very remunerative price.

Another point in its favor is that it eocourages extensive farming, and is also profitable to the small farmer, as he can get the price, of two bushels of ordinary feed grain for one of good Registered Seed.

Speaking from actual experience I may say that I took up the work of good seed a few years ago and since then have more orders than I can fill. This year I sold some to the Department at Ottawa at a remunerative price besides winning largely at the fairs.

In summing up, I may say that the reasons for selecting are many, but the most outstanding ones are that it increases the yield; it improves the quality and wonderfully improves the price. Thanking the management of Maritime Farmer for opening up this subject and also for encouraging and helping our fair, and wishing your valuable paper the unbounded success it deserves. I remain.—A. E. McLEAN.

A Young 500 Tree Orchard.

General contour of the land on farm, of Mr. Philibert T. Despres, Kent Co., N. B., on which a 500 tree orchard was planted last spring. View taken looking inward from the Atlantic shore. Photo by A. G. Turney.

Seed selection from strong, vigorous plants always produce the largest crops, and also the best type of each variety. If possible, seed should be selected from crops of early sowing, as they are more generally free from rust, the grain is plumper, better matured and weighs heavier. In importing seed, there is the risk of getting seed grown from plants affected by rust, smut and other things undesirable in good grain, while the farmer, by selecting from his own fields, can see that it is free from weeds, rust, smut and joint disease.

Grain well ripened before being cut, increases the vitality of the seed.

Straw with three joints will generally produce the heaviest heads and the longer the space between the top joint and lower branches of head, the stronger the straw and better the crop. In black oats, the white spot on cryst should show out well and white and the cap on top of pickle should be prominent also, as that is indicative of a well filled kernel and light hull.

These conditions of selection apply to wheat and barley also. But wheat might be cut a little on the green side, as it will ripen and harden in stook. Two rowed barley, especially English Duck Bill, should be left to ripen well before being cut, as when cut green it is liable to shrivel and when used for seed the following year it is more apt to have rust and smut. In five years experience with six rowed barley I find it does better cut a little green, as the straw being weaker and more brittle at the head than the two rowed, it is more liable to break off, thus losing quite a lot. By selecting seed thus for a few years, an increase of four to eight bushels more to the acre can be obtained and as twenty-five acres is about the average amount of grain sown per farm on Prince Edward Island, and there are about 14,000 farms, at an increase of say four bushels per acre, it is easily seen what a financial advantage is obtained by selecting good seed.

To get the best and most prolific potatoes, the seed should be selected in the field from the largest and most vigorous stalks yielding from six to twelve potatoes of good quality. They should not be dug until quite ripe and then handled with great care as the least bruise or spot hurts them. My method of keeping them while in the cellar, is to put a bushel to a bushel and a half in each box and keep in a cool dark place to prevent sprouting. The first sprout is the most vigorous, and potatoes sprouting in the cellar in the month of March or April will not produce as heavy a crop as those that do not sprout until planted. In my opinion the warm cellars of last winter had a good deal to do with the poor crop of last summer. As scab is getting very prevalent, potatoes should be treated before being planted. I have planted potatoes cut in halves—cut in four pieces—two eyes to a sett—and one eye to a sett and I have found the best results from a good, large sett with one eye. Setts should be planted twelve inches apart, in drills thity inches apart, making less work and giving more saleable potatoes which means more money to the farmer.—PETER BRODIE.

I have made it one of the rules of my farming operations for the last forty years to follow a system of seed selection. I have found that I could not farm successfully without doing so.

A farmer wants the best seed obtainable and by selecting from the standing grain he can select the best, and he can get all one kind which is very necessary, because if we do not get one kind I find the crop will not ripen evenly. Another reason is that if you have good, selected seed you need not sow so much to the acre as if you have a lot of mixed seed. Here you gain about two bushels to the acre which is one great financial advantage of selecting seed and you have the satisfaction of knowing what you will reap at harvest time.

I derive great satisfaction from selecting turnips from my field at harvest time and from them growing not only my own seed but a sufficient quantity to supply my neighbors with pure seed. I find it is the same with all seeds. We must try and get

the very best and there is no way like selection for whatever a man soweth, it is reasonable to suppose, something similar wille he reap.—JOHN HOWLETT.

Editor's Note.—The foregoing essays on Seed Selection and its financial Advantages were the winners of the Maritime Farmer's $5.00 prizes at the Summerside, Charlottetown and Georgetown, P. E. I. Seed Fairs What was the matter with P. E. I. seed selectors who did not take part in this competition? Surely the subject of Seed Selection is deserving of more general interest than was maifested by the response in this competition.

Carleton County Fruit Growers Association.

On February 3rd was oraganized at Woodstock, the Carleton County Fruit Growers' Association, with officers: President, G. A. Thomas, Farmer; vice-presidents, Sheriff John R. Thompkins and Harry Cochrane, both fruit growers; Secretary, Tappan Adney, Upper Woodstock, representing the Sharp fruit growing interests; Treasurer, Jarvis J. Bull, Managing Director Maritime Copperage Co.; and as additianal members of Exexutive Board, Judson Briggs, farmer, and Coles W. Dugan, fruit grower and shipper. The organizing members included presidents of the Imperial Packing Co., Cooperage Co. and Cold Storage—in all thirty-four gentlemen, fruit growers and others interested in the fruit growing industry of the county; and twenty-eight others, including the representative men of the county, have since made application for membership.

The time had long been ripe for organization of the fruit growing interests of this county, which has the record of having been on an export basis, as regards apples, for over forty years, and since thirty-five years ago has exported the grand total of upwards of 350,000 barrels, our export in some years having been as high as 18,000 barrels, and in 1910 (a year of general failure everywhere) 5,000 barrels.

It was not to this county that the honor belongs of having first introduced cultivated varieties of apples, that having been done in York county—the Alexander and Fameuse being among the number. But it was here, commencing about the year 1844, that there was begun a systematic introduction and testing, for varieties suitable to the difficult soil and climate of New Brunswick. Practically all the kinds at that period recommended in America, were tried, with various English and other foreign varieties, few of which, however, seemed to be of value excepting as supplying a limited amount of delicious fruit for home market. Not any proved of commercial value, in any high sense of the word and many not at all, until there was discovered, as a seedling, the so-called New Brunswicker apple, which was propagated in great quantities and has been all these years our chief export apple, finding a ready sale at highest prices in not only the cities of Canada but in the American market. The search thence forward was for a later apple which would have a commercial value corresponding with the New Brunswicker, but no equal success has been met with, although numbers of the Russians were fruited and many American varieties; the Crimson Beauty, also a native variety, being one of exceptional earliness filling a market ahead of any other having export quality.

Important information was acquired concerning methods and other matters of cultivation, through the unceasing activities of the late Mr. Sharp, of Woodstock. New varieties were originated by hybridizing. The success of these methods, some of them for the first time carried out in America, and some of them for the first time in horticulture, were given occular demonstration in our apple and plum orchards. Our commercial apple orchards, bearing heavy annual crops for thirty-five years and over, have been slowly but steadily falling into decay, yet are steadily bearing crops. Experiments made throughout the country in recent years, since the Sharp influences were removed, have been on the whole extremely discouraging, it being an exceptional thing for orchards planted with trees recommended by itinerant agents from United States and Ontario, to live, or if to live, to bear fruit in the quantity which we have become accustomed to associate with the word "success." The expression during the past few years often heard has been: "If our old orchards are not replaced by proper varieties in a short time we will have no apples."

One of the chief objects of our association will be the collection and distribution of authentic information regarding our fruits and the work of Mr. Sharp with them, and to deal generally with all matters relating to fruit growing within the county on the same lines as existing agricultural societies do, and therefore in no way conflicting with the work of the general fruit growers' association of the Province, but on the contrary giving it support in all matters in which the province as a whole is concerned.

We have already begun the circulation of literature, such as Fruit Marks Act, and Packing of Apples, with a view to improving the standard of quality in our export. We have taken over practically the whole charge of the exhibition work, for this year's exhibition, of the Agricultural Society, with a view to revision of prize lists, improvement of arrangement and marking of exhibits, etc. We have in preparation a History af Commercial Orcharding in the county, which we expect shortly to be in press. There is no lack of interest in fruit growing. For several poor years in succession as regards potatoes, for instance, has revealed the fact that from the orchards, which have been allowed ta go their way neglected, has come the only actual money of that season. Our growers are, however, for the most part farmers only, and while some are extensive orachrdists they realize that orcharding is a specialty requiring special skill and training, and they do not as a general rule want to know so much about grafting, pruning and such things, as to know where they can find persons qualified to do that work for them. Formerly the Sharps and men trained under the Sharps, did this work throughout the county, almost all of it.

While conditions in our own county are somewhat peculiar and even unique, much good might be accomplished in every county in the fruit districts, by similar organizations. In a single county soil and climatic conditions are more uniformly similar, and men getting together more frequently can by comparing notes learn important data much more readily than can be possible where the work is limited to a provincial association, in which men meet each other but once a year, and from widely separated parts of the Province and each having little or no accurate understanding of the conditions which surround the other, the mutual gain is nat a great deal in this respect. General activities such as exhibitions fall now within the scope of the general association, especially where the province as a whole faces the outside world.

TAPPAN ADNEY,
Secretary.
Upper Woodstock, N. B.

Hauling Trees to the Planting Ground

Mr Despres hauling the trees from where they were heeled in over winter to the planting ground. They are covered with wet seaweed to prevent drying out. The haul in this case was all of a mile and unless properly protected the roots would easily have died outright.

A GOod Plan For Keeping Nursery Stock Over Winter

Method adopted by Mr. Despres for storing fall delivered trees. The trees were heeled in in two and one half feet of sand and the front of the shelter boarded up. When taken out on May 15th the trees were in excellent condition

Co-Operative Works at Pugwash.

Editor Maritime Farmer:—

I thought that as the Farmers' Co-operative Store Ltd., have just had their annual meeting, it might be interesting to a number of your readers to know how we are progressing. This company was organized in March 1909. They bought out Silver Allen's stock of goods and his good will with the trade, rented his store for two years and on the first of Aptil they made their bow to the public.

On the second of April, 1910, they had their first annual meeting, which was largely attended. During the year they sold over thirty thousand dollars worth of goods. They also sold over ten thousand dollars worth of produce for which they paid cash to all who wanted it. The business netted eleven and one-third per cent. Having out grown their accommodations the shareholders authorized the directors to build, buy or rent a suitable place to carry on the business. They bought Black & Co's. commodious store, with five floors, which is now fitted up in first-class style and is well suited for a wholesale and retail business.

Now, another year of eleven months has rolled around. On the eleventh of March our shareholders congregated in the Division Hall and they were a happy looking lot of farmers. They found that their business had increased to forty-five thousand dollars and had handled produce to the amount of twelve thousand dollars. The business netted them ten per cent. and besides this, the shareholders are satisfied that they have saved ten per cent. on goods purchased.

We have about two hundred of our best farmers back of this company and they say that it is here to stay although rumor says otherwise. They are now, through our genial shareholder, W. J. Fraser, organizing a Farmers' Martial Fire Insurance Company with head office at Pugwash, N. S. We also have a Co-operative Life Insurance Society here which is doing good work. The farmers are looking forward to the time when they will start some Co-operative manufacturing here at Pugwash. Mr. A. R. D. Mitchell is our manager and he is the most popular man in this end of the county. We have six clerks on our staff, whose pleasant faces and winning ways draw many to this most popular store. We were all very sorry that Councillor G. H. Allen, our President, had to withdraw from our board on account of other business connections. Vice-pres., Coun. J. L. Hassey, was promoted to the position. Messrs. Alex. Cameron and W. J. Fraser were added to the Board of Directors.

Farmers, come one, come all, patronize your own store, swell the dividend which will be paid back to the shareholders who do their trading at the Farmers Co-operative Store, Ltd., this coming year.

A CO-OPERATOR.

THE ESTABLISHMENT OF APPLE ORCHARDS.

Their Care up to the Tenth Year.

By A. G. Turney, Horticulturist.

Mr. A. G. Turney
New Brunswick's Popular Horticulturist.

Not many years ago the possession of an orchard made*but little difference to the value of a farm. Such marked changes, have, however, taken place within the last twenty years, that in many sections to-day, farms possessing good orchards have sold for from 25 to 50 per cent. increase over farms, which though equally as good in other respects, possessed no orchards. The reason for this is that the past twenty years or so, have witnessed a wider appreciation of the profits to be obtained, and a commercializing of apple growing. Following this came the renovation of old orchards, with the result that these once neglected and despised portions of the farm, are now in many cases yielding handsome returns. Hence the large increase in the price of those farms, a portion of which is planted to orchard.

Placing the price of land at thirty dollars per acre, the cost of establishing five acres of apple orchard today in New Brunswick would be about sixty dollars per acre; if only one acre were planted the cost would be greater. The conditions of establishment being favorable and proper care being given to the orchard the increase in value per year up to the tenth year should average from 30 to 50 dollars per year, making a selling value in the tenth year of from 300 to 500 dollars per acre. In actual practice this annual increase in the value of the orchard has in many cases been exceeded, but suffice it to say that a well planted and well cared for orchard will greatly increase the value of the farm.

THE MAN.

Other things being equal the increase in value just referred to will be wholly dependent on the man. No man should undertake the actual operations involved in the growing of an orchard, if his sole object for so doing is to be measured up by the dollars and cents he hopes to get out of it. Unless there is a strong natural liking for the work and an expectancy to get some enjoyment and wealth out of the investment other than mere money—one had far better leave it alone.

BUYING A FARM FOR APPLE GROWING.

The avowed object in this case being to specialize in apples, only those factors tending to the greatest success of this project should be considered first; other considerations should be secondary. In their eagerness to handle a bearing orchard, many people will purchase a farm with a certain amount of orchard on it, rather than take the bare land and wait a number of years. This step, in may cases is a serious mistake. Often this bearing orchard is irregular in its planting, contains poor varieties, is not in the best possible position, and will before many years, begin to die out. Also, it often prevents the development of the farm according to the ideals of the owner so as to produce the best results. On the other hand, the advantages of starting with the bare land is that there will be no portion of the orchard in a declining state, that the essentials of success can be observed from the start, and the farm better developed according to the ideals of the orchardist. The farm must of course, be adapted for apple growing as described later on and the land should be in a good state of tilth and fertility. Too often, this point is overlooked and the indifferent growth of the trees in the first two years or so is not only apt to discourage the grower, but since it acts as a check to the trees, prevents the attainment of the best results. Also, by the time the land is brought up to a good state of fertility, the expense of so doing has materially increased the initial price of the land. Proximity to good shipping facilities and to other apple growers is also of great importance. In deciding on the size of the farm, we shall in part be governed by the properties available, the capital to be invested and labor facilities, but it is well to remember that large returns per acre are to be had from the smaller area, since it is not usually possible to give the same care to fifty acres of apples that can be given to ten acres.

THE SELECTION OF VARIETIES.

The wrong selection of varieties, not only in this province, but in all places where fruit is grown, has occasioned enormous loss and great disappointment. In selecting the varieties for commercial apple growing, the following principles should be closely observed:

1. Confine your selection to a minimum of varieties, from three to five, and even four or five may be too many.

2. Decide on the market you are going to cater to and then select the varieties which that market demands even though there are other varieties you yourself may prefer.

3. These varieties must be adapted to your soil and climate. In this respect we have much to learn. For instance, Golden Russets, not advised, favor heavy soils; apples of the Fameuse type do best on soils of granite formation.

4. Plant varieties that have proved to be good commercial sorts in your locality. Do not plant varieties simply because they have succeeded elsewhere. To attempt to grow varieties as Jonathan, Newtown or Spitzenberg here would be folly.

5. Due regard must be paid to the difference in the blooming periods of the varieties and to their ability to fertilize themselves. This will be explained later on.

VARIETIES.

For commercial apple growing the Fameuse, McIntosh Red, Bishop Pippin and Bethel will find a ready sale at good prices on the local markets. For export purposes we would omit the Bishop Pippin and add the Duchess, Dudley, Wealthy and Alexander or Wolfe River. These last five varieties sometimes sell well in the local markets and at other times are rather over plentiful. The writer hardly knows enough about the Baxter to recommend it as a commercial apple. It has hardly been sufficiently well tested here, but gives promise of being useful. It is probable that for a few years yet our selection of varieties will be confined to these mentioned above. A substantial reward might well be offered for any new apple of native origin that is a distinct improvement over those which we consider our best varieties.

SITE.

An elevation above the surrodnding land but not so much so as to be badly wind swept is preferable. Such a site will permit of the cold air draining off to the lower points and in this way ensures greater freedom from frosts. Rolling or inclined land is generally preferable to level land, not only because better air drainage is obtained but because water drainage is apt to be better. Steep hillsides on account of the danger of soil washing and difficulty of horse cultivation will not permit of the same variation in treatment and are not so desirable, though in certain instances they may be profitably planted to apples. The modifying effect which large bodies of water have upon the climate for some distance from their shores make land so placed preferable, though quite as good localities are found inland.

EXPOSURE.

While orchards are to be found doing well on all exposures, a northern, eastern or north-eastern slope is to be preferred in our northern climate, since such a one will give us less exposure to the strong prevailing wind from the south-west, greater freedom from late spring frosts, since the growth starts later, and less danger from sunscald. However, in proximity to large bodies of water the best exposure is probably towards the water.

WINDBREAK.

The natural bush lot or riding ground forms perhaps the ideal protection from the wind, but where these are not so situated as to give this protection, some artificial windbreak often becomes a necessity in our northern climate and indeed not enough attention has been paid to this feature in New Brunswick. The greatest need for some such protection in the winter is to lessen winter killing which is largely caused by evaporation of moisture from the cells in the twigs and limbs due to rush of cold dry air over them. Where winds are very dry, cold and frequent and have free access to the orchard, the evaporation is often so large as to prevent natural reabsorption of moisture and hence the cells are broken up and the twigs die. However, the protection of the orchard in the summer and fall from the full force of the winds is far more important. The young growth in the summer is very easily bent before the force of the prevailing wind and the lack of adequate protection is all too evident in the many trees leaning in most cases to the north-east. Breakages too, at this time of the year are frequent in the unprotected orchard, and the retaining of the optimum amount of moisture in the soil is more difficult where the evaporating effect of the winds remains unchecked. The greatest value of the windbreak is however, in the protection afforded the fruit towards harvesting time. Heavy winds at this time may turn 50 per cent. of the crop into windfalls—a very serious loss and one that it is well worth while planning to avoid.

Where artificial windbreaks are necessary we can hardly improve here on the native spruce. Trees three to five feet high may be successfully transplanted from the bush. A single row may be sufficient, but a double row with ten feet between the rows, the trees planted alternately is sometimes necessary. The trees should be set 8 to 10 feet apart, in the row. Aim to plant the windbreak at the same time as the orchard or ayear or two ahead if possible and fully thirty-five feet from the apple trees. Various objections are urged against windbreaks but if due precaution is taken that the wind break does not encroach on the feeding ground of the apple trees and is not set so close as to prepent proper air drainage, the objections are not to be compared with the advantages procured. In planting the orchard, so far as is consistent with proper pollination and convenience of picking, the more tender trees may be given additional protection by planting the hardiest and strongest growing trees, with persistent fruits, on the outside.

APPLE SOILS.

Apple trees may be found thriving on almost all kinds of soils, provided good drainage is there. Good drainage is absolutely necessary since the apple tree is deep rooted. Avoid any soil with a hard pan or close impervious subsoil. Artificial drainage is often necessary in soils that have every other requisition. In planting out an orchard of some size, if in doubt as to the natural drainage being sufficient, by all means supplement with tile drains; they will repay their cost many times over before the orchard is in full bearing. We may say, that as a rule the most suitable soils are those of a sandy loam, and clay loam nature. Prof. Waugh in his work "The American Apple Orchard" says:—"A somewhat gravelly soil or even one verging on stony, has been found by experience to be highly satisfactary for apple growing, provided only that there is an abundance of plant food present—the gravel and small stones doubtless assist in the drainage and this fact probably explains in part the superiority of such soils. As a rule we may say that gravelly loam, fairly rich in plant food is the ideal apple soil." Much of our soil is of this nature, although some of it is much more stony or gravelly, but the amount of loose stone which may be present in an apple soil is only limited by the possibility of cultivation and especial tools may be devised to withstand the extra wear and tear. Stony soils will hold the heat more readily and therefore being warmer are likely to give better results in a northern climate.

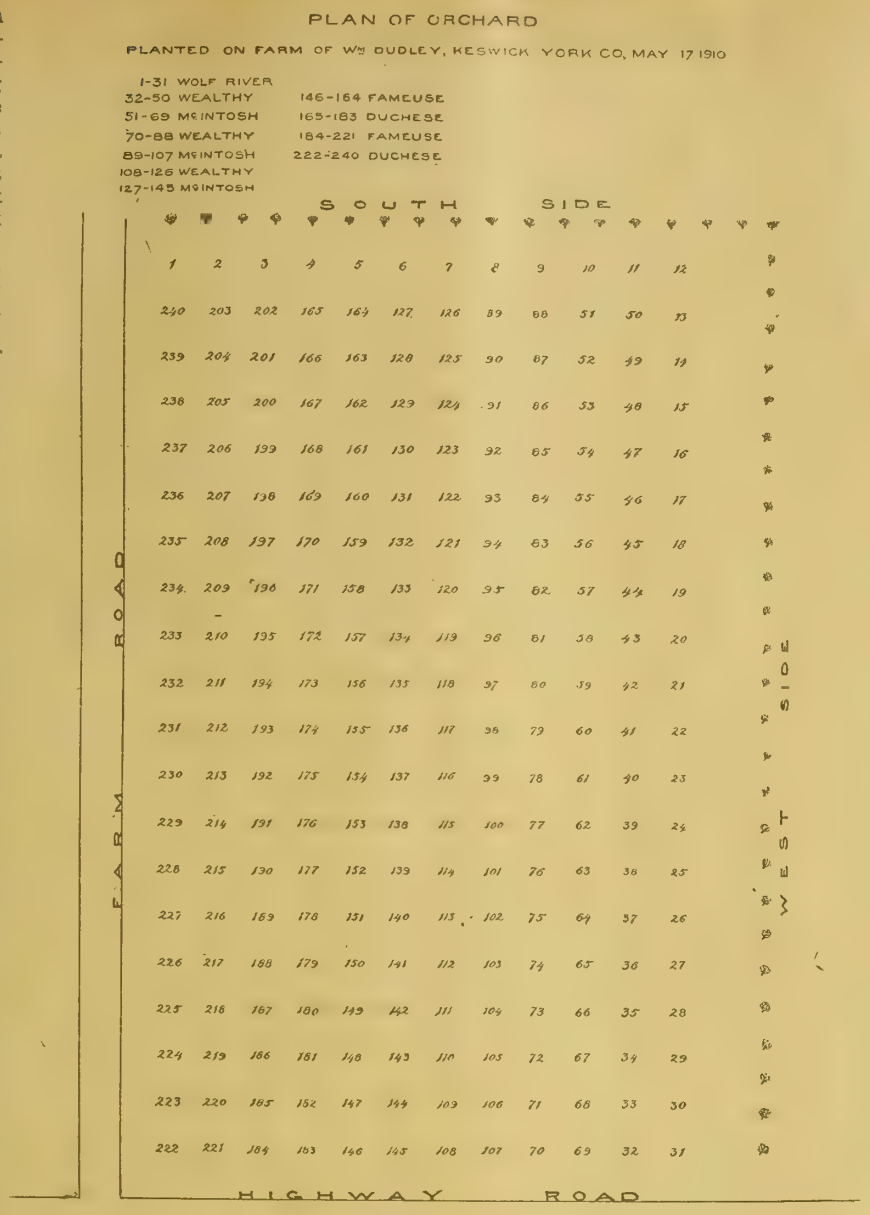
PREPARATION OF THE SOIL.

This is a very important point and a great deal more of the failures in apple growing in the province are

due to lack of thorough preparation of the soil, than is generally understood or attributed. The temptation on the part of the intending planter to get his trees in at once and thus save a year or two, though the ground may not be fit, is often a fatal one. In the same way that it is a recognized principle in stock raising to keep the young stock growing well and going right ahead, so it is with fruit trees; plant them in poor land lacking in tilth and fertility, and they will receive a check which in spite of the beneficial treatment after planting, will lessen their chances of developing into strong, healthy trees. Instead of gaining time by this hasty method of planting, one often loses two or three years. The planter will be time and money in pocket in the end if he waits a while and brings the land intended for his orchard up to a high state of tilth and fertility. The methods of doing this will depend on the previous treatment of the soil. A clover crop turned under will add much humus and greatly improve the mechanical condition of the soil. Land that has been well fertilized and under hoe crop the previous season, if plowed in the fall and again in the spring and well worked up should be in first rate condition for planting.

THE KIND OF TREES TO BUY.

On this point a number of our people need to get away from the old idea that size is the main essential in buying fruit trees. Don't buy any thing older than three years, and give two-year-old stock the preference. The longer a tree is kept in the nursery the more must it be cut back each year and the greater will be the loss in the root system when it is finally sent out for planting. Trees over three years old have been unduly held in check in the nursery row—such trees have received a set back, their root system has been badly mutilated—their vitality is depreciated and they are strictly undesirable. A close examination of the trees should disclose the rings marking the cessation of each year's growth and in this way enable the buyer to determine the age of the stock. It would be well for us to go easy in planting one year old trees here until we can see their advantage over the two year old stock. Their slimness and susceptibility to breakages would seem to be points against them for this climate. A good tree should be clean, straight for the variety with the head well formed and branches leaving the trunk so as to form no weak crotches. In this respect it must be remembered that certain varieties naturally form better heads and grow straighter than



Windbreak on South and West.
Notice arrangements of varieties.

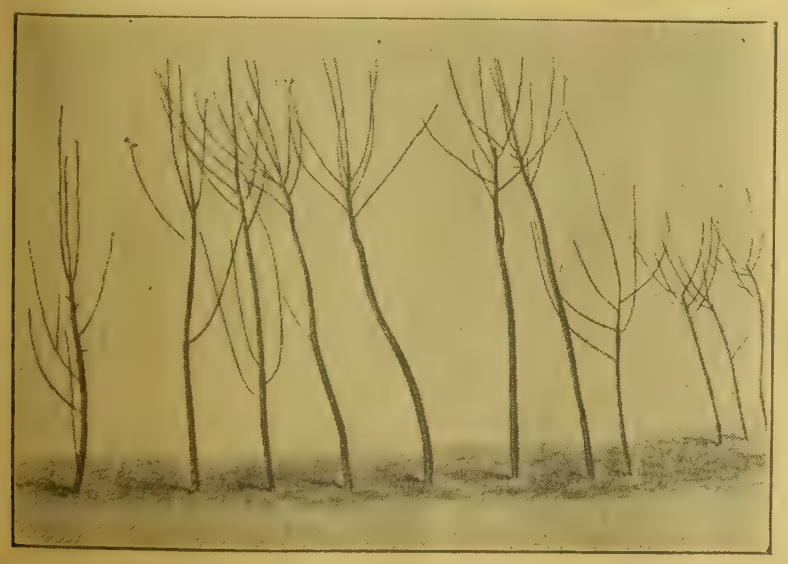
others, in their early stages, e. g., the Wolfe River and Duchess will be straighter looking trees f rom the nursery than the Fameuse and Longhfield. Those varieties that are apt to be more or less crooked from the nursery straighten out as they grow older. But apart from this fact there should be a general thrifty appearance about the tree. The root system should contain plenty of small branches and fibrous roots—absence of these is a serious fault. Dry, hard, shrivelled or discolored looking bark indicates decreased vitality probably due to unnecessary exposure or poor method of storing through the winter.

BUYING THE TREE.

The travelling fruit tree agent should not be encouraged. It is not my purpose to run down the fruit tree agent. His business is to sell trees for the money there is in it for him and not just for love. More tree buyers ought to remember this. It is a pretty safe plan to refuse to buy trees from a man whose selling contract leaves the buyer to take all the risk and put up with any loss that may occur. When the farmer is buying stock he takes greater care to see that he gets good value for his money. Why shouldn't he do so when buying fruit trees? It may sometimes be all right to buy trees from an agent who is a permanent resident of the district and who has a good reputation. Such a man has something to lose by supplying poor stock. Where possible the best plan is to purchase from a local nursery, after personally inspecting the stock. Where this is not practicable a reliable firm should be patronized and greater attention and better prices will be obtained where the orders are clubbed together and sent in through some society. Order the stock well beforehand, in the summer or early fall is none too soon. If you wait till the winter the best stock and varieties will be sold out. Spring delivery is safest and best, as the nurserymen have better facilities for winter storing of trees and there is a slight danger of trees being dug prematurely from the nursery row in the case of fall delivery.

PLANTING DISTANCES.

The present tendency in apple growing is towards closer planting; smaller trees and more of them. The standard distances of 35 or 40 feet apart used in Ontario, Nova Scotia and many sections of the United States do not apply to New Brunswick. Trees dwarf here somewhat and some of our best varieties, such as the Wealthy, are shorter lived and smaller growing trees than say, American Baldwin or Northern Spy. The close planting system used by the Sharps in their orchard operations at Upper Woodstock were highly successful so long as they remained under their control and were confined to smaller growing varieties such as the New Brunswick and Wealthy. When their horticultural skill and ability together with their understanding of the requirements of such intensive methods of apple orcharding were no longer available the results were unsatisfactory. The lesson is obvious—the planting distance to be decided on depends not only on the variety, soil and the climate conditions but still more on the man. To the farmer who has the balance of his farm to attend to in addition to the orchard, an average of about ,60 or 72 trees to the acre would seem to be a good distance in the lower portions of the province. In the upper sections of the provinces still closer planting may be desirable. For such varieties as the New Brunswick, Duchess and Wealthy, the trees might well be planted as many as 108, 145 and 193 to the acre, providing the treatment which such close planting necessitates is forthcoming. Many growers take the stand that for McIntosh Red, Famuese and varieties of about the same growth, 30 ft. apart each way giving 48 trees to the acre is sufficiently close. This distance is the one used in the Fameuse and Mc-



The Poorest of the Nursoryman's Offerings.
These trees are from 6 to 8 years old and represent a very poor class of stock, of which altogether too much is sold in the Maritime Provinces.

Strong, Well Grown, Well Headed 3-Year-Old Stock.

A Bundle of Fine Nursery Stock.

Intosh sections of the Ottawa and St. Lawrence Valleys where growth conditions are much the same as ours. The closeness of planting, apart from the other factors, will be in proportion to the planter's knowledge and his ability and courage to carry out a rigorous system of treatment.

PLANTING TABLE.

Distance	Trees per Acre.
10 ft. x 10 ft.	435
10 ft. x 15 ft.	290
10 ft. x 20 ft.	217
10 ft. x 24 ft.	181
10 ft. x 30 ft.	145
12 ft. x 20 ft.	181
12 ft. x 30 ft.	121

24 ft. x 30 ft.	60
30 ft. x 30 ft.	48
35 ft. x 35 ft.	35
40 ft. x 40 ft.	27

POLLINATION.

Before laying out the orchard it is very necessary to consider the comparative ability of varieties to fertilize their own blossoms. In the past, large blocks of one variety have been set out and proved to be singularly productive, such varieties for example as the Northern Spy and McIntosh Red. These two varieties are quite sterile to their own pollen and need to be fertilized by pollen from other varieties, before fruit will be produced. Certain varieties such as the Duchess, Wealthy and the Dudley are strong self fertilizers, but we may take it as a general rule that most varieties are apt to yield heavier crops of larger fruit, sometimes better colored, where cross fertilization takes place, except in the case of a few varieties, therefore the practice of planting solid blocks of one variety is no longer followed. Alternate rows or double rows alternated is now the more usual practice. Where we have decided to grow a certain variety which is not a strong self-fertilizer or which will not fertilize its own blossoms at all, it is not merely enough to plant it in close proximity to another variety, but to a variety of the same blooming period. For instance, good cross fertilization should result from McIntosh Red planted close to Wealthy the latter variety blooming at about the same time and proving to be a good pollenizer. It is known that some varieties will give better results as pollenizers to one variety than others, but on this point we have much to learn yet. Observations carried on for five years on the dates of blossoming of varieties of apples were made by persons in various parts of Canada for the Horticultural Division of the Central Experimental Farm, and while the results will not hold good in all cases, they are fairly correct. Arrangements are being made to collect information on the blooming periods of varieties throughout the province, and the difference in the same varieties in different sections of the province. Certain varieties most applicable to New Brunswick have been taken from the Ottawa Bulletin and are grouped as follows:

Early:—Duchess, Fameuse, Red Astrachan, Scott's Winter, Tetopsky, Scarlet Pippin.

Medium:—Alexander, Baxter, Ben Davis, Canada Baldwin, Gano, Golden Russet, McIntosh Red, McMahon's White, Peach, Lawrence, Wolfe River, Yellow Transparent, Ontario, Ribston, Milwaukee, Louise, St. Lawrence, Salome, Stark, Wealthy, Winter Sweet.

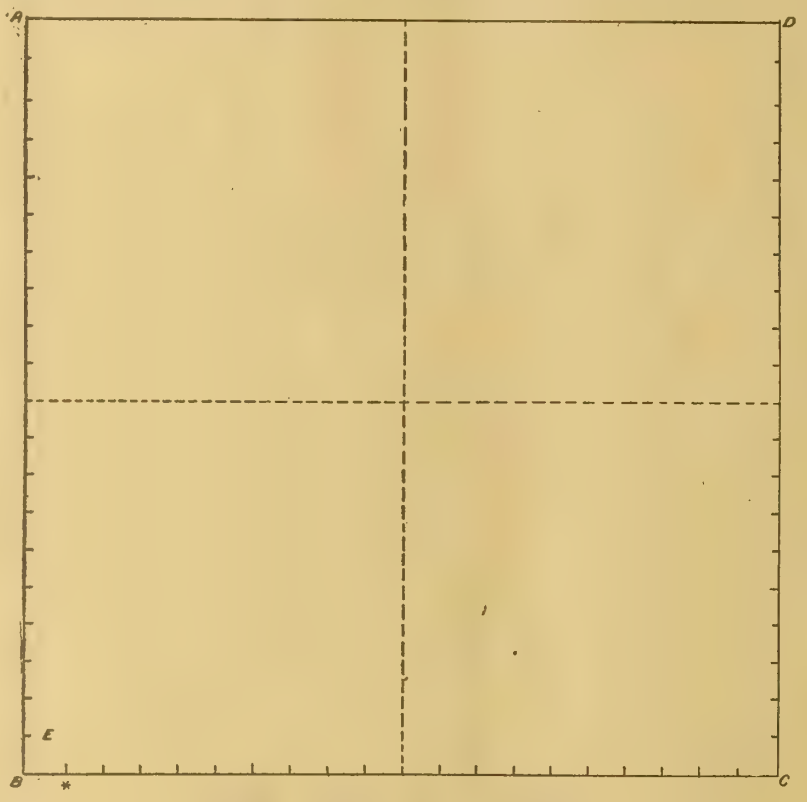
Late:—Blue Pearmain, Talman Sweet, Bishop Pippin.

ARRANGEMENT OF TREES IN THE ORCHARD.

Where the square system of planting is not adopted the direction of the rows will probably be decided or restricted by the pecularities of the site. But, where possible it is desirable to plant them north and south, to obtain the maximum amount of sunshine per tree. As to the position of the different varieties in the orchard, the most important point to consider is that of ample cross fertilization. Having so arranged the varieties as to secure this —keep in mind for the sake of economy and dispatch in harvesting the relative periods of maturity of the varieties and as far as possible plant the sturdier, strong-growing hardier varieties on the outside.

STAKING OUT THE ORCHARD.

For the sake of appearance and convenience in cultivation the rows should be planted as straight as possible. Orchards of three acres or more had better be laid out by staking. Lath may be used for stakes. First three sides of the orchard should be measured off and stakes placed at the proper distances as between A. B. C. D. Then one man will stand at the first tree from B. on the way to C. The second man at first tree running from C. to D. A third man carrying a bundle of stakes and directed by the first and second men, will locate position opposite, and in line with them, place a stake there, then proceed on down the row repeating the operation until all the stakes are properly placed. For large orchards where the whole distance from one side to the other is too great for sighting, the ground may be staked off in blocks of convenient size, as per dotted lines in diagram. We now have the correct spot for each tree marked by a stake.



Method of Staking Out an Orchard.

THE USE OF A PLANTING BOARD.

When however, the stake is removed and the hole dug the exact spot is lost, and since the hole is often not exactly dug equally around where the stake was placed, it becomes necessary to sight the tree into correct position again. This need of further sighting is however, dispensed with by using a planting board. A planting board is the best made of ¾ stuff, six inches wide and five feet long with a hole bored in each end and a notch cut in the centre. In large operations it is best to have two of these boards of exactly the same dimensions. One man preceeeding the planters, places the board on the surface of the ground with the stake where the tree is to be fitting into the notch. Small pegs are then placed in the two end holes, the board taken up and the operation repeated at the next stake, etc. The planters following, place their board over the pegs and the tree in the notch in the centre, fill in the earth around the roots and the tree is in exactly the same position as the stake.

PREPARATIONS FOR PLANTING.

The stock should be heeled in in the field where it is to be planted and on no account should it be allowed to partially dry out at any time. Where the rows in the orchard are long, the trees may be taken out, fifty or so at a time and placed in a large tub half filled with clay and water in such proportions as to form a thin paste. This tub is then placed in a box, covered with a wet blanket or sacks. In this manner, two rows of trees may be planted at the same time, one from each side of the wagon, and the possibility of the trees drying out avoided. When the trees are taken from the place where they are heeled in, cut off all broken and struggling roots and cut back all main roots to within five inches from the trunk. The clean cut surfaces will callous over better than ragged ones and more readily throw out new roots. The head of the trees had better not be cut back until after planting, and the manner of doing so will be dealt with later on.

PLANTING THE TREES.

In digging the holes place the rich top soil to one side and the under soil to the other side. The hole should be made large enough to receive the roots freely, without cramping or bending their form from their natural position. Set the tree about the same depth as it stood at the nursery or an inch deeper. Fill in around the roots carefully and firmly with the rich soil. Set the tree as firm as a post, but leave the surface filling of under soil light and loose. Where the head of a tree is unequally developed, let the strongest branches face the direction of the prevalling wind.

CONSERVING MOISTURE.

As the ground around the trees will be much tramped and solidified in the planting operations, a cultivator should be run over a three foot strip on each side of the rows of trees; this will break up the crust and form an earth mulch. This should be done as often as necessary during the first month after planting. On hillsides, where drying out is feared and cultivation is not practical, a mulch 4 or 5 inches deep may be formed just around the trees of coarse manure, straw, grass, etc.

The Strong Root System.

STAKING.

Tall trees or ones exposed to the action of strong winds may be protected from injury by staking. Drive two strong stakes firmly into the ground, one on each side of the tree about a foot from it and fasten the trees between them with a band of straw, sacking or other soft material, so that it may be kept in an upright position, without chafing.

THE FIRST PRUNING.

The necessity of pruning vigorously at the time of setting is generally a very unpleasant one to the planter, as it injures for the time being the appearance of the tree to an unpracticed eye. It is, however, necessary to balance the loss which the root has received in its removal from the nursery and to prevent drying out. At least one half the previous year's growth should be removed. (See photographs.) In most cases it will be best to cut back to outside buds. In the absence of any limbs suitable to form a top, cut the tree down to the requisite height, leaving the dormant bud to make the head. Aim to form the head of the tree from 24 to 30 inches from the ground—probably 30 inches is the better distance here.

A tree, so formed, may be considered low headed, is less subject to damage at all seasons from winds, and is far more economical in the operations of pruning, spraying, thinning and picking. The objection that cultivation is made more difficult is hardly true, as with proper pruning, low headed trees develop ascending branches and by the use of modern orchard implements are as easily worked around as the old high headed trees. The subject of pruning young trees is further discussed under a subsequent heading.

THE ORCHARD RECORD BOOK.

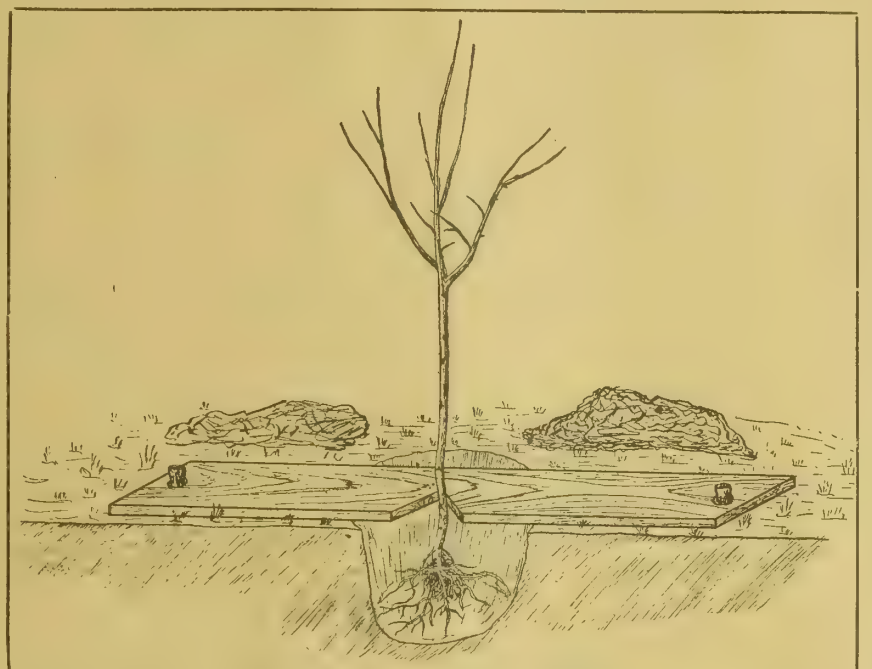
It is both interesting and important to keep a proper record of the orchard. Such a record will not only bring out many points of great interest concerning the different varieties, but if not essential, is at least, very conducive to a better understanding of the requirements of trees and to a high measure of success in apple growing. The labels should be removed after planting and a plan made as shown in plate in which every tree is accorded a certain definite number. This plan may be attached to the inside cover of a strong, well-made note book, and then a certain amount of space in

CULTIVATION OF THE ORCHARD

the book accorded to each number, and notes made on the condition of the trees throughout the year. Notes under such headings as: Character of the Winter, Character of the Spring, Summer and Fall; Spring Care of Orchards, when commenced and what done—same for summer and fall; Opening of first Leaf Bud and Blossoms; dates of fall bloom and total blossom fall; notes on fruit, setting cover crops, intercrops, insect and fungous pests, spraying, fruit yields, etc., should be made. If underdrains have been laid their whereabouts should be marked on the plan. The trouble involved in the keeping of such a record will be more than amply repaid by the better understanding thus obtained as to the best possible treatment of the orchard.

UP TO THE TENTH YEAR.

The growth of the young trees must be allowed to proceed vigorously and without interruption from



Illustrating Use of Plantiug Board.

Newly Set Unpruned Tree.

the time of planting and the future success of the orchard depends upon the extent to which this principle is carried out. Except in extreme cases where cultivation is impossible, it therefore becomes essential that the trees receive thorough cultivation during the greater part of the first ten years. Professor Hedrick conducted carful experiments in New York State to determine what the comparative effects of tillage and sod are upon the apple. He says: "The average cost per acre for the two methods of management, not including harvesting, was $17.92 for the sod, and $24.47 for tillage, giving a difference of $6.55 in favor of sod. The average net income per acre for the sod plot was $71.50, for the tilled plot $110.43, a difference of $38.91 in favor of tillage, an increase of 54 per cent for tillage over the sod mulch method of management.

In general, Hedrick draws the following conclusions:

"Nearly all the plants which minister to the needs of man are improved by tillage; the apple does not seem to be an exception.

"Results as positive as in this experiment can be made very comprehensive; they should apply to all varieties of apples and to nearly all soils and locations.

"The experiment does not show that apples cannot be grown in sod; it suggests, however, that apples thrive in sod, not because of the sod, but in spite of it.

"While moisture is by no means the only factor to be considered in the controversy over the sod and tillage methods of managements, it appears to be the chief one.

"There is nothing in this experiment to indicate that trees will become adapted to grass. The sodded trees began to show ill-effects the first year the orchard was laid down to grass and each succeeding year has seen greater injury.."

It will be noted from this experiment, and it is backed by general experience, that the cost of the tillage system over the sod method is not so much as is generally supposed.

Deep spring plowing is generally preferable. While the objection that it is either impossible or harmful may hold true in orchards that have never been cultivated, it certainly does not hold true in orchards where deep plowing is practised from the start, as under this treatment large roots are not formed near the surface but grow below the reach of the plow thus avoiding damage and giving better anchorage to the tree.

After the plowing, a strip three feet wide on each side of the trees for the first year should be kept pulverised and stirred once a week, or in dry weather, twice a week. The width of these strips should be increased each year so as to be a little wider than the width of the top growth of the tree—so that the intercrop will not be feeding from the same ground as the apple roots. In this northern climate the length of time that the cultivation of these strips should continue is very important. The idea of the cultivation is to conserve the moisture by creating a dust blanket on the surface and to keep the trees growing vigorously. This it does by improving the physical condition of the soil, creating a greater feeding surface for the roots and rendering plant food more readily available.

COVERCROPPING THE YOUNG ORCHARD.

But in the north the danger lies in the possibility of promoting too strong a growth for the short season to properly mature and where this happens a portion of the season's growth will go into the winter green and winter killing result. To prevent this, the strips should be seeded down early in the summer to some crop, the growth thus checked and the new wood allowed to thoroughly ripen. For this purpose, leguminous crops, such as clover and vetches are best, since they will form a good covering for the ground in the winter, hold the snow and where turned under in the spring add considerable nitrogen and plant food to the soil as well as improving its mechanical condition. In this climate I would aim to sow this cover crop on the strips not later than July 1st, and preferably about six days earlier.

COVERCROPS.

Crimson Clover has proven rather uncertain in New Brunswick. In some of the Illustration Orchards it has done very well while in others it has not been satisfactory. Summer Vetch Hairy Vetch and Mammoth Red Clover have given good results at the Central Experimental Farm, Ottawa, and arrangements are being made to test them as cover crops in the Illustration Orchards throughout the province. Government Standard seed is quoted today as follows:

Crimson Clover ...$18.50 per 100 lbs.
Mammoth Red, fancy ... $19.00 per 100 lbs.
Sand or Hairy Vetches ...$9.50 per 100 lbs.
Common Vetches ... $2.50 per bushel 60 lbs.

QUANTITY OF SEED RECOMMENDED PER ACRE.

Mammoth Clover .....12 lbs.
Crimson Clover .....15 lbs.
Hairy Vetch .....60 lbs.
Summer Vetch .....90 lbs.
Buckwheat .....60 lbs.

The vetches form a close mat over the ground, killing out weeds and holding the soil. They accumulate large quantities of nitrogen. The hairy vetch will live through cold winters and grow early in the spring. Early plowing is necessary to get rid of it. The present high price of the seed, however, makes it rather too expensive for practical use. The Summer Vetch is much cheaper, is a rapid grower and although it kills out in the winter yet it makes a fine cover crop. Buckwheat is best suited to northern climates, will leave the soil in good physical condition and will germinate and make good growth even when sown late. It is the best of the non-leguminous cover crops. Where a leguminous cover crop had

A Newly Set Treepruned.
Note the percentage of head cut back,

Notice Weak Crotch.

been used for some years and the trees show signs of making too much green growth it would be well to substitute buckwheat or possibly to seed the strips down for a year but never for more than two years at a time.

CROPPING THE YOUNG ORCHARD

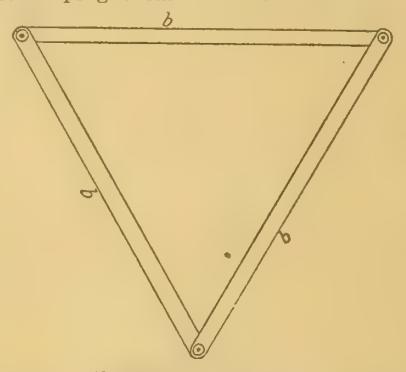
No returns to speak of, may be expected from the trees for the first six years and the large amount of unoccupied ground may be cropped. Where this is done judiciously, the growth of the apple trees is not checked and enough returns may be procured to at least pay for the expense of growing the orchard and in some cases to give a net profit on the whole transaction. Do not forget, however, that the trees are the first consideration. No cropping should be done under the trees and intercropping should cease whenever it threatens to interfere with their progress. By using the right crops and proper care and liberal fertilizing the intercropping of young orchards should be advantageous rather than harmful.

Small fruits make a satisfactory intercrop but should not be planted too close to the trees nor grown for more than six or seven years. Late vegetables should be avoided, because they need late cultivation and such combined with the stirring effect on the soil of late harvesting is apt to start growth afresh on the trees and cause a portion of them to go into the winter green. Early beets, early carrots, early turnips, radishes, peas beans, and potatoes are good crops, since they need and should receive good cultivation and liberal feeding.

Sometimes it may be advisable to seed the intercropping space down to clover, take one crop off and plow under the remains. No grain crops should be planted in the orchard with the intention of harvesting them. The size of the orchard, proximity and nature of markets, etc., will determine the procedure to be followed in cropping young orchards, but the above mentioned points should be kept well in mind.

THE OBJECTS OF PRUNING.

While the natural aim of the apple tree is to produce fruit, it is not the same as that of the fruit grower. Nature aims to produce seed while the grower is not directly concerned with seed production. With nature, the seed is of primary importance and the fleshy pericarp surrounding it of but secondary importance. With the fruit grower these points of importance are reversed and indeed the fruit grower would be delighted if he could obtain the fruit unimpaired in any respect and minus the seed. Trees will bear well when never touched with knife or saw, and the object of pruning is not in the main to make trees more fruitful. Nature's method, without pruning at all, serves best where reproduction from seed is the simple desire. But the fruit grower wants the luscious fruit even if he gets it at the expense of the seed and it is well known that some of our best apples produce but few seeds and that some of these will not grow. Hence the reason that the best seed for planting is grown on wild native stock where no pruning is done. Unpruned trees will produce plenty of seeds that will grow and the object of pruning then is not to get more seeds and more fertile ones, but to obtain an enlargement of the fleshy covering of the seed—or in other words, larger, better colored and higher quality fruit. Of course, we are not to lose sight of quantity but it must be coincident with size, color and quality. These being the objects in pruning what then is the form of the tree that is most apt to ensure their attainment. The tree must be so shaped that it will stand up well under its load of fruit and the branches therefore should leave the trunk and main stems, not in a cluster of two and three from the same point, but at some distance apart, thus avoiding crotches. In addition to this requirement the sunlight and air should have free access to all parts of the tree, and therefore, the excess of limbs must be removed. Such then is the ideal we have in mind when the trees have been planted out and the actual work of shaping them is to be done.



Temporary Support.

FRAMING THE TREES FOR BUSINESS.

The first three years in the pruning of the tree is of prime importance, since in that period of its life the form and character of the head are determined. When left till older, a poor head cannot be changed into a good one without resorting to radical methods involving the loss of much time. By careful attention during the first two years the grower can form the branches where he wants them and thus avoid the formation of weak crotches and other undesirable growths.

The first year, aim to form a good, strong framework by selecting four or five main branches, symetrically placed, and where possible, with no two of them leaving the trunk at the same point. Prune these back about one-half their growth, leaving the most central one as a leader and pruning it about 4 inches longer than the others. The natural tendency of some varieties, such as the Dudley, is to form weak crotches, and of other varieties, such as the Talman Sweet and McMahon's White, to form strong, clean crotches. Weak crotches cannot always be avoided and a method of strengthening them artificially is explained later. Three, four and five year old trees unpruned since planting, will produce a lot of small branches in their centre at the base of the main limbs. Such growth is undersized and of no use to the tree later, but is determental in that it uses up nourishment and that prevents the optimum growth of the permanent limbs. Such growth should not be allowed to develop and is best removed in June by rubbing off the shoots. In fact, light pruning of this nature may be safely done at any time of the year, and if done when the need for it is first observed a saving to the tree is effected.

The second spring the tree will be somewhat as shown in figure 2. Remove the superfluous, broken and crossed limbs. Select two or three limbs for each main branch of the tree and cut these back one-third of their growth. (See Figure 3.) From this time on the pruning to be given will be a matter of judgment rather than of rule; and the natural growing habit of the varieties should be studied and reckoned with. The top of the tree should be kept well opened, weak branches and branches crossing one another removed. Direct the growth where you want it by cutting back to strong buds facing that way. This pruning may be done from the beginning of May to the middle of June. Small growth may be removed at any time during the summer as occasion demands. Make clear sloping cuts above strong buds. Where the work of pruning is attended to every year as above, no great amount will have to be done at any one time and the orchard can be quickly gone over.

ARTIFICIAL SUPPORTS.

For the first three years after planting weak crotches may be

Permanent Support.

Cross section showing same crotch with permanent wire support. D, screw eye; e, ½ inch ring; b, No. 12 galvanized wire.

strengthened by connecting two or three limbs together as the case may be, by tying the twine in a circular belt around the limbs. This gives room for each limb to expand in growth, does not interfere with the sap flow and maintains their correct position. A soft spun two-ply tarred manilla or hemp twine answers the purpose as it will last about three or four years. The branches will then be large enough for the substitution of screw eyes and wire; small screw eyes about ⅝ inch long are screwed into the inside surface of the limbs and these are then connected together with wire, a ½ inch galvanized wire being best. In time the wood growth will cover up the screw eye and only the wire will protrude from the limb. Where three or more limbs are to be joined together in this manner the wires are fastened to a small ring in the middle. Wires put in neatly and carefully will hold weak crotches together for years even under heavy strain and large crops. This method is certainly more satisfactory, safer and more economical than that of temporarily tying trees together and propping up limbs in time of harvest.

HILLSIDE ORCHARDS.

On rough, rocky, or steep lands, where tillage is difficult and soil washing is a factor, the sod or the sod-mulch methods or modifications of them will be found advantageous. Even on such sites one should aim to give the trees some measure of cultivation during the first few years. A circle made around each tree may be kept worked up with a heavy hoe or mattock. This circle should be increased in diameter each year, and in this climate may be seeded down or allowed to grow up to weeds and grass about the end of June. After the trees reach a bearing age, there is no place where they are better able to do without cultivation than in hilly regions. On land difficult of tillage the ground may be sown to grass and the grass cut and allowed to rot beneath the trees. If the roots of the trees are not occupying the whole soil it is best to pile the grass in the form of an individual mulch around each tree. Where the tree roots have spread over the whole ground the grass may be allowed to decay where it falls. In many cases it will pay to go a step further than this and thicken the mulch with any cheap material that can be readily obtained. The relative ability of these hilly sites to retain moisture throughout the summer, and their care or difficulty of cultivation will be most important points in deciding their treatment.

FEEDING THE TREES.

Probably more trees die of slow starvation on impoverished soils than from all other causes. If farmers here gave their root crop no more fertilizer than they do their fruit trees they would not expect a crop. But in some inexplicable and myserious fashion an apple tree is expected to thrive without cultivation and plant food and even while the soil about it is either producing another crop or is tramped solid by stock.

A growing tree requires a different fertilizer from a tree that is already almost fully formed and able to bear fruit. Growing tissues require considerable nitrogen and less phosphoric acid and potash. If the grower follows the system of cultivation recommended in this bulletin and use a leguminous cover crop he will get all or nearly all the nitrogen which the trees need with hardly any expense at all except the cost of cover crop seed. If it becomes necessary to supply nitrogen well rotted barnyard manure is the best. Where a good quality of muck is procurable at very little trouble, it may be successfully applied. Nitrate of soda furnishes nitrogen in an immediately available form and is therefore especially useful for correcting unsatisfactory conditions as soon as cultivation has started. It should never be applied late in the summer as it will tend to prolong growth and prevent the same from properly maturing. Phosphoric acid for young orchards is probably best supplied either in the form of Basic Slag or Bone Meal. They are somewhat slower in action than Acid Phosphate, but the Basic Slag contains a high percentage of lime. For Potash probably the sulphate is better for most soils than the Muriate. The latter has a tendency to make soils sour.

No hard and fast rule can be given as to the exact amount of fertilizers to be applied as this depends on so many local conditions. General principles only can be laid down and the individual must take these into consideration when determining his own special requirements. When fertilizing a young orchard, as the growth starts early, the fertilizers ought to be applied as soon after the frost is out of the ground as possible. They may be applied broadcast, only confining them to the feeding ground of the trees and harrowed in. The following fertilizer per acre to be applied annually is suggested:

Basic Slag or Bone Meal .....200 lbs.
Sulphate of Potash .....100 lbs

Where nitrogen, other than that supplied by leguminous cover crops,

is desired, 50 lbs. of Nitrate of Soda may be added. These amounts of fertilizer refer only to the needs of the trees and the application of fertilizing material for the needs of the intercrop is another question.

INJURY FROM VERMIN.

Precautions must be taken to prevent injury from mice, rabbits, etc. Many failures in apple growing here and elsewhere are caused by these pests and a large annual toll in the form of dead trees is annually exacted by them. As far as possible, crops harboring or attracting such pests should be avoided and the accumulation of litter, trash, weeds, long grass, etc., which furnish suitable winter quarters for these animals, prevented. Mice work under the snow and damage from them may be prevented by tramping the snow solid round the trees after the first few snow falls.

This method of protection is, however, somewhat dependant on the weather. The cheapest and safest protection is secured by wrapping the trunks cylinder fashion with paper, wood veneer or some such material. Good strong building paper, as light as possible, in color gives good satisfaction. This may be placed round the trees in the fall, not tightly, but leaving an inch or so space between the inside of the paper and the bark of the tree. The soil should then be mounded up around the bottom of the paper to a height of six inches or so. Veneer tree protectors, made of thin material, ¼ inch thick, 8 inches wide, 24 inches long and costing about $5.00 per thousand will last three or four years and afford good protection. The paper or veneer, as the case may be, should be removed in the spring, about the middle of April.

SUN SCALD.

This form of damage is very common in some localities, so common, in fact, that a tree which escapes it is a rarity. The greater part of the damage occurs in late winter, or during the warm spring days when the snow is going off. During the warm afternoons the sun, reflected from the snow against the southwest sides of the tree trunks, becomes very warm. The trunks are thoroughly warmed on that side. They are thawed out, and the bark becomes soft, sappy and pliable. Then, when the sun goes down and the temperature falls again to zero, the bark is again frozen tight. The next day the same thing happens, and so day after day, the young bark freezes and thaws, and by this means is torn in shreds. When suring arrives the bark is killed and broken open. Then various kinds of fungi get in and the damage which begins by freezing and thawing ends with spread of canker and other troubles all round the trunk of the tree.

The best preventives of sun scald are low heads and veneer and paper cylinder protectors. High-headed trees, which are of doubtful value anywhere, are altogether inadmissible in places where sun scald is bad. The protectors of paper or wood veneer recommended above for mice and rabbits will also give practical immunity from sun scald.

This trouble is a very serious one. It is not uncommon to find entire young orchards ruined by it. In sections where this trouble is prevalent great pains should be taken to protect young orchards from it.

Editor's Note—The remainder of this article will be published in future issues of The Maritime Farmer. We understand the New Brunswick Department of Agriculture is getting this interesting treatise published in bulletin form.

A Chat With Our Readers.

How to straighten out the little kinks around the farm is a subject that every reader of The Maritime Farmer is interested in. Those little things that have caused you to scratch your head and search for an explanation. Have you been bothered with them? Have you experimented with a view to finding the cause? Can you recall a specific case. How you were puzzled to know just how some certain thing turned out different than you expected? Have you experimented and investigated until you found the cause? Will you, in your own way, tell us, so that we may tell others of your success? These little things are what farmers want to know; they are the things that make the difference between practical and therotical farming.

This is being sent to thousands of our readers all over the Maritime Provinces and while all will not answer—we could hardly expect it—there will be thousands who will and as space permits these answers will all be published and if good pen and ink sketches of any labor saving devices are sent we will reproduce them.

Let us get closer together on this subject of farming and see whether something cannot be done to give it a boost. If it can, you and we will not have lived in vain.

Boost for a better and more practical farm paper, boost for better rural schools, boost for better live stock, boost for double our average crop, boost for everything that will make life more worth living, boost the other fellow by telling him how to do things better, boost yourself, boost your farm, boost your village, boost your nearest town, boost your country, boost our province, boost everything and knock nothing that is worth a boost. Be a booster not a buster.

* * * *

Now there's that little matter of turnips, some farmers get 100 bushels to the acre while others get as high as a 1000 bushels. Why should there be such a difference? The farmers who get the smaller amount we are sure would like to know how the other fellow gets the larger. If you have been fortunate enough to get the large yield why not tell us how you did it so that we can tell your farmer friend of the smaller crop? This will be your boost

* * * *

Then again there's that matter of cow testing. Do you test your cows? How much more does it cost you to handle your herd now than it did before you started? Have you been able to tell just which cow was paying you? Did you get rid of the ones that were not? Does it pay to know what each cow is doing? Would it be wise for us to start a cow testing club and offer prizes from time to time? Would you join it?

* * * *

What about alfalfa? Are you going to try some this summer? Do you think our provincial governments should offer a few thousand dollars in prizes on the lines followed by the Saskatchewan government as explained in our last issue? Would you endorse a resolution to that effect if brought up at your agricultural society? If so will you see that it is brought to their attention? Should it be carried from there to the provincial association? What do you think of the idea anyhow?

* * * *

Our lady friends; what about your poultry? Are the hens laying as well as you would like? Do those little mites bother them? Do you have any trouble in getting rid of them? Are you using an incubator? Do you think incubator chickens are as likely to be lousy as those hatched by the hen? Do you collect your eggs three times a day? Have your hens been getting all the grit, oyster shells, wheat and corn that they desire? Do you keep egg records? Do the hens get the attention they deserve? Would you like to see the egg records of some of our readers? Will you send yours?

Notes from a Nova Scotia Sugar Maker.

Editor Maritime Farmer:

As another sugar season is approaching it might be advisable for those who have spent much time in the sugar bush to exchange their experiences one with the other, and also for the benefit of those who are just beginning.

The first thing to do is to choose your location, if that is your privilege, choose it facing the south or east, in order to get the benefit of the early morning sun.

The next thing is to locate your camp ground. There is much to be considered in your choice as you require an elevation above the camp, so as not to lift your sap but let gravitation carry it from the gathering tub to the storage tank and from that to the evaporator.

Another fundamental consideration is to build near a stream of water, not for the proverbial reason that a milkman requires so much water, but for sanitary purposes, for which there is a continual call in a sugar camp. And here I might state how I have arranged to have hot water all the time ready for use.

I set a ten gallon keg on an elevation behind my evaporator and run a pipe from it through the arch under the grates, with a faucet on the other end; open the faucet and gravitation will empty the keg.

After tapping your trees, gather the sap every day while the sap is running, so as not to allow the sap to stand, and boil it as soon as possible after it leaves the tree; and boil as rapidly as possible, in a corregated pan on an arch; a sectional pan connected by siphon preferable, as the siphon confines the principal skimming to the first pan.

You can remove the sediment from the syrup much more efficiently with a felt strainer than with flannel, as with the latter you will require a settling tank. I use cheese cloth for straining the sap and a felt strainer for the syrup, which I test with a thermometer to make it of uniform consistency.

A very important consideration is to have covers on sap buckets to keep the storm out as a very little water dropping from the moss and bark of the tree forms a decoction that colors and spoils the flavor of syrup or sugar.

D. W. DIMOCK.

Cum. Co., N. S.

Sugar Making in the Albert Woods.

Editor Maritime Farmer'

My sugar house is 16x32 ft. and it is two miles in the woods and we have to live there. We have 12 feet taken off one end to live in, that leaves the boiling room 16x20 ft. and we have a wood shed built besides. We cut the wood for the next spring and put it in the shed before we leave the camp this spring. We use No. 2 sap spout, which requires a bit 7-16 in. We bore about 1¾ ins. deep and use tin buckets in size from four to eight quarts, but prefer the larger ones. We are now beginning to use the covers for the buckets, which I would recommend to anyone getting an outfit.

We can't use any test for cooling tapping, but our system has been to tap as soon as it becomes sap weather after the 20th of March. We like to see the sap start when we tap. We are not particular about tapping all our trees at once. If the sap runs well, we leave tapping and look after the sap at once. It injures the quality of the sugar very much to let the sap stand after it is gathered.

It requires one person just to attend to the boiling as we draw off the syrup often, we use what we call syrup settler. When we put up syrup for market we draw it off from the settler and finish it in the pan of the sugaring off arch or thicken it. I agree with Mr. Hubley that when it is too thick it sugars and too thin it sours, so we have a thermometer to get it exact, 220 F. for syrup and it never fails.

For sugaring off we use a box stove or sugaring off arch with a pan 18x28 in. In this pan we put from 3 to 5 gallons syrup, which will make from 35 to 45 pounds of sugar, and boil it from 235 to 238 by the thermometer. We used to make it about 240, but since we make the maple cream we can't boil it so hard.

We can't use any list for cooling except our own judgment. We set our pans on snow, if there is any, or in running water, in as cool a place as possible. We leave it there until there is an inch or more of candy on the bottom, then it is set on boards with one end higher than the other. The candy is all scraped to one end and stirred vigorously until it hardens or sets, all this time becoming white. Then we go at it with a ladle and work it up till it gets soft and creamy, when it is put in wood or tin moulds ½ and 1 pound size. When it is cold it is taken from the mould and should be put in a dry room for several hours when it is ready to wrap up and ship.

WM. A. COLPITTS.

Mapleton, Albert Co.

H. A. McArthur.

The Maritime Farmer is a believer in the future of the Maritime Provinces, and Canada in general. We always feel like extending our hand to all those returning, who have tried their fortunes in the land to the south of us and who, while they have done well there, are satisfied that our country is on a par and excels in most cases that vast country. The subject of this sketch is Mr. H. A. McArthur, whose face is favorably familiar to most of our farmers in these parts and more especially to those interested in the sale of the Cream Separators. He too, is a firm believer in the future of these provinces. He was at one time manager in the Maritime Provinces for the Sharples Separator and after retiring from that business went into the manufacture of Steel Ladders. Then thinking that there were possibilities under the Stars and Stripes he opened a factory in Worcester, Mass. Many people there looked upon his invention with covetous eyes and made some tempting offers for his business. These were declined at first but as time went on he felt that it was impossible for him to feel at home in that land so he decided to sell out and retain only the royalty rights for the United States. This he later did, and when returning to his home in Sussex, N. B., he met with the manufacturers of the "Standard" Cream Separator, who asked him to represent them in the Maritime Provinces. After considerable persuasion, which carried weight, owing to the fact that the Standard Cream Separator is made at Renfrew, Ont., and is purely of Canadian manufacture, he decided to look into their proposition, consequently he investigated the financial standing of the manufacturers, the quality of their machine and their mode of doing business. These considerations proving satisfactory he decided to accept their offer. Although "the boys" will feel that "Herb" will prove, as in the past, a keen competitor, we feel that with a knowledge of his sense of fair play they will all extend to him the glad hand.

Mr. McArthur intends going to work at once and is already looking for the best separator men available. We asked him how many men he would likely employ and he said that as his selling proposition was somewhat different from that of his competitors he would require all the good men that would offer. If you are looking for a chance to sell separators write him. His address is Sussex, N. B., and his ad. appears in another part of this paper.

Appliances for Thoroughness in Spraying.

Spraying fruit trees is now almost universal in the Annapolis valley. Unless the fruit growers can grow fruit free from the ravages of fungus diseases and the attacks of eating insects he will eventually have to go out of the business. The disease known as black spot does more damage to our fruit than all other causes combined, and, as the years go by speculators and consumers are more particular about the quality of the fruit they purchase. People have been educated along these lines of late so that the farmer who has a crop of apples infested with "black spot" can not find a market for such and is compelled to feed his product to cows and hogs, or send it to the vinegar factory at 25 cents per barrel. As soon as our fruit growers learn the lesson" How to Grow Better Fruit" a large percentage of our best varieties of apples will be wrapped in paper, packed in boxes and sent to brokers who cater to the high-priced trade. Fruit to be successfully and profitably handled in boxes must be perfectly free from worm holes, blemish or spot, and the only known way to produce fruit of this class is to spray it in the most up-to-date way.

In order to do this successfully the operator must have a first-class spraying outfit.

Experience has taught us that the traction machines which generate their power by means of the wheels on which they run, have not proven satisfactory. They do not keep up sufficient pressure to permit the operator to do a thorough job, before the generated power is spent. No machine should be purchased that will not permit the operator sufficient time to remain at a tree until a thorough job has been done.

There are two ways of generating power for spraying now in use. One is a pump worked by hand and the other a pump worked by a gasoline engine. For the man who has a small orchard a common hand pump attached to a 40 gallon cask will prove very satisfactory. Such an outfit with 25 feet of hose attached, can be bought for about $25.00. Running a hand pump is very laborious work and with the class of help usually available on our farms, the keeping up of a pressure necessary to do good work is almost an impossibility.

For large orchards tanks holding from 100 to 120 gallons fitted with double acting pumps, driven by gasoline engines are requisite. Spraying machines should be provided with two lines of hose with bamboo poles or extension rods to which one can attach proper nozzles. The hose should be of very best description made, and from ¼ to ½ inch in size. Bamboo rods are usually from eight to ten feet in length.

The selection of a nozzle is a very important matter. The most popular kind used is a very simple nozzle of the Friend variety. I have the "Mystery jr" nozzle sold by the Goulds Mfg. Co., Senica Falls, U. Y., for $1.08, it gives entire satisfaction. If a greater quantity of spray is necessary a V at the end of the pole with two nozzles will be all that is needed.

In many cases it is very advantageous to have the nozzles set at an angle of 45 degrees to the pole, so as to send the spray into the open calyx, in spraying for Codling Moth, thus covering every part of it with the poison.

The little elbow which gives the nozzle the proper angle can be purchased for 20c. The cheapest and best strainer is made of cheese cloth. A small stopper fitting the apperture in the spray cask will prevent any of the liquid from spilling.

The amount of pressure on a spray pump to do good work should be about 100 to 125 pounds. If the pressure is at 50 or 75 pounds the result is that the spray is not fine and is not forced to the remote parts of the tree. With a high pressure the liquid penetrates the crevices in the bark and reaches its true destination. Every operator should remeber that the spray must be sent to the spores and insects, they will not come to the spray.

If spraying is worth doing at all, it is worth doing well, having the ingredients properly mixed and the spraying done thoroughly and at the right time.

I am of the opinion that the orchardist should be on hand and oversee the spraying. I never trust to any man to use the bamboo pole in my orchard.

There are certain times when it is not wise to spray. Never spray when the foliage is wet from rain or dew. If a rain follows, before the mixture has time to dry it will wash off and has very little effect. Heavy rain storms just after spraying wash off more or less of the spray and good results cannot be expected.

Spraying should be done with the wind and a good breeze is a decided benefit. If the wind is too strong much of the spray will be wasted. When approaching a tree to spray it, especially if the tree is full grown, stop the wagon and do the side nearest as far as possible. Then apply the spray when you have moved directly opposite the tree, then passing on direct your spray to the remaining side of the tree. The fourth side can be done best when the wind changes if it is not too late.

It is very important to cover with the spray every limb, twig, leaf, trunk, and in fact, every portion of the tree above ground.

I think it pays to go over an orchard and touch up all the portions that have been passed. I have not seen a job of spraying so thoroughly done yet, that would not stand patching in this way.

I have often advised to stop spraying just before the leaves begin to drip. A considerable amount of dripping is always sure to take place. Keep in mind one thing that the tree must be thoroughly covered with the material. Do not waste your spray. Do a good job. Let the dripping take care of itself.

After the day's work is over, thoroughly wash out the cask and let the water run through the hose as well. It is a good plan to detach the hose and let it drain out. Unscrew nozzles and wash them out, apply a little oil to keep them from setting.

In buying a pump be sure and learn how to keep it properly packed. A pump that needs packing will not give a high pressure.

All spraying materials are more or less caustic and hence all connections should be kept tight. After hose begins to leak it is no use trying to mend it.

It is a good plan to keep extra hose on hand. Sometimes half a day is lost in driving to the village to get supplies that should be kept on hand.

One of the best things for keeping the connections tight is wire about half the size of hay wire and a pair of nippers.

W. H. Woodworth, President of N. S. F. Association.

Canada's New Director of Experimental Farms.

A government order in council was passed on April 3rd appointing J. H. Grisdale, formerly Dominion agricul-

J. H. Grisdale.

turist, as director of experimental farms to succeed Dr. William Saunders who recently retired. The new appointment takes effect at once.

Mrs. Grisdale, who is only forty years old, is a thoroughly trained scientific agriculturist, well qualified to carry on the progressive work of Dr. Saunders and to broaden the experimentation which has yielded great benefits to Canada during the administration of Hon. Sydney Fisher.

The son of Albert D. Grisdale and Elizabeth Simpson, Mr. Grisdale was born at St. Marthe, Quebec. He married Miss Laura Vipond, of Hudson, Quebec. Mr. Grisdale received his education at Vankleek Hill, at Albert College, Belleville; Toronto University, the Ontario Agricultural College and the Iowa State College of Agriculture at Ames, Iowa. A farmer's son, he taught school for a few years to earn the money necessary for his course of instruction. He was gold medalist at the Ontario Agricultural College and took first

class honors both at Guelph and at Ames, which ranks as probably the foremost agricultural school in the United States.

Mr. Grisdale is well and favorably known in the Maritime Provinces, and we know that our many readers will congratulate Mr. Grisdale on his promotion.

Raising Calves Without Milk.

I always feed the calf new milk one week to 10 days, two quarts morning and night. Then gradually begin with hay tea. I used a one-half barrel brass kettle in which to make the tea. I put in as much good hay as I can crowd in, cannot tell the amount in pounds. I then pour in enough boiling hot water to soak the hay, and after it is wet crowd it down. I let it stand from morning until night and then it is s ready to feed.

When I feed at first with tea, I give about one-third tea at a feed and increase the quantity gradually until no milk is used, and when I commence to feed tea with the milk I use a little old process oil meal, a dessertspoonful at a feed, put the meal in a kettle or dish, and pour enough hot water on to scald it, stirring it all the time to prevent it from being lumpy. Mix this with the milk and tea. As the calf grows, cut out the milk and use nothing but the tea and oil meal. When the calf is three weeks old, if it is doing all right on the tea and oil meal, leave out the milk. I don't know of any hard or fast rule to give. You must use your own judgment. Some calves will carry more than others.

I used to feed four quarts of the tea at a feed twice a day, and at a month old the calf ought to be taking three to four tablespoonsful of the meal twice a day, if it does not act too laxative on the bowels.

A calf will begin to eat a little hay at two weeks old and at three weeks old I generally put a handful of wheat bran at a time into a box, and later as it grows it will take more bran and hay.

Of course you will find this way of raising calves makes some more work for the feeder, but you can raise cows that will give just as much milk when matured as if they had all milk to grow on.—N. E. Farmer.

Treatment of Oats for Smut.

Few farmers realize the value of treating seed oats for smut. Experiments made by the Missouri Experiment Station show a gain varying from 5 to 20 per cent in the yield of oats by thus treating the seed. The method is simple and cheap. Various methods are in use, but this one which the experiment station has found to be most practicable is as follows: Secure a 1 pound bottle of commercial formalin (sometimes called formaldehyde), 20 per cent. strength, and pour this into a vessel containing 40 to 50 gallons of water, and stir. Spread the oats out on a clean barn floor and sprinkle on this solution from a sprinkling can. Shovel them over and over until every grain is thoroughly moistened, allow to stand in a heap for 20 or 30 minutes and spread out in a thin layer to dry. Shovel these over occasionally to aid the process. The oats may be sown just as soon as they are dry enough to handle or they may be kept any length of time. The best way is to make this treatment in the winter when one has time, since the treatment lasts indefinitely. Care should be taken that the oats are dried out thoroughly if they are to be sacked, since they may be injured in germination by being sacked damp.—M. F. Miller, Missouri Experiment Station.

What to do for Hollow Horn.

This old-fashioned term denotes a diseased condition of the blood. The horn is not hollow and never is. The old quack method of boring a hole in the horn with a gimlet and squirting turpentine into the orifice is both cruel and ridiculous. While, in fact, the temperature of the horn is low, it is because of the general poverty of the blood of the animal. There is no merit in this kind of treatment. The most common symptoms are general debility, scanty flesh, scurvy coat and coarse hair. The appetite is also irregular and at times greedy.

Treatment is in line of better food and general improvement of the system. If lice are found on the body, they must be destroyed by disinfectants and washes. A tonic consisting of two teaspoonfuls of sulphate of iron, one teaspoonful of powered nux vomica and four tablespoonfuls of ground gentian root given each day in the food or as a drench, will be very helpful in toning up the system and in enriching the blood. The most important factor of the treatment, however, is in nutritious, wholesome food.

Standing Grain Competitions in Nova Scotia.

The Nova Scotia Department of Agriculture have increased the grant for Field Competitions for the coming year.

While the prizes are confined to oats only, there is a separate competition for each county.

This should, and no doubt will, bring out a large entry. The Nova Scotia Department is anxious to encourage the production of better seeds and is co-operating with the Federal Seed Department in this work. With a competition in every county in which generous prizes are offered it is up to the Nova Scotia farmers to do their part.

Try this Thirsty Flour

A *very* thirsty flour. Absorbs a lot of water.
Because it contains so much *gluten*.
Manitoba wheat is wonderfully rich in *sturdy* gluten.
And, think of it, FIVE ROSES is milled *exclusively* from the very *cream* of the Manitoba wheat berries.
So FIVE ROSES must be awfully thirsty, don't you see.
In your mixing bowl it greedily absorbs *more* water.
So you get *more* loaves than usual without using more flour. You use *less*.
Your flour lasts *longer*, doesn't it?
Less trips to your dealer.
That's how FIVE ROSES saves money.
Actually saves YOU money.
Use this *economical* flour.

THE BROWN TAIL MOTH IN NEW BRUNSWICK.

For several years we have been advocating the necessity of more work of an agricultural nature in our rural schools. Some of our readers will remember hearing Rev. Hunter Boyd speaking to this question at Fredericton say: "How much better it would be for our farmer's sons and daughters to study about various animals, plants etc., they come in contact with on the farm than spend their time studying about cockatoos and variousforeign animals that they never see unless they should chance to visit a menagerie." We concur with Mr. Boyd's idea. We would advocate the use of colored plates of various farm animals, birds and pests for use in our schools.

Mr. Wm. McIntosh of St. John, working under the auspices of the New Brunswick Department of Agriculture, has been doing good work in the spread of knowledge along the line of inciting vigilance re a threatened invasion of the much dreaded brown-tail moth.

The following paragraph from the columns of the Daily Telegraph, St. John, bears testimony to the efficacy of continuing an educational campaign of this nature.

The dreaded scourge, the brown tail moth, has obtained a foothold in this province. Thirty-two of the winter nests of the caterpillars have been found in one orchard in Pomeroy Ridge, Charlotte county. The orchard is an old one with between twenty and thirty trees in it, and on one of the trees seventeen nests were discovered.

The discovery was made by Roy McInnes, a pupil of the school there, the day following a lecture in the school by William McIntosh of the Natural History Society here. Mr. McIntosh says that the situation is a serious one and that the local government will call upon the dominion authorities to grapple with it. Orchard owners in all parts of the province will hear of the finding of the pest in such numbers with a great deal of anxiety.

Mr. McIntosh says that these nests would average about 200 caterpillars each. These in turn would become moths and the females would lay on an average of between 100 and 200 eggs. What makes the moth so hard to cope with is that as yet no natural enemy has been found for it, neither parisitical or otherwise, and the only thing the orchardist can do is to spray in the same manner as for any other insect pest.

It has been estimated, Mr. McIntosh says, that the states of Maine andMassachusetts have to spend $1,000,000 annually in fighting against the gipsy and brown tail moths. In a season the caterpillars swarm everywhere and strenuous efforts are necessary to keep them from entering the houses. In addition to their appetite for green leaves, however, the caterpillar of the brown tail moth bears poisonous spines upon his back. Dr. George E. Osgood, of Somerville, writing of this, says that wherever the hair strikes the skin it causes either small or large blotches. The first attack lasts about a week but one can be poisoned as many times as the hair touches the skin. The after effects seem to be trivial unless the person has tuberculosis or dropsy.

Mr. McIntosh at the instance of the local government has during the past two or three springs searched for the nest of the brown tail, but until this year he never located any. A curious thing is that although so many nests were found in the orchard at Pomeroy Ridge, none was found in adjoining orchard. He says, however, that this is a frequent experience with them.

That the pest has got a firm foothold in the province Mr. McIntosh has no doubt, and, from this on, if it is to be kept within bonds at all, it will be necessary to use great vigilance. The method pursued so far, has been to get the children interested and searching for the nests. It was after such a lecture that the present discovery was made. In addition to large colored plates showing the life history of the moth. Mr. McIntosh also carried along actual specimens of the caterpillar in all its stages and the moth itself.

The day after Mr. McIntosh had left Pomeroy Bridge Roy McInnes was searching in the orchard when he found what seemed to him the nest. He took it to the teacher, Miss Knight, and that lady agreeing with him as to its identity, it was sent to St. John, where it came in due time into Mr. McIntosh's hands. In spite of the fact that the nests had been outdoors all winter, when they were opened it was found that the caterpillars were alive. At this stage they are only about a quarter of an inch long, but grow rapidly until when about two or three inches long they go into the pupa stage from which the moths in time emerge. These only live about three weeks, but in that time the female will deposit an egg cluster of between 100 and 200 eggs.

THE PRACTICAL MAN.

It is not strange, perhaps, that men who have been engaged in the business of farming for many years find it difficult to believe that the men of a younger generation, with little actual experience, it may teach them anything of real value. It is a fact that a great many of the men who are engaged in this advanced work in farming are young men, and although it is and always has been the young men who has accomplished things in advance of the average run of his fellows, we know those of us who are older, find it difficult to acknowledge with good grace that we do not know as much as some young men just out of College, or some young college professors who may be our sons.

Certainly the older man, the man of mature years who has been farming all his life, knows more about farming in most ways, but even the older men who have given the matter careful thought and study will acknowledge that there have been opportunities for the young men to learn, to get an insight into the science of farming in these days which the men of even the last generation did not have, much less the generation farther back. There are opportunities for experiment and demonstration now which our fathers could not have, and it is just here that the younger men have the advantage. It is, therefore, their privilege and their study to make known that which they have discovered, and that is just what is being attempted in many of the institutes and other meetings which are being held.

To the practical farmer who may be in no way a scientific or technical farmer, there is likely to be something a bit incongruous in attending meetings at which all the addresses are made by college professors, or men from the departments of agriculture. It is naturally difficult to get actual practical farmers who are able to tell easily and interestingly, and at the same time fully, how they do things and how things ought to be done on the farm, but there are such men in every state, in every community, and the greatest good can often be accomplished by the words of just such men. We would by no means suggest or even think of dropping agricultural college men for such work—we need and must have them—but we have an idea that the presence of more active and successful practical farmers in such work would better reach some of the present indifferent men. The trained experts are needed, but so are the other kind of men.

The prejudice against the scientific farmer is being overcome by the success of that kind of farming. Likewise, the prejudice against the college professor is being overcome because the agricultural college professors are actually doing things and showing farmers how they can do better, but there is still some of it left. And after all, there is a great deal to be gained by hearing a man practically in your own kind of business, tell how he does things that you want to do.

DOES IT PAY?

The natural and proper inquiry of the present day, before taking hold of any business, is, does it pay? Every farmer and live stock breeder should ask himself the question before he takes up any line of breeding, production, improvement or investment on the farm. The present prices for farm lands, together with the labor expense of operating them, has introduced the question, "Does it pay?" There is no way of getting a satisfactory answer to this question except by figuring it out on a basis of possible results. This may be corroborated at the end of the year, or it may demonstrate where the mistake was made, or it may show where a lack of system or attention was at fault.

Does it pay to raise any kind of live stock on the farm? This depends entirely upon how the work is carried on. It does not pay to carry breeding animals of any kind, a whole year and then fail in producting offspring or to fail in raising them. It is an easy matter to buy breeding animals and afford them the breeding opportunity in the proper breeding season and to carry these same animals through the grazing and feeding seasons up to the period of delivery, and at this point, through a little neglect, a little carelessness, a little inattention at the proper time, lose the offspring. Not alone this but the whole year's prospect, the whole year's expense of feed, attention, care, interest or investment in animal, taxes, everything that in the least enters into the expense of keeping the animal.

The economic management of the farm in every feature of production attempted, is the key to, does it pay? The value of having everything done in season, and doing it right so as to have it yield the largest possible returns, whether it is with the planted crop or in the production of the flock or herd, cannot be overlooked. It is the attention to these little details, the understanding of nature and natures's laws and their strict observance, that marks the course of success with the farmer and live stock raiser.

How Can Alfalfa Growing Receive a Boost in the Maritime Provinces ?

Helping the Clover Seeding.

During every season since 1905, the Bacteriological Laboratory of the Ontario Agricultural College has sent out to farmers and others, cultures of bacteria for inoculating seed of alfalfa and other clovers in order to aid in insuring a better catch of the seeding. The bacteria sent are of the kind which live in the small nodules or "knots" which are naturally formed on the roots of clovers, and which may usually be readily seen when a clover or alfalfa plant is dug up and the earth carefully broken away from the roots so as not to break off the nodules. It is the business of these bacteria to draw upon the great supply of nitrogen in the air (about four-fifths of the air is nitrogen gas), and transfer it to the growing plant. Thus, by the aid of these nitrogen-gathering bacteria the clover plant is able to get its supply of this most valuable fertilizing element, nitrogen, from the air, instead of having to depend upon what is in the soil. This explains the fact which every farmer knows, that clovers and other closely related crops are such good soil enrichers. When these crops are plowed under, the extra amount of nitrogen which has been stored up in them becomes available for succeeding crops.

It is absolutely essential that the nitrogen accumulating bacteria be present in order that the storing of nitrogen in the clover plant be accomplished. If a clover or alfalfa crop has been successfully grown as shown by thrifty, vigorous growth and the presence of plenty of nodules on the roots, it indicates that the necessary bacteria are already present in the soil, and ready to penetrate the roots as soon as germination of the seed occurs. In the case of a new or unsuccessful seeding, however, it is probable that the bacteria are not present, and they should be supplied by some method of inoculation. Experience has shown that the most satisfactory method of inoculation is to apply the bacteria directly to the seed before sowing. This is the method to be followed with the cultures sent out by the College at Guelph.

Last year there were 3,375 of these bacteria cultures sent to 1,881 farmers, and of 771 who returned reports two-thirds stated that the inoculation of the seed had aided in securing a better crop.

During the present season, the College will send cultures for the inoculation of the following kinds of seeds —Alfalfa, red or mammoth clover, alsike clover, white clover, crimson clover, vetches, peas, beans, sweet peas. Each kind of seed requires a different culture. The cultures are sent by mail with full instructions for their use. There is only one size package prepared, that being sufficient to treat sixty pounds of seed. There is a nominal charge of 25c. for each package of culture to cover cost of material and postage. Applications should state the kind and amount of seed to be treated, and should be addressed with enclosed postal note, stamps, or money order, to S. F. Edwards, Ontario Agricultural College, Guelph, Canada.

FIVE YEARS RESULTS FROM NITRO CULTURE.

During the past five years there have been contained in the Reports of the Secretary for Agriculture, yearly records of the benefits from the use of nitro cultures as manufactured and distributed from the Nova Scotia Agricultural College, Truro, N. S. In the Report for 1909 in re nitro cultures, is contained a somewhat extended article on the history, physiology and value of nitro bacteria as found in the nodules on roots and also methods of inoculating soils. Hence, we will deal exclusively with the actual tests. It will be seen from the following table the year 1910 has been by far the most prominent in this work, both as to distribution and results.

Year.	No. Cultures Distributed.	Excellent Results	Good Results	No Difference.
1906	5[illegible]	50 %	33 %	17 %
1907	75	62	20	18
1908	110	50	20	30
1909	436	59	26	15
1910	524	53.4	18.9	27.7

COMPARATIVE RESULTS.

As will be seen in the foregoing table, results for 1910 are very similar to those of previous experiments. Other influences equally as important as the nitro bacteria are drainage, lime, potash, phosphoric acid, freedom from weeds, good seed, a good seed bed, and many others, which all have a marked bearing on the last two columns in above table. Of the 524 cultures distributed during 1910, already 351 reports have come to hand. The majority of which state the comparative needs of these other factors and report quite fully as to previous success with that crop, together with difference between treated and untreated crop, in size of plants, color, nodules on roots and the like. Of the 354 cultures sent to various parts of Nova Scotia, we have received 202 reports, which, according to the success with the culture and the character of the crop raised, might be tabulated as follows:

Crop	Excel.	Good	Fair	Poor	Total	Excel.	Good	Fair	Poor	Total Repts.
Alfalfa.....	23	15	19	10	67	2	5	8	20	102
Red Clover..	36	3	5	—	44	10	3	—	3	60
Alsike.....	13	2	1	1	17	1	2	—	—	20
Peas.....	5	—	1	—	6	1	—	—	—	7
Beans.....	2	3	—	1	6	—	1	—	2	9
Vetch.....	4	—	—	—	4	—	—	—	—	4
Totals.....	83	23	26	12	144	13	11	8	25	202

Where there was a difference in favor of the treated seed yet only a fair or a poor crop reports state the needs of drainage, lime, phosphoric acid, or the like. Where there was a poor crop, 22 p. c. report tremendous growth of weeds. This may be due to poor and weedy seed bed, or on the other hand, may be similar to our experience on the College Farm where, during the past two years we have been unfortunate in obtaining very dirty seed, alfalfa particularly showing a high percentage of weed seeds. Where there was an excellent crop no difference between treated and untreated seed, all report good catches of this crop on the land in previous years, which insures the presence of that specie of bacteria.

About 12 p. c. of the alfalfa reports state a tendency of the crop to die after coming up as a strong, rank catch and growing to a height of 6 to 8 inches before trimming. Contrary to advice from the Upper Provinces, our experience has been that it is not advisable to trim alfalfa until, at least, 10 to 12 inches high, as here the stooling has but a firm start. If the season is dry and the intensity of the sun great in the absence of copious showers, I would not advise trimming, even at that date. However, localities, seasons, presence or absence of a nurse crop, and the like, will all influence variations from the above. Experience of various experimentors during 1910 are fairly illustrated by the following extracts:

Mr. John Foster, Kendall Farm, Sydney Forks, C. B. "There was a great increase in vigor, color and nodules on roots from treated seed in alfalfa, red and alsike clovers, spring and hairy vetches, and even greater in peas and beans."

John T. McLaren, West Chezzecook, Halifax Co., N. S. "Alfalfa treated is easily the best. The same seeded in 1909 gave during the past season two heavy cuttings, the third crop standing 15 inches in height in the fall. Lime also shows marked improvement."

Alex. Miller, Margaree, C. B. "Treated alfalfa grew 18 inches for the first cutting and stood 14 inches in the fall, while untreated was thin, spindley and died six weeks after germination."

A. C. McKenzie, South Dalhousie, Pictou County, N. S. "Red Clover sown in 1909 shaws a 50 p. c, increase in crop from treatment being stronger, of a richer green and having more nodules on roots."

H. F. McWilliams, Stellarton, N. S. "I never had a catch of alsike until treating seed with nitro culture in 1910. I also got an excellent catch of alfalfa where treated, but a failure untreated."

John R. Drum, Lyon's Brook, N. S. "It is a great waste of time to use a nurse crop on alfalfa. It does best on a light, clay soil, with fresh culture, using 25 pounds seed per acre and not clipped after September 15th. Each time I seed alfalfa on a piece of ground I have better results and am now getting a good crop."

Thos. Killam, Gay's River, N. S. "There was a tremendous improvement from the use of nitro culture. Alfalfa did best where nurse crop was cut when green."

Edwin Putnam, Middle Stewiacke, N. S. "Culture is of great value on alfalfa. My treated crop when cut August 25th was 26 inches in height, roots 15 inches long. Untreated crop 14 inches in height, roots 6 inches long and crop delicate."

I might quote from many to bring out the experiences of others, but would summarize as follows: 1.— Nitro cultures are almost always beneficial where that crop has not been grown successfully. 2.—Nitro culture will not compensate for the lack of lime, etc., for poor seed, poor cultivation, or the like. 3.— Clean seed and clean land are necessary for best returns in any leguminous crop. 4.—In the majority of cases where there was not difference between the treated and untreated seed, a good crop was produced over all. 5.—It is unnecessary to treat seed to be sown on land which has formerly produced a good crop of the same. 6.— Seed treated and allowed to stand for some days is apt to heat and mould, which injures the seed and bacterial vitality. It is thus necessary to apply the seed as soon as sufficiently dried after treatment with culture.

In the past five years over 1200 cultures have been sent out and had a most marked influence, directly in increasing soil fertility and crop production; indirectly, by producing a greater study of the soil in its relationship to drainage, lime, potash and all other essential physical and chemical needs of the soil. It has also given those interested an insight into the economic field of soil bacteriology. Finally, it has been and will continue to be a large factor in introducing and maintaining such leguminous crops as alfalfa, which are not indigenous to our land. Study and perseverance are the two greatest elements in such work and the nitro culture has been a great factor in each.

Further notice will be given of cultures which will again be distributed during the year 1911.

E. S. ARCHIBALD.

Late Cutting of Alfalfa

How many times each season ought it to be cut? Some say twice, assigning as their reasons that the after growth will serve to protect the crowns of the plants from the winter's cold or any chance injury, as from cattle tramping; that it will help to protect the ground from the changes of the weather and the resulting repeated freezings and thawings; and assist a little in giving the growth a quick start in the spring. Pretty much the same reasons may be given for not letting the cattle remain on too late in the fall.

Some may make an objection against leaving this food to rot and waste. A neighbor of mine, a thorough farmer, who has a small piece of alfalfa of one year's growth less than that he has been mowing as required for his cow, keeping up this practice, I have been telling him, too late in the season. When comparing notes yesterday, he said, "at the latter end of the season last year, I let a small patch of alfalfa go without cutting it, and I noticed this year that the piece grew markedly better than the rest." It was like putting a thing out at interest, as he exuressed it. He seemed to think, too, that I got more in proportion cutting twice than he did with his way of cutting. What he speaks of as cutting three times must mean going over the whole piece three times. His patch looks rather bare in the winter time.

He remarked to me that he thought he would plow his bit up after another year as the grass was beginning to make an appearance here and there through it. That gives one a hint that the oftener you uncover the surface the more you favor the grass. His sowing of the seeds was followed by as good a catch as any one could wish for. This theory receives conformation from another fact that I have noticed. When my alfalfa first started there were a few sow thistles in it. These have all disappeared. Nothing was done to destroy them. The alfalfa was the only living thing that could have done it so far as I can see. After the in next to no time. That is, I fancy, alfalfa is cut it seems to be up again the key to it. It smothers out the slower things before they can get even started. Grass may, in my opinion, be set down as the worst enemy it has. A comparatively few scattered spikes of grass will ultimately rout it.

W. O. E.

Whiby, Ont.

Alfalfa Growing in Colchester Co., Nova Scotia.

Five years ago we sowed a quarter acre plot of alfalfa, using nitro culture, on gravelly intervale soil that needs no drainage, where we had potatoes growing the previous year. We sowed it about the first of May, the spring being rather late, but the soil was nice and dry. We harrowed in about five barrels of hardwood ashes, with a light harrow, and rolled it. The seed was slow in starting to grow but when it did start it grew with surprising rapidity.

We cut it on July first, getting what we judged to be about half a ton of hay. It came on again very fast. And we cut it the second time, during the first week in August, getting just about the same amount of hay. We cut part of it again about the first of October and fed it to the cows, green. It made a splendid quality of hay, which we fed to the cows and a colt we were raising. They ate it greedily, but we had to be careful in feeding it, especially at first, as it scoured the animals.

It did not winter kill and we cut it twice the next summer getting about half a ton each time.

That winter we sold the farm and bought our present farm at Old Barns, Col. Co. Two years ago we sowed about half an acre here, of sandy hillside, in alfalfa, on potato land as before, using culture. We got a good catch, but this farm is badly poluted with cadlock and wild mustard. And as these weeds grow faster than the little alfalfa plants do at first it was badly smothered out, in spite of the fact that I mowed the weeds twice during the early part of the summer.

Last spring there was enough alfalfa came up to make me believe it will grow here, if it were not for the weeds.

I cut a heavy crop of hay off of it last summer about one-third of it being alfalfa, the rest being alsike and red clover.

How the plot we left on the farm in New Annan did last summer I am unable to say.

I intend to try it again, here, as soon as I can get a field clean enough to try it on. I plowed up an acre of hillside last fall, which I intend to summer fallow to clean it and prepare it for seeding to alfalfa, unless someone can tell me of a better plan for cleaning it. A neighbor of ours got a very good catch of alfalfa last summer. I hope this account of my very limited experience will be of some use to you and if you or any of your readers can tell me the best way to clear a farm of cadlock and mustard you will receive my everlasting gratitude.— E. R. Byers, Colchester Co, N. S.

Alfalfa Queries.

Curious, Queens Co., N. B. — 1. Where can I get Alfalfa seed? 2. How much does it cost per pound? 3. Must it be sown on land that produces clover? 4. How much seed should be sown per acre? 5. At what time of the year should it be sown?

Ans. Alfalfa seed may be procured from any of the seed houses advertising in these columns. Many local stores are also keeping it in stock. 2. Prices of seed vary according to quality of seed and quantity bought, from twenty cents per pound and upwards. 3. Not necessarily, but if clover grows well on any soil it is a sure indication that soil conditions are congenial for the minute nitrogen gathering bacteria that form nodules on the roots and such being the case, one would naturally suppose that the necessary bacteria for Alfalfa would live in the soil and that Alfalfa would thrive thereon. 4. Sow from 15 to 20 pounds seed per acre. 5. The time for sowing depends on the soil conditions. If the land is well drained and free from weeds it may be sown as soon as the soil is ready in the spring. We believe most of our readers have found it advisable to thoroughly cultivate the soil in order to destroy the weed seeds and sow the Alfalfa from the middle to the last of August.

What Alfalfa Would Mean to New Brunswick.

Editor Maritime Farmer:

Replying to your letter of the 28th in reference to Alfalfa growing, I am very pleased indeed to see that the Maritime Farmer is taking such a prominent part in encouraging the growing of this valuable fodder.

In reply to your question as to how much it would enhance the value of farm lands in New Brunswick, if every farm had at least five acre plots of well established alfalfa, it is in my opinion, in the absence of active knowledge on the question, largely a matter of opinion.

If we estimate that three tons of alfalfa hay may be obtaioed on the average per acre from each well established acre of that crop, and we take the valuation of that hay at $18 per ton, we would have from five acres a food value return of $270. Were this same land in ordinary mixed grasses and clovers, we could estimate on two tons to the acre of about $9 per ton in food value, or $90 for the five acres. This might give an increasing earning value to the farm of $180 per year, and after deducting extra expenses and labor in connection with the alfalfa, it might be safe to say that there would be an increase in revenue of fully $100 which would be the interest at 6 per cent. on $1666.00.

This is a somewhat problematical answer to your question, but we feel that it is the only one that can be made at the present time, though personally I have every faith that with proper precautions the results above mentioned can be accomplished and in many cases exceeded.

W. W. HUBBARD,
Secretary for Agriculture.
Fredericton, N. B.

The Use of a Nurse Crop.

The theory that a nurse crop will prevent the weeds choking the alfalfa is apparently, as a rule, not well founded. In the first place alfalfa should not be sown on foul land, and in the second place proper disking and harrowing at near intervals for four or six weeks before sowing, will disturb or kill far more weeds than can any nurse crop. Besides, the oats or barley sown as a nurse will when cut leave weeds in good growth, or dormant and ready to spring up as fast or faster than the alfalfa.

No nurse crop is ever used with fall sowing. When ground has been thoroughly prepared for the preceding crop, and then properly cared for and made ready for alfalfa by the preliminary weed destruction, it will be found advisable to sow alfalfa alone, even in the spring.

Fall Seeding Gives Best Results.

I have tried to get a stand of alfalfa by seeding in the spring, but have not been altogether successful. About the same results were secured when the seed was sown with a nurse crop as when sown without.

I have sown some in late summer and have found that fall seeding is best. In the spring there is trouble keeping down the weeds, to say nothing of the loss of the use of the ground where the alfalfa is put in without a nurse crop.

The best success I have found in sowing oats or millet, and as soon as the crop has been removed plow 6 or 8 inches deep and harrow very thoroughly. After each rain the ground should be harrowed to hold the moisture.

Between August 20 and 30 I disk ery lightly to make a good seed bed, harrow some more, and then sow 20 pounds of good alfalfa seed per acre. I then harrow it two or three times and if rain comes in season a good stand is assured and a fair crop the following year.— William Dawson, Onondaga Co., N. Y.

You Can't Grow Crops without Nitrogen

You've got to give it to them in some way, and the

Quickest—Cheapest—Cleanest

way is to use

Nitrate of Soda

BECAUSE: The Nitrate will act at once. It is the form of nitrogen the plant may take up without previous or delayed soil nitration. All its nitrogen is available. It is pure plant food. It is as clean to handle as sand.

It will pay you to top dress your meadow with 100 lbs. per acre, and to add some Nitrate of Soda to your complete fertilizer.

The Shawnee Alfalfa Club.

Farmers of Shawnee county Kan., have an alfalfa club made up of men who are practical alfalfa growers. Regular monthly meetings are held and either a prepared program is carried out or a free discussion is conducted.

Various subjects in connection with alfalfa growing are discussed and other points in farming are sometimes touched upon. At a recent meeting among the various facts gleaned from the experience of those present were the following:

The hay tedder is almost a necessary instrument in cutting and curing alfalfa. If the mower is started late in the afternoon and the hay is tedded about noon the next morning it is ready to take up during the afternoon of the second day. Much damage is done to alfalfa by too long curing in the open. While some favor the method of shocking it into small cocks all raisers are not holding to this system. In most cases the side delivery rake will accomplish the purpose of the tedder and works well upon level land.

The Kingdom of Alfalfa.

Although one of the forage plants longest known to man, alfalfa is but a recent acquisition to the agriculture of America; so recent in fact that that compared with the whole only a small number of farmers know its characteristics, its treatment, its use, or its worth. In fact, however receptive minded the stranger to it may be a recitation of its merits, strictly within the bounds of truth and yearly occurrence, is sure to put a strain upon the credulity of him who hears it for the first time.

The man used to hay plants yielding one or at most two cuttings in a year, and to whom it is almost a religion to believe that red clover is the most valuable of all the forage plants that grow, is loath to quickly surrender to the idea that there is another that over a vastly wider territory grows on indefinitely without re-seeding, that has feeding qualities equally as good or considerably better, the leaves of which pound for pound are almost as valuable as wheat bran, or that yields from two or four times as much in a season as clover, and hence he rightly, like the man from Missouri, insists on being "shown." The statement that alfalfa under irrigation in the dessert sands of Southern California affords sometimes as many as twelve cuttings in a single year, or in Oklahoma nine cuttings in a like period without irrigation; that it is a profitable crop in the North-western Provinces of Canada; that it is a rank grower in Louisiana and Florida, has flourished for a few who knew its merits of a hundred years more or less in South Carolina and New York, to their great profit, and makes prosperous all who persevere with it, is difficult for many to accept or assimilate. This must in a large measure account for the comparatively tardy acceptance heretofore of such a plant, by farmers generally, but within the past decade there has been going on an awakening which promises to give alfalfa its proper place and rating in farm economy.

FAILURE DOUBTLESS THA FARMER'S FAULT.

The fact that an individual in a given locality has tried to grow alfalfa and results have been below what he anticipated, or a failure, is no argument against alfalfa, or against his locality as alfalfa-growing territory. It may be only a reflection on himself for sowing poor seed, at the wrong time, on unsuitable soil indifferently prepared, or for mistreatment by over-pasturing later. Wonderful plant that it is, alfalfa must, like any other that prospers, be given some chance for existence.

NO SUCCESS WITHOUT GOOD SEED.

One of the biggest and paramount factors in obtaining a stand of alfalfa is seed of robust germinating power, free from adulterants. This means other seeds or substance mixed with it for adding weight for cheating, or, impurities consisting of trash and seeds of noxious weeds grown with the alfalfa seed and never properly separated from it, amounting in one instance of record to nearly 71 per cent and in another nearly 35 per cent. The most common of these are bur clover, yellow trefoil, plaintain, lambs quarter, foxtail and dodder.

The Indiana Experiment Station tested thirteen samples of seed sent

in from as many different counties, and the average for all these was 2,335 foreign seeds to each pound, the number in one sample reaching nearly eleven thousand. The Ohio Station found in a pound, one of fifteen samples, 21,728 noxious seeds, including 18,144 of lambs quarter or pig-weed, and 3,126 of dodder. Another pound carried 6,420 seeds of crab grass and 3,325 of foxtail. Seed bought at $7.80 a bushel contained only about 61 per cent that was germinable, making the actual cost $12.75 a bushel. The Department of Agriculture at Washington tested many lots of imported alfalfa seed, in one of seventeen tons there was but 5.21 per cent that would grow, in another 6.34 per cent, and in still another but 7.13 per cent. In the first there were 23,082 weed seeds to the pound; in the second, 21,070 and in the third, 21,848. In another lot of seventeen tons there were 32,420 weed seeds to the pound.

These are a few striking examples suggesting the folly of expecting to raise alfalfa by sowing seeds of something else. For almost twenty centuries we have been taught that men do not gather grapes of thorns or figs of thistles, and alfalfa comes only from alfalfa seed, and even that must be alive. Economy is in sowing tested seed, and the State Experiment stations or the National Agricultural Department will do the testing without charge.

Seed of prime quality is never abundant and can never be sold at a low price. Hence to sow "cheap" seed is to court certain disaster and pave the way for it from the outset. Poor seed, even as a gift, would be so expensive that no one is rich enough to afford it.

The idea disseminated in the catalogues of numerous enterprising, not to say crafty, seedmen, and some bulletins as well, that there are in the market seeds of particular varieties of alfalfa suited to every condition and every environment, is generally speaking quite misleading. Buyers who pay unusual prices for seed with a high-sounding name and for which extravagant claims are made, are liable to be grossly deceived. While in time it will be other wise, at present the buyer is doing well, who obtains a fair quality of plain "alfalfa" seed, without ornate prefixes or affixes suggesting peculiar virtues due to its originating in some far-away region, peculiar climate, extreme latitude, or developed by some special method of culture whence it came. This does not mean that it is not advisable to procure, if possible, seed grown under about the same climatic and other conditions as obtain where it is to be sown, but any claim that to succeed one must use a particular brand of seed, far fetched and dear bought, discovered by some wonderful explorer, giving yields otherwise unheard of, and obtainable only from some one who has a monopoly of its marketing, is merely to humbug the credulous and dexterously separate them from their increment in larger amounts.

THE SOIL IT NEEDS AND THAT NEED IT.

Alfalfa, when established, is a great improper and renovator of the soil by the nitrogen its roots gather from the air, to an extent virtually unequalled by any other plant, and by the constant decay going on in its deeply penetrating root system, adding humus and leaving innumerable perforations which the rains and fertilization from the surface enter. However, it makes but a poor beginning on an impoverished or thin land unless encouraged by some sort of fertilizer, and for this nothing equals an application of rotted barnyard manure well distributed and worked into the soil. Although in course of the seasons it is such a land improver, no plant is itself more responsive to generous manuring than alfalfa.

To the inquiry "what land is well, or best adapted to alfalfa" a common reply has been "any land that will grow cottonwood trees or corn." A more complete and expressive general answer for the humid regions would perhaps be "any well drained land that will produce 75 bushels of corn to the acre should make a first-class alfalfa field." Of course they are well-nigh millions of acres in the arid and semi-arid regions where corn is an unknown product that under irrigation produce, or will produce, alfalfa crops of most astonishing volume, and with a frequency unknown in regions of less sunshine and warmth and of shorter seasons. Its behavior in this respect and on stretches of sand seemingly destitute of humus or any sort of fertility is unbelieveable except by those who have seen it.

Alfalfa has a great affinity for soils that have abundant lime, and its plants often make but a sickly showing on land that looks promising but fails to respond because the needed lime is lacking. This lack however is easily remedied by applications of either burned lime or ground limestone. These not only act as needed fertilizers but correct an acidity in many soils with which alfalfa does not agree and in which, without the application of such correctives it will refuse to prosper.

QUANTITY OF SEED TO THE ACRE.

What quantity of seed is best to sow is a question upon which there is a wide diversity of opinion even among the most experienced. There are those who insist that for a full stand thirty-five pounds to the acre is not too much, while others of equal experience insist that thirey-five pounds is sufficient for seven acres. One party within the writer's knowledge, in central western Kansas, at an altitude of 2,000 feet, sowed three-and-one-half pounds to the acre, from which the stand was so satisfactory that he declared the use of more seed would have been detrimental. Of course if what is sown is half trash, seeds of other plants, or is not germinable a much greater quantity will be needed to produce a stand than if clean and vital alfalfa seed alone was sown. As a rule twenty pounds to the acre is commonly sown, with a tendency to use less rather than more, and the most better the tilth the less seed is quired.

DAIRYING.

The Dairyman's Relation to the Creamery.

The farmer, the tiller of the soil, the breeder and feeder of animals, the producer of food and raiment, pre-supposes everything that stands for human existence and possibility of progress. This man is the most important one in the world. He is an Atlas on whose shoulders rests the economic universe. Each time a farmer is born a new Adam of the race is created, and wide before him is spread the garden, the field, the flock, the herds that he may tend and till, seed and harvest, that his own tribe and the other tribes of the earth may be fed and evolutionized. And for this man, this new Adam, Nature has projected an Eve for his helpmate—fortunate for both of them if their paths come together at the right time and the de-fanged serpent is asleep or absent when the woman goes to gather fruit.

So, as we cannot conceive of the existence of our race unless we first have this farmer, neither is the creamery possible without the dairyman, the owner and feeder and milker of cows, this drawer of milk and payee of the checks therefor. Now while this dairyman, being also a farmer, is the first man of his race, and the one on whom all others lean—and mightily heavy we sometimes think they do lean—he cannot be regarded as a wholly independent man. By the very nature of his occupation the farmer is short tethered by his environment, and is forced to remain close to his base of operations. His ability to ramify has its limitations. His farming and dairy interests require close personal supervision; in fact, his success as a farmer and dairyman is usually measured in direct ratio to his personal attention to the details of his business. While this condition has made him an economical producer it has operated against his success as a distributor. Hence, has come the middleman, or as we are considering it just now, especially, the creamery man.

I do not want to use this classification as a middleman for the creamery man in any unfavorable sense, for we hear so much of the bad qualities of the class we call middlemen that it is many times regarded as an unmixed evil. Personally, I am now ready to subscribe to this popular estimate of them, for where the middleman is an honest laborer I accredit him as being fully worthy his hire.

But I have classified the creamery man as a middleman because that is practically his function, taking out of the dairyman's hand the fine product of the dairy, and by skill, experience and full equipment, carrying the product to its ultimate finished condition, so the consumer receives a finer and more uniform luxury, and the dairyman a larger price for his raw material than if the agency of the creamery were eliminated.

I am speaking, of course, of the dairyman at large, and not of those isolated cases who are able to make a fine butter product and dispose of it directly to selected customers. Fortunate, indeed, is such a butter making dairyman with such a product and trade. But the large class of dairyman, remote from good markets, have found that through the good offices of the honestly and carefully conducted creamery, dairy profits are greatly advanced and are much more satisfactorily uniform, than by the system of farm making and farm-store-keeper marketing of butter. Consequently, if we classify the creamery as a middleman we must admit that it has earned the right to stand toward us dairymen as a good middleman.

I am a dairyman, pure and simple—always pure as I can be and often much simpler than I should be—having no connections with any creamery concern, not even owning stock in a dearly bought and over capitalized co-operative creamery; and I am not going to stand up here and publicy acknowledge that the creamery is ever as good as it should be. Every dairyman knows that there never was a creamery that tested high enough nor paid high enough for us. But not even a creamery should be hanged until it is condemned, and it should not be condemned until it is found guilty. If there are any doubts in the mind of the dairyman regarding the integrity of the test the creamery is crediting to him he should check the matter by making counter tests. These, however are absolutely worthless, misleading and unjust unless the samples be taken carefully and read honestly. Yes, I have actually heard of dairymen who were not a bit more honest than the very dishonest creameryman.

So, I would advise every creamery patron to first be honest and, if the creamery does not naturally emulate his good example, keep tab with the private test. If the creamery man be not born honest make him act honest.

It is a sin to lie and cheat even in the general abstract of life, but it is greater sin to do it in concrete business relations, based upon mutual confidence; and it is a still greater sin to make the innocent, passive beneficent invention of Doctor Babcock lie and cheat for us.

In the summing up of their business relations there should be confidence between the patron and the creamery. The patron while having the full knowledge that the creamery cannot make butter without milk with butter-fat in it, should remember also, that if the creamery gets good, clean milk, well taken care of, so it reaches the creamery in the best possible condition for making first class butter, the creamery, if properly conducted, with good equipment and skillful operation, can usually pay the patron more for the milk than he can realize from it independently of the creamery.

The creamery, on its part, practically run on the advanced capital of the patrons, should remember that its obligation to the patrons must be of first and constant consideration.

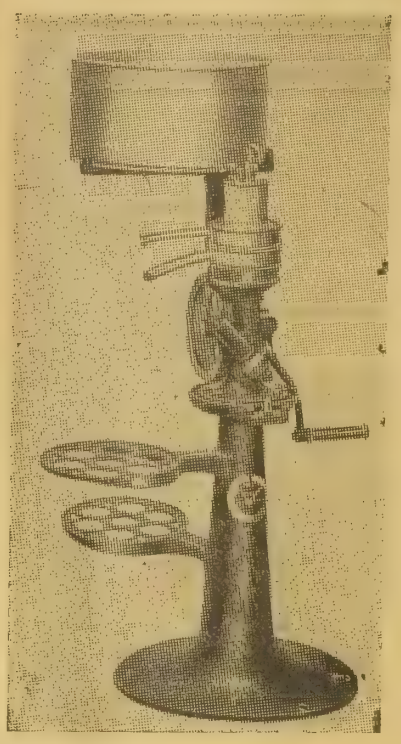
The patrons pool their milk or cream with the creamery, believing that the aggregate can be manufactured and sold more advantageously than otherwise, and are perfectly willing that the creamery have its full, liberal compensation; but the creamery in its equipment, its business management, its economy, its attention to all the details of the business, from the first receiving of the milk to the final marketing of the finished product, shall demonstrate to the patrons that nothing toward making a profit has been left undone.

If the buttermaker be a man fit for his job he should know the condition in which he wants the milk delivered for best results to be recorded on pay day, and the patron should accord to him a superior knowledge in the matter and try to produce and deliver the milk according to instructions. On the other hand, the man at the churn should not be so fresh and "young" as to presume that he shall have a supervising direction of all the patron's farming, breeding and dairying policies.

As I have said, the creamery as a laborer, is worthy its hire. It should make a profit in the business, representing a full, fair interest on investment, covering risks and equipment depreciation, with, of course, all expenses, wages and pay management; but the creamery that starts out to accumulate a fortune in a few years at the expense of the contributing patrons belongs in that class made up of trusts, combinations, confidence men and highway robbers.

Finally, the farmer is the great middleman of the universe. On his one hand stands the expectant, con-

WE SAVE YEARS WITH OUR GEARS



The question of GEARS is an important one. The gears in the CAPITOL Separator are not heavy and clumsy as in some separators but they are built in accordance with the work they have to do—this work is to furnish power, or speed, to the bowl—in the CAPITAL, the bowl with a capacity of 500 pounds of milk per hour, weighing less than four pounds is the smallest and lightest bowl of any separator of equal capacity on the market—hence it is not necessary to have the numerous and heavy gears other separators have; **numerous,** because their particular type necessitates many reductions of gear to produce the required speed; **heavy**, because the bowl in other separators is so much heavier than in the CAPITOL, the gears must necessarily be heavier.

The LIGHT BOWL and the SIMPLE yet STRONG GEARS in the CAPITAL make it the EASIEST separator on the market to TURN.

And again; by the use of an ingenious clutch devise—found in the CAPITAL ONLY—the gears stop running instantly when you drop the handle. NOT A SINGLE GEAR IN MOTION after you STOP TURNING. We SAVE all the running down WEAR without resorting to a brake. These POINTS of SUPERIORITY are making the CAPITAL SEPARATOR more popular every day; these points of superiority, together with the separator's ability to SKIM CLOSE and the ease with which it can be THOROUGHLY CLEANED are responsible for the steady increase in sales each year.

We are willing for YOU to be the JUDGE. A Postal will bring you full particulars of our FREE TRIAL OFFER. Address nearest branch.

THINK OF IT!

When you have three meals to prepare every day for 365 days in the year, you surely need a Range that will do the work with the minimum of time and fuel.

The MONARCH will effect this saving for you, being constructed for the purpose. With its large fire-box for wood, its quick-acting reservoir and numerous improvements and labor-saving devices, it is guaranteed to do what is claimed for it.

Circular on request.

The Enterprise Foundry Co., - Sackville, N. B.

MANUFACTURERS.

fiding world population it is his privilege and obligation to feed; on his other hand, liberal, wise, provident and just, behind a veil of mystery and wonder, stands Creation: And if you will, from God's hand to the farmer's hand, for by his passing it on to the hungry world, comes the largeness of the bounty of the universe. And shall we think that this agent of creation, this divineley orwork and compensation measured dained middleman, shall have all his in dollars and cents? Not so. Shall he be forever asking the mercenary question "Will it pay?"

It appears that the law of redemption always demands a sacrifice and it will appeal to me that the redemption of the business world, its elevation and purification must be and remain the burden—or shall I say the glory, the exaltation of the farmer?

We must be the salvation of our time. We must be the purifying force in affairs of state. We must be the cleansers of the civic life of the nation.

The question can not be only, will it pay us to make clean, sanitary milk as a fit food for the innocent consumer, fit for the food of the babe, for the invalid; but rather are we guiltless of wrong doing when we, as nature's agents, God's middlemen, fail to do our utmost towards the conservation of the public health.

The dairyman who produces milk in filthy and unsanitary stables, from under-nurtured and often unhealthy cows; and the creamery man who relaxes one jot or tittle in skill and care in keeping his products clean and wholesome are committing crimes against humanity. Both these men are under solemn obligation to do nothing avoidable that will injure the public health.

Next in civic importance to good morals is good health, and let it not be said or charged against us countrymen, us dairymen and creamerymen, that we have knowingly done that by which our brother has stumbled or suffered.

"Think not because no man sees, such things remain unseen."

I, as a countryman, am glad that these obligations rest upon us. I am glad that we have in a measure this much charge of the public health, for when a man realizes that a high obligation rests upon him, only then does he begin to live up to his duty and his opportunities. And let none of us think that the humblest of us are absolved from these obligations. Each man's work in his work and

"No life can be true in its purpose
and strong in its strife
And all life not be truer and strong-
thereby."

Address delivered before Vermont Dairymen's Association by W. F. McSparren.

Skin Disease in Cattle.

There are a number of skin diseases which afflict cattle such as itch, ring worm, mange and eczema, but the most common one perhaps that the average live stock owner has to contend with is the ring worm. This usually puts in its appearance on stock, especially young cattle, in the form of scaly, scurvy condition of the skin, especially around the eyes and head.

While this may be spread from one animal to another and is a very disagreeable disease, it does not in any stage produce death and usually yields to treatment very readily, such as internal tonics and outward applications of ointments which have a tendency to destroy the parasite that produces the disease.

GRUBS, WARBLES, BOTS.

The writer, when a boy, noticed large lumps or tumors on the backs of the cattle in his father's herd. These appearing during the months of January, February and March, and he was exceedingly curious to know the cause and nature of them. Upon investigation he found that they contained a large worm or grub and by firmly squeezing the tumor, it would pop out. What seemed to puzzle him was to know how and where they originated.

Believing that many readers have meet with the same experience prompts me to give a short description of this grub or warble as it is properly termed.

Grubs, warbles or bots originate from a fly which deposits its eggs on the limbs of horses and cattle, and in the nostrils of sheep, usually during the months of July and August. When it deposits its eggs in the nostrils of sheep and they hatch, the sheep is then afflicted with what is known as grub in the head which produces chronic catarrh, an ailment much dreaded by sheep owners as it often terminates fatally.

When the egg is deposited on the limbs of horses, as they lick themselves the egg is taken into the stomach where it hatches and then becomes known as the bot, oftentimes adhering to the walls of the stomach to such an extent as to cause indigestion and other derangements of the digestive organs. However, after the bot reaches a certain stage of maturity it passes from the animal through the alimentary canal and when it comes in contact with the ground it burrows deep enough to hide itself and after a certain period of time appears in the form of a fly whose aim in life seems to be to deposit its eggs as formerly described.

As the eggs are deposited on the body and limbs of cattle, they, by licking themselves, carry the eggs into the digestive organs where they penetrate the walls and later appear underneath the skin in the form of small swellings or tumors, indicating that they have developed into a large grub, which can by a little pressure, be forced out of its pocket or nest and if destroyed ends the work of that particular grub.

On the other hand, if these grubs or warbles are permitted to remain in the back of the cow, they will later on force themselves out, fall to the ground, burrow themselves sufficiently to be protected, and later will develop into flies which are then ready to take up the work of depositing their eggs.

This is only one of the many diseases or ailments which may be brought on by flies. Live stock well protected against flies are to a great extent, protected against disease to say nothing of the shortage of milk due to the constant annoyance of flies.—David Roberts.

Three Kinds of Cows.

There is as much difference in the individuality of cows and their powers to produce milk as there is in men and their powers to perform certain kinds of work. Man is adapted to perform many different kinds of work, but he can perform only a few kinds with great proficiency; so cows are adapted to perform but a few kinds of work. One cow consumes corn silage, clover and alfalfa hay, oats, bran, etc. and by a peculiar, intricate mechanism converts this rough food into palatable material—into large quantities of the food product known as milk, and she does this at a profit. Another cow takes this same food and converts it into soft, juicy, muscular tissue, which after the animal is killed, fdrnishes the steaks and roasts which we all relish so much. Then there is a third cow that takes this same ration and converts it neither into much milk nor into much meat. The first two cows are profitable cows, but the third is unprofitable. Unfortunately too many farmers persist in keeping the third cow and that is just where the difference between successful and unsuccessful dairying lies.

Success lies not in the number of cows that a man keeps, but rather in the kind of cows that he keeps. It is more profitable to keep a small number of good cows than a large number of average cows. The following may be cited as an example' A farmer had 23 cows which he had been keeping for a number of years. He finally realized that he was not making as much money as he should and began to keep records. As a result he found that 20 of these cows produced 7,000 gallons of milk in one year and it cost him $1,760 to feed and care for them during that time. It cost him 25c to produce each gallon of milk and he received for it an average price of 13½c per gallon for the year. In addition to this he was obliged to pay 12c per gallon for his milk. Now it is plain to be seen that on each gallon of milk he lost 13c; consequently at the end of the year he had lost $910. The other three cows produced cost just 10c. It was and the actual cost to keep them was $240. Every gallon of milk that these cows produced cost jdst 10c. It was sold for 12c. Thus there was a profit of 2c per gallon or $48 on the total amount produced by the three cows. This is not a very large income from a cow, but it shows such a difference between the returns from the three cows and the returns from the twenty cows that it makes a good example. —Prof. Oscar Erf.

Every family and especially those who reside in the country should be provided at all times with a bottle of Chamberlain's Liniment. There is no telling when it may be wanted in case of an accident or emergency. It is most excellent in all cases of rheumatism, sprains and bruises. Sold by all dealers.

Minister of Agriculture Selects The
SHARPLES TUBULAR
The World's Best Cream Separator

The following letter is from the Minister of Agriculture :

Regina, Sask., Jan. 28, 1911.

Gentlemen:—I have in use on my farm at Abernethy one of your Tubular Separators, which has given excellent satisfaction.
W. R. MOTHERWELL, Minister of Agriculture.

The Minister of Agriculture is certainly in position to know, select, and use on his own farm the very best cream separator it is possible to obtain.

Why Did He Choose The Tubular ?

Because it is later than, different from and superior to all others. Because it has twice the skimming force of others, skims faster and twice as clean, and thereby pays for itself time after time by saving cream that common separators cannot get. Because the Dairy Tubular neither needs nor contains disks or other contraptions. Because buying one Tubular—which wears a lifetime—beats buying several "peddler's" or other inferior machines that last but a short time. Because Tubulars are guaranteed forever by the oldest separator concern on this continent. The Minister of Agriculture chose a Tubular because it is The World's Best.

Tubular sales easily exceed most, if not all, others combined. Tubulars probably replace more common separators than any one maker of such machines sells. The manufacture of Tubulars is one of Canada's leading industries. Our local representative will be glad to show you a Tubular. If you do not know him, ask us his name. Write for catalog No. 194.

Where Can I Secure the Best Seeds?

At this season the question **"WHERE CAN I SECURE THE BEST SEEDS ?"** is the one which naturally arises in the mind of every up-to-date farmer.

The **"PURE SEED"** campaign being carried on by the different agricultural departments and societies has created a demand for **"THE BEST SEEDS."**

Our aim for sometime has been to offer only Seeds that we can recommend for their **PURITY, FERTILITY** and **SUITABILITY** for this section.

This year we are in a better position than ever, both as regards quality and price, and before you make your purchases, we should like the privilege of showing you samples and quoting you prices; this we believe would result to our mutual advantage.

American Plain and Barbed Wire is the Best !

We are in a position to offer you this at prices that will appeal to you. Also Woven Wire Fencing.

Special attention given to MAIL ORDERS.

The Common Parasites Affecting Sheep.

There are several parasites which prey upon sheep in North America; but only a few of these are troublesome in Canada, and the bad results of all can be to a large extent obviated, with care on the part of the shepherd.

By far the commonest parasite of sheep is the widely distributed "Sheep Tick" which is found wherever sheep are kept. Although usually known as the Sheep Tick, this parasite is not a true tick, (all of which are allied to the spiders and in the mature form have eight legs) but is a true six-legged insect. It is, in fact, a member of the lowest section of the true flies known as louse-flies, and has habits very different from those of ordinary flies. Instead of laying eggs, the females retain the larvae inside their bodies until they are full-grown, only one developing at a time. When full-grown these emerge from their mothers' bodies and at once turn to hard brown seed-like objects, having a row of seven dots on each side. These are attached to the wool by a waxy substance From these so-called "eggs," about three weeks after they are deposited the fully formed sheep-ticks emerge. They are about one-fourth of an inch in length and about one-third as wide as long. The body is flattened above and below, and very tough; the color varies from grey to red according to the amount of blood contained in the insect. The head is broad and flat, and the eye is small; the legs are strong, although short, and each is provided with two sharp claws by means of which they move quickly through the wood. When the ticks are removed from sheep they die in a very few days. Infestation of flocks takes place by contact with other animals; and, when the animals in a flock are thoroughly cleaned of ticks, they can be easily kept clean, if not re-infested from animals introduced from outside.

Each female sheep-tick produces only four or five young; but notwithstanding this, sheep-ticks are frequently very numerous upon certain animals; the bite causes much irritation, and, when lambs are infested, much harm is sometimes done.

Remedies: There should be no trouble with sheep-ticks if animals are regularly and properly dipped in spring, soon after shearing. The work must be done thoroughly; for convenience, a deep vat should be used, and care must be taken that the whole animal, head, and all, is pushed right under the liquid. As a sheep dip there are few things better than kerosene emulsion, prepared after the usual Riley-Hubbard formula, via.

KEROSENE EMULSION.

Kerosene (coal oil) ..... 2 gallons
Rain water 1gallon
Soap .... ½ pound

Dissolve soap in water by boiling; take from fire, and, while hot, turn in kerosene and churn briskly for 5 minutes. To be diluted before use with 9 parts of water.

This will destroy all the ticks and other parasites on the animal, and will not in any way injure the wool nor the skin of the animal. As not requiring special preparation and therefore more convenient, some of the commercial dips are as a rule used by sheep owners. There are several of these in the market, all of which, if not containing arsenic, are good. Those which we have used at Ottawa with great satisfaction, are Zenoleum, McDougall's Dip and Creoline. The cans containing these preparations always bear directions which should be closely followed.

THE SHEEP LOUSE.

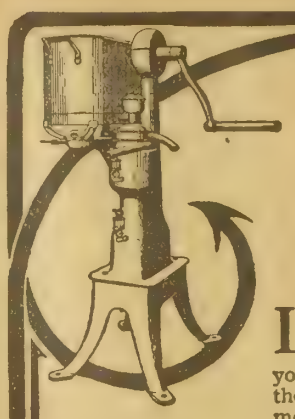
This is a very small louse but is very troublesome when it becomes established, causing great irritation to infested animals, which show their discomfort by rubbing themselves and biting out tufts of their wool. Whenever sheep show by these symptoms that they are uncomfortable, the wool should be opened up, and the very small white lice, which are not more than one-sixteenth of an inch in length, should be looked for; if any are found, the sheep should at once be dipped. It is well to examine flocks carefully in autumn, because sheep lice seem to increase most during the winter, particularly where the animals are housed. Where animals are regularly and properly dipped in spring, soon after shearing, there is very seldom any trodble either with sheep ticks or sheep lice but if animals are found to be from any reason heavily infested in autumn or winter by either of these pests, dipping them even at that time of the year, will be found a paying operation. If it is thought too dangerous to dip animals in winter time or there are no convenient warm sheds where they may be sheltered until dry a small quantity of the wash may be poured along the back of an animal after separating the wool, or applied wherever the parasites are seen.

THE SHEEP GADFLY.

In the hot weather of summer, during July and August, sheep may be seen bunched together, under trees or sheds, on dry, dusty roads, or in sand pits, always holding their noses close to the ground, so as to prevent as much as possible the gadflies they are so much afraid of getting at their nostrils. When a fly comes near them they seem to show great terror, shaking their heads and striking the ground violently with their feet, or running away a short distance and coming back again to the place whence they started. The fly which causes all this trouble is a short, thick fly, a little over a quarter of an inch long, of a yellowish color, dotted and variegated with dark brown. The under side of the head is puffed out and white; but this fly has no mouth parts, and cannot, therefore, take any nourishment when fully matured. Except during the hottest hours of the day, when it deposits its larvae, it is very sluggish; but when pursuing the sheep it is very quick in its actions, and is very difficult either to see or to catch. No eggs are laid, but perfectly-formed and living grubs are laid inside the nostrils of the sheep. The young grubs at once begin to work their way up until they reach the upper part of the nasal cavity, where they remain until full-grown, taking several months, passing the winter there, and then making their escape into the ground, and change to flies in July. There are, as a rule, only two or three flies in the head of an infectd sheep, but from ten to twenty have been found. When there are only a few grubs, there are no serious symptoms; but when there are several, their presence is marked by a catarrhal discharge, and doubtless causes great painito the animal.

Remedy. The only satisfactory remedies are of a preventative nature. The fly does not attack sheep in the shade, and only seeks its prey during the middle of the day. Low sheds to afford shade in the pasture; or access to woodlands are a great protection. Valuable breeding stock should be stabled, and allowed to graze only during the morning and evening during the season the flies are active. A common plan with some shepherds is to put tar, thinned with oil, on the noses every few days, to prevent the females from depositing young larvae. A convenient plan is to smear the slats or sides of a narrow feed box or salt trough with the mixture, so that the sheep cannot get at the sglt without touching the tarred slats. A treatment which has sometimes been recommended is the application of irritating fumigations or sneezing powders, and the injection of irritating substances, such as turpentine, coal oil, and carbolic solutions. All of these, however, are unsatisfactory, causing great annoyance and pain to the animals, without giving much relief, except in a few cases. The larvae wonder much farther into the head cavities than can be reached in this way. In the case of very valuable sheep, the medical operation known as trephining may be resorted to, but this should only be done by a skilled veterinary surgeon. The advice given by one of the highest authorities on this subject is: "At all times, if the number of animals affected is large, the malady should be left to follow its course, and those which show the gravest symptoms should be fatted up and killed."

By James Fletcher, Dominion Entomoligist, Ottawa.



OWNERS KNOW THE REASONS WHY IHC CREAM HARVESTERS PAY BEST

LET I H C owners tell you about I H C Cream Harvesters. They know I H C superiority by actual experience. The local dealer will give you the names of some owners near you. Learn from them why I H C Cream Harvesters skim closest, are most durable, easiest to clean, and easiest running. Let them tell you about the many profit-advantages of

I H C Cream Harvesters

Look over the I H C separators they are using every day. Then consider these facts:

The wearing out of parts and many other cream separator troubles are largely due to dust and milk getting into the gears. I H C Cream Harvesters are the only separators with dust and milk proof gears which are easily accessible. A glance at an I H C will show you this great feature. I H C Cream Harvesters are protected against wear at all points by phospher bronze bushings—not cast iron or brass bushings. I H C Cream Harvesters are constructed with larger spindles, shafts and bearings than any other separator. The I H C bowl is free from slots or minute crevices, which make it remarkably easy to clean. There are many other advantages which any I H C owner or the local dealer will point out and prove to you. I H C Cream Harvesters are made in two styles—Dairymaid—a chain drive machine, and Bluebell—a gear drive separator—each in four sizes. In justice to yourself, see an I H C owner or the local dealer before you decide on any separator. If you prefer, write for catalogues and all information to nearest branch house.

I H C Service Bureau

The bureau is a center, where the best ways of doing things on the farm, and data relating to its development, are collected and distributed free to everyone interested in agriculture. Every available source of information will be used in answering questions on all farm subjects. If the questions are sent to the I H C Service Bureau, they will receive prompt attention.

Some Lambing Problems.

With the best of care, it is in the winter quarters, and at lambing time we meet our most troublesome hours among the flock. After several exposures to the late cold fall rains,—which the careful shepherd will prevent if possible,— open-wooled sheep especially, are apt to have colds, or snufflues. The sticky discharge from the nostrils is offensive, and if no relief is obtained loss of condition makes its appearance. Pine tar given twice daily, in table-spoonful does, poured into the held-open mouth, if thin, or if thick a lump the size of a plum placed on a flat stick, and put well into the mouth will often cure. It is well to give a few three ounce doses of Epsom salts in which a teaspoonful of ginger is mixed, one every second morning for a week, same time as tar is fed. Given well-saved clover hay, good pea-straw, two or three pounds each daily of Swede turnips, with conditions already stated, and our flock should winter cheaply and well.

April has arrived and lambs are dropping daily. If not done previously the shears should be used immediately after lambing to remove all wool around the udder, as lambs while searching for the teat are apt to suck a lock of wool, thereby getting the first start of wool balls in their stomach, which causes scouring, bloating and sooner or later death. Prevention is the only cure known of, so far.

We go into the pen and find a ewe in labor. In an hour she still strains but no lamb makes it appearance. We consider it better to not yet interfere, but let nature have its course It may be well to examine her, and see or rather feel if the lamb is coming. Another hour passes and no relief. It is now time to act gently, and with care. A clean wooden vessel carrying a gallon of very warm water in which a teaspoonful of carbolic acid is well stirred, and sweet oil are provided, an attendant holds the ewe firmly, better laying her on right side while the shepherd warms his hand in the water then oils it, and finds out what is the cause of delayed birth. Possibly the head is coming, with the fore legs away back, and may be the legs are presented and no head. If the latter it is well to secure soft cords to the feet above

hoofs, and holding cords, force legs back into the womb, find the head then start head and legs together. If head is appearing and no feet, it may be necessary to make a halter of soft strips of cotton fasten on head force it back and so get legs and head forward together. Patience and gentle treatment, count for much in dealing successfully with such cases. dealing successfully with such cases. After lambing, the ewes should have nourishing drinks, made of oatmeal and bran with hot water poured over and cooled off by adding cold water. If ewes lamb on grass, the weather is warm, the water drinks may be dispensed with. Fresh water and salt should however be always in reach of sheep, old and young, at will.

Occasionally, a ewe is found with a sore teat caused by the lambs sharp teeth. The way to deal with the lambs is to use a small fine flat file on the teeth and so do away with the sharpness, while the ewes sore spots are dressed twice daily with a mixture of glycerine and lemon juice in equal parts. Or if vaseline is found more convenient then it is used. The aim is to heal and not render the taste so disagreeable to the youngsters as to cause them to stop sucking, and so bring on inflammation of the udder, and its loss. A trouble known to have caused the death of young lambs is "pinning." That is, the first passage from their bowels is frequently so adhesive as to clot under the tail, and harden so as to prevent passages. It is readily noticed and the removal once or twice prevents any loss. At other times the lambs will be found "dumpish" with head and ears hanging. A safe and convenient remedy, is a heaping dessert spoonful of Epsom salts into which a pinch of ginger is mixed and given slowly in a drench.

Tailing should be done when ten days old or sooner and castrating some ten days later; two operations, so often neglected at a loss of thousands of dollaes annually to our sheep growers.

Ewes and lambs on grass with as frequent changes to fresh fields, even if grass is no better, will carry them along with little care or labor till weaning-time. Then lambs quite often get a set-back, through being turned into rough dry grass. It pays well to have a bit of nice fresh grass near a patch of early rape, to keep up growth and vigor. The rape field for fall feeding of butcher's lambs is the ideal condition, with the grass field near by, where they can and will change frequently from one to the other.

Nor should the ewes be neglected when lambs are weaned. Better to turn them for a time or rather poor pasture to stop the flow of milk. And every second morning for a week, they should be milked to stay pain, and prevent caking of udders, and loss as a consequence.

Bloating of lambs on rape is not uncommon. It may be largely prevented by exercising care at first. If turned in at first in the evening with full stomachs of grass, and rape is dry, danger is much lessened. When bloating occurs, as it will sometimes with the best of care, a safe remedy is a heaped teaspoonful of common baking soda dissolved in as little water as melts it, and given soon as possible. A second or third dose may be required in a bad case. Another, often convenient remedy is two teaspoonfuls of turpentine well mixed in a half-cup of milk, given in a small and long-necked bottle slowly and carefully so as not to strangle the patient.

A Disc That's Stiff, Strong, Sharp.

BUILT FOR HARD WORK

Don't fear for a WINDSOR DISC HARROW. Don't worry for a second that it will go back on you when you have a hard piece of work for it to do. The Windsor is so substantial, so well braced at every angle, that no matter what it strikes, it withstands the shock. Put it into whatever kind of land you have, and it will cultivate and pulverize that land to your entire satisfaction. It is doing so for thousands of satisfied farmers today. The

FROST & WOOD DISC HARROW

has an all-steel frame, strongly protected at all angles with rigid braces. It is built on the **out-throw** principle. The two levers in front of driver—very conveniently located—control the two separate gangs of discs, which can be set at any angle necessary. This is a rigid Harrow, but does most excellent work on any kind of land. On knolly ground it has a tendency to level the field, because of its rigid sections. But whether on side hill or level—wherever driven—it will cut uniformly the length of both Gangs.

It is built in two styles—the Front Truck Style, as shown in illustration, and also as a Pole Harrow. The demand for Truck Harrows is growing very rapidly, because by its use you make the work of the horses infinitely more comfortable. Operating a **Windsor Truck Harrow** is solid comfort for both man and beast. We also build a Pole Harrow with a patented adjustable Pole Attachment, by which the pole can be instantly set for 2, 3 or 4 horses. See illustration of this in catalogue. Both of these Harrows are substantially built. The Discs are made of the best quality of steel we can buy for the purpose—they are rolled, sharpened and tempered in our own factory, so we can vouch for them. Ask us or our agent for further information and catalogue B 53

THE HORSE.

Capsule Impregnation of Mares.

Since a number of our readers are seeking information about the method of impregnating mares with capsules, the operation is here discussed in full for the benefit of all who are interested in this simple, safe, practical way of increasing the number of foals from a stallion and of getting many hitherto barren mares to foal. Stallion owners should save this for reference.

Before the operation is performed the mouth of the womb should be opened to make sure of an easy entrance. Hobble the mare. Smear vaseline on the hand and arm; then introduce the hand into the vagina and advance it forward to the mouth of the womb which is in the centre of a prominent projection into the forward end of the vagina. One must be careful not to mistake the mouth of the urinary duct or urethra, which is on the floor of the vagina near the outer opening, for the larger and more interior mouth of the womb. Sometimes the mouth of the womb is quite tightly closed and considerable patience and pressure are necessary to open it. It need not be opened more than enough to admit two fingers.

If a number of mares are to be impregnated from one service, get them all ready before the stallion is allowed to serve one of them. If a mare has leucorrhea, or harbors the germs of contagious abortion or is sick from any cause, there is little likelihood of successful impregnation even by artificial means. As a precaution against spreading any possible infection from a mare of doubtful condition, the hand and arm should be thoroughly washed after being inserted in her vagina for any purpose, but a disinfectant should not be used on the hands or instruments used for impregnation unless they are very thoroughly rinsed afterwards, for there is danger by that means of destroying the sperm cells and thus defeating the object of the work. Instruments may be cleansed in boiling water.

The capsule may be used either to advance the semen to the womb from the vagina where it has been deposited by the stallion or to transfer it to the womb of another mare. Capsules used for this purpose are the large size gelatine capsules sold by drug stores. The two-dram capsule is a handy size to use. These are about 1¼ inches in length and not too large for the finger completely to cover the end to confine the contents. Capsules are made to hold as much as an ounce, but there seems to be nothing gained by using these very large ones and they are cumbersome to manipulate. Every drop of semen is abundantly supplied with sperm cells and only one of these is finally needed to fertilize the opum that gives rise to the fetus.

There is no difficulty in getting semen into the capsule. It is done by holding the capsule firmly between the thumb and fingers while it is inserted mouth forward into the vagina of a mare that has just been served. The capsule is scooped along the floor of the vagina through the semen deposited there, using the forefinger to push the semen into the capsule, and when it is full the opening of the capsule is closed by slipping the forefinger over it. Then if it is desired to place the semen into the womb of the mare the capsule is simply carried forward to the mouth of the womb and pushed into it. It is not necessary to withdraw the geletine capsule as it will dissolve and do no damage. If the semen is to be carried to another mare it is withdrawn when filled and transferred as quickly as possible by way of the vagina into the womb of the other mare. In this way a number of mares may be supplied with the seminal fluid from one service.

If a mare at some distance is to be impregnated so that more than a few moments are required to carry the semen from one mare to the other some special provision must be made for keeping the fluid warm; otherwise the warmth of the hand closely enclosing the capsule will suffice for warmth and exclusion of light, both of which are essential. Successful impregnations have been claimed from semen carried some miles in a rubber bag carried next the skin under the arm to maintain it at body temperature. For securing a large quantity for this purpose a syringe or impregnator for extracting the semen from the vagina is very convenient and some prefer to use it altogether for impregnating mares. The syringe is filled with the seminal fluid, drawn into it from the floor of the vagina, and then the nozzle is carefully guided by the hand into the mouth of the womb where the contents are deposited.

The capsule method has been given abundant trial and has proved to be a success, making it possible greatly to increase the number of mares a stallion can accommodate. Special instruments for introducing the fluid into the womb are also effective. The capsule is inexpensive and quite free from danger of injuring the delicate internal parts of the mare, but it does not carry so large an amount of the fecundating material as a specially constructed instrument. In either case, great care should be taken to avoid spreading infection from a mare which is suffering from any disorder of the genital organs. The mare served by the stallion should be a perfectly healthy one.—Breeders' Gazette.

Hidebound.

Subscriber, W. S.—"Horse, though getting plenty of good feed and water, and apparently feeling well, seems to be hidebound. His hair is dry and dead, and does not lay down close to his body."

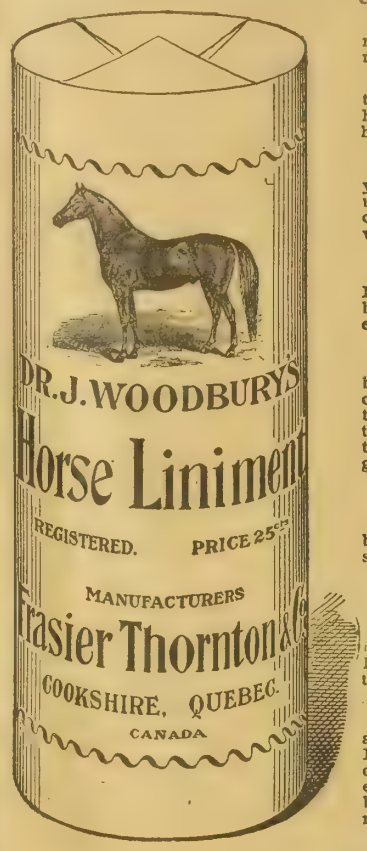
Answer.—Give the horse a cupful of flaxseed every day, and add a teaspoonful of dilute nitro-hydrochloric acid to each pail of water he drinks.

DR. J. WOODBURY'S Horse Liniment.

INFALLIBLY THE REMEDY.

For the removal of Splints, Bog Spavins, Enlargements of any and every description it has no equal. Given internally, it will promptly relieve and remove any and every character of Cough, Enlargements of the Glands, Affections of the Kidneys. For Distemper, Strangles and Colic it is infallibly the remedy.

All horses that are stabled should have an applicatiou of Dr. J. Woodbury's Horse Liniment to the hoofs of the fore feet to prevent their becoming feverish, dry, brittle, hard, contracted or otherwise injured.



Insist on having Dr. J. Woodbury's Horse Liniment. We warrant it to effect that for which it is recommended when used according to directions.

Its beneficial effects are so prompt and decided that it has excited the admiration of the leading horsemen of the Dominion and secured their highest confidence.

Bear River, N. S.

Dear Sirs :—We do not hesitate in recommending your Dr. J. Woodbury's Horse Liniment. We have used it in the woods for coughs, colds, distemper and cuts, and would say that no lumberman should be without it. Yours truly, CLARKE BROS.

Hubbard's Cove, N. S.

Dear Sirs :—I have used Dr. J. Woodbury's Horse Liniment in my stable for years and consider it the best liniment on the market for both internal and external use. Yours truly, C. C McLEAN.

Truro, N. S.

This is to certify that I have used Dr. J. Woodbury's Horse Liniment with the very best results for colds, coughs, distemper and all lung diseases. It is the best thing to give horses in the spring to keep them in condition It purifies the blood, cleanses the lungs from impurities, which may exist, and gives the system healthy action.

NEWTON LEE, Owner "All Right" 5817.

Elmsdale, N. S.

Dear Sirs :—Kindly send me 6 dozen Dr. J. Woodbury's Horse Liniment. I have not a bottle in the store and it is the only kind my customers will take.

Yours truly,
ELMSDALE MERCANTILE CO.,
Elmsdale, N. S.

Dear Sirs :—I cured my horse with Dr. J. Woodbury's Liniment. It was a bad case of distemper. I always recommend this liniment to my friends as the best for all diseases of the horse. Yours truly,
H. R. WHITEHEAD.

Dear Sirs :—One of my horses had a bad cough, and I made a complete cure with three bottles of Dr. J. Woodbury's Horse Liniment. The cough was of twelve months' standing. In my large experience with horses, I consider this liniment to be the best made for all diseases in the horse, and I recommend it to my friends.

Worm Powder.

J. K., N. B.—"Kindly give cure for worms, receipe for powder, for colts up to three years, and for any horse above this age."

Answer.—Mix one part powdered wormseed, two parts tartar emetic, two parts exsiccated sulphate of iron and one part powered liquorice root. Dose for colts six months old: Half a teaspoonful once a day; one year, a full teaspoonful; two years, one and a half; three years, two teaspoonfuls; in all cases once a day only, in the feed.

Hard to Breed.

Subscriber, P. E. I.—"I have a mare, rising eight years, which I have bred this last three years to different horses and cannot get her in foal. I work her hard in summer and can always keep her in fairly good working shape."

Answer.—Feed her well and keep her at work. Shortly before the season when you wish to breed her, give a dose of the following medicine twice a day. Fluid extract of nux vomica two ounces, tincture of iron ten ounces. Mix and give two tablespoonfuls in a pint of water.

Diarrhoea should be cured without loss of time and by a medicine which like Chamberlain's Colic, Cholera and Diarrhoea Remedy not only cures promptly but produces no unpleasant after effects. It never fails and is pleasant and safe to take. Sold by all dealers.

The Second Maritime Horse Show.

Ushered in by balmy spring weather the Second Maritime Horse Show threw open its gates to the general public on April 4th and from then to the closing, at a late hour of the night of April 6th, the spacious Winter Fair Building, Amherst, N. S., where the show was held, was held, was thronged with interested horsemen and horse lovers.

The weather man did not furnish very favorable weather for the second and third days of the fair but nevertheless the attendance was all that could be expected.

The number of entries in the respective classes exceeded those of a year ago, when the first horse show was held as a purely experimental venture. The results then achieved far exceeded the most sanguine expectations of its originators and now the most sceptical onlookers are forced to admit that the feature of an Annual Horse Show in Maritime Canada has come to stay, and if we judge aright, and we think we are also expressing the views of many prominent horsemen, it is only a question of a short time until the already capacious Fair Building must be enlarged in order that ample accommodations may be provided for showring and stabling purposes. The good citizens of Amherst have risen to the occasion when improvements and enlargements were necessary in years gone by and we feel that they will give the question of extending the building their unanimous support, when called upon at a future date, and thus keep abreast of the town motto, "Busy Amherst" they have adopted and which is so typical of the public mindedness of Amherst's citizens.

Not only were there more entries than last year, but the quality of the horses was also very noticably improved.

The governments of the respective provinces have done a great deal for the encouragement of horse breeding by importing pure-bred sires and brood mares. What has been done in this line and the gratifying results therefrom, was very plainly evidenced by the showring records made by the farmers of Amherst and surrounding districts. Not a few of the splendid teams shown could trace their lineage to horses imported by the Nova Scotia Government and the end is not yet. Other sections are also taking an awakening interest in the important question of horse breeding. The horses imported by the New Brunswick Government are also lending their useful, uplifting influences in the respective districts in which they have been placed. The Horse Show furnishes a school where our farmers can see ideals which they may strive to attain, and its influences are destined to be one of the greatest factors in spreading a desire for better horse raising and horsemanship than has heretofore existed.

THE JUDGES.

The management had planned to have Mr. Pearson, of Montreal, who judged the horse classes last year, judge again this year; but were disappointed to hear from him at a late hour that he could not be present. Mr. Albert Ness, of Howick, Quebec, was also to be present to judge the Heavy Horse Classes, but he too, missed train connections in coming from Toronto, and his father, Mr. Robert Ness, the veteran horse judge and importer, who was enroute to Scotland on a horse purchasing trip, stopped off in Amherst and he and Professor Cumming, of Truro, and C. M. McRae, of Ottawa, placed the awards in the respective classes. Their line of judgment was closely followed by the onlookers and not a dissenting voice was heard.

President Campbell, Manager Fuller and those associated with them on the directing board did their utmost to make matters as convenient and pleasant for the exhibitors as they possibly could and they deserve great credit for the very successful culmination to their efforts.

THE THOROUGHBREDS. — There were only two Thoroughbred Stallions in the ring—Haphazard, owned by W. A. Black, Halifax, N. S., and the magnificient Waterlight, imported from Kentucky by the New Brunswick Government and now owned by Mr. George W. Fowler, Sussex, N. B., who also owns the Thoroughbred mare, Necitas, the only mare of the bred exhibited at the show. Waterlight is by the famous Watercress and has a running record of 1.39 and purse winnings of over $63,000. His first crop of foals in New Brunswick were foaled last spring and they are no disgrace to their illustrious sire. Waterlight and Necitas captured the coveted championship diplomas in their respective classes.

STANDARD BREDS were out in strong numbers. There were no fewer than nine aged stallions, and they were all in the pink of condition. Dodd Dwyer's King Dodds, last year's champion was again successful in capturing the coveted red ribbon and championship diploma. C. R. H. Starr's Royal Knight came in for the blue ribbon and George W. Fowler's Buz Fuz captured the white. The other stallions shown in the class were G. W. Fowler's Baron Ajalon. W. B. Lowe's Haskell; Thos. Munro's Maritime Prince and A. E. Trites' Rudy Kip and Leonard Wilton.

There were four entries in the class for Standard Bred Stallions foaled on or after January 1st, 1909. G. M. Holmes' Timbrooke, E. Purdy's Rush Lake, Thos. Munroe's Baron Britt and G. A. Wallace's ten-months old Kaintuck, out of Grace Abbott by King Dodd won honors in the order named..

The aged Standard Bsed mares were a strong lot. J. T. Prescott was there with his trim and handsome Luella Mac and captured the coveted red and the chamuionship diploma. G. A. Wallace's handsome Grace Abbott stood in second place and D. R. Sutherland's Dina Hartshorn captured third money...: Outside the money's pale stood H. K. McLean's Miss Woodburn, last year's first prize winner, W. M. Spence's Maude Allen Wilkes and W. W. Simond's Bon Bon.

In the two-year-old class Thomas Munroe's Countess Bird and D. R. Sutherland's Lady Achille stood first and second, respectively.

Geo. M. Holmesj Miss Sure and W. B. Lowe's Nellie Besure captured the red and the blue respectively in the one-year-old filly class.

HACKNEYS.—R. A. Snowball's Model Performer in the aged stallion class and Rev. R. T. Hawkes' Chatham Model in the two-year-old stallion class had no competition. The Championship Diploma was captured by Model Performer.

R. A. Snowball's Langton Lily, the veteran prize winner again stood at the head of her class and captured the Championship Diploma for best mare, any age. W. W. Black's Violet stood in second place and Mrs. H. E. Fawcett's Lucille came in for third money. W. W. Black's Winona Dignity and G. H. Lounsbury's Sparkle stood outside the money's pale.

R. A. Snowball's Langton Belle and Chatham Lily had no competition in their respective two-year-old and one-year-old classes.

CLYDESDALES.—Words fail to describe the magnificence of the Clydesdale classes at Amherst. It was a revelation to many of the onlookers to see the excellent specimens of this noble breed that are owned and bred in the Maritime Provinces. At the director's call, four three-year-old stallions entered the ring and were placed in the following order. C. R. Starr's Baron Majestic, A. H. Thompson's Petruchios Heir, Geo. Holmes' The Bishop and Fred S. Black's Flash. Baron Majestic won the coveted Championship Diploma and special prize of a silver cup donated by Graham Bros., importers and breeders of Clydesdale and Hackney horses, for the best Clydesdale Stallion of any age. Cup to be won three times, not necessarily consecutively, by the same person. This cup was also won in 1910 by Messrs. Starr with their aged stallion Baron Primrose, Baron Majestic's sire. Baron Majestic was purchased immediately after the show by Mr. H. A. Moffat, a prominent farmer of North Sydney, N. S. We feel satisfied that Baron Majestic will give a good account of himself in his new home and will be the means of improving the quality of farm horses in Cape Breton. Petruchio's Heir was bought by Mr. Purdy and Son, of Wentworth Station, N. S., where he too will undoubtedly be heard from later.

WM. RENNIE CO. LIMITED TORONTO

CANADIAN REPRESENTATIVES

In the aged stallion class, R. A. Snowball's Baron Belgraddon captured the red ribbon. A. H. Thompson's King of Drumry and Constaple were the second and third prize winners. Baron Belgraddon was out in exceptionally high condition. W. W. Black's Prince William was also shown in this class.

The two-year-old stallion class had only three entries. R. A. Snowball's Chatham Faime, Frank Dobson's Billy Dolkeith and C. R. H. Starr & Sons' Royal George. They were placed in the order named.

There were twelve entries in the Clydesdale aged mare class and the greater percentage of them were heavy in foal. They made a magnificient showing. Logan Bros. showed Polly McGregor, Pink Rose, Soubrette, Princess May and Baron's Fancy. C. R. Starr & Son showed Berfern Favor and Juliet. R. A. Snowball showed May Lothian and Marinetta. A. H. Thompson had his imported mares Black Nancy and Flower of Garter and Robert Roberts of Prince Edward Island was there with a rather nice mare that he sold after the show to C. R. H. Starr & Son.

Starr's Berfern Favor won the Championship Diploma and next to her, in her class, stood Logan's Baron's Fancy and Pink Rose.

There was also keen competition in the two-year-old mare class where C. R. H. Starr led the way with Lady Primrose, closely followed by Edgar Heartz's Marshfield Girl, and A. H. Thompson's Athenia and Jess Ballentyne in second and third and fourth places. Donald McIntyre showed Rose of Thomstead, and A. H. Thompson showed two fillies other than his prize winners in this class.

In the one-year-old filly class Logan Bros.' Soubrette of Homestead, was sandwiched in second place between R. A. Snowball's Moss Ross and Chatham Jennie.

The Clydesdale Horse Association of Canada's special prizes in the respective classes were won by the horses as indicated in the regular competition.

PERCHERONS.—A. H. Thompson had everything his own way in the three-year-old Percheron stallion class with his imported stallions, Immersif, Indican and Inventeur.

Immersif captured the diploma for best stallion, any age, His only competitor being Chas. Symes' Lord Roberts a two-year-old colt, Harvard, owned by Albert Fleming, of Truro, N. S., was the winner of the second prize in the latter class. He showed with a one year's handicap against him.

Chas. Symes' Distinguee and Flemming's Prudence stood first and second respectively in the aged mare class. The former capturing the Championship Diploma.

ROADSTER HORSES IN HARNESS.—King Dodds, Royal Knight and Buz Fuz, the winners of the first, second and thirh prize honors respectively in the Standard Bred Class, captured similar honors in the sectiom for roadster stallions in harness. The competition, in this class, was quite keen as such stallions as Baron Ajalon, Tony Prince, Right Wilkes, Haskell, Maritime Prince, Rudy Kip and Leonard Wilton were all out striving for honors.

There were no fewer than seventeen entries in the section for Roadsters, Mares or Geldings in harness, over 15-2 hands. In this class there was a reversion of judgment from that given in the Standard Bred Class. Dina Hartshorn, the third prize Standard Bred mare was placed at the head of the list. Luella Mac, the first prize Standard Bred mare was placed second and J. C. Purdy's Susie Wilkes came in for third money. The reversion of judg-

RUBEROID ROOFING

Trade Mark Registered. Pronounce it RUE-BER-OID.

in Red—Brown—Green—Slate

RUBEROID Roofing is now as far ahead of all other ready roofings in **appearance** as it has always been in **service** and **durability.**

Besides the business-like slate, or natural color, RUBEROID is made in beautiful soft shades of Red, Brown and Green.

These colors, please remember, are not painted **on,** but **impregnated into the roofing.** The sun cannot fade them out, nor the severest weather conditions wash or chip them off, for they are right **in the body** of the roofing.

The only other roofings that can compare with Colored Rubercid in appearance are stained shingles and tile. Shingles are far less durable than RUBEROID, and they constitute a very serious fire risk, while **RUBEROID is strongly fire-resisting.** The excessive weight and cost of tile roofs put them out of the question in almost every case.

For house, barn, stable, anywhere that ornamental effect is not essential, RUBEROID Slate Roofing will give you **more service for your money** than any other roofing you can buy.

Where you want beauty as well service you can get the most pleasing effects with Red, Green or Brown Ruberoid. We have devised a special tile effect that is most attractive.

Call on the nearest RUBEROID Dealer, or write us, for information about it, and for our Booklet G on the Roofing Question. It contains some striking facts which you ought to know.

"SOVEREIGN" Sheathing Felt—a light-weight RUBEROID—makes houses cool in summer, warm in winter, dry always. It will pay you to get posted on its advantages.

HOLMAN, "The Gypsum Man."

Sells Gypsum Direct to Farmers and Farmers' Clubs.

Gypsum [Land Plaster] stops the tremendous waste that annually occurs in your manure heaps; use it liberally in your stables and help to keep them in a sani tary condition; sprinkle it on your potato sets and it will keep them without shrivelling and in a vigorous condition for growth, even if they are cut a long time before they are planted; use it on your dry soils to conserve moisture and on your wet soil to help sweeten it.

Gypsum is cheaper than lime and has a more favorable effect on the soil, as it does not liberate the stored up plant food in excessive quantities.

I have installed a plaster mill and am now prepared to grind Gypsum at my Sussex quarries. Write me for prices on car, ton or hundred weight lots. It would be extravagance to farm without using Gypsum when I can quote you such low prices.

ment was due to the fact that Luella Mac's owner absolutely, and wisely, too, refused to speed his mare on such a dangerous track and cumbered with a heavy buggy while Dina Hartshorn was shown to a bike and to better advantage.

In the section for Roadsters, Mares or Geldings, under 15-2 hands, Grace Abbott, the second prize Standard bred mare led the way and proudly stood at the head of her nineteen competitors. Spurgeon Gammon's Queen Brazilian came in for second money and C. C. Black's Lady Parkside stood in third place.

Six matched pairs of Roadster horses were shown. A. P. Elderkin captured first money in this class with Gipsey and Queen, and we understand they have since been sold to go to Barbadoes. Fred M. Blenkhorn's Bonnie Prince and Sim came in for second money. Their owner refused a long price for them. C. H. Jackson's Beauty and Lady stood in third place.

SADDLE HORSES.—There were eight saddle horses, ridden by gentlemen, McAvity's Senora captured the red, W. A. Black's Talisman captured the blue and G. W. Fowler's Guardian captured the white. In the class for Saddle Horse, ridden by a lady, McAvity's Senora, ridden by Miss Holmes, Amherst, stood at the head of the list. W. A. Black's Toreen ridden by Miss Black captured the second prize, and Lt.-Col. H. Montgomery-Campbell's Bell, ridden by Miss Campbell secured the third award.

G. W. Fowler's Guardian, ridden by Mr. Kyle Johnson, captured the first prize in the Leaper, ridden by a gentleman, class, and W. A. Black's Talisman, ridden by Miss Black, captured a similar award in the section for Leaper, ridden by a lady.

CARRIAGE HORSES.—There were five entries in the section for Carriage Stallions, in harness. R. A. Snowball's Model Performer, the first prize Hackney stallion led the way. Buz Fuz, Geo. W. Fowler's third prize Standard Bred stallion came in for second and Haphazard, W. A. Black's second prize Thoroughbred stallion captured third money.

In the section for Carriage Mares, or Geldings in harness, over 15.2, Snowball's first prize Hackney mare led the way, followed in second place by Dina Hartshorn, the third prize Standard bred and first prize roadster mare. Embree's Clifford captured third money. There were fifteen entries in this class.

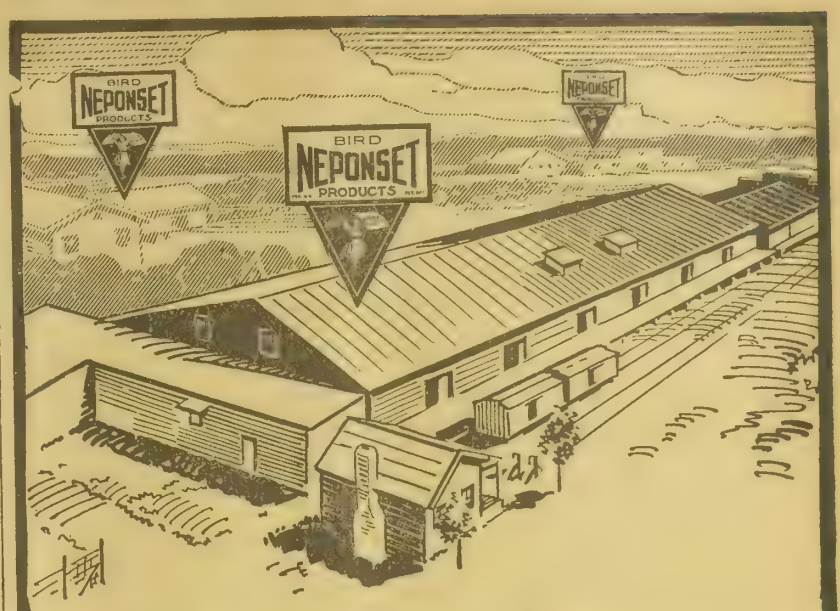
McAvity's Senora and Senorita and W. W. Black's Winona Dignity captured first, second and third prizes respectively, in the section for carriage mare or geldings, under 15.2 hands, in harness, in a class of ten competitors.

McAvity's Senora and Senorita, W. W. Black's Violet and Dignity, and Lt.-Col. H. Montgomery-Campbell's Selim and Mac captured the awards in the class for pair carriage horses, in harness. Seven good pairs competed in this class.

In the section for carriage horses, over 15.2 hands, equipment counted 25 p. c. Snowball's Langton Lily, Mrs. Fawcett's Lucille and W. A. Black's Talisman were the successful ones in a class of eleven entries. In a similar section for horses under 15.2, McAvity's Senora, Senotita and W. W. Black's Violet captured the coveted prizes in a class of thirteen entries.

McAvity's Senora and Senorita, W. W. Black's Violet and Dignity and W. A. Black's Noreen and Toreen in a class of nine matched pairs captured first, second and third places respectively.

McAvity's Senora and Senorita, W.



A Dollar's Worth of Durability for Every Dollar of Cost

WHATEVER roofing you choose for your building, don't let the question of first cost have too much influence. The cheapest roofing at first is apt to be the most expensive in the end.

NEPONSET
Paroid Roofing

costs a little more than some roofings, but every dollar of additional cost will give you a dollar's worth more of service. The idea back of NEPONSET roofings has always been to make them so durable that their years of honest service would be their strongest recommendation. NEPONSET roofings are the most economical roofings you can buy because they wear so long without a single leak.

Write for Book of Plans of Farm and Poultry Buildings

We will send you at the same time The NEPONSET Booklet, which describes the different kinds of NEPONSET Roofings for different types of buildings. This book is invaluable to any one about to build or repair.

Catalogue No. 57 will teach you all about Gasoline Engines.

WINDMILLS, GRINDERS, TANKS, PUMPS, Etc.

Ontario Wind Engine and Pump Co., Ltd., Toronto, Ont.

G. J. Barrett {Sales Agent} 32 Dock St. St. John, N. B. Branch at Fredericton, N. B.

A. Black's Noreen and Toreen and Geo. M. Holmes' Rex and Prince had everything their own way in the Carriage Horse Tandem class and won out in the order named.

McAvity's Senora captures the Silver Cup donated by the Terrace Hotel for the Champion horse in harness while the Silver Cup donated by Col. H. Montgomery-Campbell fori the best Saddle and Carriage Horse went to W. A. Black's Talisman..

HEAXY DRAFT PURE BREDS.—In the section of this class, for mares or geldings, over 3 years old, Logan Bros. showed their Clydesdale mares Pink Rose and Polly McGregor and R. A. Snowball showed his Clydesdale mares May Lothian and Marinetta. Pink Rose stood at the head of the list and was closely followed in second and third places, respectively by Marinetta and May Lothian. In the aged pure bred team in harness class, Logan Bros.' Soubrette and Pink Rose, Snowball's May Lothian and Marinetta and Logan Bros.' Polly McGregor and Princess May were the only contestants and carried off the awards in the order named.. They put up a very creditable appearance and are of a class of which any owner might feel justly proud.

In the class for younger Clydesdale mares, or geldings, Logan Bros. had the first and second prize winners in Princess May and Baron's Fancy, while Donald McIntyre had the third prize winner, Rose of Thornstead.

Logan Bros.' Princess May and Baron's Fancy had no competition in the class for heavy draught, purebred team, in harness.

One of the most interesting features of the Clydesdale class was the purebred, heavy draft, four-in-hand, Soubrette, Pink Rose, Polly McGregor and Baron's Fancy, owned by Logan Bros., who captued the Silver Cup, donated by Dunlap Bros. The Silver Cup donated by the management of the Winter Fair for the best four-in-hand heavy draught team was captured by Forrest Bros., with Billy, Doll, Prince and Nancy.

HEAVY DRAFT GRADES were out in strong numbers, Clydesdale grades almost without exception.

Aged pairs were shown by Forrest Bros., who won first and second places while their only competitor, Milton Copeland came in for third money. Three year old, and under, heavy draft grades were shown by R. A. Snowball, Roper Bros. and Forrest Bros. A Roper colt was sandwiched in in second place between two Snowball colts.

Aged horses were shown by Forrest Bros., and John A. Embree, the former with three entries, capturing first and second monies. Third money went to Mr. Embree.

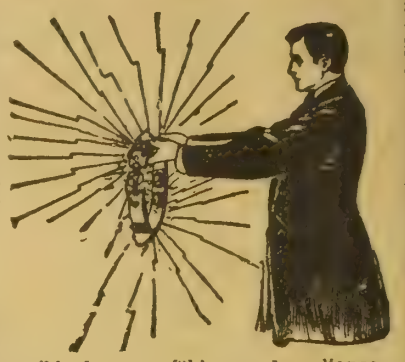
R. A. Snowball had the best heavy draught grade team and Roper Bros. captured second place.

The Clydesdale Horse Association of Canada's special prizes in the respective sections of the heavy grade class were won in the order above named.

GENERAL PURPOSE HORSES were shown in abundance and a good useful lot they were. In the class for singles there were no fewer than eleven entries. Embree's Clifford, the third prize carriage horse, over 15-2 hands led the way in the General Purpose Class with G. A. Wallace's Dodd and Fowler Bros.' Bob closely following in second and third places. General Purpose teams were shown by W. P. Keillor, Fowler Bros., and George M. Holmes and won out in their respective order.

AGRICULTURAL HORSES in the over three-year-old class were shown by Fowler Bros.' who won first and second monies and Rufus Copeland who captured the third award.

Weak, Run Down, Worn-Out Men



Why will you be weak? Why do you go on from day to day when you know you are losing your nerve force—your manhood—when you see a cure within your grasp? Do not delay a matter which is the key to your future happiness. Whatever your condition to-day, you will not improve as you grow older. Age calls for greater vital force, and the older you get the more pronounced will be your weakness.

I have the grandest invention of the age for weak, run-down, worn-out men; the surest and easiest cure for all nervous and chronic diseases. Its wonderful power is directed to the seat of the nervous system, through which its vitalized strength penetrates into all parts of the body, carrying new life to every function which has been weakened by disease or dissipation, restoring energy to the brain and power to the system. No weak man will regret a fair trial of the invigorator.

DR. McLAUGHLIN'S ELECTRIC BELT

will make you strong. It will send the lifeblood dancing through your veins. You will feel the exhilarating spark warm your frame, the bright flash will come to your eye, and a firm grip to your hand, and you will be able to grasp your fellow-countryman and feel that what others are capable of doing is not impossible for you. This grand appliance has brought strength, ambition and happiness to thousands of men in the past year.

It is the one sure remedy for the cure of Rheumatism, Weak Back, Weak Kidneys, Weak Stomach, Varicocele, loss of power in young or old, and similar ailments as well as Dyspepsia, Constipation, etc. How can anyone remain in doubt as to the value of this grand remedy when you see so many cures by it?

To prove to you the confidence I have in the curative power of my Belt, I am willing to accept your case, and after I have cured you, then pay me. All I ask is reasonable security. You may then use my Belt at my risk, and

IF I DON'T CURE YOU MY BELT COMES BACK TO ME

You are out the time you spent on it—wearing it while you sleep—nothing more.

Nervousness---Sleeplessness---Run Down

Dear Sir,—One year ago last February I was taken with Nervous Exhaustion (the doctors pronounced it). I suffered all the tortures of that disease; was run down, so weak I could hardly do anything at all. Since I began to use your Belt there has been a marked improvement in my condition in the different ways mentioned. I have slept well every night since wearing your Belt, which is one of the greatest blessings of mankind. I have a great deal more ambition; work used to seem such a mountain now it seems more a pleasure; more strength and vim; memory better; digestion better; constipation about gone, with which I was bothered a great deal; head feels better, and I feel far better in every way. Yours truly,

NELSON ROSE, South Bay, Ont.

The Dr. McLaughlin Electric Belt is a cure for all signs of Breakdown in Men and Women. The Vitality of the body is Electricity—the force in the Nerve Cells. My Electric Belt will give you back this power and enable you to fight on in the Battle of Life!

VERITY REVERSIBLE SULKY PLOW

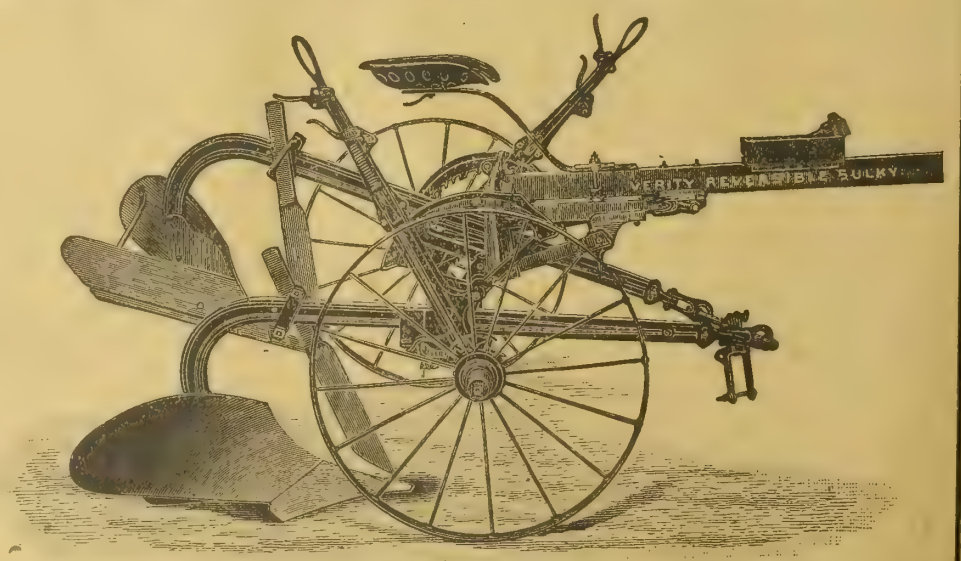
Does Perfect Work on Hillside or Level Land.

Will throw the soil all one way if desired, leaving no dead or open furrows nor ridges.

Harrowing and seeding can be started sooner with this plow than with the non-reversible.

Each plow is entirely independent of the other, having its own depth lever and lifting devise.

Besides the above it has many other features which are all explained in our catalogue which will be sent you for the asking. Write for it now.



THE MASSEY-HARRIS CO., Ltd., - - Moncton, N. B.

Forrest Bros., W. W. Black and Geo. M. Holmes were the contestants for honors in the three-year-old Agricultural class and were placed as named.

C. M. Shipley and T. M. Keillor were the only competitors for honors with Agricultural horses two-year-old.

Fowler Bros., Rufus Copeland and John A. Embree showed three splendid Agricultural Matched Teams and were rewarded accordingly.

W. W. Black had the only entry in the section for one-year-old Agricultural Colt or Filly.

PONIES.—A. H. Thompson's Peggy a trim little pony was the only pony

Consumption Book FREE

This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Consumption Remedy Co., 1641 Rose Street, Kalamazoo, Mich., and they will send you from their Canadian Depot the book and a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful cure before it is too late. Don't wait — write today. It may mean the saving of your life.

Raspberries.

We can supply plants of several choice hardy varieties of raspberries including "Herbert," the heaviest yielding berry in existence. Send for catalogue.

ORCHARD HILL FARM,
Brown's Flats, N. B.

at the fair eligible for her class.

THE HAULING COMPETITION attracted much interest. In the class for singles there were three contestants. A horse shown by the Robb Engineering Co., won first money by hauling 3240 pounds of pig iron on a stone boat on a cinder track. A horse owned by the Town of Amherst came in for second place and F. S. Black's horse captured the third money.

In the class for doubles there were four contesting teams. Rufus Copeland's team won out by hauling 5265 pounds on the above mentioned track W. W. Black's team was next best and Fowler Bros. captured the third award.

The general interest in horses was clearly shown by the patient and enthusiastic manner in which the large audiences remained until a late hour each night to see the very last of the judging in the various classes.

We have photos of some of the prize winning horses, that will be reproduced in our next and subsequent issues.

The Sussex Dairy School.

The creamery and farm dairy courses at the Sussex Dairy School are now completed and the cheese making course is in full swing. We regret to state that the attendance at these courses was very slim, but the students who attended were delighted with the instruction received from Superintendents McDougall and Daigle, and Messrs. Ransom and Conrad.

Professor Archibald, of Truro, was over for two days and gave interesting talks to the students and all of the general public who chose to attend, on Field Crops Suitable for Milk Production.

We would strongly recommend every farm boy and girl in the Maritime Provinces, who can get away from home and who intend to have anything to do with farm dairying, to attend the dairy courses next year.

Bull and Heifer Twins.

K. A. N.—One of my cows gave birth to twins one of which is a bull calf and the other a heifer calf. Both are nice calves and as they are pure breds I would like to keep them if they are any good for breeding. Will you please advise whether or not they are?

Whether or not these calves will have any breeding value can be determined only by raising them and giving them a trial. It frequently occurs that heifer calves which are born twins to a bull calf fail to breed when they reach maturity and are known as free martins, but it does not necessarily follow that all heifers so born fail to develop their reproductive powers. In our experience we know of such a heifer that is now breeding regularly and producing calves. Our advice is to keep the calves since they are well bred and promising individuals and give them a good trial.

The Maple Grove Auction Sale.

The dispersion sale of pure bred, imported and home-bred Ayrshires held at Maple Grove Stock Farm, Lower Millstream, N. B., on the 29th was a decided success. Prices ranged from $35.00 for bull calves to $205.00 for a heifer. The sale netted in the vicinity of $3,000 being an average of about $100.00 per head. Buyers were present from various parts of Nova Scotia and New Brunswick. There were also a large number of bids by mail and wire.

CARBONOL

"NECESSARY AS SOAP"

HEALS, CLEANSES, DISINFECTS.

Carbonol is indispensable to raisers of Poultry and Live Stock. An interesting booklet, fully describing its many uses, will be sent with free sample on request.

Now is the time to start building your telephone line!

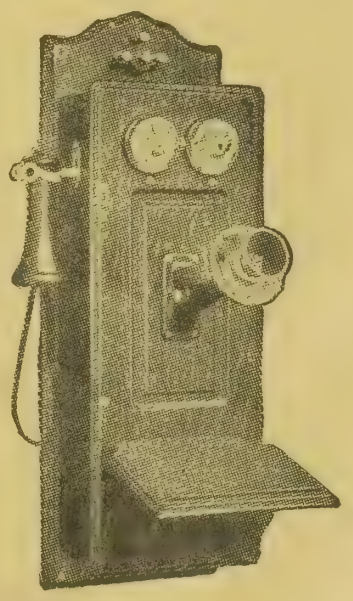
The conditions are all in your favor now for the construction of your telephone line. The sooner the work is completed the earlier you will be enjoying the benefits of an efficient telephone service.

At our factory here in Toronto we always carry a large stock of construction supplies. You can secure the best goods from a Canadian Company and save time as well as duty.

Everything we make is fully guaranteed. Our telephones are guaranteed for ten years against detective material and workmanship.

The success of this company has been almost phenomenal, our business doubling in volume last year. This is going to be another record-breaking year.

Independent Telephone Systems everywhere are fast recognizing the superiority of



our materials and apparatus, and are adopting them as their standard equipment.

They also tell us they like our methods of doing business, and appreciate the suggestions and co-operation given by our staff of Expert Engineers.

If you intend to establish a telephone service in your locality, we believe you will find it profitable to get into communication with us at once.

We will place our Expert Engineers at your disposal, and do all in our power to facilitate rapid and thorough construction.

When writing be sure and ask for our latest publication called "Canada and the Telephone"—the most artistic and interesting telephone book yet published.

CANADIAN INDEPENDENT TELEPHONE COMPANY, LIMITED

1820 Duncan Street, TORONTO

Result of Prince Edward Island Dairy Herd Competition.

Editor Maritime Farmer:

The following are the results of the last year's competitions for season June 1st to October 31st—five months The Herd Prizes were offered by the Local Department of Agriculture, and the Acerage Prizes were contributed by Messrs. Paton & Company and Prowse Bros., Charlottetown, and R. T. Holman, Ltd., and Messrs. Sinclair & Stewart Company, Summerside, all through the P. E. I. Dairy Association.

As these results are of great interest and value to our dairymen and as similar prizes are to be offered for the coming season, I trust you will give these lists a place in your valuable paper.

June 1st to October 31st, 1910.

JOHN ANDERSON. Secretary P. E. I. Dairy Association

FREE TO YOU—MY SISTER

FREE TO YOU AND EVERY SISTER SUFFERING FROM WOMEN'S AILMENTS.

I am a woman.
I know woman's sufferings,
I have found the cure.

I will mail, **free** of any charge, my **home treatment** with full instructions to any sufferer from women's ailments. I want to tell **all** women about this cure—**you**, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourself at home without the help of a doctor. Men **cannot** understand women's sufferings. What we women know **from experience**, we know better than any doctor. I know that my home treatment is a safe and sure cure for **Leucorrhœa or Whitish discharge, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors or Growths, also pains in the head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney and bladder troubles where caused by weakness peculiar to our sex.**

I want to send you a **complete 10 days treatment entirely free** to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that **it will cost you nothing** to give the treatment a complete trial; and if you should wish to continue, it will cost you only about 12 cents a week, or less than two cents a day. It will not interfere with your work or occupation. **Just send me your name and address**, tell me how you suffer, if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you **free of cost**, my book—**"WOMAN'S OWN MEDICAL ADVISER"** with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it and learn to **think for herself.** Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures **all, old or young.** To **Mothers of Daughters**, I will explain a simple home treatment which speedily and effectually cures Leucorrhœa, Green Sickness, and Painful or Irregular Menstruation in Young Ladies. Plumpness and health always result from its use.

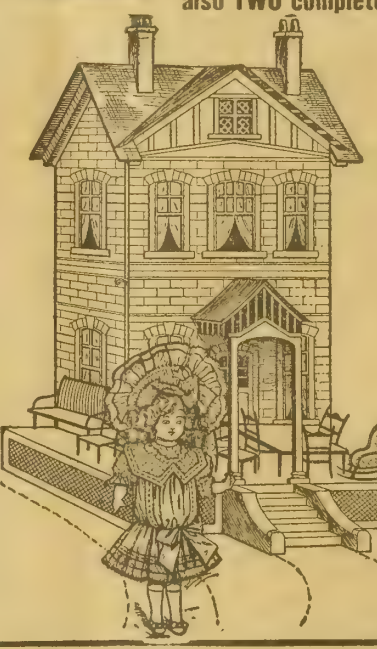
Wherever you live, I can refer you to ladies in your own locality who know and will gladly tell any sufferer that this **Home Treatment** really cures all women's diseases and makes women well, strong, plump and robust. **Just send me your address**, and the free ten days' treatment is yours, also the **book.** Write to-day, as you may not see this offer again. Address:

MRS. M. SUMMERS, Box H 309 - WINDSOR, ONT.

FREE

THIS MAGNIFICENT DOLL'S HOUSE AND HANDSOME IMPORTED DOLL

also TWO complete sets of beautiful furniture for the house and this lovely gold-laid jeweled ring



GIRLS, THIS IS A CHANCE OF A LIFE-TIME. DON'T MISS IT. This magnificent doll house is a perfect little palace, **EXACTLY LIKE THE DRAWING IN EVERY DETAIL,** with its quaint gothic roof with two chimneys, fine porch, lovely verandah and broad handsome front steps. The outside of the house is finished in red brick and the inside is beautifully papered throughout, and every window has curtains. **IT IS FURNISHED COMPLETE** with the loveliest furniture you have ever seen—two complete sets, including sofas, chairs, tables, beds bureaus, wash-stands, etc.

THE HANDSOME DOLL WE GIVE YOU WITH THE HOUSE is a little beauty. Fully jointed so that she can sit down, turn her head, move her arms and legs, and she is dressed with fine underwear, shoes, stockings, etc., complete from hat to shoes.

Girls, if you want to secure **ABSOLUTELY FREE** this handsome doll house, lovely doll, the two sets of furniture and the beautiful jewelled ring, send us your name and address at once and agree to sell only 25 of our handsome jewelery novelties at only 10 cents each. They are handsome novelties, everybody wants them and you can sell them very quickly in a few minutes after school. When sold, return us the money, only $2.50, and we will promptly send you all 5 handsome presents carefully packed, exactly as represented. We arrange to stand payment of all charges on these presents right to your door. **DON'T DELAY,** write us to-day, and in a few days you can have the magnificent house and all the beautiful presents.

Address—
THE MUTUAL CREDIT CO.
Dept. 229. Toronto, Ont.

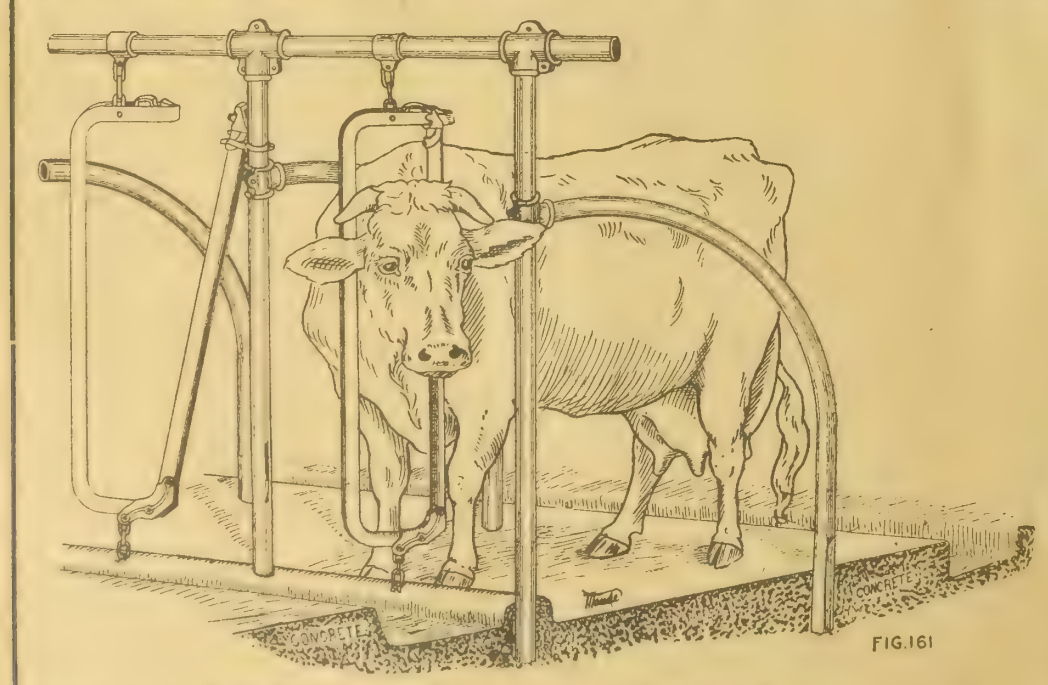


FIG. 161

"B T" STANCHIONS

Are Always Chosen When Their Merits are Known. Because:

They are the easiest to open and close One hand only is necessary.

They allow the greatest amount of freedom for the cow, being two to four inches longer inside than others.

They cannnt possibly be opened by the cow.

They are made entirely of steel and malleable. The frame is made of 70 carbon steel. (They are the only stanchions made of high carbon steel.)

They are the easiest to install, owing to the "BT" Special Clips for attaching above and below.

They can be used equally well with a wood frame or in the "BT" All-steel Stall.

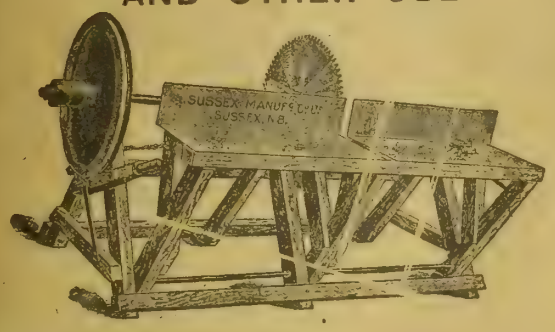
IF YOU ARE BUILDING OR REMODELLING YOUR BARN, you will be interested in the "BT" Catalogue on Stable Construction. It gives best plans for layout, tells how to ventilate, and how to lay cement floors, etc., and gives information about "BT" Steel Stalls and Stanchions. If "BT" Plans are used the cost of your stable will be reduced. In writing let us know how many cattle you will stable.

BEATTY BROS., - FERGUS, ONT.

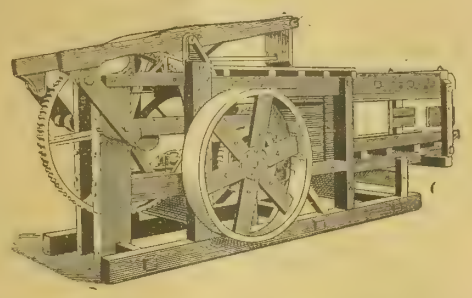
We also manufacture Hay Tools and the "B T" Litter Carrier.

SUSSEX MANUFACTURING COMPANY'S LINE OF FARMERS' MACHINERY

AND OTHER USEFUL ARTICLES FOR THE FARM.



The above is a picture of our Long Swing Table Machine. We also manufacture the Long Flat Roller Table and Short Swing Table Machines. Note the **strong** and **rigid frame,** the **heavy balance wheel,** the **steel table,** and many other **superior points.**



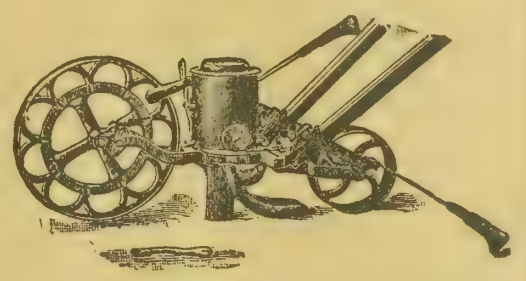
The **Improved Gear Trenholm Hay Press.** This machine will do more work, with less power, than any machine on the market and is the strongest and most substantial hay press built.

Every farmer should have the **Cast Iron Manger.**

The Little Giant.—We manufacture four different sizes, also the level geared **tread** power. Without doubt **The Little Giant** is the best machine on the market. Now is the time to get your orders in as it will not cost one dollar more to purchase a machine now than if you waited until the day before you wanted to use it.

Feed Boilers and Plough Castings of all Kinds.

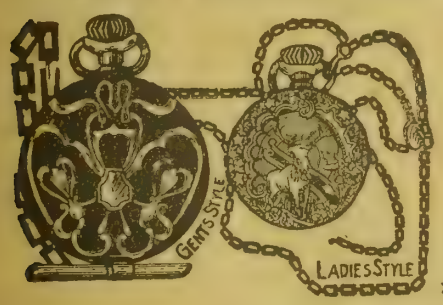
If your dealer does not handle our goods, write us direct. We will forward catalogue and all information



No better **seeder** can be built for the **accurate** and fast sowing of **turnip, cabbage, sage, carrot, onion, parsnip, spinach, beet, pea, corn** and all kinds of **garden seeds.**

THE SUSSEX MANUFACTURING CO., Ltd., = Sussex, N. B.

FREE Handsome Watch and Magnificent Phonograph FREE



Not a toy, but a genuine, modern, up-to-date Talking Machine.

READ OUR WONDERFUL OFFER

We are prepared to give away ABSOLUTELY FREE 1000 of these magnificent imported Swiss $50.00 appearing watches, ladies' or gentlemans' size and an equal number of these magnificent Phonographs or Talking Machines. Our **GENTLEMANS WATCHES** are stem wind and stem set, genuine lever movement, thin model and with the works enclosed in an inner case of glass as is only seen in the very finest watches, your choice of either magnificent silver nickel or gun metal. **THE LADIES' WATCHES** are the beautiful small size models in either open face plain gold finish or gun metal for engraving, or richly engraved gold laid hunting case. You have your choice. **OUR PHONOGRAPH** is not a toy, but a genuine talking machine that will sing songs, tell funny stories and be a constant source of amusement and pleasure in the home. It is the beautiful new "Lyra" shape and takes a regular cylinder record.

YOU CAN GET BOTH THE WATCH AND TALKING MACHINE ABSOLUTELY FREE

If you will help us in your spare time to advertise our business. Just send us your name and address and we will send you, postage paid, only 12 boxes of Dr. Burdick's famous New Life Blood Tonic and Nerve Pills to sell for us at only 25c. per box. They are a grand remedy for indigestion, constipation, nervousness, weak and impure blood and a wonderful tonic and life-builder. They are easy to sell, as every customer who buys a box of medicine from you is entitled to receive from us a handsome present of silverware, cuff links or ring. Address **THE DR. BURDICK MEDICINE CO.,** Dept., 221 **TORONTO, ONT.**

Handling Manure.

If manure is left in piles by the barn it will soon begin to neat, even in winter, especially if it contains any large portion of horse manure. When it heats the manure is decomposed and the element of most value the nitrogen, is lost in the form of gas. In the spring and early summer, if manure is lying where rain can fall on it, much of the fertility is leached out and carried away. If the manure is spread on the field directly from the barn, heating is prevented until the manure is covered up in the soil. Then any elements that are liberated by decomposition are taken up by the soil and saved. When manure is spread out on the field it dries out; and as the larger part of the manure is in insoluble form, even if it does rain on the fields, very little fertility is washed out because it is not soluble. It does not become soluble until covered up in the ground where it is kept moist and where decomposition can take place. Then the leaching leaves the fertility in the soil where it is used. Considering these facts and the fact that manure is handled fewer times when hauled direct from the barns to the fields, it makes it quite evident that from the standpoint of economy this is the practical way to handle manure.—A. D. Wilson.

Peas and Oats.

J. A. B.—What kind of peas should be planted as a soiling crop with oats and in what proportion should they be sown with oats? How much of the mixture should be sown to the acre?

The advantage of partially soiling cattle during the summer is recognized by every careful dairyman and breeder. For early soiling it is doubtful if there is anything superior to oats and Canadian field peas sown at the rate of one bushel each per acre. If it so happens that a drough does not come early in the season and the crop of oats and peas is not needed for feeding as green feed they should be cut at the time when the oats are in the dough and made into hay. Such hay, properly cured and stored under good conditions, is almost if not quite as valuable for feeding cows in the winter as clover.

Injured Udder.

K. F. G.—One of my cows which calved last winter had one of her teats stepped upon by another cow shortly after she freshened and it was badly hurt. I was unable to draw any milk from it. After a time I was able to heal up the teat. However, now the cow is soon due to calve and the quarter of this teat is becoming sore. As the cow is a pure bred Holstein I would like to do all I can to heal up this quarter. What should I do?

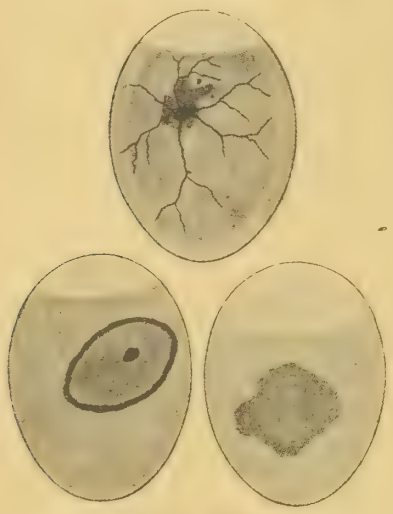
Strip away some of the fluid several times a day and twice daily rub the quarter with a mixture of equal parts camphorated oil and fluid extracts of belladonna leaves. Continue the treatment when she is fresh. If pus comes from openings in the udder inject peroxide of hydrogen daily and continue the other treatment advised.

FREE—WATCH and FOB

BOYS AND GIRLS—We will give you **ABSOLUTELY FREE** your choice of either a LADIES' OR GENTS' SIZE of these magnificent genuine imported Swiss thin model Watches, with this beautiful latest design monogram Fob, engraved with any initial, absolutely Free. Write us to-day and we will send you, postage paid, only $3.50 worth of our handsome jewelery novelties to sell at only 10c. each. We send gentlemen's beautiful cuff links and tie pins, ladies' beauty pins, sash pins and brooches, etc., and they are so beautiful they just sell like hot cakes. When sold, return us $3.50, and we send watch and fob engraved with your initial, all charges paid exactly as represented. Address—
THE MUTUAL CREDIT CO., DEPT. 30, TORONTO, CAN.

Egg-Testing Guide.

X-Ray Views of the Egg



A Live Germ.

A Dead Germ. **A Stale Egg.**

When you test your eggs, whether in an incubator or under a hen move all stale and dead germ eggs. They will not hatch out and if left with the fertile eggs will prove detrimental to a good hatch.

St. John Prices.

GRAIN.—Oats, 45 to 50; buckwheat $2.50 to $2.75.

LIVE STOCK.—Milch Cows, $45.00 to $50.00; sheep, $4.00 to $5.00; lambs $5.50 to $6.00; hogs, $5.00 to $6.00.

DRESSED MEATS—Beef, carcass, 9c to 11c; beef, retail, 12c to 20c; mutton, 10c; Veal, 9c to 10c; pork, 9½c to 10c.

HORSES—Drafters, $225.00; roadsters, $200.00; carriage, $175.00 to $200.00.

DAIRY PRODUCTS Creamery Butter, 25c to 27c; dairy butter, 25c; cheese, 13½c.

POULTRY AND POULTRY PRODUCTS—Eggs, 17c to 18c; fowl, $1.50 to $2.00; chickens, $1.50 to $2.00; ducks, $1.25; geese, $1.25; turkeys, 25c to 28c.

FRUIT—Apples, $5.00 to $7.00; Strawberries, 45c to 50c per box; honey, $1.25 gal.; maple products, 18 to 20c lb.

VEGETABLES—Carrots, $1.25 to $1.30; potatoes, $2.25 per bbl.; turnips, $1.00 bbl.; beets, $1.00 bbl.

MISCELLANEOUS.—Hay, $9.00 to $11.00; straw, $7.00 to $8.00; wool, 21c; beef hides, 9c; calf skins, 15c; sheep hides, 80c to $1.25.

The market was poorly supplied until to-day. Eggs are dropping in price. The beef market is active, looking forward to a good Easter market. I think the prices will rule high this coming week.

Ancient Agricultural Grants.

Editor Maritime Farmer:

The following copied from "The Times" published at Halifax, Nova Scotia, January 14th, 1845 may be of interest to your Farmer readers, as showing that their forefathers made use of the government of over sixty years ago for the advancement of the important cause of agriculture.

B. J. LAWSON.

Amherst, Mar. 24, 1911.

"To the Officers and Members of Agricultural Societies throughout the Province:

As the time will soon arrive when the Provincial Grant for Agricultural purposes will expire, it therefore becomes the agriculturists to reflect upon the advantages, the stimulus, etc., created by it; and in order to insure its continuance, let us come forward unitedly, (for union is strength), and petition the Provincial Parliament for its continuance. As the meeting of the Legislature will soon take place, and as it is necessary to have the petitions before the House at an early period, the sooner it is accomplished the better.

An Agriculturist.

Cornwallis, Dec. 14, 1844.

EGGS FOR HATCHING

From the following breeds:
S. C. Rhode Island Reds.
S. C. Black Minorcas.
..."Parkdale Strain."
S. C. Brown Leghorns and Silver Spangled Hamburgs.

My Reds were imported in eggs last year, direct from the yards of Mr. John Kiessling, of Hudson, Mass.

My Minorcas are direct after the Grand Minorca Cock of Mr. R. B. Stewart, of Moncton, N. B., which was exhibited five times and was first in each and every case.

In Leghorns I have six good strong Pullets, mated to an Exhibition Cockerel (Becker Strain), direct from the yards of Mr. H. F. Becker, Ontario. The Becker Strain is noted for its grand color, shape and lacing.

My Hamburgs were also in eggs last year from an American breeder and are beautifully spangled and of good size and shape.

Prices of Eggs per 15.

R. Island Reds	$3.00
Minorcas	2.50
Leghorns	2.50
Hamburgs	2.00

Correspondence a pleasure.

Out of 22 Minorca eggs tested 19 proved fertile.

St. Anselme Poultry Yards,
Dennis D. Legere, Prop.
ST. ANSELME, - - N. B.

Echoes From the Horse Show.

Dodd Dwyer, the owner of that handsome unbeaten Standard Bred Stallion, King Dodds, made quite a record for himself when he entered Queen Bralizian for Spurgeon Gammon, New Glasgow, in the roadster mare or gelding class under 15.2 hands, and drove the winning G. A. Wallace's Grace Abbott, of Pictou. Queen Brazilian took second place. This is all the more creditable as there were twenty contestants in the class.

1 Cent a Word

WANTED—Pork, eggs, butter and fowl.—JOHN HOPKINS, St. John, N. B.

CHESTER WHITE PIGS for Sale—ARTHUR E. FERGUSON, "Gowan Brae Farm," Bathurst Village, N. B.

FOR SALE—Registered Holstein Bull, "Gibson Boy," No. 5518; sire of prize winning stock, 4 years old.—ROY JONES. Hazelbrook, P. E. I.

SINGLE COMB RHODE ISLAND REDS. Eggs from pen of ten grand females, headed by first prize cock at Hartland, $1.50 per 15.—R. B. HAGERMAN, East Florenceville, N. B.

EGGS FOR HATCHING from my prize winning and laying strain of White and Patridge Wyandottes. $1.50 per 15.—AARON MOREASH, Oakfield, Nova Scotia.

EGGS FOR HATCHING from pure bred White Wyandotte hens, $1.00 per 15; $1.75 per 30 All orders promptly attended to.—C. CALDWELL, Berwick, N. S.

COLUMBIAN WYANDOTTE EGGS for hatching from prize winning stock, Good layers; non-sitters; hustlers; $1.00 per 15.—C. PERRY FOOTE, Kentville, Kings Co., N. S.

EGGS FOR HATCHING.—Barred Rocks; 1st pen is headed by one of the finest narrow Barred cockerels in the province, mated with six large well Barred hens, yellow beaks and legs; 2nd pen pullets headed by a very fine cock. Eggs $2 00 per 15, Satisfaction guaranteed.—EDWARD JORDAN, Kentville, N. S.

CHEESEMAKER WANTED—A first-class cheesemaker wanted to take charge of the Salmonhurst cheese factory for the season of 1911. Factory to open about May 20th Apply, with references, to A. J. JENSEN, Salmonhurst, Vic Co, N. B.

POULTRY.

Handling Breeders.

Probably no other rock in the great channel of poultrydom has wrecked the hopes of so many amateurs as that of infertile eggs. Nearly every beginner, unfortunately for himself, knows a little something of the business as it was commonly practiced years ago, when the biddies had little to do but eat corn and loaf through the most of the winter, were given their liberty with the coming of spring, and were allowed to fix the time of incubating, as in fact most other matters, pretty much to suit themselves.

Poor hatches were the exception in those primitive days of the industry, and with this fact all too firmly fixed in his mind, the unsophisticated beginner of today enters upon his campaign of incubation in the cold weather of February or March, perhaps after having "pumped" his birds hard for eggs the previous part of the winter, fondly anticipating a ratio of chicks to eggs as great as could reasonably be expected under the favorable conditions noted above. When the inevitable disappointment follows, he is apt to attribute it to poor males, chilled eggs, defective incubator, or almost anything but the actual cause—and next year make the same mistake again. That is, neglect to give his birds the extra attention breeding birds must be given, no matter what their natural vigor to secure even fair success with early hatches.

The novice should consider that his grandmother's "old speckled hen" that he used to see bring out thirteen chicks from as many eggs, from a nest of her own choosing under the barn, had been "resting up" all winter; that with the coming of spring she had enjoyed the freedom of the entire premises, with attendant opportunity for exercise and to add to the variety of her diet, and that, moreover, she made no attempt to go into the chicken business until the natural breeding season came round.

While there are, among other causes, many instances of poor males, we are satisfied that more often, especially where they have been laying for a considerable period, the fault of early infertility lies with the hens. It will be noticed that many authorities insist upon the breeders being kept at complete rest through the winter, but we hardly think the average poultryman will find it profitable (or necessary) to keep even this portion of his flock idle during the several months when eggs command the highest prices of the year. But as, on the other hand, it means certain disaster to crowd them for eggs, it is the best plan to separate from the rest early in the season, or one is likely either to force them along too hard with the others, in the eagerness to get a big egg yield, or to be too easy with the whole flock for fear of over-taxing the breeders.

With the breeders quite by themselves, it can be seen just what they are doing, and so long as they are only laying enough to rather more than pay their keep, no fears need be had of impairing their future usefulness. They may easily be kept in check by withholding meat and green stuff, except for an occasional feed to keep in good health. A horse is not injured as a breeder by a moderate amount of work, and we see no reason why the case should not be the same with the hen, as long as she is left a good reserve to call on when the proper time arrives.

But, as already stated, an extra effort must be made, if success is to be had with cold weather hatches. Not an item of feed or care should be omitted that tends to the highest degree of fertility. It is not enough simply to get eggs with germs, but they should be strong germs, which will readily respond to either the natural or artificial method of incubation, through all the stages, until the perfect chick actually outgrows the shell and easily bursts it asunder, instead of having to peck feebly away for hours.

Raw meat and bone should be an element of the breeders' ration, if possible. If lacked, do not fail of dried scraps, and keep before them at all times. Green stuff is almost as essential; clover, cabbage, beets, all should be had, supplementary to about every kind of grain procurable. It is by no means, as some seem to think, a waste of clover or vegetables to give them to hens for while eating of them they are not depleting the grain chest. So feed freely if you have them, and if not, don't consider it a waste of money to purchase them, for they are cheap at any price, compared with a lot of infertile eggs.

As to the dry or wet mixtures, we rather lean towards the former, although we have at times had the very best of results with a daily feed of the old wet mash.

Exercise is, of course, needed more than ever in the breeding season, and it will pay to replace the old, worn-out litter with new. The deeper, too, the better, so they will have to scratch and scratch hard for every kernel of grain they get.

We have said but little as to the male bird, for we believe there is a tendency to lay much to his door that should properly be charged to the female side of the breeding pen. —John L. Woodbury in Maine Farmer.

Suffragette vs.
Aunt Salina
The Canadian housewife is much more interested in lightening household drudgery than in securing the right to vote. That is why the
New Century Washer
is so popular. It takes all the back-breaking labor out of wash day and sweetens the housewife's temper. It also thoroughly cleanses the clothes by forcing the water through them.
Send a post card for "Aunt Salina's Wash Day Philosophy."

Cheer Up.

In looking over my last Maritime Farmer I noticed that V. P., Berwick, N. S., had received a cold douche to his poultry enthusiasm. In order to cheer the brother along I will give some of my experiences. I began keeuing records on the first of January. My flock consisted of forty hens and thirty-five pullets. About the time the pullets commenced to lay the old hens had ceased laying, so that during the month of January the pullets only were laying'

January	344 eggs.
February.	566 eggs.
March	678 eggs.
124 days, total	1588 eggs.

Some of your readers may smile at my small record. However, I live about twenty miles from Halifax, where we have a good market all the year. I get a good price for my eggs and I find my hens yield me a good profit above their keep. Perhaps some of your readers would like to know how I feed my hens.

After the hens go to roost at night I scatter a few quarts of oats through the straw litter in the scratching pen. They scratch for this feed early in the morning. I believe in keeping them at work. About nine o'clock I give them a mash made up of four quarts second crop clover, cut fine, two quarts corn meal. two quarts middlings and at noon whatever table scraps I can furnish from the table, and one quart whole oats and one quart whole corn.

At evening I feed four quarts oats and one quart corn. I use a bone cutter and feed all the bone I can get. They have access to all the sharp gravel and crushed shell they want to use. Grit and shell are, in my estimation, two very important elements in hen feed, without them there would be very few eggs. I keep clean water or milk before my birds at all times, replenishing the dishes three times a day.

First Prize Cock
Moncton and Hartland, 1911.

First Prize Pullet
Hartland, 1911.

First Prize Cockerel
Moncton and Hartland, 1911.

Walter McMonagle & Son, of Sussex, N. B., breed the Regal Strain of White Wyandottes exclusively. The above illustrations show three of their winners at the recent Poultry Shows. The First Prize Cock is the sire of the Cockerel and Pullet. The two males head their White Wyandotte matings this season.

THE FARM HOME

This Department is now being edited by a very competent lady, who will be pleased to answer all inquiries. She solicits the aid of all who are interested in home making. This aid may be given in the form of short articles dealing with your experiences, questions or timely suggestions. Ladies, this department is yours. Use it to the best advantage.

Long, Long Ago.

CARL MATZ. Arr.

The Health of the State.

Nothing is more characteristic of the age we live in than the growth of Sanitary Science.

Health, with its increased possibility of attaining old age and of avoiding pain, has always been a desire near the heart of man but it has mostly been an individual pursuit.

Except under the Mosiac Law, Public Health has never been the conscious aim of the community to such an extent as it is at present, and it is now a recognized fact that health and holiness have a common derivation and everything that concerns the welfare of the human race should be regarded as sacred.

Thirty-five year ago the Royal Sanitary Institute organized with the ever-increasing demand of the time for a spread of sanitary knowledge and from the date of its inception it has exercised a continual influence for good on the health of the nation.

The Institute has spread beyond the bounds of the United Kingdom and now assumes an imperial character. Examinations are held under its auspices in India, Australia, South Africa, Canada and other parts of His Majesty's dominions. Nothing of moment in the matter of public health escapes its notice.

Man is a gregarious animal and in nothing is the interdependence of society more marked than in the general liability to disease.

From this general liability no class is exempt and diseases originating among the poorly fed and badly housed members of the commonwealth soon invade those who are fortunate enough to live under better conditions.

The prevention, treatment of disease, therefore becomes a matter of concern to al, members of society and the rapid growth of interest in the Science of Sanitation is due in a great measure to the growing consciousness of the fact.

Cleanliness, fresh air, pure food and the prevention of infection are the keynotes of modern medical science. Twenty-five years ago the teaching of hygiene, temperance and the laws and conditions of health found no place in our schools and there was scarcely a single university at home or abroad in which the subject of hygiene and public health was taught. But today much is being done in all directions to fight diseases of every kind and to keep the people in a pure, cleanly and wholesome condition.

Now, I think you will agree with me that the strength of the Empire depends upon the homes of its people and it is also obvious for the individual is the unit of the home as far as the home is the unit of the state.

From improved and healthier homes would come increased comfort and happiness and consequently more physical energy to fulfil the duties of life and to meet the demands the future may make upon the nation.

Home life is the vital source of the nation's strength and there is nothing so essential to the health of the people as simple, wholesome, homely homes.

It has been well said by one of our greatest poets "that childhood shows the man as moving three hours the day" and it is unquestionable that any deterioration in the health of the rising generation will tend to the grave disadvantage of not merely the individual but the entire community. No subject therefore, is of greater importance to the well being, the progress, even the existence of a State, than the hygiene of its children. The children of today are the nation of to--morrow. It is to the children therefore, that I would wish you particularly to turn your thought this afternoon. If you would have a healthy race of strong men you must first rear healthy children. The influence of home being such an important factor let us now consider what are the essentials of a healthy home life for a child. From a material point of view they are the following five:

1. Fresh air and surroundings.
2. Good and sufficient food.
3. Sufficient clothing.
4. Cleanliness.
5. Sufficient sleep.

It is the clear duty of citizens to see that such essentials are within the reach of all; and one of the best ways of securing such a condition is to insist that the girls who will be the mothers of the coming generation are instructed in the laws of hygiene and in the practical workings of a well-ordered and healthy home, for progress in this respect depends largely upon a wide dissemination of knowledge. It has been truly said, "The people perish for lack of knowledge."

Thus it is important that the girls of today should be trained in domestic hygiene, food values and in the management of children. It is now an accepted fact that a healthy adult life is dependent very largely on a healthy childhood, and a healthy life in the majority of cases cannot be secured unless the first five years of a child's life are satisfactory in character.

The truth of this statement may be realized by a few facts as to child growth:

During the first year of life an infant becomes 45 per cent. taller than at birth and doubles its weight. In the first five years of life a child's height is doubled and at seven years old a child is more than half the adult in stature, while its brain at this age has attained nearly its full size; though this of course does not mean that its brain is fully developed.

These few facts prove, I think, that the making of a healthy home should be one of the first steps towards the making of a physically and mentally healthy child and parents themselves must take their part in the training and upbringing of the children. We ought particularly to interest the mother as a trainer and educator of her children and not divorce her from her proper duties or relieve her in any way of her responsibilities our ultimate aim should be the prevention of the destruction of the homes and the cultivation of "mother-craft."

In olden days people believed that mothers somehow knew without instruction, how to look after children. We know better now. The Medical Officers of Health for London have done an admirable work in advancing an educational scheme which has already had a marked effect upon the infantile death rate. Dr. Sykes of St. Pancras, has in particular, long been noted for the practical and effective work he has organized in that city. When first appointed to his office some years ago, he found that there was an enormous death rate among the young children in the poorer districts and also that many of the deaths were largely due to ignorance, improper feeding and lack of attention. Accordingly to save the lives of the children he started instructing the mothers. He secured the services of some practical lady inspectors who go from home to home showing the poorest mothers and

DOCTOR ADVISED OPERATION

Cured by Lydia E. Pinkham's Vegetable Compound

Canifton, Ont.—"I had been a great sufferer for five years. One doctor told me it was ulcers of the uterus, and another told me it was a fibroid tumor. No one knows what I suffered. I would always be worse at certain periods, and never was regular, and the bearing-down pains were terrible. I was very ill in bed, and the doctor told me I would have to have an operation, and that I might die during the operation. I wrote to my sister about it and she advised me to take Lydia E. Pinkham's Vegetable Compound. Through personal experience I have found it the best medicine in the world for female troubles, for it has cured me, and I did not have to have the operation after all. The Compound also helped me while passing through Change of Life."—Mrs. LETITIA BLAIR, Canifton, Ontario.

Lydia E. Pinkham's Vegetable Compound, made from roots and herbs, has proved to be the most successful remedy for curing the worst forms of female ills, including displacements, inflammation, fibroid tumors, irregularities, periodic pains, backache, bearing-down feeling, flatulency, indigestion, and nervous prostration. It costs but a trifle to try it, and the result has been worth millions to suffering women.

wives how to cook, how to feed their children and how to keep their homes decent.

Many other large towns in England have followed London's good example. Nottingham, for instance, established a "Mother's Babies Welcome" in 1908. A convenient house was provided by the city corporation which also paid the salaries of two trained nurses. Over 250 mothers attended every month at this establishment and here they are taught the best way of feeding and rearing their infants and the elements of domestic economy and sick nursing.

In other ways also, England has been advancing with the spirit of the age. In respect to the children in the Public Schools. For the last two and one-half years, that is since the passing of the 1907 Education Act, the Education Committee all over the country have appointed School Medical Officers. The duties of these officers may be grouped under two heads:

1. The care of the health of the school children.

2. The supervision of the hygiene of school buildings and all matters of sanitation affecting the scholars. Some idea of the far-reaching character of their investigations may be gathered from the Board of Education circular No. 596, which says:

"The school medical officer will note and report to the authority, cases in which ventilation of schools is defective, either as regards the means provided or as regards the use and maintenance of these means; if necessary he will supply them with the results of scientific tests. He will, of course, call attention to the physical defects of bad ventilation, such as the prevalence of headache, lassitude and debility among the scholars when they come under his notice. He will observe and report instances of bad positions in sitting and unsuitable designs of desks or benches."

"As regards cases of defective eyesight he will indicate such measures as can be taken to remedy or mitigate such defects, and he will call attention to the strain imposed on the eyesight by the use of too small type in text books and the teaching of very fine sewing, etc."

In his annual report the School Medical Officer is asked to give:—A general review of the hygienic conditions prevalent in the schools, in respect to such matters as surroundings, ventilation, lighting, warming, equipment and sanitation, including observations on the type and conditions of sanitary conveniences, lavoratories, water supply for washing and drink purposes, and the cleanliness of school room and cloak rooms and the relation of general arrangements of the school to the health of the school and to the health of the children.

Each child comes under the inspection of the school medical officer at least three times in the course of its school life. The medical officer is usually helped in his work by the school nurse, who assists at the medical inspections, visits the children in their homes, taking the doctor's report with her, bringing her influence to bear upon the parents to persuade them to obtain the necessary medical attention for their children; she is always willing to give advice and help in smaller matters relating to health and is an invaluable source of information for the school authorities in respect to the conditions of the homes in which the children attending the schools live.

By these means not only the school children themselves, but the younger brothers and sisters at home are benefitted and the school nurse helps the medical officer in tracing the disease to its source and attacking it in its home. I might add that in some parts of England there has been a good deal of opposition to these reforms, chiefly on account of the expenses involved; but whatever the immediate cost may be there can be no doubt that such medical inspection and treatment, will, in the end, prove a preventative and consequently an economic measure. The community as a whole will gain by the effort now being made in this department of child life.

I should like to call attention to the large part women are taking in this health campaign in England. We have at the present time many women serving as Sanitary Inspectors, Health Visitors and Infant Protection Visitors. Their duties include the visiting and inspecting of women's work shops and home work places where women are employed, all matters connected with the "Notification of Birth's Act" and all inquiries made with regard to the welfare of infants and young children. Perhaps of these duties the most important are the carrying out of the measures for securing the diminuation of infantile morality under the Notification of Births Act, 1907 and the "Children's Act" of 1908. Under the former act all births have to be notified to the Medical Officer of Health for the district within 36 hours. The most suitable cases are then visited by the health visitor, beginning with the poorest houses in the poorest streets. The visitor goes as a friend and not as an inspector. She gives young and ignorant mothers advice as to the rearing and maintenance of their infants and poor mothers and those in need of charitable assistance are brought to the notice of the various religious and charitable institutions. Mothers and infants suffering from disease are referred to the various doctors, hospitals and dispensaries. Usually these visits are kept up for a twelve month each case being visited about once a month, the baby being weighed at each visit and a record being kept. It is surprising to see what can be done by a genial, kindly health visitor in some homes; in many cases indifferent and ignorant mothers are stirred up to care for children who would otherwise have been neglected, improperly treated.

The placing out of infants with strange women for payment has long been recognized as a subtle method of getting rid of infants not wanted and it was to control this traffic that the Infant Life Protection Act, 1897, was passed, but the crux of the whole matter was not really touched until the Children's Act of 1908 was passed. By this act every person taking a child under 7 years old into her home for more than 48 hours for payment or adopting any such child was compelled to notify the fact to the Foard of Guardians in whose district she resided and all such persons were registered and inspectors were appointed to visit and report from time to time. In most cases these inspectors have been women. Although many of the children are in fairly good homes, needing little or no ispection or supervision many others are in homes which leave much to be desired; these are carefully watched and advice is given as to nursing, and cleanliness. In cases where the foster parent continued to ill-treat or neglect the children, the children are removed to other homes and the people who so ill-treat and neglect them have their names placed on a Black List and are not allowed to take nurse children again. Although there are not many cases in which such extreme measures are necessary, yet in most cases the constant supervision of the home and the friendly interest taken in each are removed from the district, notice has to be given of the name and address of the home to which they are going. Notice is then sent to the visitor in that district and thus each child is as far as possible kept under supervision. Under the Children's Act such children cannot now be inchild ensures for it comfortable surroundings. If any of these children

A Garden of Delight

Is your garden a source of pride and pleasure, or simply of common "garden truck?" That will depend largely on your choice of seeds. People who sow

EWING'S Reliable Seeds

and give them proper care, get big crops—sure crops—crops of superior quality. Whether you garden for pleasure, or profit, or both, discriminate on the seed question. Get EWING'S, the seeds that have proved their quality by over forty years of bumper crops.

If your dealer hasn't Ewing's write for our Illustrated Catalogue and buy from us direct.
